The chief treasures, however, of the collection are a number of remarkable specimens of those beautiful Greek vases, both black-figured and red-figured, which we should scarcely hope to find outside of the great European museums. The frontispiece reproduces one of the most important, a *hydria*, on which is represented "Orpheus put to death by the women of Thrace," certainly to be ranked among the most beautiful examples in existence of red-figured vases in the "fine style." There are also four of those highly prized vases which bear the signatures of the artists by whom they were painted. Three are black-figured *kylices*, with the names of Tleson, Xenocles, and Hermogenes; the fourth is a graceful red-figured *kylix*, in the "severe style," signed Euphronius, and is one of the ten extant vases of this master. It was once the property of Mrs. Hamilton Gray, who says in her 'Sepulchres of Ancient Etruria' that she had seen "none superior to it either in size, form, subject, elegance of design, or beauty of workmanship." A very singular specimen, given in a plate, is a black-figured *skyphos*, representing probably a chorus scene from some Old Attic comedy: six armed warriors riding upon leaping dolphins, and six others riding upon ostriches, each company advancing towards a man who plays upon a double flute. Two black-figured *lekythi* have for their subject Herakles and the Centaur Pholos; in one the centaur is portrayed in the archaic style, with the whole figure of a man joined to the body and the hind legs of a horse; in the other in the later fashion, with a human head and trunk joined to a horse's body. In conclusion we would call attention to four white Attic funeral *lekythi*, two of them containing the singular-looking little figure called the *eidolon*, which is supposed to personify the soul of the deceased. These have been published by Prof. J. H. Wright in the *American Journal of Archæology*. A third example is of peculiar archæological interest from its bearing an inscription evidently referring to the deceased, inasmuch as Pottier, the author of an excellent monograph upon this kind of vases, denies that any such inscription can be found upon them.

The Indian and the Pioneer: An Historical Study. By Rose N. Yawger. Two vols. in one, pp. 189 and 143. Syracuse, N. Y.: C. W. Bardeen. 1893.

THIS book ought to ask pardon for being born, and its petition ought to be denied. It begins with five corrections of errata, as if to gain credit for painstaking accuracy. Two of the so-called errata do not exist at all, but others much worse swarm by scores. For one instance, Washington, writing of "the mischiefs which would attend a defeat" of Sullivan, is made to say: "We should perhaps lose an enemy, and our frontiers would be deluged in blood" (p. 119). This sentence is nonsense unless we know where to find Washington's letter (Sparks, vi., p. 284). We there discover that the word he wrote was "army," meaning his own, which the printer, or perhaps the copyist, has twisted into enemy.

In her first volume, Miss Yawger has tied up in a nosegay some dozen of her compositions written in school-girl days, or as contributions to local newspapers. These productions, stamped with her individuality and garnished with apt quotations, as well as sprightly and graceful verses of her own, were creditable and useful. They gave her the name of wielding a facile pen as well as popularized much of neighborhood history and legend. But such cut flowers soon dry and wither unless brought into vital connection with the roots from which they grew. The inaccuracies inevitable in juvenile essays should have been tested by original and recognized authorities. Thus, we should not read, as we do (p. 121), that Skoi-Yase, the Indian name of Waterloo, means Rapid Water, when Lewis H. Morgan has said that it means Place of Whortleberries ('League of the Iroquois,' p. 470).

But the "true inwardness" of Miss Yawger's work is not discoverable till her readers are well along in the second volume. Then the truth dawns upon them: they have pilgrimed through many pages of prose and poetry, and their terminal shrine is the academies, chiefly feminine or female, of Cayuga County. Some parents profess peace principles, and for these the orthodox Friends' Academy is described. For those not Quakers, Cayuga Lake Military Academy is exhibited, not only in prose and rhyme, but by six plates of the pomp, pride, and circumstance of war. Some like an institution open to all comers, and for them Union Springs High School opens its doors with Miss Yawger herself an assistant. On the other hand, as "we may believe large numbers to be incompatible with the best educational results," Wells College "limits its numbers to not more than one hundred, beside resident teachers." Its faculty seems, however, quite unlimited, their present number being sixteen, who stand forth with full names and additions. Whatever the heads of these and some other establishments have printed in circulars as their chief attractions and cardinal claims to patronage, is the nucleus of Miss Yawger's second volume. Whoever buys it is likely to call it, in printer's slang, a bundle of "blind ads." He pays money for what its educational creators would thank him for receiving without money and without price. He feels himself a victim of sharp practice, as Pharaoh's daughter must have felt when she learned that she had paid Moses's mother for nursing her own child.

Napoléon et les Femmes: L'Amour. Par Frédéric Masson. Neuvième édition. Pp. xxxi, 334. Paris: Paul Ollendorff; New York: Christern. 1894.

IT is difficult to find a satisfactory reason for the existence of this book. In general, that which is of value in it is not new, and that which is new is of small value. Its purpose is to present a somewhat chronological record of the women of all sorts and conditions who attracted either the temporary or the permanent attentions of Napoleon. This diary of concupiscence begins in the streets of Paris in 1787, with a story from Napoleon's own mouth and pen, and ends with the obscure rumors of St. Helena. All the allusions which, more or less veiled, flit through the pages of the memoir-writers from Mme. Junot to Mme. de Rémusat reappear here, framed in statistics.

M. Masson shows, indeed, an industry worthy of a better object. He has found the exact dates of Napoleon's liaisons with actresses and ladies-in-waiting. He knows when Lady This and Lady That were installed in lodgings at the expense of the State, and he tells just what sums of money were granted to them. Nay, more; he tracks the lady on through the rest of her generally unimportant life, and, with the zest of the true annalist, reveals the names of the towns and the street numbers of the houses in which she lived down to the day of her unimportant death. M. Masson does not take this trouble because he is unable to escape from the fascination of his facts, for they are not alluring; he does it because he soberly believes that any kind of association with Napoleon casts a halo of beautiful immortality over the Emperor's partner, be it in wisdom or be it in folly. Even the husbands whose families Napoleon invaded seem to M. Masson on that account to deserve the statues that are "ære perennius," and the reader is presented with the biography and pedigree of the complaisant or indignant spouse. The longest chapter in the book, the best written and the most interesting, is the one which tells over again the miserable story of Mme. Walewska. M. Masson, however, betrays no sense of the meanness of Napoleon's conduct to the Polish woman; it is M. Masson's theory that the heroic man is not under the common obligation to behave himself. The author thinks that Napoleon's attitude towards these summer butterflies who caught his fancy was the attitude of a *lover*, and he commends Napoleon highly because the latter preserved towards Marie-Louise, on the contrary, the attitude of a *spouse*—a sufficiently Gallic distinction.

The conclusion of all this strange mixture of pornography, exclamatory rhetoric, and political psychology is that Napoleon had "as great a power of loving as of thought and action," that he is "l'exemplaire le plus surprenant du génie masculin," and that "in his relations with women, as in all other relations, he remains superior to other beings." To apply the word "love" to Napoleon's selfish conduct towards women would seem an unnecessary liberty with language, but Bonapartist partisanship has always shown a large trace of the mediæval loyalty. This book is the work of a devoted partisan, and yet it more than confirms the dark picture of Napoleon drawn by

Mme. de Rémusat. To M. Masson's eyes, however, the shades are brightness.

Notes on the Surnames of Francus, Franceis, French, etc., in Scotland. With an Account of the Frenches of Thorndykes. By A. D. Weld French. Boston: Privately printed.

It is unfortunate that the author of this book has failed to explain its intent. The surname is by no means uncommon, especially in Ireland, and on the surface it appears to mean that the first bearer of the name was a Frenchman. We do not, perhaps, understand the value of the few scattered notes in this essay, citing instances of the use of the name in various forms. There is no extended pedigree given, and no connection shown between many of the persons cited, in the first part. The second part traces a Scotch family, the Frenches of Thorndykes, from 1375 to 1617; but we are not informed whether the information is derived from printed or manuscript sources. The author presents his account with as much seriousness as though he were tracing the family of Douglas, or Seton, or Dunbar, and yet the reader at the end is tempted to inquire the cause of such industry in searching the pedigree of an obscure family which ran out nearly three centuries ago. An American genealogy interests many people, and it may often be of value in the study of vital statistics. The history of a foreign family, even if not of historic renown, is often interesting if enriched with documents showing the details of life in former generations. But a mere pedigree of names and dates is of service to few, and must claim a value only proportionate to its originality. We infer that Mr. French has the merit of first printing these copies of charters and other documents; but to obtain any recognition he should have stated the fact more plainly. If Mr. French will prepare genealogies of the Frenches in America, or trace the families of Weld, Davis, Williams, or others of his ancestors in this country, he will be doing a good work and will not fail of due recognition.

BOOKS OF THE WEEK.

Ariel Shakspere. Fourth Group. Putnams. $5.25.
Chambers, Julius. On a Margin. F. T. Neely. 50 cents.
Evans, Mrs. Elizabeth E. The Story of Louis XVII. of France. London: Sonnenschein.
Foster, R. F. Duplicate Whist. Brentano's. $1.25.
Gamble, Eliza B. The Evolution of Woman: An Inquiry into the Dogma of her Inferiority to Man. Putnams.
Harraden, Beatrice. Ships that Pass in the Night. M. J. Ivers & Co. 25 cents.
In Memoriam John Larkin Lincoln. 1817—1891. Boston: Houghton, Mifflin & Co. $3.
Keith, Leslie. 'Lisbeth. Cassell. $1.
Manual of Statistics for 1893. Nicoll & Roy. $3.

"*A heavy task well done.*"

HITTELL'S MENTAL GROWTH OF MANKIND IN ANCIENT TIMES.

From Savagism through Early Christianity. 4 vols. 12mo, in box, 6.00.

"A heavy task well done. . . . His four volumes are a monument of patient industry. In spite of the multiplicity of facts to be mentioned and considered, they are also highly attractive reading They will be a treasury for future workmen. Such a summary was badly needed, as any one can testify who has meddled with any one of the themes which formed a part of Mr. Hittell's scheme"—*N. Y. Tribune.*

"The range of study is immense. . . . He has produced a work of great utility. . . . Shows not alone industry of research, but fine powers of classification The history of man from the primeval times up to the Christian era is thoroughly treated. Without being as special as is Herbert Spencer, the entire subject of sociology is discussed."—*N. Y. Times.*

HENRY HOLT & CO., N. Y.

Yale A Grand Combination. Mixture

For the Pipe.

A Delightful Blend of St. James Parish, Louisiana, Perique, Genuine Imported Turkish, Extra Bright Plug Cut, Extra Bright Long Cut, and Marburg Bros. Celebrated Brand "Pickings."

Marburg Bros., Baltimore, Md.

ATLANTIS.

The only newspaper in this country written in

GREEK,

And giving latest intelligence on the Archæological activity in GREECE. Next issue will contain a description of the recently excavated theatre at Delos.

Published weekly. Yearly subscription, $5.

Address THE "ATLANTIS," 2 and 4 Stone St., New York.

For sale at Brentano's, Union Square.

THE LENOX LIBRARY

(AND READING ROOM),

Fifth Ave. and 70th St., is open every weekday from 10 A. M. to 5 P. M.

Exhibition of rare books; two galleries of paintings.

Admission free; no tickets required.

PAPER BY THE POUND and envelopes. Greater quantity, lower price than by quire. Samples, all grades, prices marked, on receipt of 10c. WM. R. JENKINS, fine stationery, 851-53 Sixth Ave. (48th St.) N. Y.

HISTORY.

Deeds of Montrose:

The Memoirs of James, Marquis of Montrose, 1639–1650. By the Rev. George Wishart, D.D. (Bishop of Edinburgh, 1662-1671). Translated, with Introduction, Notes, and Appendices, and the Original Latin (Part II. now first published), by the Rev. Alexander D. Murdoch, F.S.A. Scot., and H. F. Morland Simpson, M.A. (Cantab.), F.S.A. Scot. Fettes College. With a portrait from Girard Honthorst's painting of the Marquis (1649), Plans of his last campaign, etc. 4to, $10.00 *net.*

Madoc:

An Essay on the Discovery of America by Madoc ap Owen Gwynedd in the Twelfth Century.

By Thomas Stephens, author of "The Literature of the Kymry." Edited by Llywarch Reynolds, B.A. Oxon. 8vo, $2 50.

Our Indian Protectorate:

An Introduction to the study of the relations between the British Government and its Indian Feudatories. By Charles Lewis Tupper, Indian Civil Service. Large 8vo, $5.00.

The Nation.

NEW YORK, THURSDAY, MARCH 22, 1894.

The Week.

THE passage of the so-called seigniorage bill by the Senate was not unexpected. It has produced little or no disturbance as yet, because the common expectation is that the President will veto it, and that it cannot be passed over a veto. It is also a fact generally recognized by the business community that the bill, even if it should become a law, would not produce much mischief under the present management of the Treasury. This is undoubtedly true. The worst feature of the bill is that it brings us once more to the parting of the ways, and sends the nation upon the wrong road; for, as surely as it becomes a law, so surely do we again start on the descent from which we were rescued only by the repeal of the Sherman act last year. We are at the same parting of the ways—the same in substance—as when Gen. Grant vetoed the inflation bill. That was likewise a scheme for depreciating the currency. All the silver and greenback measures have that common end. Gen. Grant vetoed the inflation bill. It disappeared, and the greenback party withered as though it had been struck by lightning. Depreciation of the currency would never have been thought of again during the present generation but for the decline in the price of silver—a pure accident, but a most calamitous one to this country. It was this accident that put new breath into the unburied corpse, and gave to the cheap-money crowd the ascendency which they enjoyed from 1878 to 1893. How the idea was ever conceived that it would be a social benefit to have a depreciating and fluctuating dollar, is an insoluble mystery; but we know that it exists to a very considerable extent in this country, and that it now and then makes head against all the forces of reason and experience.

While the seigniorage bill was pending in Congress the attention of its friends was invited to the fact that it would, if it should become a law, produce contraction of the currency rather than expansion. The second section of the bill says that all Treasury notes issued under the act of 1890 which come into the Treasury shall be cancelled, and that thereupon silver certificates shall be issued in the manner now provided by law. Now, suppose that Messrs. Lazard Frères, who happen to be exporting a little of the yellow metal at this time, take a million of these notes to the sub-treasury and demand and receive gold for them The Bland seigniorage act being in force, the secretary has no option but to cancel the $1,000,000 of notes thus received. Then he looks to see what law may be in force to enable him to issue silver certificates, and he finds that the only law on the subject of silver certificates is one which authorizes the secretary to issue them to persons depositing standard silver dollars in the Treasury on their demand, and not otherwise. This is the act of February 28, 1878, the Bland-Allison act. It is doubtful, indeed, whether the terms of this act apply to any silver dollars coined under any other act; but supposing that they do, the fact still remains that no certificate can be issued except to a depositor of silver dollars. So the net result would be that $1,000,000 of Treasury notes would be cancelled—merely this and nothing more. Perhaps this would not be a bad thing in the long run, but it would not be exactly what Mr. Bland intended.

The fact that no Southern State but Delaware, Maryland, and Louisiana cast a vote against the seigniorage bill in the Senate on Thursday gives renewed emphasis to Mr. Hewitt's recent observation about the way the South is represented in Congress—or, if you please, misrepresented. More than once within a few weeks the Legislature of Maryland has practically passed censure on Senator Gorman's attitude towards the tariff bill, and on Thursday night a leading Democratic organization in West Virginia sent formal word to the United States Senators from that State that they ought to live up to their party pledges and support tariff reform or resign their seats. It is undoubtedly true that the silver heresy has a stronger hold on the South than the protection heresy. The South may be said to be traditionally for tariff reform. The silver question is a newer issue, and, like its twin sister the greenback question, appeals easily to men uneducated in economic matters, whose incomes are small, and who always have to face a certain amount of indebtedness.

As it passed the House of Representatives, that portion of the Wilson bill which proposes a tax upon incomes in excess of $4,000, provides (section 55) that "in estimating the gains, profit, and income of any person there shall be included . . . the amount of money, notes, bonds, choses in action, and the value of any personal property received by gift, devise, or inheritance" within the calendar year. Manifestly a federal inheritance tax of 2 per cent. is thus levied upon all bequests of personal property which exceed $4,000, and, in case the legatee's income for the year in question approaches the taxable limit, upon bequests even smaller than $4,000. With the purpose of the Wilson bill as commonly interpreted—viz., to impose a tax upon incomes—this provision is entirely at variance. Income, properly understood, is a recurring revenue; it is, as a rule, more or less steady, foreknowable. A gift, devise, or inheritance comes to the recipient once for all; it is not, for the most part, followed by other like sums from a similar source. Legacies constitute a superaddition to the legatee's income, frequently a considerable, and in general an unexpected or, at least, an unearned, superaddition. They thus increase, for the time, the recipient's ability to pay taxation, and it is precisely upon this ground that inheritance taxes are chiefly defended in most countries where they exist. To tax legacies as if they were a part of income is an absurdity. Such an absurdity the Wilson bill commits in reference to bequests of personal property, but not in reference to devises of realty. That the bill, being thus absurd, is not consistently absurd, may be due to inadvertence. Those sections of the bill which propose an income tax are evidently drafted with less care than the parts for which Mr. Wilson is more directly responsible. Nevertheless, it is incredible that any portion of the bill has been drawn so heedlessly as to impose an unintended tax of not less than fifteen millions annually; the blunder would be too gross.

A more probable explanation is, that the death duty upon personal property was introduced into the bill as a compensatory tax. Such is the character of the inheritance taxes in our States, where the "general" property tax notoriously fails to reach any considerable share of the personal property legally liable to taxation. But the federal Government has no property tax to be compensated. As a matter of fact, however, the proposed federal income tax will probably bear with disproportionate weight upon income from real property. Income from personal property will more generally evade taxation, in spite of the attempt to tax income from corporate bonds, etc., as nearly as possible at its source. But, on the other hand, salary income will certainly suffer still more than income from real estate. As a compensatory device, then, for the probable shortcomings of the income tax, any inheritance tax whatever, levied exclusively upon personalty, must be painfully defective. The particular inheritance tax imposed by the Wilson bill is further objectionable both because of the form in which

the levy is provided for, and because of the size of the legacies taxed. If a federal inheritance tax upon personalty be needed at all for a compensatory purpose, that purpose should be avowed, and the tax enacted clearly and unmistakably in a separate section of the law, not hidden away in a couple of lines of a section devoted to a different subject. Likewise the compensatory tax should be levied, not upon a four-thousand-dollar legacy, corresponding at 5 per cent. to an income of two hundred dollars, but only upon bequests of such sums as, at current rates of interest, will afford the income itself taxable under the law.

We are glad to agree for once with the organ of the Manufacturers' Club of Philadelphia. That paper strongly protests against the increase in the tax on distilled spirits. "The tax now levied upon alcohol," it says, "is just about *six times* the value of the material; that is to say, every manufacturer who uses alcohol pays a tax of 500 per cent. for the privilege." As a raw material of industry, alcohol stands in the first rank, along with iron ore, wool, and lumber. It enters into the composition of innumerable things, and is perhaps of more importance to the medical art than any other article or agent in the world. In Great Britain the Government furnishes methylated spirits to manufacturers free of tax. By this means the alcohol is treated with wood gas, which renders it repulsive and sickening as a beverage, but does not impair its qualities as an agent for manufacturing purposes. Plans have been brought forward from time to time for introducing this system here, but they have been found inadequate by reason of the wide extent of the country and the consequent difficulty of keeping the business under strict surveillance. It is the opinion of those most competent to judge that if we should attempt to make alcohol used in the arts free of tax, we should be obliged to make it free for all purposes. Therefore, when it is proposed to put an additional tax of 20 cents a gallon on raw spirits, two gallons of which are required to make one gallon of alcohol, a very serious question is presented apart from the question whether the present tax is or is not the most judicious one. Mr. David A. Wells, whose authority on this subject is undeniable, holds that the present tax of 90 cents per gallon is the highest that the conditions of this country permit, that the maximum of revenue is derived from it, and that any considerably higher rate would lead to illicit distillation on a large scale. Of course there will always be disputes on this theoretical point, but there can be none on the point that an additional tax of 20 cents would be a severe and needless blow to many manufacturing industries.

A correspondent asks whether the retaliatory duties levied by President Harrison upon the coffee and hides of Colombia and Venezuela will s and under the Wilson bill. Beyond all doubt they will not, whatever may become of the reciprocity treaties. The duty of any collector of customs will be to enforce the law as he finds it. Under the new tariff, coffee and hides will be admitted free of duty, no matter where they come from, and no power is given the President or anybody else to make any discriminations. The collectors will have no occasion to concern themselves any longer with President Harrison's fulminations, after his warrant of law for issuing them has been destroyed. They will let all that dead past bury itself and collect the duties which the law says they are to collect, and no others.

The Democratic members of the Senate finance committee have at last recovered from their astonishing aberrations of mind on the reciprocity question. They now say that they have never had any doubt that the Wilson bill necessarily destroys the McKinley reciprocity bargains, but that they propose to remove all possible ambiguity on that point by inserting a specific amendment covering the case. This is satisfactory both in itself and as an indication that our lawmakers are not so hopelessly bereft of sense as they sometimes try to make themselves out. No less satisfactory is the decision, now made public, not to insist upon the abrogation of the Hawaiian reciprocity treaty. That was a bona-fide treaty, and in it the United States obtained a valuable consideration—the cession of Pearl Harbor. In return for that we promised the Hawaiians the free admission of their sugar, and if we keep the harbor, we ought to give them what we agreed to pay for it. Moreover, to do so will contribute more to the settlement of the Hawaiian question than all the buncombe speeches that can be packed into a whole set of *Congressional Records*. When the Hawaiians get their sugar free again, while other imported sugar is taxed, their burning republicanism and the immoralities of the Queen should disappear like the early dew, along with their intense desire to be annexed.

The Hawaiian annexationists have scored a great point in getting the "Portuguese colony" to come out strongly for annexation to the United States. This was accomplished in a mass-meeting of that colony held on February 19, when stirring resolutions were passed to that effect. As there are 8,602 Portuguese in the islands, 6,276 of whom cannot read and write, the importance of this accession to the annexation cause will be apparent. But if they are none too literate, they evidently are good patriots, for they also resolved strongly against "the increase of Asiatics" in the islands. As the Asiatics outnumber the Portuguese three to one, and have been in Hawaii, many of them, much longer, the proposal to expel them and to make them register and take out licenses shows how beautifully the principles of majority rule and of human brotherhood are at work in the key of the Pacific. The offensive Asiatics, for their part, held a mass-meeting on February 14, and asserted their right to a continuance of the privileges they had heretofore enjoyed under the Hawaiian Constitution and laws. This, too, is accounted a powerful argument for annexation.

The "balance of trade" in our favor for the past eight months of panic and distress is $218,000,000. Shades of Blaine and substance of McKinley, where is that balance? We know, for they have told us, that such balances are always "paid over," and in "gold." That some $200,000,000 was paid over in 1891, McKinley asserted on his sacred honor, though how it slipped in and who had got it he firmly refused to say. Anyhow it was a great triumph of protection and a crowning proof of the prosperity of the country, showing how exceeding clever we had been to sell the deluded foreigners $200,000,000 more than we had bought of them. But now it seems that hard times are even better than protection to bring about that blessed crippling of our purchasing power. To a mind like McKinley's this must be "significant of much," though to the ordinary mind its principal significance will be that the balance of trade is, as commonly understood, nothing but the balance of nonsense.

Secretary Morton continues to administer the Agricultural Department in an unconventional way which is a constant surprise to the politicians. A practice had grown up of sending scientists and experts employed by the department to the annual meetings and conventions of scientific and agricultural bodies in different parts of the country, whenever their presence was asked, to deliver lectures and read papers on various subjects, their expenses being paid by the Government. Mr. Morton has recently written a letter to the Secretary of the Michigan Dairymen's Association, declining to detail a man from the Agricultural Department to address the body at its meeting in Flint, and giving his reasons for taking this stand. He points out that no provision is made in the statute for the payment of such travelling expenses, and that it is only by indirection that they can be justified. If the secretary has authority to send a man to the Dairymen's Association at

Flint to make a speech or read a paper, he could not refuse similar requests from other agricultural associations. "And tell me," he writes to the Association's secretary, "where the line shall be drawn, and how long, if this practice is continued and grows with the same luxuriance which has characterized its growth in the last three years, it will be before every division in the Department of Agriculture will be filled with vacant chairs of employees who are engaged in lecturing to associations throughout the country, the Government paying their expenses to and from these meetings?"

The abolition of Fast Day in Massachusetts, legally accomplished on Friday, is personally a triumph for ex-Gov. Russell, who first, though unsuccessfully, urged it upon the Legislature. The day had come to be only a pious mockery, in reality nothing but a general holiday masquerading as a time of fasting and prayer. So strong had been the impression of the evil wrought by such insincerity in the name of religion, that many of the more thoughtful religious leaders of the State have for some time advocated making an end of the simulacrum. Its abolition will doubtless seem to many timid souls as little better than a plunge into atheism, but it is really in the interest of religion as well as of common sense and sound ideas of government.

The London *Economist*, which is a very serious paper indeed, is almost alone in the English press in refusing as yet to treat Lord Rosebery as a statesman. It says truly that he is an almost unknown quantity to the British public—that is, much more like our "dark horses" than the British premiers, who generally climb painfully to power through long years in Parliament and many subordinate places, are apt to be. Gladstone had been thirty-seven years in Parliament, and was sixty years old, before he became premier. Disraeli had been thirty-seven years in Parliament, also, and was sixty-nine years old, before he became premier. Peel had been in Parliament thirty-five years, and was fifty-three years old. Palmerston had been forty-eight years in Parliament, and was seventy-one years old. Salisbury had been in the House of Commons fifteen years before he went to the House of Lords, and was fifty-five when he became premier, seventeen years later. But the *Economist* says that "before 1884 Lord Rosebery was practically unknown to the great mass of electors of the United Kingdom." He has had a cabinet position for only two years. He has had little or no opportunity during his life for stating his opinions on the leading questions of the day. Out of this period since 1884—barely ten years — he has lived in seclusion for two years after the death of his wife; so that he has in reality been only eight years before the public, and not in the House of Commons either. The *Economist* says that "Lord Rosebery's opinions are in most cases a matter of conjecture." It says he has done only two things in his life, but has done them both well. The first was his management of the London County Council, in which he contrived to lead the Progressives and yet escape the abuse heaped on them by the Conservatives. The other was getting the premiership. The manner in which he has stepped into Mr. Gladstone's shoes it considers, under the circumstances, "astonishing."

The conclusion the *Economist* draws from all this is that Lord Rosebery possesses in a very high degree the art of political management. He is, it says, what the Americans call a "placater." He "placates" opposing interests as Thurlow Weed used to do. He brings enemies together, and gets them to be friendly out of regard for him, which is all very well as far as it goes, and he has a grand chance for a little "placating" in reconciling the Irish to his rule. But should he now fail, says the *Economist*, to produce good specimens of "constructive political action," his fall will be as rapid as his rise. But it admits that appearances are strongly in his favor.

Public librarians have naturally been interested in the libel suit in which the trustees of the British Museum were lately made defendants, for having on their shelves certain books alleged by certain persons to contain statements damaging to their reputations. The cabled accounts of the decision of the case were somewhat confusing, not to say alarming. The verdict of the jury was, in fact, qualifiedly in favor of the plaintiffs, the findings being that the books were libellous, and that the defendants, though acting in good faith and under statutory powers, had nevertheless failed to exercise proper care and judgment, and were therefore liable in nominal damages. This was dangerous doctrine, involving as it did the duty of the British Museum trustees to maintain a force of 110 legal experts to go through the books and pamphlets and periodicals received each year to make sure that there was no libel in any of them, and imposing, of course, a proportionate burden on other public libraries. But when the case came before Baron Pollock in the Court of Queen's Bench for a review of the law points involved, he made short work of this novel addition to the law of libel. After premising that there was some evidence in the form of the verdict that "the minds of the jury had not been really brought to bear upon the subject submitted to them," he went on to hold that the essential element of publication was entirely wanting. "It never had been suggested that a person should be made liable because there was a book or books upon a shelf in regard to which the owner did not call attention to particular passages." Still less could such a suggestion be made in regard to a body of trustees, acting under the statute and making no profit out of lending books. The baron therefore entered judgment for the defendants with costs. Execution has been stayed pending an appeal, but it seems impossible that any other decision can be reached in any other court.

M. Jannet has been discussing socialism in the French *Correspondant*. He says there are three varieties of it, State socialism, Christian socialism, and real socialism, and that he prefers the last. State socialism, he says, is the most mischievous of all, because, by its promises and legislation, it excites hopes which cannot be realized, and thus engenders the real socialism at the bottom which throws bombs. The same charge may be brought against the Christian socialism, which is pushed by the young clergy of both the Protestant and Catholic churches. This, too, not only excites among the working classes the most extravagant expectations as to what may be done for them by the State, but it preaches that poverty is the consequence of "injustice"; and as injustice must have unjust people behind it, they learn to look on all the well-to-do—that is, on the saving, the industrious, the provident, the energetic and able—as their enemies, who are keeping them out of something that rightfully belongs to them. This myth is kept afloat, too, in spite of the daily demonstrations before their eyes that it is for the most part want of character or intelligence that brings healthy men to poverty. Of seven sons born to the same parents, educated in the same way, given the same advantages, two or three are almost certain to fail or to become "black sheep" and socialists, and howl for a new "law of distribution." M. Jannet comforts us all with the belief that the reign of "collectivism" or State socialism, if it was ever tried, would not last long, because "the day the collectivists got into power the anarchists would be their radicals." But should we then have to try anarchism and bombs before discarding *their* doctrines? The anarchists are just as sincere as the State socialists; their aims are said to be as high; and if we must try every social system before rejecting it, on the strength of what the prophets tell us about it, the bomb system ought to have a chance. The trouble is, that by the time its failure was fully acknowledged, we should all be hiding in the woods, or among the ruins of our houses, *in puris naturalibus*.

THE REFERENDUM.

THE opinions of the judges of the Massachusetts Supreme Court as to the constitutionality of an act referring the question of woman suffrage to the people have, upon several accounts, an interest for the whole country. There were really three questions submitted by the Legislature to the court: first, would it be constitutional, in an act granting to women the right to vote in town and city elections, to provide that such act should take effect when approved by a majority of the voters of the State? second, would it be constitutional to provide that it should take effect in any town or city where a majority of the voters approved it? and third, would it be constitutional if it allowed women themselves to vote upon it? As has been announced, four judges answered no to all three questions, two answered yes to all, and one answered yes to the second question alone. It may be added that all the judges answered on the assumption that the Legislature had the power to ordain woman suffrage at municipal elections of itself; and a bill to that effect is now pending. Hence the question of the referendum was really the issue involved, the extension of the suffrage not materially affecting the logic of the opinions.

It was conceded that the Legislature had power to pass statutes that should become operative upon the happening of a future event, and even to do this when that future event was a popular vote. But a majority of the court held that a *general* law could not be conditionally enacted in this manner, according to the authorities, and they therefore replied to the first question in the negative. As to the second question they felt more difficulty, since from the earliest times laws had been passed which delegated to the inhabitants of towns power to legislate concerning subjects proper for municipal control. Such were especially statutes uniting two towns, limited to take effect upon the approbation of a majority of the voters in both, and statutes of the "local option" class, regulating the sale of intoxicating liquors. But the majority of the judges held that a statute enlarging the franchise did not relate to a subject proper for municipal control. It was clear to them that such an act did not relate to the powers of towns and cities so much as to the determination of the classes to be invested with political power. They argued in support of this view that a very anomalous condition of affairs would result if women were allowed in some communities to vote on questions concerning taxation, while in others they had no voice. They added that the principle of local option had nowhere, to their knowledge, been availed of in any of the States where the suffrage had been conferred upon women.

The opinions of the minority of the judges are very short, and, of course, traverse the proposition that a distinction exists between general and special laws. The general position taken is, that the Legislature of Massachusetts has power to enact any law that it chooses, unless that power is expressly or impliedly withheld from it by the words of the Constitution. Hence, it has power to limit its own acts by making them subject to the approval of the people, since this is not explicitly prohibited. Justice Holmes inclines to think that an act would be constitutional which was made subject to the approval of a single man. However this may be, he regards the doctrine that the approval of the sovereign body cannot be asked by the Legislature as an echo of Hobbes's theory that the surrender of sovereignty by the people was final, and he observes that most of the reasoning by which this view is supported is stated in language which may be traced back to the 'Leviathan.' But "Hobbes urged his notion in the interest of the absolute power of King Charles I., and one of the objects of the Constitution of Massachusetts was to deny it."

The position of the majority is most forcibly suggested in the opinion of Justice Knowlton, who answered two of the questions in the negative. Stated briefly, this position is that our governments consist of distinct bodies, legislative, executive, and judicial, and that it is not consistent with this form of government that these powers should be delegated. The Governor ought not to pardon a convict on condition that the people ratify his act, the judges ought not to put a certain construction on the law provided the people approve it, and the Legislature ought in like manner to be held responsible for the laws it passes. Otherwise it might make all its acts conditional upon popular approval, and we should find ourselves living under a pure democracy. Undoubtedly the representative or expert theory of government has been a good deal damaged of late by the inferiority of the so called representatives of the people in all countries having popular government. But it scarcely admits of doubt that still more unfit men would fill these places if the principle were to be established that the people may require all laws to be submitted to them before they become effective. Few persons would care to employ a physician or a lawyer who, having once taken charge of a case, should leave the determination of the successive steps to be taken to the patient or client. In short, if the principle of the referendum is to be introduced, the theory of representative government must be changed. A legislature that simply proposes laws subject to the approval of another body, is not an unknown institution, and was tried with other experiments at the period of the French Revolution; but such a body can have little weight. The pessimistic view may be correct, that no improvement in the character of our legislators is to be looked for, and in that case we might as well try the referendum; but we are not yet ready to despair.

In this connection we may refer to an essay published by the University of Pennsylvania entitled 'The Referendum in America.' The author, Mr. E. P. Oberholzer, extends the word to the submission of constitutions as well as statutes for ratification by the people. Very good grounds, however, exist for maintaining the distinction which Mr. Oberholzer would ignore. It is true that of late years constitutions have tended to depart from their proper form of bills of rights, or bodies of customs and institutions that are placed outside of the sphere of legislative interference, and have contained a good deal of matter which, owing to the fluctuating character of its relations to popular welfare, should generally be dealt with by statute. Doubtless the inferior work of our legislators has promoted this tendency; but it is still legitimate and desirable to preserve the distinction to which we refer.

In the department of statute law it appears that the Legislature has invoked the assistance of the people in dealing with a multitude of subjects. One of the first subjects to be submitted to the popular vote was the location of the State capital, and other buildings are often placed in accordance with the popular expression of opinion. Laws providing for the collection, borrowing, or expenditure of money are frequently conditioned upon popular approval. It is interesting to note, with reference to the question of woman suffrage, that the Constitution of Wisconsin authorizes the Legislature to enlarge the franchise, but only upon condition that the law providing for the change shall have been approved by a popular majority. It is to be observed, however, that most of the instances under this head arise under constitutional direction, and do not raise the question agitated in Massachusetts.

A wide field is entered upon when the powers of the smaller political bodies, such as counties and towns, are enumerated. We incline to the opinion that only confusion results from the attempt to represent the exercise of direct legislative powers by the people of these communities as illustrating the use of the referendum. Whenever the number of citizens is small, representative government is unnecessary; and when there is no representative government, there is properly no referendum. The term implies that some body having legislative powers relinquishes those powers to some other body. It is an abdication, voluntary or involuntary, on the part of

representatives in favor of the electors. If this is kept in mind, it is evident that a vast deal of half-forgotten lore concerning the difficulty of direct legislation by a democracy will come into use, and will unquestionably be useful. The meddlesome propensity is so strong among men that measures intended to enable them to engage incessantly in the work of legislation can claim no presumption in their favor.

THE NEW LIBEL LAW.

THE full text of the new New York bill about libel for which some of our contemporaries have been agitating so fiercely, was printed on Thursday. It is really a very harmless document. It compels proof of actual malice in order to make libellous the publication of a "fair and true report of any judicial, executive, or other public or official proceeding." It also enables the defendant, in a civil action for libel, to set up in mitigation of damages the fact that he published "a retraction and suitable apology" as soon as his attention was called to the libel, and also that the plaintiff has already recovered damages for the same libel from other parties.

That this makes any change worth mention for the benefit of the newspapers we do not see. A suit against a newspaper for publishing a fair report of judicial, executive, or any other public or official proceedings is almost a thing unknown. The *Evening Post* was once threatened with a libel suit for remarks based on the report of a committee of the Legislature, but the suit was never heard of after the summons was served. We doubt if a verdict for libel has ever been obtained against a publisher for any such reason. Moreover, the present bill simply enables the defendant to offer the retraction and apology, and the damages in another suit, in mitigation of damages in his pleadings. He now always pleads them in his evidence and in the address of his counsel. They are always brought before the jury as mitigating circumstances, and the jury always considers them. The only advantage the defendant obtains from this bill is that of getting the judge to charge them, in addressing the jury; but it is, we believe, a general experience that the judge's exposition of the law in libel suits makes but little impression on the jury. They look at the matter from what Director Ely calls "the broad social standpoint," and consider "its general social effect." We do not, therefore, see what good the proposed legislation will do the press.

Any hardships the newspapers suffer under the present law are due in the main to the prejudices of jurymen. As a rule every jury is prejudiced against the newspaper in a libel suit, because, under the present system of editing, libels are nearly always gross and scandalous attacks on personal character, concocted by careless or mendacious news editors or reporters. The conviction or defeat of an editor for libelling anybody in the discharge of a distinct public duty is rare or unknown. The libels are almost always found in the nasty mess which some of our contemporaries call "news." That they know this, and know that they are engaged in a dirty business, is shown by the care with which they exclude reports of libel suits from their columns. They have entered into a sort of conspiracy against the public, by trying to withhold from it the knowledge that there is redress in the courts for attacks on private character in the shape of the scandalous "fakes" in which some of them indulge. All the courts have such cases on their calendars, and the juries make the defendants smart, but the world outside rarely hears of them. If it did, libel suits would be more frequent.

The kind of law which the press really needs is one which will restore the respect of juries for the newspapers. This is now absolutely dead. The "pictures," instead of restoring it, have added to the stock of contempt which nearly every intelligent man feels for them. They all go before jurymen with a heavy load of prejudice to overcome. Nearly every jury contains a man whom they have annoyed, disgusted, or outraged, and he feels a fierce joy in having a publisher at last under his hand. Nobody wants the libel law changed for the publishers' benefit. Most people would like to have it made more stringent. Here is the trouble. There has probably no change occurred in the modern world so great as the change in the public feeling towards the press within the present century. Fifty years ago everybody hailed it as a wonderful addition to the instruments of civilization and enlightenment. This feeling is totally changed, and not a few even go about asking whether our civilization can resist it. The indictment of his own press that M. Brunetière, the editor of the *Revue des Deux Mondes*, made the other day before the French Academy, was a very mild description of ours. Ignorance and frivolity are the vices of the French press of to-day, to which a portion of ours, in the estimation of our own public, adds salaciousness and silliness. One hears this everywhere if there are no reporters present; and to be sure of their absence, one has to look under the table and in the china closet. A swarm of young men is being trained up all over the country to consider prying and lying and distorting creditable professional pursuits if any fun can be got out of them.

It is this state of public feeling that ails the newspaper publishers, and not the state of the law of libel. Ever since the Shipley case, the law of libel has never hurt any writer or editor. It is the feeling of the juries about his business which hurts him. They take the law into their own hands, no matter what the statute says or the judge says, and they make the dirty gossip smart whether he is malicious or not.

MACHINE GOVERNMENT.

IT is a long time since a Governor of New York has been confronted with such an indictment as the Civil-Service Reform Association of this city has brought against Gov. Flower for his performances with the civil-service law of the State. They charge that he has failed to take care that the law be faithfully executed; that he has himself violated it, and that he has connived at its violation by others. Each of these charges is sustained by an overwhelming mass of evidence taken from official records, and is proved so conclusively as to leave no reasonable doubt of the Governor's guilt.

In support of the charge that he has not taken care to have the law faithfully executed, it is shown that on the first of June, 1893, there were 146 persons illegally holding office in the State service, having been appointed without the examination prescribed by the civil-service rules, and that seventy-eight of these had been appointed during Gov. Flower's administration. It is also shown that these seventy-eight positions constitute 45 per cent. of all the positions in the departments in which they exist that come within the competitive examinations in their class. In support of the charges that the Governor has himself violated the law and connived at its violation by others, it is shown that he has not prepared and caused to be enforced rules providing for competitive examinations; that he has, on the contrary, removed and permitted to be removed from the schedule requiring competitive examinations sixty-nine positions which had been in it for years; that after the State Civil-Service Commission had refused to exempt certain positions from examination, including all of the fifty employees of the Dairy Commission, the Governor personally ordered the exemption, thus being guilty "not only of a marked violation of the provisions of the law, but also of an abuse of authority"; that in consequence of the announced purpose of Mr. Roberts, after his election to the comptrollership in November last, to refuse to pay salaries to persons who held positions in the service in violation of the civil-service act, the Governor has transferred thirty-four employees from the competitive schedule to the exempt and non-competitive schedules, in order thus to legalize their appointments and enable them to draw their salaries.

These are only a portion of the specifications with which the charges are sustained, but they give a correct idea

of the whole, since they show on the part of the Governor an almost utter absence of any desire to enforce the law. The association, in summing up the case, declared that, "except in the State hospitals and a few minor institutions, the civil-service act has been practically nullified," and that the "violations of the law during Gov. Flower's term of office have taken place with his full knowledge and consent."

These charges, which the judiciary committee of the Senate are to consider, throw a flood of light upon the kind of government which has been administered at Albany since the advent of Hill in January, 1885. Gov. Flower has simply been carrying forward the system which Hill organized and set in motion, and which is, in a word, government by the machine for the benefit of the machine. Nothing is more hateful to the Hills, Murphys, Sheehans, and Flowers than a civil-service law, and they have never been able to look upon it in any other light than as a law to be got around. They "beat it," as their phrase is, whenever they are able to do so, and when that is not possible they violate it directly. It has been shown during the past few weeks that not only has the State service been filled with machine followers in defiance of the civil-service law, but that the number of places has been greatly increased, and that the cost to the State has been steadily and rapidly rising, not merely because of additional salaries, but because of extravagant and more or less illegal expenses which unscrupulous officials have been incurring by straining the provisions of the law.

If we ever get at the full truth about the workings of these eight or nine years of machine rule, we shall have a revelation which will astonish the public scarcely less than did the developments of McKaneism at Gravesend, of Murphyism at Troy, and of Sheehanism at Buffalo. It is absurd to believe that the Hills, Crokers, Murphys, McKanes, Sheehans, and Divvers, whose political methods are found on examination to be criminal, can, when they are trusted with administrative offices, produce a kind of government which is different in its essential characteristics from their politics. Men who nominate Maynards for the bench, and whose methods in political contests lead to the commission of crime, including murder, cannot be expected when in office to have any regard for law, or any nice scruples about the use of public office or of public funds.

AMERICANS AT THE ENGLISH UNIVERSITIES.

CHICAGO, March 10, 1894.

THE army of American students who annually invade the universities of Europe bring home strong impressions and publish them. That they make some impression in return is seldom recorded so directly as it was in Cambridge, Eng., on February 15, when the Senate of the University discussed the report of the council on post-graduate study. The proposal made by the council was that graduates of certain recognized universities, foreign as well as English, should be eligible, after matriculation and three terms of residence in Cambridge, to the degree of Bachelor of Letters or Bachelor of Science, on presentation of a dissertation. The debate on this apparently innocent proposition was shared in by some of the most prominent men of the university, and its tenor was particularly interesting to Americans, for the wandering American graduate has clearly much to do with the disturbance. His objection to entering the university where he would be received only as an undergraduate was pointed out by Dr. Lawrence, lately of the University of Chicago. Dr. Sidgwick (as quoted in the *University Reporter* for February 20) stated that "the demand for facilities for post-graduate study had come mainly from Americans, and therefore they were primarily present to his mind." Dr. Jackson added his testimony: "He received a good number of visits from American students passing through England. . . . Such students never thought of staying to study at Cambridge, because they could get no recognition."

Now, the practical question involved can have but small issue for us, for it is improbable that any change so great as this will be made in Cambridge ways in time to affect any one now living. But while the Cambridge Senate are debating, with some naïveté, whether or not the proposed bachelor's degree would satisfy the student from abroad who has one already by hypothesis, and whether the ignorant world would not imagine that the "Litt.B." and "Sc.B." implied not only as much proficiency but as much residence in Cambridge as the old B.A., it is worth while to notice that the conception of graduate study, of the work of the seminar, is associated in the minds of Cambridge men with foreign students mainly. It is often said in explanation that England, by the pursuit of a literary ideal in education, has cut herself off from the stream of progress which finds its true outlet in the minute scientific methods of the Germans. Thus the fact that so few foreign students find their way into Cambridge and Oxford is certainly related to the fact that so few monographs find their way out. This, it is said, is the reason that, while the Leipzig student is eagerly scanning the horizon for a new thesis, the gallant young army of Cambridge first-class men are marking time, with great flourish of trumpets and every splendor of equipment, after having brilliantly captured the same strongholds in the way of examination that have been as brilliantly captured a hundred times before.

Such, I believe, is the popular view of the case, but scholars know better. No one can seriously assert that the demand for exact knowledge, for a scientific basis on which the æsthetic superstructure may rest, has not been felt as deeply in England as in the rest of the world. It has been responded to by the stream of publications from the university presses, and by the methods of teaching in schools and colleges. On the other hand, the charge of pursuing a literary ideal cannot be fastened on the English educational methods of to-day. It is the fashion in Cambridge as much as anywhere else to prize an author's language above his meaning. Although the English are a literary race, and it is as natural to the ordinary Englishman, with his strong sense of decency in all things, to express himself well as it is to a German to express himself ill, still I should be sorry to think that a system of classical education anywhere could be conducted with less conscious literary purpose than in Cambridge. If it be objected that, after all, more of the graduates of Cambridge turn to literature than of Berlin, the reply is obvious, that if the Germans were sent to Cambridge and the Englishmen to Berlin, the case would be reversed. It is a question of race, not of education. A sheep and a cow may live in the same pasture, but in the one case the grass will ultimately become mutton, and in the other beef. The writing of Greek and Latin verse, which has had much to do with fixing the stigma of "literary" on English methods, is far from having a pure literary aim. When Prof. Jebb points out in lecture that the emendation proposed by a learned German for a line of Sophocles involves a false quantity, the class laughs with a comfortable sense of safety from such slips. It is to achieve this sense of safety, this practical, every-day knowledge of an important and difficult part of the science of the classical languages, that the English student laboriously learns to turn out Greek and Latin verses. But the theory that England's secondary place as an educator is due to a literary bias can in any case apply only to the study of language. In natural science or mathematics whatever work is done must be scientific. Yet it is as true in these departments as in language that the monographs come chiefly from Germany, and that American students go to Germany to learn to produce them.

It is plain, then, that we must look for another reason why England so completely consumes her own educational products. It is, of course, known to every one that English education to-day is governed by an elaborate system of examination, chiefly competitive. Any boy who is going to enter one of the universities, or the army, or the civil service, or a learned profession, is taken possession of by the system from childhood. No one, I think, who has not lived in the midst of its workings can appreciate its effect upon individual students and thus on the whole mass of scholarship. A boy comes up to Cambridge from school when he is about eighteen. He has already chosen his specialty, which will be mathematics if he wishes to enjoy the flower of what Cambridge has to offer, and he has been working at it almost exclusively since he was fourteen. He has become inured to examination already by competing for prizes and scholarships, and his mind has begun to exhibit some of the traits characteristic of the examinee. He is methodical, economical of his time and his tissues, selects for acquirement the facts and ideas that will pay, and then masters them absolutely. His "little-go" once passed, he need never know any more of anything but mathematics. Thus he enters upon the three years' race in perfect training and determined to win. The life of a reading man at an American or German university may perhaps be summarily dismissed by his biographer, for the chief incidents in it are his mental experiences, and his ability as compared with that of other men is gauged, as it is in the world of affairs, by general impression. When he takes his degree, he is perhaps subjected to a formal classification, but this is generally absolute, without reference to other people. In the case of the Cambridge man, on the other hand, the inward life is overshadowed by another of the greatest externality. His career is a drama, depending on the dénoue-

ment of tripos to make it tragedy or comedy, and freely commented on by the spectators, his acquaintance. By the end of his second year he has pretty well covered the ground of the subjects required for tripos, and the third year is devoted chiefly to revision and trial papers.

This third year is crucial. The student's daily successes or failures are momentous to him and his coach. Dangers are manifold without and within. In the first place, it sometimes happens that, in the strain of this part of the race, the boy outgrows the brilliant precocity which put him ahead of his rivals, and emerges merely an ordinary young man with no further possibilities of use. This disaster is technically known as "going stale," and its symptoms are as marked as those of a physical collapse. Another danger is that, as the man grows up, his brains may be too strong for his will. It must be borne in mind that reading for tripos implies monastic obedience. The student's business is to master what is set before him; the responsibility of selection lies with the coach. The satisfaction of intellectual curiosity must be postponed by any one who has a mind to be a wrangler. To revel in elliptic functions when he ought to be binding his soul to rigid dynamics, is as disastrous as any of the more ordinary forms of riotous living. All these struggles and difficulties may lie in the path of a man who yet has all his heart in mathematics; but the imagination goes on to the case of one who finds he is in for the wrong tripos. A man who has engaged himself to marry the wrong woman is in a comparable dilemma.

However, the third year draws to its close and the crisis approaches. Lucretius, who thought it agreeable to watch the storm-tossed mariner from the shore and the battle from a place of safety, would have found it to his taste to spend a May term in Cambridge, a free man himself but walking with comrades about to go down into the arena of tripos. The reading of the mathematical lists is one of the most instructive spectacles that can come under the foreigner's notice in England. When he bears in mind the nature of the test on which so much depends, that the accident of a headache or disturbing news may outweigh the faithful and successful work of years, that it is by no means certain the best man will be senior wrangler, he cannot but wonder to see how the national sporting instinct has contrived to make the most serious business in life its minister. The senior wrangler's name is telegraphed in all directions, and in twenty minutes he is being talked about throughout the United Kingdom. His success exhibits the combination of pluck and luck so dear to Englishmen, and his little brother at school secretly resolves with swelling breast to do the same when his day comes.

Such is the drama of Cambridge life as it affects the individual. It is a story of adventure, of heroic achievement, of great risk taken, of the possible intervention of chance, and of well-defined success or failure. This sort of story may be told of the lives of soldiers and brokers, actors and war correspondents. It is not unique as a human experience, but when we reflect that it is also a system of education, it seems so remarkable that we cannot help looking to its results and inquiring why it is that the rest of the story may often be told in a sentence: "So he received a fellowship from his grateful college, and lived happy ever after."

The last ten years of a tripos candidate's life have been spent in preparing for examination. There has been no time in that period when he has not had a definite job before him and some one to see that he did it. After tripos this state of things is done away with. It is true he may spend another year in preparing for the "second part," and if he likes he can go in for a series of examinations at the hands of the University of London. But after these are disposed of there is absolutely nothing in the way of examination left for him in this world. If he is to go on with his reading, it must be from those motives of curiosity which he has been diligently treading under foot. To a certain sort of English mind a man who has stood high among the wranglers has attained as definite a place in the intellectual hierarchy as a captain has in her Majesty's service. If he should never do anything more, he will still be held to have done much. His training has confirmed his natural tendency to love an outward visible sign, and a future of self-culture and inconspicuous work looks colorless to him. In this frame of mind it is the most natural thing in the world that he should turn to the fashioning of other wranglers. The profession of coaching is creditable and lucrative. It gives play to the sporting instinct, and furnishes palpable annual signs of success or failure according to the places one's men get in tripos. It is full of human interest and patent usefulness. To this life, then, are attracted the mass of able, persevering, unimaginative young men who, in Germany, would just as naturally fall to the production of monographs.

The more gifted men, those who have been more ridden by interest in their subject for its own sake, who have not ranged themselves so unequivocally on the winning side in the great match of Tripos vs. Curiosity, might perhaps be expected to free themselves from the effect of the system when they are once free of the system itself. But in their case a subtler influence is brought to bear. The first thing that strikes a foreigner in the English system is the preponderance of technique over wide reading. The subjects set for the first part of the mathematical tripos, for instance, are not extraordinarily high or difficult. The "easier parts" of rigid dynamics, solid analytical geometry, and differential equations are the boundary. A foreigner ventures to wonder at first how they manage to put three years' work into such a curriculum; but his wonder becomes admiration when he sees the ideal of dexterity which they propose to themselves. To master the theories of the subjects is the least part of the work. This is briefly and thoroughly done, and then comes the real business of preparing for tripos, the indefatigable solution of problems. The result of this limitation is that what the student knows he knows with absolute certitude, and consequently he is shy of stepping upon ground less firm. The high finish of his training, the standard of perfection which he has been taught to look to, makes any tentative work seem unworthy of such a preface. He does not feel that he has grasped a subject until he has brought his knowledge of it up to examination standard, and at that rate life is not long enough to permit him to traverse the region of the known and reach the frontier of original work. So this sort of man, too, takes to coaching to earn his living, and spends his life in reading his subject, but produces no monographs.

There is left for consideration the class in whom the impulse to produce is irresistible. When these are men of genius, their case need not be discussed. It makes no real difference where or how Prof. Cayley or Prof. Jebb was educated. But there are plenty of men of talent who find expression necessary, as is shown by the constant publication of educational works. It is these works, the admirable mathematical text-books and class-room editions of classical authors and the seductive introductions to science, that chiefly occupy the productive among English scholars. But these books, with all their ability, are mostly written in the spirit of examination and for the ends of examination—not for the world, but for Oxford and Cambridge. One answer, then, to the query, "Where are the English monographers?" will be: "They are translating Aristotle for the Oxford classmen, or preparing inscriptions for the digestion of candidates for Section E, Part II., of the classical tripos."

It is obvious that this preoccupation with its own means and ends makes an English university outwardly inhospitable to the stray foreigner with ends of his own. He is not preparing for an examination, and therefore he has no status. But if he be only determined enough to use the vale of misery for a well, he will find that the spirit of the place as it acts on him is beneficial, for it gives him a new ideal of zeal in harness, a new impulse towards perfection of detail, and a new conviction that the best is good enough for him. An Englishman, then, has as marked a taste for scientific exactitude as a German and as much industry in gratifying it, but he has chosen to make both subservient to artificial ends. He breaks forth into criticisms of these ends from time to time, and when he lays them aside, as some day he must, the Americans will come to work with him, whatever degree he gives them; and lucidity and permanent worth, expressed on opaque paper, will predominate even on the specialist's book-shelf.

EMILY JAMES SMITH.

THE TRADE BETWEEN SICILY AND THE UNITED STATES.

ITALY, March 4, 1894.

WHILE the Government is doing its level best to excogitate methods of economy and, alas, of fresh taxation for the year's budget, which shows 177 millions of deficit, the agricultural and industrial classes are wisely setting themselves to the too long neglected task of striving to reduce the cost of production so as to compete with foreign producers and to reach foreign markets without the intervention of speculators and middlemen. The fresh crisis which has overtaken Sicilian sulphur, after barely two years' respite, has alarmed all those concerned in an industry in which Italy hitherto has maintained her supremacy. Continental and insular Italy furnishes 80-100 of all the sulphur used in the world for agricultural and industrial purposes. Of this quantity Sicily produces 94-100 of the whole, and is the only province which exports mineral sulphur in the rough, *i. e.*, as soon as it is, by smelting or fusing, separated from the ore. The sulphur found in other parts of Italy, especially in Romagna, is refined on the spot (as is some portion at Catania) and sold in "flour," in "rolls," or in "cakes," or simply ground; but Sicily exports some 300,000 tons annually, and the United States have been for some years importers of about one-third of the whole. The expenses of extracting, smelting, and exporting the article are so great that mines are often worked at a loss—indeed, the cultivators say that they cannot really work at a profit unless the price on board in their

ports reaches ninety-one lire. Prices have stimulated the invention of chemical processes for the extraction of sulphur from pyrites of iron and copper and from other matter to such an extent that, as early as 1873, Signor Sella intrusted Lorenzo Parodi with the mission of studying the entire question—the cost of producing mineral sulphur, the amount of pyrites in the market, and the amount used in the preparation of sulphuric acid. Parodi's report, which fills a volume of 300 pages, resulted in the statement that unless, by the reduction or abolition of the tax on exportation and of royalties, the amelioration of the wasteful systems of smelting, the extraction of the ore by other than hand labor, as costly as it is cruel, the Sicilians could bring down the price of sulphur to seventy-five lire per ton of 1,000 kilogrammes, they would lose the American market assuredly and most of the European markets also.

This prophecy was made just twenty years since. The tax on exportation still remains; the methods of smelting have been improved, but the price of the kilns renders their general use impossible; the proprietors of the under soil still retain rights which in continental Italy belong to the State; the child-laborers increase annually; and if the sulphur trade survives, it is owing to a few factors which could not enter into Parodi's calculations in 1873. The chief of these are the increase in the planting of vineyards, the increase of vine diseases, and the enormous proportions which the preparation of sulphuric acid has attained in the United States. Signor Conti, director-in-chief of Italian mines, made a calculation that, of all the sulphur produced, about 40 per cent. is used in agriculture for diseases of the vines and of cattle; 60 per cent. in industrial operations. The United States, which manufactured only 40,000 tons of sulphuric acid in 1865, now make 580,000 tons, of which it appears that 53 100 is employed in the refinement of petroleum, 35-100 in the treatment of phosphates, 12-100 in other uses of industrial chemistry. For the first two items the pure acid is not required, so it is chiefly extracted from pyrites, of which the States produce 107,000 and import 210,000 tons, consuming in 1892 317,000 tons—thirty-four times the quantity consumed in 1881. Still, the importation of sulphur did not decrease until 1891, the year in which the price rose so high that the cultivators deluded themselves with the fond hope that their woes were at an end, and that Sicilian sulphur could hold its own against all odds. Many mines which produce poor sulphur, or, rather, mineral in which the proportion of the sulphur to the ore is low, were reopened; the number of hands employed rose from twenty-five and twenty-seven to thirty-three thousand in 1892. Calculating a family of miners at four each, adding the numbers of carters, conveyors to the ports, stevedores, etc., we have at the lowest figures some 200,000 of the poor engaged in the sulphur trade. Hence the vast importance for all to secure fresh markets and to preserve their old customers.

The United States in 1861 imported 14,000 tons (of 1,000 kilogrammes); 41,000 tons in 1871; 99,000 in 1881, in which year the price of sulphur on its arrival in America was 180 lire per ton. In 1886 sulphur cost only 100 lire per ton, yet the importation amounted to only 84,000 tons. Then it increased steadily to 134,000 in 1888, to 114,000 in 1889, to 109,000 in 1890. We have no figures for later years of the cost of sulphur on its arrival in the United States, but the extraordinary difference of prices at the Sicilian ports is shown by the following figures for the last twenty-two years (1870 to 1892): In 1870 the price was 120 lire, then 128, 126, 126, 142, 141, 120, 100, 99, 97, 100, 115, 105, 95, 89, 83, 76, 69, 66, 65; in 1890, 77. This was supposed to be the last year of the crisis, and that year the United States imported 109,000 tons. In 1891 the price rose from 77 lire to 112, the United States importing 101,500 tons. In 1892 the price fell to 95 lire, the United States importing 89,500 tons. For 1893 we have not yet the official figures, either of production, importation, or prices, but the cultivators say that the price has fallen 40 per cent., and that, with the exception of the wealthy mines—especially those cultivated by the owners of the under soil, whose exemption from paying royalties enables them to expend their capital in machines for pumping, for the extraction of the material, and on the best kilns for smelting the sulphur—the greater number of mines are worked at a loss, and continue operations only to keep the mines free from water, trusting to better times.

The agitation is now at its height. The *Giornale di Sicilia* has opened its columns to all the competent authorities. The miners themselves, before the dissolution of the Fasci, held an orderly and efficient congress last November. Their demands were for the abolition of royalties, and their temporary reduction to 10 per cent., whereas now they amount to from 20 to 35, the average being 22 per cent. of the *gross* produce, whereas the official report for 1890 showed that, the cost of production being deducted from the selling price, the owners of the under soil received 53 per cent. of the net gains; the cultivators or tenants only 47. Again, the miners demanded the abolition of the infamous truck system, which in many mines binds them to receive a large portion of their wages when, where, and how the masters please. They insisted that the age of children who, allowed to work under ground, are subjected to the torture of bringing up on their backs by steep, irregular steps from thirty-five to sixty kilos of the mineral, should be raised to fourteen. They demanded that the *cassa* (the oblong heap of mineral which they land at the mouth of the pit) should be of the same size throughout Sicily. When an eight-hours' day was proposed, they objected, as they work by the job rarely if ever eight consecutive hours down in the mines, and when prices are low very rarely five days in the week.

The cultivators, whether owners or tenants, at first demanded the abolition of the tax on exportation, which amounts to about one-sixteenth of the whole cost of production. Then suddenly a new current set in. The majority affirmed that this reduction would cause great loss to the State, and would benefit only speculators, who play at raising or lowering the prices, and the foreign purchaser. Many went so far as to demand an extra half-lira per ton to be devoted to the opening of general warehouses. Some demand a syndicate or sulphur trust; others, that the State purchase all the sulphur and fix the price per annum. The one opponent of these schemes is the Marquis of San Giuliano, who was under-secretary for agriculture and commerce during the late Giolitti ministry, and he founds his objections precisely on the fact of the immense importance of the importation of the United States. Long since, in 1888, Signor Conti showed that, though hitherto they have imported all the pure sulphur required chiefly from Italy, and in small quantities from Japan and Spain, there are sulphur mines and indications of them in Louisiana and in Utah. San Giuliano barely alludes to their existence; what he fears is that, unless the price of sulphur is lowered, the go-ahead Republicans will invent new processes for purifying pyrites, and possibly find some better substitute. While approving the opening of general warehouses, he does not believe in the possibility of a syndicate, or the feasibility of inducing all the producers to sell their sulphur to the Trust. Neither does he favor artificial measures for raising the price of sulphur and keeping it at a given price. Whether the State can now abolish the entire duty he does not say, but he insists that it shall at once be abolished *on all the sulphur exported to the United States.* The cost of production he puts, in common with most experts, at 61 lire 90 centimes; by removing the tax there would be a clear gain of 16 lire. But no one seems to understand the uses to which the pure sulphur is put in the United States; hence it is difficult to see how the exporters are to conduct their trade so as to retain the market.

In more departments than sulphur the United States are important factors in the prosperity of Italy and especially of Sicily. Ten years ago the prices of green fruit (oranges, lemons, citrons) imported chiefly from Sicily to the United States, ran so high that the planting of *agrumeti* was regarded as one of the most profitable speculations. As late as 1879 the price per quintal (100 kilos) was 27 lire; in 1887 it had fallen to 18 lire; last year lemon and orange producers were grateful for 12 and thankful for 9 lire. Sicily in 1892 possessed 10,714,342 "green fruit" trees, yielding some one hundred million of oranges, a billion and a quarter of lemons, besides mandarin oranges, citrons, limes, etc. American importation has not yet decreased in quantity, as the following table proves:

Year	Cases of oranges.	Cases of lemons.
1873	737,551	454,035
1883	1,448,057	1,544,220
1892	545,292	2,268,702
1893	1,061,624	2,595,901

"It's the price that kills," say the proprietors. Then the question arises, What does the price depend on? As far as oranges are concerned, probably the competition of home production in Florida and California explains it in part. But we were told, when in Sicily, that the fault lies in great part with the producers, who, since the disease has attacked their plants, have not taken sufficient precautions for its cure, and are also too careless in packing the fruit for export. This complaint was made not long since in Liverpool, where the merchants allege that whole boxes arrived rotten and had to be thrown away. This comes again from the system of middlemen, which is the curse of Sicily. The proprietors sell their fruit to the highest bidder, who sends men to pluck it, contracts for the wrapping, packing, and carting to the nearest station. Now, if the proprietors were themselves to employ the women who wrap and pack, with close supervision so that no fruit damaged by *pidocchi* or other malady, or bruised, be despatched, the higher price for perfect fruit would more than compensate the additional outlay and trouble. No sacrifice can be too great to secure the future of this agricultural product, which, after wine, is the chief, Sicily yielding nine-tenths of all the green fruit grown in Italy. The diseases (*cagna* and *gomma*) which affected the orange and lemon trees in former years were overcome by grafting the plants at the trunk with the bitter Seville orange; but the new distemper, *mitilaspis florescens*, affecting the lemon plant and fruit, seems more difficult to cope with. The lemons affected get brown and shrunken, and although the quality of the fruit is not spoiled, foreign importers object

to receive them. The exportation to Austria is on the increase since the abolition by the treaty of 1888 of the entrance duty. The half million of cases exported to Trieste in 1879 increased to one million in 1892; but all Europe does not offer so large a market as did the United States, which have also lessened their demand for sumac, owing, it is said, to a new process of tanning discovered in Philadelphia.

J. W. M.

PAILLERON'S "CABOTINS."

PARIS, February 28, 1894.

"CABOTINS" was a very suggestive title to choose, and it gave great hopes to all the friends of M. Pailleron, the fortunate author of "Le Monde où l'on s'ennuie," which has been played, I believe, already more than three hundred times. But what is really the meaning of "cabotin"? It is a slang word which was first used for a bad actor, vain and mediocre. We even often say, for short, "cabot," instead of "cabotin." There was once at the Odéon an actor of this sort, called Bocage, who played in tragedy; he had come out after the Revolution of 1848 as a great Republican, and made his appearance at public meetings, where he discoursed upon politics. One evening he was hissed at the Odéon by some students; he advanced majestically towards the front of the stage and asked, "Are these hisses addressed to the actor or to the citizen?" "Neither," said a student; "to the *cabotin*." Bocage was answered and asked no more questions.

The word has since been applied by extension to all charlatans, to all those who live on shams. The field is large, too large for a satirist; you will find the *cabotin*, taken in this sense, in all ranks in society. The professor in "Le Monde où l'on s'ennuie" who delivers philosophical discourses to an admiring circle of ladies, and whose real desire is to carve his way in the world, to get places and honors, and to find a rich wife, is no better than a *cabotin*. He makes spiritualistic speeches and talks of pure love, but he becomes very materialistic in his love affairs. We can find the spirit of "cabotinage" (for the word *cabotin* has engendered this last word) even in the Church. If you should go during Lent to hear the fashionable preachers, you would often be shocked at the amount of worldliness which is mixed with devotion and piety. Need I mention the political *cabotin*? We speak no longer of statesmen, we speak of politicians; and what is a politician? He is a political charlatan, a *cabotin*.

The genus is very large, the number of species is endless. It was a bold attempt on M. Pailleron's part to attempt a theatrical satire on the general charlatanism of the time. He was evidently led to it by the success of "Le Monde où l'on s'ennuie," a mild attack on a certain sort of charlatanism which is found in Paris in a certain number of academical salons. If he had had in him the spirit of Aristophanes, he would have boldly put political charlatanism on the stage, and models would not have been wanting; he did not dare to do it, and it is perhaps well that he did not, for the task would have been beyond his powers. Pailleron has, in his "Cabotins," kept, if not to the academical world, at least to its frontier. He presents us a foolish old man, whose chief ambition is to be made a free member of the Institute. *M. de Laversée* has a wife, who holds a salon, where her pleasure is to receive indiscriminately all the celebrities, all the rising stars—artists, writers, politicians. She has a large fortune and no children. Such a princess must have a sort of maid of honor, a *dame de compagnie;* she has educated a poor girl and spoiled her by accustoming her to a life of pleasure, of agitation, of absolute worldliness. (Mlle. Marsy plays the part of the girl, and Mlle. Brandès the part of *Madame de Laversée*.) One day, they go together to the Salon, with a great following, as usual, of artists. *Valentine* (Mlle. Marsy) stops before a statue, and declares that it ought to have the medal of honor. The statue is the work of an unknown young sculptor who is meditating before his own work; he hears the interjection and the prophecy of the handsome *Valentine*, and naturally finds her very fascinating. He does not know who she is, but he falls in love at once (what we call the *coup de foudre*).

We see him in the first act in his studio, working from memory at a bust of the unknown *Valentine*. He is unhappy, he is poor, he is in debt. An old *brocanteur* comes to see him, naturally a Jew, well known to all the young artists, who has read in *Figaro* an article on the statue of our young sculptor *Pierre Cardevent*, and he knows that *Cardevent* will probably have a medal. He tempts him with money, and finally succeeds in buying his statue at a very small price. The atelier is filled by degrees with the friends of the sculptor—artists, writers, journalists; they all come from the South, they are members of a mutual-admiration society, the "Marmite," and have periodical dinners.

There is not much invention in this episode of the "vie de Bohême." I doubt if the modern ateliers present many types such as those which were delineated by Henri Mürger. The gayety of the friends of *Cardevent* is somewhat vulgar; they are noisy, and they are not really young; they are sceptics, even cynics, and their cynicism is all the more marked in that *Cardevent* himself is represented as very sentimental, ingenuous, and high-minded. The most exuberant of these young men of the Midi is *Pégomas;* he is a journalist who intends to become a Deputy. (This part is admirably played by Féraudy.) He is a mixture of *Rabagas*, of Tartarin, and of the many types of meridionals which Daudet has so well described—men who are overflowing with animal spirits, shrewd at the same time and exuberant, cautious and extravagant, full of life, of cold passion, of apparent faith, actors and *cabotins par excellence*. Féraudy's part is the best in the new play, and without *Pégomas* the "Cabotins" would be like "Hamlet" without the Prince. *Pégomas*, with his violent gestures, his way of buttoning his coat at the moment of great outbursts of eloquence, of throwing his head backwards, with the sonorous ring of his phrases and his strong Southern accent, forcibly reminded me of Gambetta. But he becomes Gambetta only in the second act; in the first act, he is still a mere journalist who wants to become the secretary of *Laversée*, and he has promised to make his employer not only a member of the Institute, but a Deputy.

Laversée, his wife, and the beautiful *Valentine*, with the gentlemen-in-waiting of *Mme. de Laversée*, visit *Cardevent* in his studio, to compliment him on his *médaille d'honneur*. His friends of the Marmite form a great procession in the studio, with palms in their hands. *Cardevent* is now a great man. Reporters come from all sides to ask for details about his age, his birthplace, etc.; they want his photograph. But *Cardevent* has but one thought: he has recognized in *Valentine* the object of his secret love; she has seen also the bust which he made of her from memory. She is prepared to fall in love with him. *Pégomas* seizes his opportunity and *Laversée* accepts him as his secretary. From this moment *Pégomas* becomes the leading character of the play; from this moment, also, the piece subdivides itself into two: a sort of vaudeville, which never rises to the dignity of a comedy, but often falls into the vulgarity of a farce of the Palais Royal or of the Bouffes, is intermingled with a sentimental drama (or rather melodrama) of the Porte St.-Martin. The transitions are often wanting: we are expected to laugh, and immediately afterwards we are expected to cry.

M. Pailleron has several times attempted to touch the sentimental chord of the human heart, but he has generally failed. The natural bent of his character and of his talent is not in that direction; he is much happier when he follows the impulse of his natural gayety. The heroes of the drama which is interwoven in the "Cabotins" are the young *Valentine* and the sculptor *Cardevent*. The penniless girl who has been brought up in the drawing-room of the *Laversées* has been a great flirt; young men speak to her with extraordinary freedom; she is very imprudent—but she is good and honest at heart, and when she falls in love with *Cardevent*, she is thoroughly changed and becomes very earnest. *Cardevent* is a model of all the virtues, though he lives surrounded by the *cabotins* of the Marmite. He is madly in love with *Valentine*, but he is a good and obedient son, and his mother, a nice old peasant of the South, has very strict notions, and she refuses her consent to the marriage of her son with *Valentine*, because *Valentine* is a natural child.

Madame Laversée has always been jealous of the beauty and success of her lady-in-waiting. She has a lover, a *cabotin* doctor, who follows her everywhere, and one day she finds this impudent doctor making a declaration to *Valentine*. *Valentine* despises the doctor, but she has no time to explain. *Madame Laversée* turns her out of her house. Where shall she go? To the virtuous young sculptor's house, of course, and she asks the sculptor's mother to take her with her to the South. After a decent term of probation, the mother gives her consent to her son's marriage with the unfortunate *Valentine*.

This rather commonplace drama is involved, as I have said, with a vaudeville which at times becomes a political satire, for the object of *Laversée* is to become a member of the Institute, and *Pégomas*, his secretary, has proved that the best way for him to reach the Institute is to be first made a Deputy. *Pégomas* has his own project; he does all the canvassing for the foolish old *Laversée*, he writes his speeches, he sends articles to the newspapers, he gives prizes, he inaugurates public buildings. He goes in person to the South, to the department where *Laversée* is a candidate, and he does so well that his compatriots, seeing only him, hearing only him, delighted with his inexhaustible eloquence, finally choose him as their candidate. Who can resist the dictates of universal suffrage? *Laversée* is angry at first, for he has given all the money for the campaign; but *Pégomas* is so lucky that a place becomes vacant in the Institute, and he sees that it shall be given to *Laversée*. *Laversée* will now be buried under the green palms of the Institute, and *Pégomas*, the great *Pégomas*, will go to the Chamber and astonish the world, as he has already astonished his compatriots, by his eloquence, his wit, and

his profound statesmanship. He will probably become a minister, and, as such, he will preside at a banquet of the Marmite.

Correspondence.

THE DUTY ON COAL.

To the Editor of The Nation:

Sir: Your statement in this week's *Nation* that "The duty on coal . . . affects only a corner of New England" seems not to be correct. In this battle we must "speak by the card," and the facts are that, in the last four years, the States on the Pacific Coast imported about four times as much coal from British Columbia, etc., as was imported by New England from Nova Scotia.

Yours truly, Edwin Brainard.

Chicago, March 16, 1894.

UNIVERSITY WOMEN.

To the Editor of The Nation:

Sir: I am glad to see an answer to your correspondent "M. F. K.'s" rather extraordinary letter entitled "Women in German Universities." Women, oftentimes young girls needing chaperones, will go to lectures; they have more leisure than men, and they attend lectures wherever lectures are to be had, largely for that reason. But it is only misleading to confuse such ladies with bona-fide women students—women whose names are either regularly borne on the college books, or are working under definite business relations with particular professors.

I have had considerable experience of advanced education for women, both in this country and in Europe, and I have never heard of any unbecoming or giddy conduct, except the *cause célèbre* in Leipzig some years ago. If any criticism should be made, I would say that the average young woman in college or university takes herself too seriously. Indeed, this criticism may be well applied to women who are "coming on" in all lines of endeavor these days. The *reductio ad absurdum* of it gave us that anomaly, a Woman's Building at Chicago. What women need to learn is, that they have no interests apart from men, intellectual, social, or economic. And, perhaps, it is the sounder education that is going to impress this truth.

I have a little story in point. A definer on one of the ponderous new dictionaries that distract our minds and deplete our purses was an elderly clergyman. He belonged to that generation of men, now happily dying off, to whom women are "females." Naturally, he proposed to define, and did define, "female college." Presently the word came before another definer in the same office, a college-bred woman, who disposed of it with the quiet remark that she saw no need of the distinction. A college is a college, no matter who goes to it.

Léonard Boyer.

New Haven, Conn., March 16, 1894.

To the Editor of The Nation:

Sir: I greatly regret to see my statement doubted. It was, nevertheless, a very real experience in a German university lecture-room during the winter of '91–'92. M. F. K.

Northampton, Mass., March 17, 1894.

[The writer is a perfectly responsible and trustworthy witness.—Ed. Nation.]

ZOÖLOGY IN THE STANDARD DICTIONARY.

To the Editor of The Nation:

Sir: When I assumed the charge of the Zoölogical Department of the 'Standard Dictionary,' I surveyed, with all the care I could give, the field before me, and concluded that the wisest course was to admit most of the current family names, in the higher classes at least. The chief reason for so doing was that the family is a large unit, much used in the discussion of morphological and zoögeographical problems, and any one may come up in some important and unexpected connection. For example, the family *Gracilariidæ* (not *Graciliariidæ*, as your printer has made you say) is of interest to horticulturists and arboriculturists on account of its attacks upon the leaves of various plants. One of the best-known species infests the common lilac in some regions, and it has been the subject of extensive studies. It seems to me that the name of a group with such a record deserves the admission it has obtained in a dictionary having the scope of the 'Standard' or 'Century.' The derivatives apt to be used are given in the simple words "*gracilariid*, *a* and *n*," and "*gracilarioid*, *a*," and indicate the peculiar usage of entomologists. Examples of the constant use of analogous names are innumerable. In *Insect Life*, published by the Department of Agriculture, kindred words may be found in every issue.* The function of such words is chiefly to avoid circumlocution. Thus, *gracilariid* is preferable to "a moth of the family *Gricilariidæ*," or even to "one of the Gracilariidæ."

My own desire and deed were to keep out unnecessary words and such as should not be in an English dictionary. Many thousands found in other dictionaries were therefore excluded. Doubtless I have often failed in judgment, but my own action was the reverse of "padding" or unnecessary augmentation of the mountain of words. Theo. Gill.

Washington, March 17, 1894.

JUVENAL READ BACKWARDS.

To the Editor of The Nation:

Sir: In the symposium of opinions by the bishops of the P. E. church on the fourth article of the Chicago-Lambeth "quadrilateral" (*Independent* of March 8), appears a letter from the Bishop of Missouri, who winds up with what appears to be meant for a quotation:

"To advocate any practices for the alleged promotion of Christian unity which count out the Historic Episcopate, is simply *propter vivendi causas perdere vitam.*"

Put beside this the actual utterance of the old satirist:

"Summum crede nefas animam praeferre pudori
Et propter vitam vivendi perdere causas" (Juv. viii., 83).

Juvenal's clear note of high, courageous, self-sacrificing virtue is distinctly and flatly reversed. We are forced in charity to credit the bishop with a kind of "heterophemy," a momentary lapse of intelligence. Else he speaks as an "incumbent," a placeman, a (mere) official. The old Roman's original "indignation" is infinitely better than the episcopal revision. Y.

*I have counted twenty-seven different names in the last number of *Insect Life* lately issued (Vol. 6, No. 3), and enclose a list with references to pages.

THE INDEX-MAKING CONSCIENCE.

To the Editor of The Nation:

Sir: I have been trying for some years to use the volumes in the series entitled "English Men of Letters." It may surprise the editor of that collection to learn that I have now and then succeeded in finding in one of these books a passage or a reference of which I was in search. Not a volume in the series has an index. There is a table of contents in each; but this is often so brief as to be only an exasperation. I will cite everything that is given to assist the reader in unravelling that tangled skein, the life of Shelley: Chapter I., Birth and Childhood; II., Eton and Oxford; III., Life in London, and First Marriage; IV., Second Residence in London, and Separation from Harriet; V., Life at Marlow, and Journey to Italy; VI., Residence at Pisa; VII., Last Days; VIII., Epilogue. Some of the volumes contain a very brief bibliography or list of authorities, but this is evidently in each case a departure from the general plan of the series.

Recently a new book has come to my attention, interesting to read but difficult to *use*—Littledale's 'Essays on Tennyson's Idylls of the King' (Macmillan, 1893). The work has no index whatever. It should be marked, like Excalibur, on the front cover, "Take me," and on the back, "Cast me away."

Years of vexation have caused me to ask the question, How about the *morality* of publishing books of reference without indexes? A very little consideration for others, an elementary application of the law of love, would seem to be sufficient to arouse in every writer an index-making conscience. A. H. Tolman.

The University of Chicago, March 10, 1894.

Notes.

Houghton, Mifflin & Co. are about to publish 'An Island Garden,' Mrs. Celia Thaxter's description of her own at the Isles of Shoals, with illustrations in color by Childe Hassam; and 'Does God Send Trouble?' by Dr. C. C. Hall.

Thomas Whittaker announces 'Addresses to Workingmen,' by Dean Hole.

A translation of Sabatier's 'Life of St. Francis of Assisi' is in the press of Charles Scribner's Sons.

Frederick Warne & Co. publish immediately 'In Love with the Czarina,' from the Hungarian of Maurice Jokai.

D. Appleton & Co. will issue in the course of next month an English version of Baron de Méneval's 'Mémoires pour servir à l'histoire de Napoléon Ier,' remodelled and revised to suit the present rage by his grandson; 'Aerial Navigation,' by J. G. W. Fijnje, translated and revised by Col. Geo. E. Waring, jr.; 'Memoirs of Edward L. Youmans,' by John Fiske; 'General Washington,' by Gen. Bradley T. Johnson, in the "Great Commanders Series"; 'Evolution of the Public School System in Massachusetts,' by G. F. Martin; a revised edition of 'Smith's Classical Dictionary'; 'Creatures of Other Days,' by the Rev. H. N. Hutchinson; 'Aphorisms from the Writings of Herbert Spencer,' selected by Julia R. Gingell; and 'Symbolic Education,' by Susan E. Blow.

The Jewish Publication Society of America (Philadelphia) will shortly bring out the third volume of Graetz's 'History of the Jews,' and 'Papers of the Jewish Women's Congress,' Chicago.

The Baker & Taylor Co. will issue next

month 'With the Wild Flowers, through the Spring, Summer, and Autumn, from Pussy-willows to Thistle-down,' by E. M. Hardinge; 'The Amateur Aquarist,' by Mark Samuel, Aquarist to Columbia College; 'Christianity Practically Applied,' being a report of the proceedings of the Evangelical Alliance for the United States held at Chicago in 1893.

Charles H. Sergel Co. will shortly publish a 'History of Bohemia,' by R. H. Vickers.

Capt. John Bigelow, jr., Tenth United States Cavalry, has issued a second edition of his 'Principles of Strategy' (Philadelphia: J. B. Lippincott Co.). Considerable changes have been made in matter and form. Part of the geometric and diagrammatic treatment of the subject has been omitted, and a condensation of this part of the work has thus been effected without diminishing the clearness or value of the presentation of principles. The space saved has been profitably used by critical analyses of other campaigns of the civil war, in addition to those before given. The work is now issued in octavo instead of the quarto form—a gain in handiness and no loss in beauty. The new edition may therefore be received as an improved one.

'Practical Methods in Microscopy,' by Charles H. Clark, A.M., Principal of Sanborn Seminary (Boston: D. C. Heath & Co.), is a very compact and handy treatise on the simpler principles of the microscope, with practical lessons in its use. To this is added sound instruction in methods of studying fresh natural objects and those artificially prepared. The subject of the preparation and mounting of microscopical specimens in different departments of investigation is thus introduced, and the chapters devoted to it are more than ordinarily full and valuable. The study of bacteria and their culture occupies a couple of well-digested chapters, and another is given to practical first lessons in photomicrography. The author does not profess to rival the greater standard treatises, but has been very successful in reaching the result he aims at, viz., to make a reliable and useful handbook for the student. Besides a good number of woodcuts illustrating apparatus, etc., a series of very beautiful reproductions of photomicrographs, by the half-tone process, will be found in the appendix.

'Everybody's Guide to Music,' by Josiah Booth (Harpers), is a not particularly successful attempt to condense elementary information regarding music and its composers into 175 pages. The fact that in the biographic portion (headed "The Growth of Music") Handel gets five pages, Mendelssohn four, and Bach one and a half, while Chopin is not even mentioned, shows the writer's absolute unfitness for his task.

'Musical Education and Musical Art,' by Edith V. Eastman (Boston: Damrell & Upham), is a well-printed little book containing essays on "The Language of the Sense," "The Uses of Silence," "Art in Education," "Characteristics of Musical Art," "From the Conservatory to the Kindergarten," "The Eye versus the Ear," "The Voice and the Ear," "Fences and Gates," "The New Education." Those who teach music or are interested in that subject (beyond the mere technique) will find matter of interest in the author's suggestions, observations, and apt quotations; and all American women who would like to possess a musical speaking voice will find useful hints in the essay on "The Voice and the Ear."

Students of harmony as a basis of musical composition may profit by C. C. Müller's 'Tables for the Writing of Exercises in Harmony' (Wm. A. Pond & Co.) as a guide to chord succession. Mr. Müller's principle is that "the best way to study harmony is to harmonize *melodies*."

'The Art of Singing,' by Sinclair Dunn (London: T. Fisher Unwin), is a little book of 117 pages, containing a few chapters on voice production and cultivation, and a few others (on a dozen popular singers) which are called "chats," but are little more than compilations from the musical dictionaries. The author's mental calibre may be gauged from a ten-page list of songs "embracing most well-known classics," in which Schubert occurs only three times, Schumann once, and Jensen and Franz not at all, while the Matteis, Molloys, Sullivans, Balfes, and Claribels are abundant.

Oscar Browning, author of 'Guelphs and Ghibellines, a Short History of Mediæval Italy from 1250 to 1409' (London: Methuen), is best known, so far as Italian studies go, by his article on Dante in the 'Encyclopædia Britannica,' a fairly good summary of the facts relating to the poet's life and works. The volume now before us is perhaps a useful book of reference, but it is hard to conceive of anybody reading it with pleasure. The author lays great stress on details, but makes almost no attempt at generalization. The result is that no reader, not already acquainted with the subject, could imagine that the epoch thus dryly treated was a great formative period in Italian art, letters, and civilization. The manner throughout is that of the perfunctory lecturer. There are no notes, no preface, no list of authorities, nothing that would enable the student to continue his reading on the subject, or even to begin it in anything like a philosophic manner.

The Players have published, in a most beautifully printed pamphlet, the full proceedings of the memorial meeting held in the concert hall of the Madison Square Garden on the 13th of last November to commemorate the sixtieth birthday of Edwin Booth, the founder of the club. The book is a model of its kind. It contains the minute of the board ordering the commemoration, the list of the committees which carried it out, the card of invitation (printed from the copper plate), the programme as the guests held it in their hands, the speeches of Mr. Joseph Jefferson, Mr. Henry Irving, and Signor Salvini—this last both in Italian and in English as read by Mr. Henry Miller—the oration of Mr. Parke Godwin, and the elegy of Prof. George E. Woodberry. Prefixed is a photogravure of the admirable portrait of Booth painted by Mr. John S. Sargent, and now framed over the mantelpiece of the most frequented room in the club-house which the actor presented to The Players.

The 'Dictionary of Political Economy,' edited by Mr. Inglis Palgrave, of which six parts now compose the first volume, A—E (Macmillan), will henceforth appear only in volume form. It is hardly necessary to say that economic science is at present in a somewhat transitional state, and that many of the subjects treated of in a work of this kind are as difficult to handle to the satisfaction of all as the dogmas of the theologians. There is, however, a wide field to be worked, historical, legal, literary, and biographical; and the digesting and arranging of the material gathered here is enough of itself to give value to such a publication as this.

'Yankee Doodle at the Fair' would have been a fitter title for a work summing up the Centennial Exposition of 1876 than for this small-folio record of the Columbian Exposition just begun to be published in parts by George Barrie, Philadelphia. The title apart, this is the most captivating effort yet made to produce a parlor-table souvenir of the later Fair. The text has been wisely committed to many hands, and takes the shape of monographs, *e. g.*, "Columbus and La Rábida," by William E. Curtis; "The Architecture of the Exposition," by Henry Van Brunt; "The Gobelins at Chicago," by E. Gerspach; with which are intercalated biographies of artists, as, Edwin Lord Weeks and Madeleine Lemaire. The illustrations are largely in color, and as such are at their best in some of the vignettes, initials, and tailpieces. The black-and-white process cuts are fully up to the average level in similar works. The fact that the work is published by subscription probably accounts for the break in continuity of some of the articles we have enumerated. A lack of variety in each part, especially in the first, might have been an impediment to canvassing.

The Department of Philosophy and Education of Columbia College announces the early publication of the first of a series of contributions on philosophical, psychological, and educational subjects that are to appear under the editorship of the members of the department. They are not intended to interfere in any way with existing journals, but will contain (1) the longer and more important dissertations submitted by advanced students in philosophy and education, in partial fulfilment of the requirements for the degree of doctor of philosophy; (2) occasional longer and more technical studies by the professors and instructors themselves; and (3) reprints from other journals of contributions made to them by members of the Department of Philosophy at Columbia. The contributions will appear at irregular intervals, and will be numbered consecutively for binding and preservation. They will be under the editorial direction of Profs. Butler and Cattell and Drs. Hyslop and Farrand. The first will be entitled "Friedrich Heinrich Jacobi: A Study in the Origins of German Realism," by Norman Wilde, A.M. The second will be "Kant's Inaugural Dissertation of 1770," including a translation of the dissertation, together with an elaborate introduction and notes by Prof. W. J. Eckoff of the University of Colorado. Orders for these numbers, or requests for information, should be addressed to the Department of Philosophy.

We receive from the Librairie Chevalier-Marescq & Cie., Paris, the first number of the *Revue du Droit Public et de la Science Politique en France et à l'Étranger*. As the title indicates, the department of private law, which is already abundantly cultivated, is not included within the scope of this magazine. The editor very justly observes that many persons outside of the profession of the law have an interest in international questions and in general political science. For these a review of current events and literature is desirable, and this programme includes a survey of constitutional law, administrative law, international law, the administration of justice, penal jurisprudence, financial legislation, individual rights, etc., etc. It cannot be said that this programme errs on the side of narrowness; on the contrary, the danger is that nothing except private law will be excluded. However, a skilfully prepared digest of incessantly accumulating material is always acceptable.

The *Physical Review* for March–April (vol. i., No. 5), published for Cornell University by Macmillan & Co., contains a portrait of the late Prof. Heinrich Hertz, with an appreciative notice.

The most interesting points brought out by

Mr. R. D. Oldham, the Superintendent of the Geological Survey of India, in his paper on the evolution of Indian geography, published in the *Geographical Journal* for March, appear to be the very slow growth of some of the mountain chains, and the fact that the erosive forces are getting feebler, and in certain places are so feeble as to be inefficient. In these cases, where the streams are "no longer powerful enough to keep their valleys clear," the mountains are gradually being buried under their own débris. There is also an account of a journey in Hadramaut, Southern Arabia, by L. Hirsch, too condensed to be interesting, and a paper by Mr. J. W. Redway, in which he accounts for the treeless plains of the United States, "not because of prairie fires, nor yet of unwholesome conditions of the soil, but from the simple fact that the seeds of forest trees have never been distributed over its surface at fortuitous [*sic*] times." A notice of the second general census of India, taken on the night of February 26, 1891, refers to the remarkable fact that the vast majority of the total of 287,223,431 persons were told in less than four hours. The mean density of the population is 184 per square mile, but it varies from 31 in Kashmir to 522 in Oudh. While in England 53 per cent. of the whole population is found in 182 large towns, in India under 5 per cent. reside in the 227 towns of similar size—20,000 inhabitants and upwards. The increase of population during the last decade was nearly 28,000,000. This is not a high rate, however, for in a list of twenty-eight countries, India stands "twentieth in respect of rapidity of increase of population; New South Wales being the highest and France the lowest."

The *Scottish Geographical Magazine* for March contains an account, by Mrs. Lilly Grove, of the Archipelago of Chiloë, a group of sixty islands lying off the south coast of Chili. The inhabitants, numbering 75,500 in 1889, are mostly Indians, and occupy themselves with agriculture and wood-cutting, though some thousands of them go every summer to the mainland to work upon the railways or at harvesting. They are peaceful and industrious, and much attention is paid to their education. In the department of Castro alone there are seventy-three public and private schools, and, out of a population of 36,000, 80 per cent. can read. There is also a paper upon Fiji, by Mr. J. P. Thomson, containing an unusual amount of information in a condensed form. A wonderful fertility is ascribed to the soil. Two and sometimes three crops of maize are harvested annually, and "fifty bushels to the acre is the annual yield, while some soils yield as much as eighty or one hundred bushels." Sugar, copra, and "green fruit" are the staple crops, though attempts are being made to cultivate tea, coffee, and tobacco. Very little cotton is grown, as compared with former years, on account of the low prices prevailing, though it is of a "quality better than can be obtained in any other country." In certain places the Sea Island variety "grows to perfection."

Mention was recently made in these columns of photographs of the pictures in Venice and its environs taken by D. Anderson (Spithoever) of Rome. We have just received Signor Anderson's catalogue, and it contains—not to mention works accessible in photographs of any kind before—the Carpaccios of the Scuola di S. Giorgio ("The Shrine of the Slaves"), the most interesting Tintorettos of the Scuola di S. Rocco, the Academy and the Doge's Palace, the Vivarinis in the Frari, the Lottos and Cimas of the Carmine and S. Giovani e Paolo, the Giovanni Bellini of S. Giovanni Crisostomo—this master's last altar-piece—and all the better pictures in the Seminary; including the dainty Filippinos, and Giorgione's ruined but still enchanting "Apollo and Daphne." At Vicenza, Signor Anderson has photographed Giovanni Bellini's "Baptism," Giorgione's "Christ Bearing the Cross," and Montagna's "Pietà," three of the sublimest creations of Italian art.

The Woman's Education Association of Boston, in order to increase the meagre opportunities for advanced courses of study by college women, offers two foreign fellowships of $600 and $400 respectively. Applications for these fellowships for the year 1894–'95 should be sent before May 1, 1894, to Mrs. N. P. Hallowell, chairman of the committee, West Medford, Mass. Candidates must be graduates of the colleges recognized by the Association of Collegiate Alumnæ, or graduates of the Harvard Annex, and should be women who expect to follow permanently professional, scientific, or literary work. It is noteworthy that "satisfactory evidence of thoroughly good health" is one of the requisites for appointment.

We have received from Mr. F. S. King, the well-known engraver on wood, a portrait of Daniel Webster on plate paper, the print being about 11x13 inches. It should naturally be a specimen of this artist's craft, but we are really perplexed to describe it. At first glance it appears to be a steel engraving, in line except the head, which is in stipple and yet almost shows the marks of the lithographic crayon. However produced, it is a very strong and interesting performance, and, being from a life drawing, is a valuable addition to the long series in which Webster has come down to posterity. The figure is a half-length in a characteristic attitude, and the face, though grave, has a sweet and healthy expression. Mr. King's address is No. 306 Fifth Avenue.

—Close upon the heels of the clever article in the March *Atlantic*, "Is the Musical Idea Masculine?" which sets out to prove that women as a sex are, on both physiological and psychological grounds, incapable of originating musical ideas, comes the curious announcement that, at the present moment, all of the students of the violoncello at the Royal Academy of Music, London, are women. The increase in the number of female violinists is also one of the items of current musical gossip in England, where the superb violin-playing of Lady Halle in concert with Herr Joachim has lately been winning unqualified praise. Finally, at the Royal Academy concert a couple of weeks ago, the most interesting feature of the programme was a sonata in E for pianoforte and violin, composed by the Macfarren scholar, Miss Llewela Davies, and pronounced to be a bright, fanciful work, written in musicianly style. Although none of these facts are conclusive against the argument of the *Atlantic's* essay, they at least go to prove that the final evidence as to the musical ability or disability of women is not yet in the hands of the theorists.

—The current issue of the *Astronomische Nachrichten* contains charges of a serious character, prima facie, against the photometric work of the Harvard College Observatory. They are presented by Dr. S. C. Chandler, a professional astronomer of high standing, who maintains that the Photometric Catalogues contain errors so numerous and of such a nature as to rob the work of any claim to high scientific character, while there is grave question whether it has any value whatever. The mistakes were discovered by Dr. Chandler in the course of his well-known investigations of variable stars, and, having become aware of their existence, he felt in duty bound to announce them to the astronomical world. It is within that world that the weighing of the importance of these errors must take place; but as the matter has already been laid before the general public in a Boston newspaper, it may be proper to mention some circumstances which will have to be taken into account. Much is made of the fact that the light of a star is in one case multiplied in the Harvard Photometry by over one hundred. This ratio seems quite monstrous. The fact is, that the star is set down as one of the faintest photometrically measurable, while in fact it is quite invisible with the telescope used. It is so many magnitudes fainter—no matter how many. It was set down as barely visible; it is invisible. If its light had been multiplied a hundred thousand times, the error would be the same, that of recording a star where no star was to be seen. The mistakes which Dr. Chandler has brought to light have probably originated in the telescope being misdirected. It is a very common occurrence in an observatory that, perhaps on a cold night, the assistant, with his eyelids almost glued together with frost, reading by a dim lantern a minutely engraved circle in an awkward position, sets for the wrong star. In ordinary meridian work this is discovered the following morning with certainty, because the observed time of passage will prove too decidedly out. But in photometric work there is no such check; and if the observer, on putting his eye to the telescope, sees a star of about the same brightness that the star he is looking for has been reported to have, he naturally takes that to be the one. This may so easily occur that, no doubt, every possible precaution ought to be taken to avoid misidentifications of stars. Dr. Chandler's charges, therefore, would seem to reduce themselves to this, that the precautions taken were insufficient. Astronomers at present judge of the Harvard Photometry by the degree of its agreement with the Catalogues of Pritchard and of Wolf, which were independently executed. The errors which Dr. Chandler has discovered must, if they affect the whole body of photometric work under Pickering, have influenced the estimate of his accuracy formed from that comparison. If, thanks to Dr. Chandler and other critics, they can be detected and eliminated, the work will have an even higher value than astronomers have hitherto placed upon it.

—Mr. Sidney Lee, editor of the monumental 'Dictionary of National Biography,' encounters obstructionists in curates and parish clerks. His work has reached only the middle of the alphabet, but he has found more than a third of the incumbents to whom he has applied "more or less refractory" in the matter of granting public access to the public records. In many cases no answer was given to his letters, though repeated more than once and with stamps enclosed. Among the answers received, after reiterated inquiries, were the following: "Time with me is too valuable for profitless occupation." The meaning of "profitless" was shown by other answers when nothing more than a date was asked for, thus: "I regret that I cannot give the information required except on receipt of 1s. for the search and 2s. 6d. for the information, *i. e.*, 3s. 6d. in all." To another and repeated application to learn a recent death-date, the reply was: "Call

at the church at a certain hour on a certain day and we will discuss the question of fees." Thus the desiderated date was ascertained by the outlay of 5s. In another case, a curate, having been paid 2s. 7d. for a date, claimed £3 19s. 6d. for looking it up. He afterward agreed to compound for three guineas, and his extra charge was finally beaten down to £1 1s. 6d. Mr. Lee was indignant at charges always arbitrary and often extortionate, and has recently exposed them in the London *Times*. He holds that search in parish records for literary purposes ought to be permitted at lower than usual rates. The fact is, that English restrictions on the examination of parish records have often hindered the knitting together again of ties between New and Old England which were early snapped asunder. For generations a large proportion of Americans who have crossed the Atlantic have been curious about their ancestry. Some few of these inquirers into ancestry, like James Savage long ago, as well as Col. Chester and his successor, Mr. Waters, came with credentials to dignitaries and dedicated decades to their work. This elect few have had little to complain of. But with the great mass, who were not genealogical experts and without much of time or money to spare, it has been far otherwise. Several of the Massachusetts Willards have investigated their ancestral English annals. One of them reports in the family history that he did not dig very deep, since it was too expensive a luxury. Imperious clerks would allow him to copy nothing, and for abstracts, however meagre, exacted enormous fees. Mr. Lee's grievance is not so much that he is overcharged as that he never can tell how far extortion may stretch.

—As no person of judgment can pretend that the Writings of Thomas Paine are no longer worth reading, intrinsically or historically, the first service rendered by Mr. M. D. Conway in his edition of them is the putting of them in clear and open type (vol. i., 1774–1779, G. P. Putnam's Sons). There are to be four volumes in all, uniform in style with the Hamilton, Franklin, Washington, Jay, and Jefferson, already completed or undertaken by the same firm; and none are more worthy of a place among the literary monuments of our Revolutionary fathers. The first volume contains "Common Sense," whose effect can never be estimated exactly, and may or may not merit Mr. Conway's assertion that it "has never been paralleled in literary history." No doubt can rest upon the extraordinary sale of this pamphlet, or upon its contemporary reputation as invaluable to the American cause. With it are conjoined here the caustic "Epistle to the Quakers" and the polemical "Forester's Letters," now reprinted for the first time, as are the several articles on Silas Deane; while quite new is the letter to Franklin copied from the MS. "The Crisis" is the other famous body of pamphlets embraced in this volume. "The Rights of Man" and "The Age of Reason" are yet to come. Opinions will differ as to the need or worth of admitting to this collection thirteen of the first fourteen pieces, from the *Pennsylvania Journal* and *Magazine*, though their authorship is purely conjectural. The first, on "African Slavery in America," has a show of evidence in its favor. Mr. Conway's introductions and annotations seem to us sufficient, albeit a footnote reference backwards or forwards would now and again be a convenience.

—Two of the three "familiar quotations" made from Paine by Mr. Bartlett are to be found in this volume, beyond which we need not go for the essential qualities of Paine's style, which is too much overlooked nowadays. No writer of the Revolution is more sententious, and it is surprising that a greater number of his sayings have not become household. His metaphors are apt and striking—"literary ornaments," he calls them; and it is amusing to see him drop into them in spite of himself immediately after he has given notice (as on p. 409) that he will avoid them in order to be understood of those who can scarcely read. He knew his good things, and was fond of quoting them, and he felt his superiority as a popular writer to his associates in the cause. With all the occasional intemperance of language pardonable in a heated time, the contents of this volume could win only respect for Paine's character with posterity. His sense, his humanity, his disinterestedness, his independence, his probity, his political "tone," are simply admirable. We will quote a passage which we commend to the *Outlook*, as it recalls that religious journal's grave aberration in the Hawaiian matter. Paine is speaking of "national honor":

"In a Christian and philosophical sense, mankind seems to have stood still at individual civilization, and to retain as nations all the original rudeness of nature. . . . As individuals we profess ourselves Christians, but as nations we are heathens, Romans, and what not. . . . It is, I think, exceedingly easy to define what ought to be understood by national honor: for that which is the best character for an individual is the best character for a nation; and wherever the latter exceeds or falls beneath the former, there is a departure from the line of true greatness."

We shall read later Paine's sincere profession, "My country is the world, and my religion is to do good."

—M. Brunetière has been giving at the Sorbonne an unpaid course of lectures on Bossuet and the movement of ideas in the seventeenth century. The students, dissatisfied that he should have reserved no seats for them, seeing in him a partisan of the old while they are unanimously for the new, irritated because, in the late elections to the Academy, Brunetière had been taken and Zola left, but above all excited by the preparations for the procession of students and washerwomen the next day (*mi-carême*), and glad to get an excuse for a little fun, flocked to the Sorbonne. The call that had been circulated among them deserves to be reproduced: "Grand chahut, chez Brunetière, grand amphithéâtre (Sorbonne). Serpentins, etc. Rendez-vous à l'École de Médecine, à 2 h. moins ¼. On partira en monôme et sans bruit. Faire circuler S. V. P." They came early and filled the galleries. They shouted unmusical songs, threw confetti, *serpentins*, and paper darts among the ladies, and when the professor came drowned his voice. The ladies took up his defence by applauding. Then came an ungallant shout, "Conspuez, conspuez les femmes!" followed by a variant on a Boulangist refrain, "C'est Zola, Zola, Zola-â-â, c'est Zola qu'il nous faut, oh, oh!" When M. Brunetière, after twenty minutes, abandoned the contest, they broke up his table and chair, and, when finally hustled out by the police, they proposed to sack his house and his room at the offices of the *Revue des Deux Mondes;* but the one was too distant and the other too strong for their zeal. The papers condemn the students—they could not do otherwise; but they take occasion to say disobliging things of the victim. They note that, in the confusion, he shouted, "Je ne savais, messieurs, qu'il était *encore* mi-carême," meaning to say *déjà*—a slip of the tongue unpardonable in a severe critic. They give little biographical sketches of him which are not precisely intended to win for him the sympathy of the public. His character is disagreeable and *grincheux*—the usual attribute of lack of power. Finally, his election to the Immortals was the consequence partly of private influence, partly of a desire to favor the *Revue des Deux Mondes*.

—Under the general and, many will think, appropriate title "Le Naturalisme, ou l'Immoralité Littéraire," and under the specific title 'Émile Zola, l'Homme et l'Œuvre,' M. Antoine Laporte, who appears to be his own publisher (Paris), gives us an arraignment of Zola, his methods, and his school, which, though strongly tinged in many places with partial antipathy, expresses what is surely a deep and general feeling. That feeling is one of disgust at the success which Zola's abominations have obtained in Europe and America—for in respect of eager reading of his works Americans are not, it is to be feared, much behind the French. That Zola has marked ability as a writer, that there are passages, many passages, in his books of undoubted force and beauty, that he has the gift of impressing on the mind a sense of vastness and multiplicity, no one will deny. In 'Germinal,' in 'L'Œuvre,' in 'La Débâcle,' in 'L'Assommoir,' there are pages which prove his power, but in comparison with the remainder of his work these pages are few and scattered, and wholly inadequate as redeeming features. In vigorous language M. Laporte denounces a naturalism which "is not merely the art of tickling and exciting the depraved tastes of the public, but of heating and surcharging its sensual appetites to the point of hysteria, of erotic madness." His work is a healthful sign of reviving morality, and will be read with interest and sympathy by very many.

GOLDWIN SMITH'S POLITICAL ESSAYS.

Essays on Questions of the Day, Political and Social. By Goldwin Smith, D.C.L., author of 'The United States,' 'Canada and the Canadian Question.' Macmillan & Co. 1893.

Mr. Goldwin Smith is a writer whom it is very easy to criticise and very difficult to review. It is easy to pick out his hasty deductions and impetuous conclusions, array them, riddle them, ridicule them, but difficult to depict the length and breadth of his studies, his wonderful memory, his clear presentation of things historical and political, without at the same time countenancing the mistakes which he makes in dealing with his own knowledge. He was always an independent thinker; with age he seems to have grown fond of crossing the ideas of all other men on all subjects, and of augurring the worst result from any given present condition of affairs. But, whatever his errors of deduction, Mr. Smith fairly states the premises. If the reader has head enough to draw his own deductions, he will find the book whose title we give above most interesting and instructive. We have before us a review of it by Principal Grant in the Toronto *Week*, which may be said to be an indictment of twenty-four counts; but all and each of these counts go to conclusions and deductions. The writer well says, "It is the inconsistency of Dr. Smith's language rather than its inaccuracy that I wish to point out."

Even with these limitations understood, it is startling to find a man of Mr. Smith's years—

an educated, intelligent, cultivated man, who has been a professor in one of the chief universities of the world and in one of the largest universities of America—calmly looking forward to civil war in the most stable empire of the modern world, and (more paradoxical still) contemplating it as a right and duty, as the lesser of two evils. This civil war will not be dynastic like the Wars of the Roses; nor religious like that of the Roundheads and Cavaliers; nor sectional like our war of secession; but a war of classes—the French Revolution over again, with this radical difference, that the revolutionists will embrace the wealth, property, education, intelligence, rank, and nobility of the kingdom. In other words, the stable, cautious, conservative elements of society will take the part of the Jacobins, and the lower classes that of constituted authority. That we may not misstate his position we quote what he says:

"The Newcastle programme, drawn up to gain votes, raises issues which together would be enough to bring on a revolution. In America civil war ensued upon a presidential election, which corresponds to the general election in England, and was its natural result. No country can bear for ever these convulsions, which grow more violent as the suffrage is extended, and more frequent as the exercise of the prerogative of dissolution becomes more unrestrained" (p. 120).

"People are not bound to fold their arms in tame submission when they can prevent the cruel indulgence of class hatred, public rapine, or the dismemberment of the nation, any more than they are bound to fold their arms in tame submission when the tyranny of a despot becomes insufferable. There are international situations, though few, out of which the only exit is war. There are domestic situations, far fewer still, out of which, as Mirabeau saw, the only exit is civil war or the display of a determination to face civil war rather than suffer the extremity of wrongs" (p. 123).

"Civil war is a dreadful thing; but there are things even more dreadful than civil war. Submission to the dismemberment of the nation by the sinister machinations of a morally insane ambition, would in the end work more havoc than the civil sword. 'I am prepared,' said the constitutional and cautious Peel, 'to make the declaration which was made, and nobly made, by my predecessor, Lord Althorp, that, deprecating as I do all war, but above all civil war, yet there is no alternative which I do not think preferable to the dismemberment of this empire'" (p. 306).

The causes which are carrying the British Empire towards some great political convulsion, according to Mr. Smith, are two-fold: first, there is the tremendous upheaval in which the combining forces are philanthropic, sentimental, demagogic, agrarian; second, there is the defective condition of the British Constitution, undefined, inoperative, in parts defunct—a constitution which has been amended by abandoning fundamental safeguards without putting substitutes in their stead; a constitution ill-adapted to withstand a shock or bear a strain; weaker than the constitution, written or unwritten, of any people in the world. Nominally, the government consists of an independent executive and two legislative bodies, each a check upon the others. In fact, the power of the executive has passed to the ministry; the ministry is but a committee of the House of Commons; the House can turn the ministry out of office at any moment; the ministry can turn the House out of office by dissolving Parliament; the authority of the Lords is becoming as obsolete as that of the Crown; the existence of the judiciary is absolutely dependent upon the will of Parliament.

It is refreshing here to turn from this disorderly medley and view our own constitutional situation as it is admirably depicted by Mr. Smith:

"The people of the United States have a written Constitution which emanates from themselves and is the subject of their profound reverence. They have a Supreme Court to guard that Constitution. They have a President whose veto is a salutary reality, and whose authority is being signally displayed at the present juncture. They have a Senate, elected on a principle comparatively conservative, and really coördinate as a legislative body with the popular House, whose bills it amends or throws out without fear. The federal structure of their commonwealth, like that of a ship in compartments, is a safeguard against any sudden flood of revolution. In their Constitution is an article forbidding legislation which would impair the faith of contracts" (p. 91).

On the Irish question Mr. Smith's opinions are well known and are as extreme as those of Lord Salisbury. His chief grievance is that the home-rule bill is not really a law, but an amendment of the Constitution; that it is dismemberment without the consent of a majority of the people of England, Scotland, and Wales, or of a majority of their representatives in Parliament; that it is secession without the consent of the North. He does not believe in the fitness of the Irish for self-government—nay, more, he holds that they were never fit to govern themselves and never will be. He includes the whole Celtic race in his distrust, and quotes Mommsen and Bishop Lightfoot, and goes back to the time when St. Paul exclaimed, "O foolish Galatians." But certainly there are vast differences in the Celtic races of to-day. The French peasant, if we may judge from the portraiture of French realistic fiction, is mean, miserly, selfish, reticent, distrustful, with large bumps of acquisitiveness and secretiveness. Like his cousins in Canada, he cares little for government or dynasties, and is solicitous only in regard to his church and the tax-gatherer. The Welsh peasant is industrious, thrifty, contented, heartily loyal, yet has so much truly national spirit in him that he has held fast to the language of his fathers, hearing it from the pulpit and reading the news of the day in papers published in his ancient tongue. The Irish we know pretty well, and how he differs from the others.

The essay on the British Empire and that on Church Disestablishment will seem to American readers fair, reasonable, and just; yet there is hardly a class of English or Canadian readers whose views they will not cross. To Canadians especially the former must be exceedingly rasping, bringing into view as it does the extraordinary want of unity that exists in the Dominion—an English Canada, a French Canada, an American Canada, an aristocratic Canada, a democratic Canada, a demagogic Canada. It deals, too, with all of the scandals and mistakes of the Canadian Government. It speaks of the Governor-General of Canada as a sham, and calls "her mimic aristocracy, her baronets and knights, a political outpost of monarchical and aristocratic England on the territory of American democracy." But the reader will not find anywhere in the same number of pages a clearer view, historical and political, of the British Empire.

The most valuable essay in the book is that on Social and Industrial Revolution. The reader who desires to see with his own eyes the field of nationalism, socialism, combinations, unions, strikes, etc., will find its clear-flowing, illustrative style most interesting reading, and will be saved much research if he really intends to examine the subject for himself. As we have before said, the errors of Mr. Smith are chiefly those of deduction; but here there are points, and very strong points, of which he has not made enough. For example, he says:

"Strikers should never forget that they are themselves buyers as well as producers, and therefore employers as well as employed; so that if they can strike against the rest of the community, the other trades can strike against them, and, wages being raised all round, nobody will gain anything."

The proposition which is here intended is, that if the remuneration of all the manual laborers in the world were doubled instantly, the cost of all the products of manual labor would soon be doubled, and the result would be the same. The striker would have to pay twice as much for everything he bought; his money would be doubled, but its purchasing power would be halved; it would be but a new form of inflation. It is idle, however, to tell strikers that they "should never forget" this. And it is not true in their case. It is like telling a small band of monopolists that they "should never forget" that the rest of the world can form monopolies and make them pay as roundly as they are making us. They are ahead in the race; they have doubled their remuneration while the rest of the working-world have been looking on in a vague, sympathetic belief that strikes of organized labor will somehow or other benefit themselves, and in utter ignorance of the fact that it is they themselves who are, for the most part, paying the augmented wages. Again, Mr. Smith says that it is really the consumer and not the employer who pays the increase of wages. He should have brought out the fact that the employer of to-day is being ground between two stones, the strikers insisting on putting wages up, the purchasers insisting on buying where they can buy cheapest. Who has ever heard or read a sermon in which the clergyman told his flock that when they get ready to pay Christian prices, they will find employers ready to pay philanthropic wages?

Mr. Smith speaks in the above extract of "the other trades," and he frequently alludes to trades, artisans, railroad hands—in short, to organized labor, as if it embraced all workingmen. We know that he does not really mean to convey that idea, but his uninstructed reader will not look behind his words for his meaning. When we take into the account the masses of unorganized laborers whose pay is ordinarily about one-third that of the artisan class, and the small farmers, gardeners, etc., who are not employers or capitalists, but get their wages out of their work, and the legion of women workers who struggle hopelessly at the foot of the ladder, we find that strikers are but a small fractional part of the mass who live by manual labor. When we look further into the operations of the "trades," we find that they are monopolists of the most selfish and exacting type, who have organized to exclude other men from honest work, and to exact tribute from every class of men who earn their bread by the sweat of their brow. The greatest of the wrongs which exist in this country is the repression of the lower strata of manual laborers; their exclusion from better-paying pursuits; the denial to them of the constitutional right of every man to seek unmolested his own advancement.

This has not been brought out in the essay as fully or as strongly as Mr. Smith could have portrayed it; and it is a wrong of which the public are strangely ignorant, or as to which they are more strangely indifferent. A few years ago a poor woman ran about the streets of Washington soliciting "influence" to obtain, not an office or a pension, but the poor privilege of apprenticing one of her boys to a bricklayer *who was willing to take him*. And it was refused her, ruthlessly, tyrannically; and to this day that American boy, after having heard much encouraging talk in a public

school about the inestimable birthright of being an American boy, and after living within the hearing of the speeches of members of Congress concerning their love for the working classes, and their abhorrence of capitalists, corporations, millionaires, monopolists, and employers in general, has not been allowed to earn his bread by laying bricks. The woman is dead now: hard work and many disappointments, anxieties, and cares dragged her down; but to her dying day she cursed trades-unions as despots who had mercilessly degraded her children to the lowest caste, and blocked against them every accessible avenue of advancement. Philanthropic ignorance pats these monopolists on the back, rejoices that they are elevating themselves, and tells them to keep on, but in a lawful way, *i. e.*, without riots or breaches of the peace. The worldliness of the world is indeed exemplified by its action in the field of manual labor. It serves power. The stronger are helped and encouraged and coddled; monopolies as odious as any of those against which the Parliament of Elizabeth revolted are upheld; the really poor and deserving—agricultural toilers who furnish city artisans with wheat at sixty cents a bushel, women who furnish ready-made clothing with no eight-hour limit to their toil, men who do the most wearisome part of the work at one-third of the others' wages and with the hope of better things shut out—these receive much commiseration and some alms, but scarcely a defensive word, from the demagogue in Congress up to the minister in the pulpit. This thing is the Slavery of to-day.

BISMARCK CONTRA CORONAM.—II.

Das Deutsche Reich zur Zeit Bismarcks: Politische Geschichte von 1871 bis 1890. Von Dr. Hans Blum. Leipzig and Vienna: Bibliographisches Institut; New York: B. Westermann & Co. 1893. Large 8vo, pp. xx, 708.

THE death of William I. in 1888 and the accession of the Emperor Frederick in no wise affected the Chancellor's position. Bismarck's most persistent enemies, the Prussian Clericals and Tories, could expect no favor from so liberal a monarch; and the advanced Liberals, who constantly asserted Frederick's sympathy with their aspirations, appear, from Dr. Blum's statements, to have exercised little influence. The only serious conflict of the dying Emperor's brief reign was due to the scheme of a marriage between one of his daughters and Prince Alexander of Battenberg—a scheme, we are told, of English origin, strongly supported by the two Victorias. Bismarck declared that such a marriage would seriously compromise Germany's relations with Russia. An English attempt to obtain a contrary statement from the Russian court failed, and the Emperor decided against the marriage.

With the succession in the same year of William II., Bismarck's position seemed assured him for the rest of his life. He himself, we are told, had no doubts on this point. But the restless ambition of the young ruler soon made him chafe under the Chancellor's somewhat dictatorial counsels. It is clear that Bismarck regarded the new Emperor as an apprentice in statecraft—a pupil of promise, indeed, who might some day be "his own chancellor," but not until the death of his preceptor; and it is equally clear that William soon began to entertain the idea of an earlier emancipation. There were many who stood ready to suggest it. Military, Conservative and Clerical "under-currents" were again in evidence. For a time it was Count Waldersee, Moltke's successor as chief of the general staff, who was to be Chancellor, but the subterranean operations in his favor were checked by some mysterious countermine, and he was assigned to a departmental command.

Cases of "friction," however, between the Emperor and the Chancellor grew frequent; and the latter became aware that certain members of the Prussian ministry were working against him. He demanded that the cabinet order of 1852, according to which the Prussian ministers were to report through the President of the ministry and not directly to the monarch, should be enforced. This demand the Emperor met with a proposal to revoke the order in question. To this proposal, conveyed through a "confidant," Bismarck refused his ministerial assent, "in some such words," says Dr. Blum, "as the following":

"'If the King desires to limit Prince Bismarck's powers as Prussian Minister-President, his Majesty must himself act as Minister-President, of which office, as a matter of fact, his Majesty is already exercising the powers.' The Emperor responded . . . that he had no idea of himself assuming the position of Minister-President, and demanded from Prince Bismarck a memorial on the subject" (page 668).

The relations between the monarch and the minister were obviously strained to the point of breaking. They actually broke on a matter of slight intrinsic consequence. In the elections of February, 1890, the governmental majority of Conservatives and National Liberals had been converted into a minority, and Bismarck saw himself forced to reopen negotiations with the Centre. For this purpose he had an interview, on the 12th of March, with the Centrist leader, Windthorst. Of this interview and the events which followed, the discreet Dr. Blum gives an account in hypothetical form. "It is not improbable," he says, that Windthorst offered, on certain conditions, not only to support the measures of the Government in Parliament, but also to support the Chancellor "even in differences of opinion between the latter and his imperial master." "The assumption is equally well founded" that Prince Bismarck declined to enter into any such alliance. Distorted accounts of the interview were almost immediately carried to the Emperor. Among other untruths, it was represented that Bismarck "had shown himself not disinclined to an alliance with the Centre against the Emperor." The Emperor immediately sent the chief of his civil cabinet to the Chancellor to demand, for the future, preliminary notification of any political interview between the Prince and members of Parliament. Bismarck refused to give any such promise. Early on the morning of March 15, before Bismarck was out of bed, the Emperor came to see him. A stormy scene followed, in which the Emperor demanded information regarding the negotiations with Windthorst, and was met by a point-blank refusal. The matter was a private one, so far as Bismarck was concerned, and the commands of his royal master stopped at the threshold of his wife's drawing-room. The interview closed with a statement, by Bismarck, that he had retained his official position thus far only because of a promise to William I., and was ready to give it up whenever the Emperor desired.

Early on the 17th of March the Emperor sent word that he was waiting for Bismarck's resignation. The Prince refused to resign, on grounds of conscience and of self-respect. He did not think it right to abandon his post in the existing position of European affairs, and his resignation would present "a false historical picture of the facts in the case." The Emperor must dismiss him. A second messenger came, in the course of the day, with a direct order from the Emperor that the Prince should send in his resignation within a given number of hours. At the same time Bismarck was informed that the Emperor intended to make him Duke of Lauenburg. The Prince responded that he might have had that title before if he had wished it. He was then assured (referring to the grounds on which he had previously declined the title) that the Emperor would pledge himself to secure such a legislative grant as would suffice for the proper maintenance of the ducal dignity. Bismarck declined this also, declaring that he could not be expected to close such a career as his had been "by running after a gratuity such as is given to a faithful letter-carrier at New Year's." His resignation, of course, he would send in as soon as possible, but he owed it to himself and to history to draw up a proper memorial. This he took two days to write. It was a detailed explanation of the reasons why he had refused to resign save at the express command of his monarch. He has since repeatedly demanded the publication of this memorial, but without success. This whole narrative (pages 668–670), in spite of its partly conjectural form and the standing qualification of "somewhat as follows" which precedes every citation of Bismarck's language, is of course Bismarck's own account of the causes and details of his dismissal.

On March 20, the Emperor, in a most graciously worded letter (which was immediately published), accepted Bismarck's "resignation." He had learned "with deep emotion" of Bismarck's resolution to retire from active service. He was compelled, "with a grieved heart," to accept the resignation, because he saw, from the reasons given, that it would be useless to try to induce the Prince to reconsider his decision. At the same time the Emperor conferred upon Bismarck the title which the latter had twice declined (and has since persistently refused to use), and also promised to send his own "life-size portrait." What disposition Bismarck has since made of this work of art we are not informed. The immediate nomination of his successor forced Bismarck to quit the Chancellor's official residence in such haste that, as was stated a few months later in a German newspaper, it was impossible to pack his effects properly, and many articles of value were irrecoverably lost. "Bismarck himself compared his exit to the expulsion of a German family from Paris in 1870."

In this catastrophe it appears that no feminine influence was at work. We are expressly told that the present Empress was sincerely attached to the Chancellor. In her childhood, indeed, the Princess of Schleswig-Holstein, whose father Bismarck had deprived of a confidently expected crown, had been taught to regard him as a bogy; her French-Swiss nurse used to frighten her with "Bismarck is coming!" But before her marriage she had learned to admire him, and later she had come to hold him in the highest esteem. Dr. Blum cites a speech of hers, made before the death of William I., in conversation with a member of the Imperial Parliament:

"May the German people never forget their proud history. Their illustrious Emperor and their great Chancellor are still living; if they are always mindful of the love and reverence which they owe the former, and of the gratitude to which the latter has so just a claim, it will be the better for us and for our future. The time will come when the proud but true

words of an English King, 'Now they revile me, but when I am dead they will wish to dig me out of the ground with their nails,' will be applied to Bismarck. May that time be long in coming."

Introduced immediately after the story of Bismarck's dismissal, and without comment, this citation is unquestionably an effective bit of polemics; but it is a pity that Dr. Blum and his patron could not have denied themselves the pleasure of this thrust. Not even in criminal procedure is it permissible to use the testimony of a wife against her husband.

In the concluding chapter the ensuing public conflict between Bismarck and the crown is described *in extenso*. The Prince's weapons were inspired editorials and personal interviews. Those of the Emperor were circular notes and threats of prosecution; the omission of even formal invitations to public ceremonies, and requests to foreign courts to withhold from the Prince even social recognition; and, finally, a withdrawal of favors and privileges from all Bismarck's friends and admirers. His special historian, Von Poschinger, found himself excluded from the state archives; and the great historical work of Von Sybel, the keeper of the archives, was interrupted before it reached its natural conclusion. These writers had already found cause to praise Bismarck, and would probably have found more.

Dr. Blum defends Bismarck's caustic criticism of the imperial policy on grounds of patriotic duty, and he roundly denounces, not the Emperor, of course, but his responsible advisers, for the ingratitude and malevolence displayed by the crown. To outsiders it seems a pitiful affair on both sides. It is impossible to acquit William II. of all the charges brought against him, but it is equally impossible not to regret the undignified and inconsistent attitude of the ex-Chancellor. A life like Bismarck's, characterized by zealous loyalty to his king and filled with extraordinary services not to his country alone but to the dynasty, should not have closed in an open conflict with the crown and attempts to make its wearer contemptible. The German people, the great majority of whom are sincerely loyal to the monarchic principle and justly proud of Bismarck's public career, may well rejoice that so unseemly a strife has now been ended.

Essays about Men, Women, and Books. By Augustine Birrell. Charles Scribner's Sons.

One of the charms of Mr. Birrell's essays, for people who have opinions of their own, is their casual air. His most polished performance—the two volumes entitled 'Obiter Dicta'—is more like a sequence of happy accidents of thought than a premeditated judgment intended to be authoritative. He may go gloriously wrong with impunity because he is so far from posing as infallible, or from assuming that he speaks the last word. He has no theory to expound, and no pet philosophy to the illustration of which all facts are to be warped. The only opinion especially dear to him is that literature ought to do more and better than instruct and edify; that its mission is to please, to solace the weary, to humanize the wicked—in fact, to be an everlasting comfort and joy in this frequently uncomfortable and joyless world. His work forms a convincing tribute to his discrimination in selecting for positiveness an opinion he was so well prepared to live up to; it is so agreeable and so polite. We cannot imagine him unpleasant or uncivil, unless to the soulless wight who should assert that Dr. Johnson was neither great nor good, and that all Charles Lamb's splendid virtues of character go for naught in face of the disgraceful fact that he occasionally got drunk. He can differ and disapprove without a scowl or a volley of vituperative adjectives. Though not enraptured with the little book 'Americanisms and Briticisms,' the harshest thing he finds to say about it is:

"To try to make an international affair over the 'u' in honour and the second 'l' in traveller is surely a task beneath the dignity of any one who does not live by penning paragraphs for the evening papers."

About the same author's fervent appeal to good Americans to remember, always to remember, that the British are foreigners (an appeal which leads us to suppose that he is holding Sir Walter Scott and other innocent scribblers responsible for British gold and the Cobden Club), Mr. Birrell only exclaims: "What rant is this!"

No more deeply in love is he with Marie Bashkirtseff, yet he lets off that garrulous person, in whose presence ordinary decency shrinks away abashed, with a smile at the interest she took in her "arms and legs, hips and shoulders, hopes and fears, pictures and future glory." If Miss Bashkirtseff were still alive, we should have resented Mr. Birrell's mildness, but, fortunately for her mother and aunt and maid, she is dead, and the people who compared her with Rousseau must perceive that, though she had a glibness in self-revelation comparable to Jean Jacques', and was to the full as untrammelled by notions of propriety, she had not for several reasons his staying power.

Miss Hannah More is the only other woman noticed in the volume. There is something humorous in the juxtaposition—*les extrêmes se touchent.* Most of us are sadly familiar with the class to which Miss Bashkirtseff belonged; it was not the class to which Mr. Birrell relegates the verbose Hannah:

"This class may be imperfectly described as 'the well-to-do Christian.' It inhabited snug places in the country, and kept an excellent, if not dainty table. . . . Its pet virtue was church twice on Sunday, and its peculiar horrors theatrical entertainments, dancing, and three-penny point. Outside its garden wall lived the poor, who, if virtuous, were for ever courtesying to the ground or wearing neat uniforms, except when expiring upon truckle-beds beseeching God to bless the young ladies of the Grange or the Manor House, as the case might be."

If an imperfect memory of books permitted to be read on Sunday and never voluntarily opened on any other day is not too treacherous, it was on this class that Miss More fondly lingered through nineteen volumes, and we cannot agree with Mr. Birrell that the lot was cheap at eight shillings and sixpence, unless he found therein the story of the old lady's cruel deception by her presumably adoring menials.

The stories the author is constantly telling about the object of his discourse are the best proof of his fitness; this is the last touch of intimacy. It is to be regretted that he has not told more stories of the famous dead—that when he chose to write at all of Swift, for instance, he had not chosen to write more. It is a fault in some of these latest essays that they are too casual, and that the chain of thought is not smoothly linked. The essays on Sterne and Gay are mere notes, in which, we think, more than justice is done to the former and less to the latter. Mr. Birrell says, though with hesitation, that 'Tristram Shandy' is one of the most popular books in the language. Granting his limited understanding of "popular," his exclusion of that public which he remarks somewhere gets its "intellectual like its lacteal sustenance sent round to it in carts," from Mudie, such a statement is enthusiastic. More praise might easily be given to Gay's originality, since in "The Beggar's Opera" he is a genuine creator, and, though possibly better men and better poets may have been denied burial in Westminster Abbey, it is not likely that any better loved man lies there. "Gay," says Thackeray, "was lazy, kindly, uncommonly idle, rather slovenly, I'm afraid; for ever eating and saying good things; a little round French Abbé of a man, sleek, soft-handed, and soft-hearted." Nevertheless, even when he had ceased to be amusing, everybody, including Swift and Pope, loved him. Nobody, so far as we know, has tried to solve the mystery of Gay's hold on the affections of his contemporaries. Yet it is a much more cheerful subject for the speculative than is the mystery of the classic rage of the Dean of St. Patrick. Mr. Birrell says that the mystery and the misery of Swift's life have not been got rid of by his latest biographer, Mr. Collins. We agree with Dr. Johnson that the mystery of facts may, without regret, be left in that obscurity in which Swift delighted to involve them, and would also, were we not privileged to be a contemporary of M. Zola, echo the doctor's grave wish to be informed what there is in deformity, disease, and filth that may attract the human intellect delightedly to dwell upon them. But for the mystery of character which puzzled Scott and Thackeray, and baffles Mr. Birrell, is it not pretty well dissipated by reflection on the conflict between Swift's nature and his conditions? Thackeray, in his incomparable presentation of Swift, seems to have unconsciously disposed of his mystery:

"It was at Shene and at Moor Park, with a salary of twenty pounds and *a dinner at the upper servants' table*, that this great and lonely Swift passed a ten years' apprenticeship—wore a cassock that was only not a livery—bent down a knee as proud as Lucifer's to supplicate my lady's good graces, or run on his honor's errands."

A man of intellect as great, but of gentler temperament, might have forgotten the man and forgiven the God who had subjected him to such ignominy, might even have wrung from the torture some sweet spiritualizing grace. But Swift's temper was demoniac. It seems superfluous to be attributing to him secret infamies and crimes.

Mr. Birrell's aptness in discovering unconscious humor in his fellow-man is nicely indicated in "Parliamentary Candidates," and the fun latent in so solemn a document as a report of a Royal Commission is quite beautifully disclosed in "The Bona-fide Traveller." The question here argued is, Who may lawfully get a drink at an inn on Sunday? Only a bona-fide traveller, say the law-makers, and he, Mr. Birrell explains, "has to make out a special case for being supplied with drink. The fact that he is thirsty counts for nothing. Everybody is thirsty on Sunday." Here he utters an incontrovertible truth. The distress caused by a Monday or Tuesday closing-act would be light indeed compared with that inflicted by a Sunday act. In the last essay, "Authors and Critics," Mr. Birrell makes a statement which, though partially true, is not incontrovertible. He says that the habit of reviewing new books in literary papers is a trade thing directly referable to the advertising columns. That means that the publisher says to the editor, "Review my books or you won't get my patronage." The editor passes on the "mandate" to the

contributor, who then proceeds to laud without justice, or damn without mercy, regardful only of the liveliness of his own article. It would be interesting to know from how large an acquaintance with the methods of literary journals Mr. Birrell makes his deduction. The case between authors and reviewers is, however, very fairly put and suggestive for both. Yet, in these days, when the author in one magazine is the critic in another, their gibes at each other are really about as serious as the insult which the pot hurled at the kettle.

Electric Waves. By Dr. Heinrich Hertz. Authorized English translation by D. E. Jones. Macmillan & Co. 1893.

THE recent death of Dr. Hertz, in his thirty-seventh year, cannot be regarded otherwise than as a calamity to science. The work before us is a translation of his collected papers, which originally appeared in Wiedemann's *Annalen*. The English translation was supervised by the author himself, and the very interesting and valuable preface is due to Lord Kelvin. Then follows the modest and fair-minded introduction of Dr. Hertz. There are thirteen of his papers, all of which are of fundamental importance. Taking Maxwell's electro-magnetic theory of light as the basis of his work, Hertz succeeded by a most beautiful series of experiments in proving the existence of distinct rays of electric force, and in showing that these possess the properties of rays of heat and light popularly so called. In other words, rays of electricity may be rectilinear, reflected, refracted, and polarized. The relation between electricity and other forms of energy is thus for the first time clearly demonstrated by experiment. To use the language of Lord Kelvin:

"During the fifty-six years which have passed since Faraday first offended physical mathematicians with his curved lines of force, many workers and many thinkers have helped to build up the nineteenth-century school of *plenum*, one ether for light, heat, electricity, magnetism; and the German and English volumes containing Hertz's electrical papers given to the world in the last decade of the century will be a permanent monument of the splendid consummation now realized."

Of course, very much remains to be done, and even the history of recent discovery is yet to be written. The work of our countryman, Joseph Henry, to whom is exclusively due the important discovery of the oscillatory character of the discharges of the Leyden jar, appears not to be known in Germany, and Hertz attributes to Helmholtz in 1847 what had been distinctly proved by Henry in 1842. But Hertz's work is eminently just to the claims of others, and he himself must stand in history as presenting an extraordinary combination of mathematical and experimental powers.

BOOKS OF THE WEEK.

Alden's Nutshell Cyclopedia. Vol. I. J. B. Alden.
Allen, Grant. The Lower Slopes. London: Mathews & Lane; Chicago: Stone & Kimball. $1.50.
Bacon, Rev. B. W. The Triple Tradition of the Exodus. Hartford: Student Publishing Co. $2.50.
Bercy, Paul. Short Selections for Translating English into French. W. R. Jenkins. 75 cents.
Cameron, Mrs. H. L. A Tragic Blunder. M. J. Ivers & Co. 25 cents.
Davis, R. H. Our English Cousins. Harpers. $1.25.
Glazebrook, R. T. Light. Cambridge: University Press; New York: Macmillan. $1.
Holmes, Eleanor. The Price of a Pearl. Harpers. 60 cents.
Kirkpatrick, Mrs. T. J. The Peerless Cook-Book. Springfield, O.: Most, Crowell & Kirkpatrick.
Little, Rev. W. J. Knox. Sacerdotalism. Longmans, Green & Co. $1.75.
Memoirs of Chancellor Pasquier. Vol. II. 1812—1814. Scribners. $2.50.
Norman, Philip. London Signs and Inscriptions. London: Elliot Stock; New York: Macmillan. $2.
Orcutt, W. D. Good Old Dorchester: A Narrative History of the Town, 1630-1893. Cambridge: The Author.
Porritt, Edward. The Englishman at Home. T. Y. Crowell & Co. $1.75.
Preston, Prof. Thomas. The Theory of Heat. Macmillan. $5.50.
Ribot, Prof. Th. The Psychology of Attention. Chicago: *Open Court* Publishing Co. 25 cents.
Scott, Sir W. The Pirate. 2 vols. [International ed.] Boston: Estes & Lauriat; New York: Bryan, Taylor & Co.
Selby-Bigge, L. A. Hume's Enquiry concerning the Human Understanding. Oxford: Clarendon Press; New York: Macmillan.
Sergeant, Adeline. The Surrender of Margaret Bellarmine. International News Co. 50 cents.
Sever, F. P. The Progressive Speller. Boston: D. C. Heath & Co. 30 cents.
Sharp, William. Vistas. Derby, Eng.: Frank Murray.
Starr, Dr. Louis. An American Text-Book of the Diseases of Children. Philadelphia: W. B. Saunders. $7.
Stoddard, C. W. Hawaiian Life: Being Lazy Letters from Low Latitudes. F. T. Neely. 50 cents.
Story, W. W. A Poet's Portfolio: Later Readings. Boston: Houghton, Mifflin & Co. $1.
Studies and Notes in Philology and Literature. Vol. II. Boston: Ginn & Co. $1.50.
Swan, Maggie. For the Sake o' the Siller. Hunt & Eaton. 85 cents.
The Jewish Question and the Mission of the Jews. Harpers. $1.75.
The Revival of Irish Literature. London: T. Fisher Unwin.

PUBLISHERS,
15 East 16th Street, New York.

MAINE COAST.

LANDS at and around CAPE ROSIER and Castine, Me., on this boldest and most beautiful section of Penobscot Bay, 50 miles nearer Boston and the West than Mt. Desert—southwesterly exposures, fine harbor fronts, bold rocks, beaches, and fine trees, broad views of mountains and islands, extended drives along the shore and among the hills, new wharves, and good daily connection by boat and rail. These lands are offered at low prices to persons intending to build and occupy. A very few hundred dollars will buy a fine high shore lot of several acres. Several tracts of from 20 to 50 acres are offered at low prices. Send for descriptive pamphlet and further details to

J. MURRAY HOWE & BRADLEE,
28 State Street, Boston.

HATCHARDS.

This is the favorite BOOKSTORE, and for 100 years the resort of the smartest people in London. It is visited and patronized by all who love books. London is the great market for books, and all the best as well as the cheapest editions can be had by writing to us. Special collections formed, and fuller information supplied than from any other house. Books both old and new, and relating to any subject, can readily be supplied at very moderate prices.

Agents for Clubs, Libraries, and all private Collectors.

CHOCORUA, N. H.

TO LET, furnished for the summer, a new 9-roomed cottage near and overlooking Lake Chocorua. Address M. G. S., 107 Irving St., Cambridge, Mass.

Three Important New Publications

The Pasquier Memoirs.

Edited by DUC D'AUDIFFRET-PASQUIER. With portraits. In 3 vols., 8vo. Vol II., 1812–1814, now ready, $2.50; Vol. I., 1789–1812, $2.50.

"Its value is great. The author brings before us and illustrates with peculiar clearness the characteristics of an extraordinary time. He gives us vivid and thoughtful sketches of the First Empire."—*Edinburgh Review*

"Memoirs which promise to be among the most valuable ever published concerning the Napoleonic period. Pasquier's account of the Empire is surely one of the best that any contemporary has left us. It will be found rich in material concerning the imperial régime, and in portraits of Napoleon's family and associates."—*Atlantic Monthly.*

Life and Letters of Dean Stanley.

By R. E. PROTHERO. With the co-operation of DEAN BRADLEY. *Second Edition.* With portraits and illustrations. 2 vols., 8vo, $8.00.

"Perhaps no similar book since Trevelyan's 'Life of Macaulay' has been prepared with so much care or wisdom. It is a work that will be to many well-nigh indispensable."—*Boston Journal.*

"One of the most profound, scholastic, and brilliant biographies written."—*Chicago Daily News.*

"This biography is perhaps the most notable work of its kind since Dean Stanley's own life of Dr. Arnold appeared. The work passes at once into the list of the few great biographies of modern times."—*Boston Herald.*

Philosophy of History—France.

By ROBERT FLINT, D.D., LL.D., Professor in the University of Edinburgh, author of "Theism," "Anti-Theistic Theories, etc. 8vo, $4.00.

"The volume makes up a large octavo of 705 pages, and is replete in interest to the philosophical student of history. It is both historical and critical, and it aims to show the rise and progress of reflection and speculation in human developments. It is a valuable and entertaining book. The thoughtful scholar will find the volume a rich mine of thought."—*Chicago Inter-Ocean.*

CHARLES SCRIBNER'S SONS, 743 & 745 Broadway, N. Y.

William Lloyd Garrison,

1805–1879.

The Story of his Life told by his Children. Illustrated with over 40 portraits, views, etc. 4 vols., 8vo, gilt top, $8.00 *net.*

This important work (till recently published by the Century Company), has been reduced in price from $12.00 to $8.00, a remarkably low price for what is unquestionably one of the handsomest products of the American press.

"A biography of almost world-wide importance. . . . It will be a standard work of reference."—*Charleston News and Courier.*

"In fact, Southern history is not complete without this work."—*Atlanta Constitution.*

"It is, for the anti-slavery record, final; and the service done to our national history is as great as that to a father's memory. Its one eminent trait, however, is its justice."—*Atlantic Monthly.*

"A masterpiece of modern historical biography. . . . To call the work a mine of information would be to convey a false impression: it is rather a well-arranged library in which attendant hands are always present to point the way to the exact thing wanted. . . . Finally, the work, while as instructive as the driest manual, is as interesting as a romance."—*Boston Advertiser.*

The Nation.

NEW YORK, THURSDAY, MARCH 29, 1894.

The Week.

IT is interesting to compare the advice President Cleveland has been getting in regard to the seigniorage bill from its Western and Southern supporters with the comments which the same element made on his Cooper Union letter in 1891. The main point of it has been that, his party being largely pro-silver in the West and South, to veto this bill would mark the party for defeat at the coming election. Turning to the *Tribune* file for February, 1891, we find in a Washington despatch giving the views of Democratic Congressmen about the Cleveland letter, a declaration by Mr. Bland that "Mr. Cleveland's letter makes his candidacy for the Presidency ridiculous. He will have no following west of the Allegheny Mountains." Mr. Crisp of Georgia, now Speaker, was cautious in expression, but regarded the letter "as a mistake." Mr. Tillman of South Carolina said: "I regard Mr. Cleveland as politically dead, and I would not like to kick a dead man," so he refrained from further comment. Mr. Hurd of Missouri said the letter put Mr. Cleveland out of the race for the Democratic nomination. Mr. Sayers of Texas predicted that his nomination after this letter would "give life and activity to the third-party movement." Mr. Stewart of Texas declared that Mr. Cleveland "should be left out"; and so the comments went on. The results show how little these political place-holders could estimate public opinion. Mr. Dargan of South Carolina put the matter in a nutshell when he said, "The letter may hurt him with the politicians, but it will strengthen him with the people." Every one of Mr. Cleveland's courageous steps, whether in regard to the currency or the tariff, has called out these same alarming cries from the politicians, and received the same appreciative support from the people. There is no reason to believe that the history of the seigniorage bill will be any different.

The Springfield *Republican* announces the adhesion of Charles Francis Adams to the neo-bimetallists of Boston, and quotes from a letter written by him to Senator Carey of Wyoming the reasons for the faith that is in him, thus:

> "'The financial troubles of last summer, due entirely to the withdrawal of a small amount of gold from this country, have satisfied me that a gold monometallic basis is altogether dangerous.' It might do, he says, in times of peace and quiet; but let any disturbance come, let any nation, in view of impending international trouble, deem it necessary to strengthen itself by drawing a hundred millions of gold into its coffers, and 'the entire exchanges of the whole world would be disturbed.'"

Opinions may differ as to whether the financial troubles of last summer were due to the withdrawal of gold, or whether the withdrawal of gold was due to the financial troubles, but there is abundant evidence to show that Mr. Adams's fear that "the entire exchanges of the whole world would be disturbed" by any nation drawing $100,000,000 of gold into its coffers, is groundless. Take an example. In 1880 the United States imported $80,758,396 gold, and in 1881 $100,031,259 more of the same metal, or $180,789,655 in two years. Deducting our exports of gold during the same period, we had a net importation of $174,585,498 in two consecutive years. This was exclusive of our own gold production. This drawing of gold into our coffers was accomplished without disturbing the entire exchanges of the whole world, or any part of them. On the contrary, the exchanges of the world were very much promoted by this gold movement. There is the best reason for believing that they could not have been carried on without it. So Mr. Adams must perceive the danger of building generalizations on too narrow a basis of facts.

Mr. Adams holds, however, that international coöperation is necessary to cure these evils. His view, according to the *Republican*, is this: "If we hang on to our present course, we can whip England into line for an international agreement within three years." If these are Mr. Adams's sentiments, he is the first man who has had the boldness to fix a time for whipping England into line. Others have told us that England would be brought to her knees some time by reason of a single gold standard, but they have prudently omitted to say when. We are glad to find somebody who fixes a time, and so short a time as three years. If this is really a safe prediction, we advise the new-fashioned bimetallists of Boston to take up the question of a ratio at once. They will need at least three years to settle that among themselves. The present market ratio is 35 to 1. Between that figure and the Latin Union ratio of 15½—the favorite ratio of all great bimetallists—there is abundant room for choice and also for dispute. Mr. Inglis Palgrave was recently asked to write down a few objections to bimetallism for the attention and criticism of Mr. H. H. Gibbs, who is perhaps the greatest light of that school in England. He wrote down as one objection of a practical nature the difficulty of choosing a ratio which the finance ministers of the world would agree to be bound by and to execute in good faith. Mr. Gibbs adjourns this difficulty to the day when the nations agree to try the scheme; that is, to the Greek kalends. Meanwhile, the world will go about its business much as usual. It will let the bimetallists do the talking, and gold will do the rest.

The most unfortunate feature of the new silver movement started by Gen. Francis A. Walker in Boston is the fact that it gives the rest of the country a false impression as to public sentiment in the East. The silver lunatics of the South and West are not given to fine distinctions, and do not take the trouble to read with discrimination long papers on financial topics. They jump to the conclusion that Walker, Adams, and other men whose names are known to them are in favor of silver coinage like themselves, and by another jump decide that this must be the sentiment of New England. This impression is now being given to the people of the South and West by many of the newspapers which publish and comment upon the Boston outgivings, and it naturally has a marked effect in reviving the financial craze which had begun to abate after the repeal of the silver-purchase act. There is really no ground for the belief that public sentiment in Massachusetts on the silver question is any less sound today than it has always been, but it is not strange that the recent developments should deceive people at a distance. This is the most deplorable aspect of the matter.

The form of words finally agreed upon by the Senate finance committee to effect the repeal of the reciprocity agreements is as follows:

> "All agreements or arrangements made or proclaimed between the United States and foreign governments under the provisions of said section are hereby abrogated; of which the President shall give such notice to the authorities of said foreign governments as may be required by the terms of such agreements or arrangements."

This would seem to argue that the learned Senators have not even yet got over their muddle on this subject. If they had stopped with "hereby abrogated," they would have been on solid ground; but their going on to talk about the President's giving the "required notice" lands them in the quagmire again. Take the agreement with Brazil, for example. That has a clause which says that it "shall remain in force so long as neither government shall definitely, at least three months in advance, inform the other of its intention and decision to consider it at an end at the expiration of the time indicated; provided, however, that the termination shall begin to take effect either

on the first day of January or the first day of July." According to that, there would be no way of ending the Brazilian agreement, under the terms of this Senate amendment, before January, 1895. The case is different with the Spanish arrangement, which specially maintains "the respective right of the Congress of the United States and of the Cortes of Spain to modify or repeal said arrangement whenever they may think proper."

The committee's action shows far too much deference for the so-called treaties and far too little for the power of Congress over taxation. Even if those treaties were worthy of the name, they could be overthrown on the spot by Congress. In the Chinese-exclusion case the Supreme Court held that a law of Congress in violation of a treaty was only the exercise of a sovereign right to cancel a treaty. But the McKinley treaties were no treaties, were never submitted to the Senate for ratification, and were only individual agreements between President Harrison and the State Departments of other countries.

It really begins to look as though the limit of pension appropriations had at last been reached. The amount provided for the next fiscal year is in round numbers $14,000,000 less than for the current year, and ex-Commissioner Black, who is now a member of the House, thinks that the appropriation just made of about $151,000,000 will never be exceeded, but that the amount will steadily decrease. This is encouraging, but there is no doubt that if the element of fraud could be eliminated, the pension appropriation might be cut down to the extent of many millions every year. The New York *Times* is publishing the results of careful investigations which it has made, sampling the pension lists in various parts of the country, which show specifically case after case where men able to earn good wages are drawing pensions for total disability. The disclosures which it has made indicate that there must be a vast number of such fraudulent pensioners, and it will be a reproach to the Government if steps are not taken to overhaul the list and relieve the taxpayers of the unjust burden thus imposed upon them.

The anarchy which has reigned in New Jersey since the Senate was divided in January, was happily brought to a close by the Supreme Court of that State on Wednesday week. Gov. Werts comes out of the affair very badly. It is hard to believe that he could have been deceived as to the illegal character of the minority Senate he so promptly recognized at the beginning of the year. He knew that his private secretary had to sneak out of one window and into another to find ten Senators claiming to be a majority of twenty-one; and a Governor not under the control of schemers would at least have waited to investigate the matter. Even if he was deceived at the beginning, the way of honorable retreat was open to him immediately thereafter, but he refused to embrace it. To say that he has hopelessly fallen in the estimation of his best friends is to put it mildly. Nor should mention be omitted of the attitude of the two United States Senators, McPherson and Smith. It has been asserted that they were actively in sympathy with the conspirators, if not actually directing them. This they will now deny, no doubt, but they cannot deny that they have sedulously refrained from saying a word in condemnation of an attempted outrage which the best men of their party were condemning all over the State. In its broader aspects the happiest effect of the decision will be the renewed respect for the judiciary which it will bring about. The decision was eminently non-partisan. Six of the eight judges of the court are Democrats, yet all but one of them united with the Republicans in completely annihilating the contention of their own party. The one dissenting judge is of precisely the character to make his dissent the crowning proof of the high impartiality of the others. This is judicial integrity and independence at its best. Bad and corrupting as the politics of New Jersey has been ever since Leon Abbett became its evil genius, it has not contaminated the higher courts. The old tradition of the learning and character required in a judge has not yet been broken down. It is well that it has not, as the courts are coming more and more to be seen as the one refuge left us against the triumph of trickery and crime passing themselves off as legitimate political methods.

There seems to be no doubt that a wave of greater reverence for the sanctity of the ballot is passing over the country. The very general adoption of the Australian ballot would show this, even if the numerous recent convictions of election cheats in this State did not illustrate it. Much of this is doubtless due to the greater facilities for detecting fraud offered by the new law. The detection of election frauds in the days of the old "bunched" ballot distributed on the sidewalk, and of "the blocks of five" who were marched to the polls by the contractors for a triumph or a "vindication," was almost impossible, and the feeling that it was very difficult or impossible had a good deal to do, we think, with the very light view taken of election frauds by the public. The apparent popular indifference to them for a great many years was, in fact, somewhat of an excuse for the crop of bosses which sprang up all over the country, some of whom met their fate in Brooklyn the other day. Mr. Jenks, the counsel for Newton, made very good use of this in arguing in mitigation of punishment before Judge Brown on Thursday. He said:

"No man will yield more sincerely than I to the truth of the proposition that crimes against the elective franchise and the purity of the ballot strike at the very fundamental rights of a free people and deserve condign punishment. In that I concur and agree with Mr. Shepard; and yet I would like to say to your Honor that there has been a great revulsion of public feeling on this subject, and that some years ago we had even the spectacle of a Vice-President of the United States at a public dinner laughing and making a by-word of the purity of elections. But public opinion when it comes swells like the Solway, and those who are in the way of public opinion must suffer. This management of elections was more or less of a political game, perhaps—I do not say in Gravesend, but in many parts of this State—and the atmosphere which surrounded the defendant and many other people was not the atmosphere, perhaps, that now obtains in that place and in other places. I do not ask your Honor's mercy on this account. I do not plead to your Honor that this is a new crime lately put into the Code of Procedure, but I simply ask your Honor to take into consideration the fact that this man has neither cut a throat, nor has he in the watches of the night stolen property, nor has he harmed any individual by an individual crime; and, if he has done wrong, he has done wrong in an atmosphere which has not enabled him, perhaps, to clearly see the things which public opinion must make all people see now, henceforth and for ever."

The Vice-President was Mr. Arthur. The remarks referred to were made at a dinner given to Dorsey, who had been secretary of the Republican National Committee in the canvass of 1880, and had almost ostentatiously bought the majority in Indiana. Mr. Arthur spoke of this victory, amid shouts of laughter, as having been achieved by the use of "soap." Everybody knew what he meant, and the joke was greatly relished. That was fourteen years ago. To-day such an incident would be impossible. A President or Vice-President who should go to a public dinner and boast of the corruption wrought by his party would be thought insane. Of course it was improvement in public opinion which brought about the adoption of the new system of voting, but that improvement could hardly have been maintained and intensified so as to send so many election cheats to the penitentiary, were it not for the evidence which the machinery of the new law supplies at every election of the increased popular regard for the purity of the franchise. The multiplied formalities necessary in casting a man's vote surround the act with a solemnity which was entirely wanting under the old system. It was all but impossible to make anybody feel that getting a small bit of paper from a red-nosed tramp in the street and dropping it into a box, was a very serious performance. So long as man is human he will not think much of things which cost him little trouble.

The Home Market Club of Boston has been caught raising money with "strict

privacy" for the purpose of helping elect a Populist Governor of Alabama next August. Its circular, marked "In confidence," prays the recipient "to avoid seeing any but discreet men and to impress upon them the importance of secrecy" in raising "at least $5,000 in New England" for the purpose of aiding "the most hopeful movement we have ever seen in the South." This gives full confirmation to the rumors that the Populist candidate, Kolb, succeeded, in his recent visit to Washington, in enlisting the New England Republicans of the baser sort in his cause. "Bill" Chandler was reported to be chief intriguer, but he left the letter-writing to Senator Hoar and Congressman Walker. Their precious missives are published along with the circular, and a fine type of political morality they disclose. Senator Hoar admits that Kolb is a fiat-money man and a socialist, but is sure that "in some way the forces he leads will be found acting with us in all great essentials in the future." Walker, too, is eager to support Kolb, though he observes that "it must be done as quietly as possible." An inspiring sight they are, these eminently respectable and conservative New England Republicans scheming in the dark to saddle a Governor upon Alabama like Waite in Colorado, and doing it under the motto, "Light Breaking in the South."

It is a fact of considerable interest and significance that, notwithstanding the panic of last year, the consumption of coal was about two million tons greater than in the previous year. The *Engineering and Mining Journal* has taken extraordinary pains to collect statistics on this subject, and it finds that the consumption of 1893 was 183,422,710 net tons, while that of 1892 was only 180,399,017 net tons. After making account of imports and exports, the remainder shows an increase in consumption of 1,881,943 tons. From this fact the *Journal* draws the reasonable inference that "the depression in business through the year could not have been so great in fact as it appeared on the surface. During the first half of the year," it continues, "business men worried over and continually talked about the depression in trade, when in fact they meant in prices. The continual talk about hard times caused capital to become far more conservative than there was any real reason for, and thus affected other branches of business. The semi-panic spread everywhere and caused infinite harm to many industries but, as the figures of coal production show, manufacturing interests throughout the country certainly have not suffered to the extent claimed and believed."

It is a curious coincidence that, on the very day that the ninetieth birthday of "the apostle of prohibition" was celebrated, there was published in the capital of Neal Dow's State the inaugural address of a new mayor, containing this passage:

> "I come to a subject of the highest import, and in which I feel, from my personal acquaintance with you, I have your hearty co-operation, and that is the extinction of the dram-shop. We have taken our solemn oaths to maintain law and order. We want to remove temptation from the unfortunate who has become a slave to appetite. We want peace and quietness to reign so that our wives and daughters can walk the streets without insult. Let us be careful that 'the trumpet utters no uncertain sound.'"

The Augusta *Journal* remarks that "in regard to the illegal sale of intoxicating liquors the mayor well says, 'We want peace,'" etc., so that it is evident that for some time past it has been impossible for women to walk the streets of Maine's capital without danger of insult from drunken loafers. Nor is the case of Augusta exceptional. Not long ago it was announced that the city marshal of Biddeford threatened to prosecute the city liquor agent for running an illegal rum-shop, at which hard drinkers could get all they wanted. There has been a similar scandal about the liquor agency in Portland within a year or two. As for Bangor, the saloons run openly there.

Reference was more than once made in the recent debates on protection in the French Chamber to the opinion of Cavour, that protection and socialism were one in essence, and that the former plays directly and infallibly into the hand of the latter. Cavour's own words were:

> "I maintain that the most powerful ally of socialism, in its logical relations, is the doctrine of protection. It sets out from absolutely the same principle. Reduced to its simplest terms, it affirms the right and duty of Government to intervene in the employment and distribution of capital; it affirms that the function and mission of Government are to substitute its more enlightened decisions for the free decision of the individual. If these principles should become recognized as incontestably true, I do not see what answer could be made to the working classes and their representatives when they came to the Government and said: 'You believe in the right and duty of regulating the distribution of capital; why not also take up the regulation of production and wages? why not establish Government workshops?'"

This is an extract from a speech delivered in Turin in 1851, and the political history of Germany and France and the United States for the past twenty years stands as the sufficient justification of the Italian's forecast. It goes very well with a saying of Bastiat's, reported by Léon Say as having been uttered back in the forties, that the only difference between a protectionist and a socialist was that the former was a man who had an income of 50,000 livres, while the socialist hadn't a sou.

It is cheering to find socialists in one part of the world actually recognizing the difficulty of securing the money to carry on their experiments. The Paris Municipal Council, which is filled with socialists of one stripe or another, has been voting to raise the wages of class after class of municipal employees, until it started up a perfect fury among all hands to have pay doubled and work cut in half. Petitions to that effect have been raining upon the Council from the men who work in the parks and gardens, and pave the streets, and clean the sewers, and labor in the water-works, and drive cattle through the city, and attend doors in public buildings. All of them represent themselves as in a condition to make use of more of the city's money to great advantage. A committee had to be appointed to take all these petitions and complaints into consideration, and its chairman made a report the other day which contained at least one solemn truth. It was that "the public treasury is not inexhaustible." This was a hard saying for the socialistic Council, but as they would be bound to raise by taxation the extra money they might vote away, and were not able, therefore, with Director Ely, comfortably to consider all these grovelling details of finance from "a broad social standpoint," they sorrowfully concluded that they could not raise wages all round. This is a practical denial of the socialist idea of the State as a good-natured kind of old uncle with a bottomless purse. The socialists find their true motto in that saying of Dr. Johnson when he stood gazing at the ancestral seat of the Dukes of Argyll: "What I admire in this is the total disregard of expense."

Whether the report proves true or false that Peixoto, since the collapse of the Brazilian rebellion, has revived some obsolete imperial laws under which he can execute without trial all the insurgents and their abettors who may fall into his hands, its reception here is in marked contrast with that accorded the news about the "bloodthirsty" Hawaiian Queen. She simply proposed to try revolutionists by existing laws, which they had helped frame and under which they had been living with their eyes open. That was a monstrous thing, to characterize which properly the classical dictionaries and the encyclopædias had to be subjected to a terrible strain to furnish parallels. Peixoto makes some laws of his own to feed his vengeance, and it is only an act of stern republican justice, fit to be headed, as it was in one paper, "Death to Enemies of Brazil." This is nothing more nor less than the old doctrine of absolutism applied to republics. "The republic can do no wrong." The natural corollary is that a queen can do nothing but wrong—especially a queen to whom you have done nothing but wrong.

SERIOUSNESS IN LEGISLATORS.

WHEN England counts up her debts to Mr. Gladstone, which are so many, she will find that not the least among them is that he restored a temper of seriousness to Parliament. For many years the favorite statesman of Englishmen was Lord Palmerston, a man of amazing talents, but of a temper pervaded with flippancy and jocoseness and a love of mischief, which was sure to break out on all sorts of occasions. He exhibited in all perfection one type of the English public-school boy—the type that never grows up, and is to the last incapable of being serious for any length of time; in earnest only about his games, in fun about his business, and always ready for a lark or a joke. A great deal of his foreign policy, which made him positively detested in Europe and the United States, proceeded from his unconquerable love of mischief, which was well exhibited in an early cartoon of *Punch*, that represented "Palmerston, the naughty boy, setting England and France [a bulldog and a poodle] together by the ears." In his management of the House of Commons he would repeatedly turn off the most serious complaints and the most urgent remonstrances for mistakes or inaction by repartees and jokes, delivered with a lazy jauntiness which made five-sixths of his hearers laugh and the other sixth ready to cry. Perhaps the climax of this flippancy was when John Bright remarked upon the unchristian boastfulness of the speeches that had escorted Sir Charles Napier's fleet to the Baltic, and to his grave and earnest protest Lord Palmerston began his answer with "the honorable and reverend gentleman." For this he was called to order; but the House in his long career repeatedly condoned phraseology hardly less impertinent.

This tone and temper Lord Palmerston derived in a great measure from his brother-in-law, Lord Melbourne, a man probably of greater natural talents and sweeter disposition, but at the same time of much greater indolence, possessed with a love of taking things easy; so that when his indolence had brought affairs to a pass where no serious excuse could be made, he was obliged to divert public indignation with a laugh. Both these distinguished men had sat at the feet of a far greater man, namely, George Canning, who, as an orator, a statesman, and a friend of humanity, was very nearly up to the level of such men as Burke, but who was cursed from the very beginning of his career to the end by the temper which inspired him in the *Anti-Jacobin*, a positive delight in laughing his antagonists out of court when he could not argue them down. The line of jokers in high office might be traced back historically through Sheridan to Lord North. But it is better worth while to consider its later developments and checks. The wit of Palmerston, rarely bitter, was encountered by the wit of Disraeli, which was rarely otherwise. But essentially different as the two men were in almost every other particular, they agreed in this, that they appeared always ready to get out of a tight place by a joke, and so, frequently, gave the impression of being serious about nothing—of playing politics as a game, sometimes for mere fun, sometimes for profit—but rarely from disinterested principle.

With the advent of Mr. Gladstone to power, all this became changed. He too had been a favorite of Canning, but only towards the end of the great orator's life. His real political ancestors are Peel, Pitt, and Chatham. From all of them he derived the feeling that the political affairs of a great nation are matters of serious conviction, and, in Parliament or out of Parliament, in office or out of office, in party or out of party, they are not to be treated flippantly or mischievously. Mr. Gladstone could—if one must speak in the past tense—be sarcastic for a moment, but he never could be a jester by profession. He might laugh a troublesome antagonist down, but he would not laugh a great question away. The effect of this temper on English politics has been great. There has been an end of jauntiness—of government by joke. The only public man who has shown signs of cultivating this temper—Lord Randolph Churchill—has proved a failure as a statesman Disraeli's own sarcasm changed its direction in his later administrations. Lord Salisbury and his nephew, Arthur Balfour, who might not be indisposed to Palmerston's methods, have shown a self-restraint and a disposition to treat serious things seriously to him unknown; and the same is true of Chamberlain. Sir William Harcourt alone has sedulously cultivated the old method; but it has not increased his influence, and it stands decidedly in his way as a leader at this day. For nearly thirty years the House of Commons has taken things seriously.

The House of Representatives does not take things seriously; or, rather, it is decidedly disposed to take things jocosely. The House of Representatives is divided not too unequally between two parties, with a small but conspicuous third party. The majority party, as has been abundantly proved, has no head on the floor of the House; the minority has a head, experienced, crafty, eloquent, and jocose. He sets the tone at all times. It would be in vain to deny to Mr. Reed not only great parliamentary and partisan talents, but great talents of a higher sort. He belongs to the first rank of politicians—he is very near being a statesman. But he is above all a wit. He loses no opportunity to make a joke and give a dig, chiefly at Democrats, but not infrequently at Republicans who lay themselves open to him. He is as willing to turn the laugh on Morse or Pickler as on Springer or Talbert. And this tone, as with Lord Palmerston, has infected the members. Seated at their desks, or rather wandering among them, they look from the gallery like a body of schoolboys, and a little longer acquaintance with them does not fail to deepen that impression. They behave pretty well with the headmaster in the chair; they are much less orderly when he puts a submaster in it. They are always availing themselves of an excuse to go out, to talk, to neglect their lessons, to play. When they get up to speak, both the speaker and the audience singularly remind one of a boy declaiming or reciting sums to a very listless school in recitation times, with the master answering questions *sotto voce* at his desk. When "Buck" Kilgore rises to object, it is exactly like a big idle boy, who has not got his own lesson, making an excuse to put off the recitation he dreads. Anything the least like a joke, however feeble or absurd, is instantly seized on, sets the audience in a roar, and breaks up everything; every chance for a personal altercation, "You did!" "I didn't," is seized upon, in spite of all the Speaker's hammering.

It is all very good-natured—the sharpest belligerents in debate are the best friends out of it. But when the great leader, now of the minority, but heretofore and probably hereafter of the majority, is always ready to give things a jocose or sarcastic turn, how shall things become more manly? We have said there is no leader on the other side. Mr. Wilson has broken himself down with overwork; the Speaker's leadership is felt oftener than seen; and of another prominent Democrat, who, when he is present, comes very near being a leader, can we say that he is a serious statesman? Mr. Bourke Cockran is astute, popular, eloquent; but is there not an almost insurmountable obstacle to taking him seriously? Surely his best friends and warmest admirers would find his prototype in Sheridan rather than Grattan—more at home in a row than in a battle.

There are, of course, on the floor of the House many men who are earnest, studious, thoughtful, conscientious; who appreciate as truly as Gladstone or Northcote that even party politics is earnest, and statesmanship most serious. There is, unquestionably, transacted a great deal of useful business; and even where business is blocked, talents are displayed. But in order that the House of Representatives shall be what it ought to be, unrivalled among legislative councils; in order that both parties may demonstrate their fitness to govern a great nation, they must take a leaf from Mr. Gladstone's book, and show that great leaders of great parties in great countries have a nobler ambition than sending a laugh running along the desks and putting their adversaries in a hole.

FICTITIOUS WAR.

IT is the fashion with persons of the Jingo persuasion, when they are trying to cultivate the national taste for war, and thus extract from the national legislature larger levies of men and more money for ships, to compose accounts of fictitious engagements by sea and land. In these engagements either the national forces, after performing prodigies of valor, are worsted, owing to great inferiority in numbers, or they inflict on the enemy defeats so frightful that the heart of every reader glows with patriotic pride. The former method is usually the more successful one in England, where foreign invasion can be used as a bugbear. In this country, where invasion is out of the question and a land war grossly improbable, the latter is preferred, and our navy is made to scour the seas, the dread and envy of all nations. When our ship meets one of the enemy's, it simply "blows it out of the water," and makes "copy" of the very best quality for all the newspapers in the country.

Harper's Monthly, we are sorry to say, which used to be, as well as the *Weekly*, a "journal of civilization," has handed over its pages to one of these descriptions of imaginary sea fights by Lieut. Staunton of the navy, who tells us all about it under the heading of "A Battleship in Action." The article is profusely illustrated. There is "the challenge" to the enemy; a scene "in the depths of the ship"; "in the turret"; in the "secondary battery," in the "cockpit"; there is a "stand by to ram"; and a "military top"; until finally the enemy, seeing the ram coming, strikes her colors. There are, too, the usual number of wounded and dead men lying about the decks, and all the other well-known horrors. Here is what happened at the height of the action:

"Sweeping on with majesty and power, the two battle-ships came abeam at 300 yards, and with a blinding crash and roar, the jets of flame and smoke almost interlacing, their terrible broadsides w re poured into each other. At such a distance to miss such a mark was almost impossible. Great breaches were made through the unarmored portions of both hulls; mangled men were blown along the decks by the explosion of heavy shells; bulkheads were demolished and guns dismounted. An eight-inch turret in the *Farragut* and a ten-inch turret in her antagonist were pierced, and their guns disabled. *It was a hell of destruction and death*, and the six-pounders kept up their murderous fire as the vessels rapidly separated."

This is all a very old story, very familiar to the world eighty years ago. The reason for reviving it now Lieut. Staunton unconsciously lets slip in the following paragraph:

"As yet each vessel ignored the other's presence. But to a thousand human beings the issue was one of life or death, and *to the two captains much more than that*—the crowning effort of serious and arduous professional lives, that crucial test long studied and long prepared for, success in which meant fame and honor, while failure meant reproach and bitter mortification, if not a broken and ruined career."

That is to say, the lives of "the thousand human beings" were imperilled, and the Christian nation at home filled with a savage African joy over the account of their dismemberment and disembowelment, in order to enable the two captains to achieve "fame and honor," and make with success "the crowning effort of serious and arduous professional lives."

What interested us most in this article, however, was the cause of the war which was to create "these hells of destruction and death." On turning to this, we were more than ever satisfied of the truth of Mr. Labouchere's maxim, that "Satan finds some mischief still for idle ships to do," or, in other words, that there is not a nation in the world which keeps a navy for simple self-defence or for the preservation of order on the seas. Behind every navy of any size there lurks a secret determination to bully some weaker power, or make somebody who has no navy "stand round." Lieut. Staunton's reasons for going to war are useful as giving us the naval idea, in case we had a great navy, of the causes which would justify us in treating the American public to grand spectacular "hell." It appears that the United States and some other nation (name not mentioned, but undoubtedly England) got irritated "over unfortunate questions of commercial influence and control." This irritation, strange to say, had been aggravated by "the rapid progress of work on the Nicaragua Canal." "The prosperity and population of the United States had continued rapidly to increase." Our commerce had been restored. The sea was again covered with our commercial marine. "The markets of South America were filling up with American manufactured goods, and their carrying-trade was under the control of American lines of steamers." "Slowly but surely European trade was being crowded out by the competition of the United States." "Our flag had once more become a familiar sight in the ports of the world."

Well, the European statesmen did not like this. Lieut. Staunton evidently holds that delightful old protectionist theory that nations you sell goods to are always in a towering rage with you because, instead of your taking their goods in exchange, you "carry the gold out of the country." Accordingly the larger their trade with the United States grew, and the more freight American vessels obtained, the more furious the European nations became, and at last they determined to control this business "by force of arms and subsequent treaty." So, one fine day, an American merchant captain violated some "discriminating custom-house regulations," and his ship was seized and he was arrested. Did he appeal to his minister for redress? Was there a diplomatic correspondence about him? Did he carry his case before the courts of the country? Did the secretary of state show that our custom-house claimed no such jurisdiction over foreign ships and crews in our ports? Not a bit of it.

"The captain of a United States cruiser sent an armed force on board the steamer, took her out of the hands of the customs officers, and escorted her to sea before the harbor authorities realized what was happening. A fast corvette was sent in pursuit, and an engagement took place between the public vessels in which men were killed and wounded on both sides."

Lieut. Staunton, the author of this contribution to the law of nations, has just gone to Honolulu as flag lieutenant to Admiral Walker. The magazine in which he publishes it as something very glorious for the education of the boys of the country, is one of the leading lights of periodical literature. The act which he describes as a legitimate cause of a respectable war is simply a bit of buccaneering which would disgrace King Lobengula, if he practised it on King Kama. Offering to follow it up with a "hell of destruction and death" does not improve it. It makes it worse. A man who presents his country to the world in such a rôle may be many good things, but he is certainly not a "good American." A "good American" is not a man who blows people out of the water on small or no provocation. He is a man who is just and fears not.

LIBELLOUS INTERVIEWING.

THE committee of the Bar Association has reported against any change in the law of libel; but this is going too far. Some changes are necessary, but they are in the direction of greater stringency. For instance, nobody has proposed to take any action for the suppression of bogus interviews. The interview has, during the past thirty years, become an important and useful feature of journalism. It enables in many cases the only man who really knows anything about some matter of public interest to tell about it in his own way; and the reporter, in putting questions to him, directs his attention to the points in which the public feels the most interest and on which it most needs information. Moreover, many a man will submit to an interview who will not write a letter. There is something a little flattering to one's self-love in being sought after instead of volunteering. Even in writing a letter to the newspapers few men are capable of forgetting their dignity to the point of saying truthfully: "I have seen such and such things in your paper." The usual formula is, "My attention has been called to such and such things," etc. That is, he, consciously or unconsciously, likes to have it supposed that he does not see the paper, or only glances at it, owing to the

pressure of more important matters, and would not have seen this but that somebody brought it to him and asked him to read it. The interview meets this widespread peculiarity admirably. The person interviewed is sought out, which of itself adds somewhat to his importance, and is treated with the respect which the press always shows to the possessor of exclusive information, or of information of very superior quality on a topic of general interest.

Next in value to being sought out is the appearance of having been sought out, and this has led, in a great many cases, to the practice, on the part of persons who in old times would have written a letter to the editor, of throwing their thoughts into the form of interviews with themselves. This is apt to have a short preface stating the claims of the person interviewed to a hearing, on account of professional eminence or some peculiar experience or special acquaintance with the subject, followed in some cases by an account of his house, if he lives in the country, and of his library, or "study," or other room in which he does his thinking or writing. The reporter is then made to ask him a leading question, generally a little (but only a little) beside the mark, and the interview opens by a correction of this mistake, after which the eminent man goes straight at his subject, first clearing away the extraneous matter and the popular errors about it. The only objection to be made to this form of interview is that it is apt to smell of the lamp. The care shown in its composition usually so plainly betrays its character that it hardly seems worth while to throw it into the form of a dialogue. The reporter's questions, too, are apt to be too leading. He generally seems to have run ahead of the great man's mind, and to be simply waiting for him at well-known turns in the road.

But, in one way or another, the interview has really proved a valuable addition to the various instruments of public discussion. It does bring into the field a good many men of more or less authority who could not be brought in in any other way—men who would not take the trouble to write letters to the newspapers or to make speeches, but who, nevertheless, have opinions or knowledge which would be valuable and have influence if made public. But the value, of course, depends wholly on the genuineness. If the thing we read as Abram S. Hewitt's or Chauncey Depew's talk about this, that, or the other be not really his, if it be simply the invention of a youthful reporter without any knowledge of the subject, of course a fraud of a very gross kind is practised on both them and the public. And yet there is to-day no commoner kind of newspaper frauds than this. We do not believe we exaggerate when we say that one-half the interviews which appear in certain papers are pure fiction, the inventions of a reporter who dared not return to the office without a little budget of "news" of some kind. Why the sale of such things to the public is permitted any more than any other adulterated or bogus article, it is hard to say. They are now so numerous that the persons aggrieved by them rarely take the trouble to complain of them. Those who do, seldom find that it does them any good. The editor who, if he carried on similar frauds in any other business, would speedily find himself in a striped jacket beside McKane, is, on account of the money thus acquired, generally treated as a great man and estimable citizen; and, in fact, the greater his sales the more he is admired.

Of the effect on public morals, and especially the morals of the young, of this spectacle of open, unpunished swindling on the part of preachers of morality one hardly needs to speak. What we seek to know is why the publication of a bogus interview with a person mentioned by name is not set down in the libel law as at least a misdemeanor, rendering the editor liable to arrest and indictment. The practice could be completely stopped by one or two convictions. It reflects great discredit on the American press and great discredit also on the American public. The indifference of our public to the quality of our newspapers, and especially to their criminal characteristics, is a blot the world over on the national fame.

THE CONSTITUTIONAL CONVENTION.

WE have received the following timely letter from a prominent member of the bar of this city:

"The Constitutional Convention is to meet on the second Tuesday of May, and if this community is to continue to be a half-fit place to live in, somebody besides the anarchists must be getting ready. It is important for people to know who the delegates are, and if any have declined to serve or resigned (as it was stated Mr. Whitney or Mr. Root would do). A list of them would at least set people to thinking."

Of the forty-four delegates from this city only one has declined to serve, namely, Mr. Whitney, who gave notice to that effect at the time of his nomination. The list contains many excellent names and a considerable number of very Tammanyish ones. There are in all thirty-three lawyers in it, three judges, one police justice, two journalists, two liquor-dealers, one contractor, one builder, and one real-estate dealer. With the exception of the four delegates-at-large, the delegation is composed entirely of Democrats who were put in nomination by Tammany Hall. Its most useless members are the two liquor-dealers, Tekulsky and Herzberg; Michael J. Mulqueen, known as "Mickey," who was nominated because he is Mayor Gilroy's son-in-law; William McM. Speer, who was formerly Mayor Gilroy's private secretary and is now editor of the Albany *Argus;* and "Joe" Koch, the police justice. There are many others who are of no importance, and who were nominated, not because of their attainments and qualifications, but because they were good Tammany men.

In regard to preparations for the work of the convention, we are glad to be able to say that a committee of the ablest lawyers of the City Club has been holding weekly sessions for several months, and has been conferring with the representatives of labor and other organizations, with a view to formulating amendments to be submitted to the convention. Among the questions considered in this way have been a series of amendments providing for the separation of municipal elections from State and national elections. This is the familiar plan of so changing the lengths of the terms of State officers and members of the Legislature that Presidential and State elections shall occur on even years, but two years apart, and municipal elections on odd years. That is to say, we may vote for Presidential candidates in 1896 and 1900, for Governor and other State officers in 1898 and 1902, and for mayor and city officers in 1895, 1897, 1899, and so on. It would be necessary to elect members of the Legislature in Presidential years, but no candidates for Governor or minor State officials would be in the field at that time.

As our readers are aware, we have been the zealous advocates of this change for many years. Few more important subjects will come before the Constitutional Convention, and we are rejoiced to be able to say that the advocates of the change will go before that body with a mass of evidence in support of it, especially in regard to the desirability of separate municipal elections, which cannot fail to exert a profound influence both upon the members of the convention and upon the voters of the State who are to pass judgment upon its work. It is the conviction of all students of the problem of municipal reform that separate elections, especially in large cities, are absolutely essential to any lasting improvement. In this city, experience has made it too plain for argument that we can never hope to be rid of rascally government till we get our elections so completely separated from State and national issues that the people can vote upon the question of good city government alone.

Other questions which have been considered by the City Club committee and other organizations are those of taxation, of a division of the Court of Appeals into two bodies, of the abolition of the Court of Common Pleas and the Superior Court in this city, and of a reform in the referee system. On all these subjects a great diversity of opinion has been developed, but the discussion has served to awaken interest in the approaching convention.

Another subject which ought to be brought before the convention is that of judicial control of contested legislative election cases. The people declined to adopt an amendment providing this reform, when it was submitted to them in 1892, but that was a Presidential election year and consequently a most inopportune time. The people had not had opportunity to inform themselves upon the subject, and, as usual in such cases, they voted against it. The only argument against the change that is of any weight is, that it brings our courts into politics and is in danger of impairing their influence. But as a matter of fact we are forced to bring the courts into contested cases now whenever we reach such a crisis as the Hill-Maynard performances brought us to in the winter of 1891-2. The courts had to be appealed to then, and the impartial and fearless manner in which one Democratic Supreme Court judge after another, and in which the Democratic judges of the Court of Appeals, gave decisions against the Democratic contentions, furnished gratifying proof that our courts can be trusted to rise above partisan considerations in political cases. The decision of the Supreme Court of New Jersey last week shows the same thing to be true of the courts in that State. If all legislative contests were referred to the courts under the laws, there would be far less danger of partisanship entering into the decisions than there is at present, when they are taken to the courts only after the fiercest partisan passions have been aroused.

AT THE BRITISH MUSEUM AND NATIONAL GALLERY.

LONDON, March 17, 1894.

FEW who are not regular visitors to the British Museum realize the good work that is accomplished in its Print Rooms. Indeed, it is only the student or the artist who can appreciate adequately the discretion and judgment with which the fine collection of prints and drawings has been made, and the skill and sympathy with which it is arranged. Appealing more directly, however, to the general public are the special exhibitions which are held in connection with this department at occasional intervals, and continued so long as they seem to prove profitable and interesting. Americans who purpose coming to London this summer should note the fact that a new one, even more comprehensive than the last, has just been opened. It is a show not to be overlooked by any lover of the art or history of drawing. The period covered extends from Masaccio to Watteau, and not a school of importance in Italy, France, Germany, or Holland is neglected. It is doubtful whether there is another museum in Europe that could bring together a series of drawings so thoroughly representative of the centuries traversed. Certain phases of the art might elsewhere yield more famous single examples; but it is the high average maintained by all schools which is the great merit of the Print Room collections, as it is of the pictures in the National Gallery.

The exhibition is made up chiefly of the Malcolm collection, which has been permanently loaned to the British Museum. Wherever it was weakest in chronological sequence, the treasures of the Print Room have supplied the missing links, so that from Masaccio to Veronese, from Clouet to Watteau, from Dürer and Van Eyck to Rembrandt and Rubens, the development of art in South and North, as it expressed itself in the studies and sketches of the masters, can be followed, step by step, in school after school. To the Italians, as is but right, prominence is given. Here we start with the illuminations of the Primitives, a characteristic beginning, since even in their work, as in that of the later schools, if the Venetian be excepted, strength lies in beauty of line or form rather than in splendor or poetry of color. And so we pass onward from the early Florentines and Umbrians to Botticelli and Da Vinci and Raphael, whose classical correctness and accomplished draughtsmanship are always more delightful in his drawings, in which, it may be supposed, he was working entirely to please himself and not his fashionable or pious patrons, and, therefore, we escape the cloying sweetness of his Madonnas and saints painted to order, and the tedious color scheme borrowed from Umbrian conventions. But more vigorous are the studies of Michelangelo, in which so strong a note of individuality is struck that at times they seem almost uncouth and grotesque compared to the restraint of Raphael and the suavity of the Venetians.

The latter are the greatest masters of them all. There is a drawing of a Turk by Bellini as refined and delicate in treatment as if it were not merely jotted down for a note or a suggestion, as is the case with the greater number of the drawings, but worked out carefully for reproduction as Abbey or Vierge might do it to-day. The landscapes of Titian, when genuinely Titianesque (it seems doubtful whether one or two are rightfully attributed to him), are triumphs of a simplicity whose value is the more emphasized by comparison with the niggled elaboration of the too little known Domenico Campagnola, Titian's pupil, who sought so diligently to borrow the methods and copy the effects of the master, and who succeeded so well up to a certain point. What he lacked, however, was the one great essential in art—genius. It is strange that the drawings of Veronese and Tintoretto are almost entirely lacking in interest. Michelangelo, on a piece of paper a few inches square, could suggest something of the vigor and majesty of his frescoes; but Veronese, as here seen, apparently had not the talent of expressing in the shorthand of art the stateliness and dignity of his decorative achievement.

French work begins with Clouet, when already it had outgrown the naïveté of the Primitives, and, in its maturing, had acquired a refinement not unworthy of the Venetians, and developed a striking originality. After Clouet, however, it degenerated, only to be revived again with Claude and Poussin and the acceptance of the classical tradition. It was at its best in the exquisite dainty drawings of Watteau, and of these the collection contains many very wonderful examples.

The only noteworthy contributions from German art are found in the studies of Dürer and the portraits of Holbein, virile, full of character, decorative in treatment, varying in methods, but with little of the graceful elegance that distinguished the Italian draughtsmen. There is so extensive and fine a series of Dürers that one can but wish that the great Dutch master, Rembrandt, had fared as well. The Malcolm collection, however, boasts of few Rembrandts, and in this instance the Print Room has not been successful in filling the unfortunate gaps. Examples of Lievens, Van der Heyde, Ter Borch, the crayon portraits of Cornelius Visscher, and the overfinished, tiresome productions of Ostade can scarce be considered sufficient compensation. Van Eyck and Rubens represent the earliest and latest Flemish schools included. And for the rest, two minor collections of northern and Italian engravings of the fifteenth and sixteenth centuries complete the exhibition. The drawings are done in the many mediums which the old men were most apt to use—pen-and-ink, sepia, crayon; a few are in color, notably some of Dürer's and also of Rubens's, who, it is amusing to find, in one at least of his landscapes, was entirely preoccupied with a problem of color which people to day are apt to think wholly and entirely modern. Altogether, the show is unusually important historically, unusually delightful artistically; a relief from the mediocrity and prettiness that prevail in the popular Bond Street or Piccadilly gallery.

At the National Gallery, if one cannot look for new exhibitions, on the other hand new purchases or new bequests are constantly adding fresh interest to the most perfectly selected and arranged collection of pictures in the world. The last to attract attention is a painting by Ford Madox Brown which has very recently been hung in the British section. Madox Brown exercised so powerful an influence on the younger generation of English painters that, even had his work been less notable in itself, it would still deserve a place in a national collection with the least pretence to being representative. But, despite its faults—and they are many—it has qualities which compel admiration and respect, and which will insure its survival long after the average Academical picture of the day has perished. The canvas chosen by the subscribers, who have presented it to the National Gallery, is his "Christ washing Peter's feet," and it could hardly be more typical of the artist's style and methods. It shows the dignity of his composition at his best, in the arrangement of the table around which the apostles are grouped, while Christ is on his knees before Peter in the foreground; it has the richness and beauty of color which, perhaps, seem less in his work only because so much greater in that of Rossetti, his friend; it reveals the sincerity of his aims and methods in the treatment of the many figures, and the skill with which he has spared us the mock sentiment and banality the modern, as a rule, brings to the rendering of Scriptural or religious subjects. As a whole, the picture is austere and solemn and dignified, as effective a mural decoration as the Christs and Madonnas of the old Italians and Flemings. And yet its faults are all too evident: the weakness of drawing is most aggressive in the kneeling Christ, the muscles of whose neck protrude as if to form a goitre; the handling is light and tedious; textures are so poorly rendered that the white tablecloth and the cushions upon which Peter reclines are like nothing so much as cast iron. These, however, are details which cannot mar the fine, impressive effect of composition and color. It is long since so welcome an addition has been made to a section into which more than enough incompetent and trivial canvases have found their way. Now that it is too late, Englishmen may well regret that to Madox Brown were not intrusted some at least of the decorative

designs of St. Paul's which, judging from the glimpse lately allowed to a few artists and critics, threaten to disfigure hopelessly the fair architectural proportions of Wren's Cathedral.

N. N.

PASQUIER'S NAPOLEONIC MEMOIRS.—VI.

PARIS, March 14, 1894.

THE third volume of the 'Memoirs of Chancellor Pasquier' has as much interest as its predecessors. It appears at a moment when the Napoleonic revival is at its height, and, in some respects, it may be considered an antidote to the enthusiasm which is felt at the present hour for the great Emperor. What gives it a special value is the fact that Pasquier does not fatigue us with military details; he does not look upon Napoleon from the standpoint of the soldier. A civilian, he analyzes events chiefly from a political and social point of view. He accepted office under the Bourbons in 1814, but he saw at once the dangers which threatened the Government of the Restoration. The chief danger was the existence of the army, which had so long been identified with Napoleon. The Bourbons had given peace to France, but their situation was extremely delicate: the men who had served Napoleon at the court or in the army had to share their power with *émigrés*, with men who were most of them unknown. The *émigrés* assumed an attitude of superiority which offended the servants of the Empire. "It often happened that the most illustrious generals heard inquiries about their names in the drawing-rooms of the Tuileries. These names, which had so often been mentioned in the bulletins of the Grand Army, were known at Vienna, at Berlin, in the numerous capitals of Europe."

There is no exaggeration in saying that from the island of Elba Napoleon continued to be the chief of the French army. In a report which Pasquier wrote for the King, and gave to the Abbé de Montesquiou, he said: "The army, which was once the terror of families, has become popular since a large number of officers and men have gone back to their families and talk incessantly of its exploits and its sufferings. It has become an object of admiration, even of affection. . . . Its glory has become a sort of national property; to this sentiment must be joined a profound antipathy to foreigners." This was written five months before the return from Elba. A Napoleonic army, a people becoming more and more attached to the army and dissatisfied with the *noblesse* and the *émigrés*—such were the elements on which Napoleon founded his audacious attempt. Napoleon was also aware of the difficulties which existed between the sovereigns at Vienna, and was perhaps hoping that a new coalition could not easily be formed.

Talleyrand, who represented France at the Congress, had adopted as his favorite theme the theory of legitimacy, and invoked it especially against Prussia, which wished to keep Saxony. Each sovereign wanted a part of the spoils. In a conversation with Alexander of Russia, the latter said: "I will keep what I occupy." "Your Majesty," answered Talleyrand, "will keep only what belongs to him." "I am in accord with the great Powers." "I don't know whether your Majesty counts France among the great Powers?" "Certainly; but if you don't want each of us to suit himself, what do you claim?" "I put right first and convention afterward." "The conventions of Europe are the right." "This language, sire, is not yours, and your heart disavows it." "No, I repeat, the conventions of Europe are the right."

"I turned then," writes Talleyrand to Louis XVIII., "to the wall, put my forehead against it, and, striking the wall, said, 'Europe! Europe! poor Europe!' and, turning towards the Emperor, 'Shall it be said,' I asked, 'that you destroyed it?' He answered: 'War rather than abandon what I occupy.' I let my arms fall, in the attitude of a man afflicted but resolved, who seems to say, 'The fault will not be ours.' I said nothing. The Emperor too remained silent for some moments, then repeated, 'Yes, rather war.' I remained in the same attitude; then raising and agitating his hands, as I had never seen him do, he screamed rather than exclaimed, 'This is the theatre hour; I must go; I promised the Emperor; they are waiting for me.'"

Alexander was thinking of Poland, Prussia, of Saxony; the fate of Murat and of the two Sicilies was not decided; all seemed uncertain at Vienna. Napoleon did not lose much time in waiting; he left the island of Elba and landed in France. Pasquier says but little of the triumphal march through the province of Dauphiné. The first effect produced in Paris by the news of the return of the Emperor was a complete stupefaction. The Government confided the principal army corps sent against Napoleon to Marshal Ney. Nobody had more brutally forced the Emperor to sign his abdication at Fontainebleau, but "nobody knew that this man of iron on the battlefield was very weak when it came to taking a resolution, and that it was easy to push him from one extreme to another." His wife was the niece of Mme. Campan, who had been, as well as her own mother, a maid of Marie Antoinette; she had expected to become a favorite with the Bourbons, but had been very coldly received at the Tuileries whenever she appeared there. She had become very much embittered, and made incessant complaints to her husband. "Small causes produce great effects, and it may be that the feelings of Mme. Ney had something to do with the defection of the Marshal."

Pasquier was informed very early of the departure of Louis XVIII. for the north of France, by M. de Vitrolles, who offered to take Pasquier with him to Bordeaux, where he was going himself, and represented to him that he had much to fear from Napoleon's wrath.

"When I left him, I was not without much uncertainty as to the course I ought to take I had but one fixed resolution, which was to leave France only at the last extremity. It was a Sunday. I went to the castle at the hour of mass. The crowd was great in the drawing-room, some brought there by a real interest, many by a desire for information. Few people knew that the departure of the King had been fixed for that evening; those who knew were silent. I saw the King and the Princes cross the salons, as usual, towards the chapel. Notwithstanding the great sadness painted on their faces, they kept a good countenance. The Duc de Berry stopped before me, and took my hand in a way that said, 'Adieu.'"

The King left Paris on the night of the 12th of March, and the next day the Tuileries were a complete solitude. Pasquier asked M. de la Valette for advice, and learned from him that a military conspiracy had been formed in the north of France, and that Gens. d'Erlon, Lallemand, and Desnouettes were in it. "Why!" said Pasquier, "did these generals intend to go and meet Napoleon?" "Not at all; and the news of his landing and his progress has upset the whole conspiracy." "What, then, did you wish to do?" "We were to go to Paris, where we had good friends waiting for us; we should have seized the King and all the members of his family who chanced to be with him; we should have taken them politely to the frontier." "And then?" "Then we should have taken a sovereign who would have received his crown from us, and not from foreigners." "But where would you have got this sovereign?" "Who knows? perhaps the Duc d'Orléans, if he had been willing to be intelligent and reasonable. He would have been obliged to be sincerely constitutional. I don't think he would have frightened Europe, which would surely not have armed herself merely in the interest of Louis XVIII."

A few days after the return of Napoleon to Paris, Pasquier received an order of exile; he was allowed to go wherever he wished, provided he was more than forty leagues from Paris. He went to Fouché to ask for his passport. Their conversation was very extraordinary. Fouché took him into his garden and asked him what he thought of the situation. Pasquier felt rather shy at answering. Fouché broke the ice and said: "I must tell you that this man [Napoleon] is not at all cured: he comes back as despotic, as desirous of conquests, as mad as ever he was. . . . I declare to you that all Europe is going to fall upon him; it is impossible for him to resist, and his business will be done in four months." Pasquier was naturally surprised at hearing such language from Napoleon's minister of police. He said: "Well, if this happens, I shall be resigned; but, in good faith, Monsieur le Duc, what is the bearing of the confidence which you make to me?" "I will tell you. I am willing that the Bourbons should come back, only things must be a little less stupidly arranged than they were last year by Talleyrand. We must have good conditions, good and solid guarantees." Fouché went on to explain his projects; he wanted good men, he wanted somebody for the city of Paris, and he offered Pasquier the post in advance. Meanwhile, he advised him to write a letter to Napoleon, asking leave to go back to the Council of State. "He will be too happy to grant it to you. Don't you suppose that he hates me much more than he does you, and I am his minister?"

Pasquier did not wish to go so far; he stopped half way.

"Upon reflection, I saw no inconvenience in following the advice given me to write to Napoleon. I said that I had served him faithfully till the day when it had been proved to me that the interests of my fellow-citizens, which were confided to me, the interests of the whole country, demanded the only course which could then avoid greater misfortunes. I had done nothing which could offend him personally, and I had never forgotten what I owed to the man who had given me functions of high confidence."

The letter remained without an answer. "Napoleon expected something more of me," says Pasquier; "he wished me to solicit the honor of serving him again." Pasquier says that he never regretted having taken the part which was recommended to him by reason and by delicacy; all the more when, a few days afterwards, the Council of State made a declaration the most bitter, the most offensive, against the House of Bourbon. The Emperor wished every member of the Council to sign it with his own name, and it was brought to the houses of those who had not attended the deliberation. Molé, who was among the last, would not sign, and he wrote to the Emperor to explain his refusal. "The deliberation of the Council," said he, "begins with the formal recognition of the sovereignty of the people; I know not a more dangerous or subversive principle." The Emperor accepted this reason: "he would not quarrel then with the

name of Molé." Benjamin Constant, who had written violent articles against Napoleon, and, when he heard the news of his arrival, thought for a moment of going to the Vendée, accepted the post of Councillor of State. Carnot had joined the Government of Napoleon, and, foreseeing a new invasion of France, accounted for his action by the necessities of the country. Pasquier retired to the Château de Coulans, near Le Mans, on the road to Laval. He found there his brother, who was an ardent royalist; he soon heard that the Duc de Bourbon had left Angers and embarked for England, that the Duchess of Angoulême had been abandoned by the troops and had also left France. The Duke of Angoulême was obliged to surrender to Gen. Grouchy, and left Cette for Spain. The French territory was now again wholly in the hands of Napoleon.

We shall see now, in Pasquier's Memoirs, how he spent the "Hundred Days," the famous period which ended at Waterloo.

Correspondence.

LAW TERMS AND LEGISLATION.

To the Editor of The Nation:

Sir: In commenting recently on the absurdity of the tax proposed by the Wilson bill upon legacies, as if they were parts of the taxpayers' incomes, you failed, perhaps from motives of clemency, to point out another absurdity that results from a surprisingly careless misuse of words. Although the mistake is one of form rather than of substance, still, considering the character of the document in which it appears, I think that it ought not to go unnoticed.

To every one who is at all familiar with legal phraseology, it is well known that the words *devise* and *inheritance* apply exclusively to lands. Therefore, this passage from the bill, "the value of any personal property received by gift, *devise*, or *inheritance*," is tantamount to the inconsistency of saying (substituting Bouvier's definitions of the two technical terms in question) *personal* property received by "gift of *real* property by last will and testament," or "a perpetuity in *lands*."

True, a precedent for construing the term *devise* to mean *bequeath* may be found in Camfield vs. Gilbert, 3 Fast., 516 (decided in 1803). In that case Lord Ellenborough's gallantry made an exception to the rules of technical construction in favor of the fair sex, and he held that "*devise* . . . might yet be easily mistaken for *bequeath* by an uninformed testatrix." But is it not a little humiliating that in order that this blunder, which would be inexcusable in a law student, should be overlooked, and, to "make sense" of a piece of solemn legislation enacted after grave deliberation by the highest hall of popular representation in the land, it should be necessary for the authors to take refuge behind the skirts of an "uninformed testatrix"?—Yours truly,

S. R. T.

Chicago, March 24, 1894.

WOMEN AND THE JURY-BOX.

To the Editor of The Nation:

Sir: A serious issue (which the woman-suffragists will not be slow to turn to account) of the disfranchisement of women as it affects the course of justice in trial by jury is brought out by the repulsive breach-of-promise case now before a Washington law court. It is an unfortunate but nevertheless undeniable fact that society holds to a dual standard of sexual purity, one for the woman, another for the man. Hence the plaintiff and defendant in the case referred to, guilty by their own confessions of mutual sin, are arraigned before the bar of two separate and distinct moral codes, one uncompromising, the other lax. But the jury which is to decide their respective measures of guilt is not, as humanity and reason alike would seem to dictate, composed half of individuals upon whom the one, and half of those upon whom the other code is binding, but, owing to the non-eligibility of women as jurors, consists exclusively of persons who would themselves be judged by the code of the defendant alone.

An adroit and skilful use of this advantage has already been made in his opening statement by the defendant's counsel, who takes occasion to say that under the same circumstances "many a man" has behaved in the same way as his client. A more direct appeal than this to the *esprit de corps* of the unmixed jury could not well be made. The question arises, the woman-suffragists say, whether a jury so composed can honestly be sworn. And they answer in the negative. For men to truly swear that they are without opinion in this and similar cases, when they are under the influence of the most subtle and far-reaching class prejudice, is an intellectual impossibility. Justice will continue to be travestied, they urge, until a woman, no less than a man, may be legally condemned or acquitted by her peers.

G. S.

Baltimore, March 24, 1894.

ROSEBERY AND PITT.

To the Editor of The Nation:

Sir: In your last issue you quote from the London *Economist* an article which appeared in that publication relative to Lord Rosebery becoming Premier of England, and seem rather to side with your contemporary in concluding that, because his lordship "was practically unknown to the great mass of electors of the United Kingdom before 1884," and only happened to be in Parliament for about ten years—"two of which he spent in seclusion"—prior to his assumption of the high office of premier, and because "he is almost an unknown quantity to the British public," the wisdom of his selection is, to all intents and purposes, open to much doubt.

In citing the names of Gladstone, Disraeli, Peel, Palmerston, and Salisbury as ministers "who climbed painfully to power through long years in Parliament and many subordinate places," it would have shown well, by way of comparison, had you also cited the case of William Pitt, who, direct from a university, and at the age of twenty-one, entered Parliament, was Chancellor of the Exchequer at twenty-three, refused the premiership, offered him by the King, at twenty-four, and *was* actually premier before he reached the age of twenty-five. Not alone was he the youngest man who ever held this high office, but he probably justified, beyond all its previous or subsequent incumbents, the degree of confidence in his ability and political sagacity which the people—"the great mass of electors"—reposed in him. He developed into a great man, a most worthy son of "the great commoner," and left behind him a lasting imprint on the pages of modern history. Lord Rosebery will not have in opposition to him a Fox, a Burke, a Sheridan, or a North, as had Pitt. He enters upon the task twenty or more years an older man than was Pitt when he took up the reins; and why the *Economist* or the *Nation* should regard the circumstances of his appointment as "astonishing" is more than I can comprehend.—Respectfully,

John Fanning O'Reilly.

284 Pearl Street, New York, March 23, 1894.

[Some things may be astonishing which are not unprecedented.—Ed. Nation.]

BESIDE THE MARK.

To the Editor of The Nation:

Sir: In the *Nation* of the 8th inst. your correspondent "F. H." discusses a "brace of whims" which he fancies has cropped up in the following sentence from a California writer in the *Educational Review* for last October:

"What good results in teaching English, pure but not affected, and easy without slovenliness, can be looked for from young women who say, *I wished I was home*, and *at all?*"

Since the excuse alleged by "F. H." for wasting paper and ink on the matter implies a contemptuous criticism, I may be allowed to point out his error. It will be immediately evident to any one who reads the article in the *Educational Review* that the writer, Prof. H. B. Lathrop, had no thought of condemning the locutions *was home* and *at all*. He was merely alluding to that combination of pedantry and ignorance which is occasionally found in teachers of a certain class—the pedantry being illustrated in this case by an affected articulation of the phrase *at* (hiatus) *all*, and the ignorance by the vulgar *I wished I was home* for *I wish I were at home* or, if "F. H." pleases, *I wish I were home*. We shall not even stickle for the *were*. Had Prof. Lathrop written *wisht*, perhaps the point would have been more readily seen; the vulgarism certainly is not unfamiliar (cp. *attackt*). Incidentally I may say that I can hardly appreciate the difference between *I wished I was home*, as "F. H." understood the sentence, and *I was home all last week*, which "is not to be tolerated." But to discuss that is not at all to my purpose.

Perhaps "F. H.'s" ink has not been wasted after all. For though I for one had never harbored a suspicion that the two phrases he considers at such length were in any way open to censure, and was therefore not interested in his long array of examples, I was interested in his information that the locutions *have* been censured, and that there are depths of ignorance or heights of pedantry which need the illumination of his kindly light.

A. G. Newcomer.

Leland Stanford Junior University, California.

THE HARVARD OBSERVATORY'S PHOTOMETRY.

To the Editor of The Nation:

Sir: Will you kindly permit a word or two of correction to the otherwise excellent notice of Dr. Chandler's criticism of the Harvard Observatory astronomy? The investigation referred to by Dr. Chandler (Annals H. C. O., vol. xxiv.) is not that one which may to some extent be judged "by the degree of its agreement with the catalogues of Pritchard and Wolff." It is a different work, executed with a different instrument upon a different set of stars, and the two are not comparable. One who is not thoroughly at home in the special

literature of photometry may well be forgiven for confusing the investigations, but the fact remains that Dr. Chandler's estimate in the *Nachrichten* is the first opinion given by an authority as to the work in question.

It is true, also, that a close reading of Dr. Chandler's article would show that the errors mentioned are not the clerical errors which your critic has deemed them, which can be eliminated to the betterment of the catalogue. They are indexes of weakness in the principles upon which the work was conducted. These two facts seem to point to a conclusion quite different from that deduced by your critic.

JOHN RITCHIE, JR.

BOSTON, March 24, 1894.

Notes.

THE 'Anabasis' of Profs. Goodwin and White is to be reissued in May by Ginn & Co., newly printed and thoroughly revised; Dindorf's text being exchanged for Hug's, but with critical acceptance. White and Morgan's Dictionary to the 'Anabasis' will be incorporated with the work.

G. P. Putnam's Sons will shortly publish 'The Lives of Twelve Bad Men,' "eminent scoundrels," by various hands; 'Maximilian and Carlotta,' a story of Imperialism, by John M. Taylor; 'The Philosophy of Religion,' the Gifford Lectures for 1893, by Prof. Otto Pfleiderer; 'Prose Fancies,' by Richard Le Gallienne; and 'Prince Henry the Navigator and the Age of Discovery,' by C. R. Beazley.

'Total Eclipses of the Sun,' by Mabel Loomis Todd, is announced for publication April 2, by Roberts Bros. of Boston; and 'Public Libraries in America,' by William I. Fletcher, April 12, by the same firm, both volumes being in the "Columbian Knowledge Series," edited by Prof. David P. Todd of Amherst College. The same firm will issue 'By Moorland and Sea,' essays by Francis A. Knight, illustrated by himself, and 'Art for America,' by Wm. Ordway Partridge.

A volume on socialism by Prof. R. T. Ely is to be added next month to T. Y. Crowell & Co.'s series in economics and politics.

Gustav E. Stechert, 810 Broadway, will market in this country a German work on the language of the Zimshian Indians in Northwestern America, by Dr. A. C. Count von der Schulenburg, with ethnographical introduction, grammar, specimen extracts, and vocabulary. The tribes in question inhabit the rocky north coast of British Columbia.

Charles Scribner's Sons have brought out the second volume of Pasquier's Napoleonic Memoirs, covering the eventful period 1812–1814.

The record of the Woman's Building and the Children's Building is completed in Part 8 of 'The Book of the Fair' (Chicago: The Bancroft Co.), and that of Machinery Hall is entered upon. The illustrations continue to be of a high order of process work. The hall just mentioned (alias Palace of Mechanic Arts) is finely shown on a full page as well as in detail.

An 'Index of Noteworthy Words and Phrases found in the Homilies of Clement' (Macmillan) may be commended to patristic scholars. This accurate and elaborate work was printed seventeen years ago at the request of Dr. Lightfoot, and is now reprinted by the trustees of the Lightfoot fund.

The work of popularizing the results of the higher criticism of the Pentateuch which was begun by the Rev. B. W. Bacon in 'The Genesis of Genesis,' is now carried further by the same author in 'The Triple Tradition of the Exodus' (Hartford: Student Publishing Co.). More of the details are necessarily tentative in this volume, yet the method and the broad outline justify themselves. The skilful use of different type to display the different documents adds not a little to the convincing power of the argument, and the whole appeals to the mind as an inevitable explanation of the phenomena in much the same way that the glacial theory accounts for scored rocks and moraines and perched boulders—though, without the key, even a Darwin may fail to perceive the evidence, as he did on his first visit to the rocks of Cwm Idwall.

Mr. F. C. Conybeare's translation of the 'Apology and Acts of Apollonius, and Other Monuments of Early Christianity' (London: Sonnenschein; New York: Macmillan) is made from ancient Armenian versions, first published in 1874, and themselves derived from older Greek and Syriac originals than any manuscripts of them now extant in those languages. The peculiar interest of thus going back of the commonly received renderings of the dozen *Acta Sanctorum* here given is in seeing how the accretions of later times invariably made the narrative more miraculous and more orthodox. One naïf editor of the Acts of Athanagines states that he "made orthodox all that was said" (by the various actors). This continual recasting of the documents of early Christian literature must be taken into the account by its students.

M. E. Lintilhac has published (Paris: E. André fils) the second and concluding volume of his 'Précis historique et critique de la littérature française.' The first volume brought the work to the close of the sixteenth century; the present treats of the literature of the seventeenth, eighteenth, and nineteenth centuries. Each volume contains a useful set of bibliographical references.

M. Émile Bosquet, himself a bookbinder, has gathered into a single volume a dozen articles about his art in the present and in the past ('La Reliure'; Paris: Lahure; New York: F. W. Christern). Like most French books on its subject, it is narrowly national, and concerns itself almost altogether with the work of those who dwell on the banks of the Seine. In artistic bookbinding the superiority of the French is incontestable, but in commercial bookbinding the French are inferior to the British and to us. No French binder, for example, has ever produced a specimen of commercial binding at once as fine and as strong and as beautiful as that of the 'Century Dictionary.' Still, these papers of M. Bosquet's are interesting to all lovers of bibliopegy. The illustrations are portraits of modern French bookbinders and photogravures of recent covers, the most curious of the latter being one by Raparlier, a figure-sketch with background, in which an outline is worked boldly on the leather by the use of lines almost incised.

Varnhagen's 'Ueber die Fiori e vita di filosofi ed altri savii ed imperadori, nebst dem italienischen Texte' (Erlangen) is a critical edition of the quaint old collection of anecdotes about famous philosophers of antiquity—long ascribed, apparently without reason, to Brunetto Latini—with which Dante and his contemporaries were familiar, and which is still studied with interest as one of the earliest monuments of Italian prose. Varnhagen has applied himself also to an investigation, successful where other scholars have failed, of the relations of the various manuscripts of the 'Fiori,' and of the sources from which the author drew. Following a hint of Gaspary, he has shown that the 'Fiori' is nothing more than a tolerably faithful translation, made some time during the boyhood of Dante, from the 'Speculum historiale' of Vincentius Bellovacencis. He draws also certain inferences in regard to the relation of the 'Fiori' to the 'Novellino,' the most famous pre-Boccaccian collection of stories in Italian, and as to the use which Dante (omnivorous reader that he was) made of both of them in a certain passage of the 'Divine Comedy.' The interesting illustrations to the treatise, which have nothing whatever to do with the text, are taken from early printed Venetian books, in which it seems that the Erlangen library is rich.

It is pleasant to find that the growing sum of knowledge about Dante's relation to his time confirms the opinion of his political impartiality that one forms from reading him with care. The latest writer, Gregorio Lajolo, attempts to show, in his 'Indagini storico-politiche sulla vita e sulle opere di Dante Alighieri' (Turin), not that Dante was a Guelph or a Ghibelline, for those names are anything but mutually exclusive, and meant little or nothing at the time, but that he was fair and wise in his political predilections. His ideal was justice, and it was justice, according to the best sentiment of his time, that he dealt to those whom he met in his journey through hell and heaven. As Dante said, he found himself forced by the contingencies of party to form a party by himself. Were he now alive, he might easily take a similar stand and suffer a similar fate.

The motto prefixed to Arullani's 'Lirica e Lirici nel settecento' (Turin) is from Algarotti, and is to the effect that versifiers were many in those days and poets few. The author seems at times to go even further and to find nothing good in the eighteenth-century Italian lyrics. Luckily, Signor Arullani is not only a pleasing writer, but a poet himself, and his book, though far different from the modern idea of what historical criticism should be, offers the reader a clear and not unsympathetic account of what was best in the dullest century in Italian literature, when Petrarchism and Arcadianism were rampant, and, despite the great influence of the classics, none had learned from them, as Leopardi did, grace and compactness of thought and form.

The thirteenth annual report of the Director of the United States Geological Survey contains essays by Prof. N. S. Shaler on "The Geological History of Harbors" and by Mr. Bailey Willis on "The Mechanics of Appalachian Structure," that will excite widespread interest among scientific readers. The first essay presents a general and popular account of the reëntrants of coast lines in which refuge may be found from wind and waves, classifying them according to geological origin, and considering the changes that they suffer under natural agencies. Following this is a specific account of our Atlantic and Pacific coasts, beautifully illustrated by charts and views, the charts being chiefly derived from the publications of the United States Coast Survey. Teachers of geography in all grades will find this essay most serviceable. Mr. Willis's essay is of a much more technical character. It presents a serious discussion of the structural features of the folded and faulted Appalachians, with a review of various experiments made by the author and others in imitating the conditions of mountain deformation. The illustrations are of a high order. The paper makes a

great stride in this division of theoretical geology.

The February number of the Pilot Chart of the North Atlantic, issued by our Hydrographic Office, contains on the back of the sheet an account by G. W. Littlehales of the formation of waves at sea and of the action of oil in decreasing their destructive effects. It is shown that the action of oil depends first on its spontaneous spreading over the sea surface; second, on its forming a shield to the orbital movements of the water particles, so that the wind cannot so effectively blow the crest of the waves forward; third, on its decreasing the surface tension of the water, whereby the waves do not break so easily as before.

Bulletin B of the Weather Bureau is a discussion of the currents of our Great Lakes, by Prof. M. W. Harrington, chief of the Bureau. It is published in atlas form, and includes charts of the Lakes, showing the drift of hundreds of bottles thrown into the water at various points in the summers of 1892 and 1893 and later picked up on the shores. One of the most definite currents rounds the southern end of Lake Michigan, flowing southward on the western shore and northward along the eastern shore. These studies will be continued, and, with the special bulletins of lake storms, promise to be of practical service to our inland navigation.

The meteorological service of India has issued a series of daily charts of the northern Indian Ocean for August and September, 1893, on which the monsoon winds and cyclonic storms of this classic region are better portrayed than we have elsewhere seen them. The barometric pressure is prevailingly low during these months from the head of the Bay of Bengal northwestward across India, and thence westward into Arabia. Towards this region, the southeast trade winds of the southern hemisphere are extended, turning to southwest winds as they enter our hemisphere. Not infrequently, a small area of low pressure is developed over the bay, and then the successive maps illustrate its progressive increase in intensity as a cyclonic storm, while it moves northwestward towards the mountains. In this subject, as in so many others, the meteorological service of India furnishes the world not only with excellent collections of observations, but with scientific investigations, well directed towards important ends.

A large photogravure by Dujardin after a painting, "Un excellent pot-au-feu," by the Misses Desliens, comes to us from the Librairie de *l'Art*, 8 Boulevard des Capucines, Paris—not inappropriately from that quarter, for the most interested observer of the dishing of the mess is a priest. In his expression we read "excellent," and in the old cook's merely "pot-au-feu." If not a great it is a pleasing picture of its kind, well drawn and composed; the chimney-jambs are, without being out of place in a kitchen, even elegant.

Lovers of curious musical scores will find gratification for their taste in a limited edition, about to be brought out, of an important manuscript in the Fitzwilliam Museum at Cambridge. The manuscript, which contains one of the most valuable collections extant of the earliest works for keyed instruments written in England, is known by the attractive though unfortunately erroneous title of 'Queen Elisabeth's Virginal Book.' Its publication is a noteworthy step in the progress of musical culture, as it opens the way to a better acquaintance with the little-known but important early English harpsichord music. The joint editors of the work will be Mr. J. A. Fuller Maitland and Mr. W. Barclay Squire. It will be issued in monthly parts, and may be subscribed for through Breitkopf & Härtel, No. 54 Great Marlborough Street, London.

Greek archæology suffers an irreparable loss in the death, on February 23, of Dr. Lolling, for the last ten years director of the department of inscriptions in the National Museum of Athens, editor of Baedeker's 'Greece,' and, since 1879, librarian of the German Institute in Athens. He excelled most in epigraphy, and the Greek Government fittingly recognized his astonishing achievements in this field by making him custodian and editor of the enormous body of inscriptions which the eager excavations of recent years have brought to the central museum at Athens. His catalogue of these inscriptions, a work involving enormous and ingenious labor, is well advanced in MS., though only the first part, on votive inscriptions, is published. Many American scholars remember gratefully the unselfish kindness of this modest, sad man, and regret that attainments and achievements such as his should have been haunted by a sense of defeat and failure.

—The current number of *Appalachia*, the official organ of the Appalachian Mountain Club, more than sustains the average standard which has been attained by this instructive journal, devoted primarily to the mountain interests of New England. A somewhat broader scope is represented in its articles than has heretofore been the case, and there is also an advance in the character of the illustrations. The special "touring" articles of the number are: "A Trip to Mount Rainier," "Three Days on the Zinal Grat," and "A Climb in the Cordillera of the Andes"; the last from the pen of Prof. W. H. Pickering of the Cambridge Observatory, and, while brief, certainly the most instructive of the three. It is an account of an ascent of the volcano of El Misti (19,200 feet), on the Titicacan plateau, which was accomplished without serious difficulty beyond that which accompanies muscular exercise in a very attenuated atmosphere. A night-camp was established at an elevation of 18,440 feet, whence the rim of the double crater which occupies the summit, a few hundred feet above, was reached in about twenty minutes early in the following morning. Prof. Pickering touches incidentally upon the subject of mountain sickness, from which most of the members of his party appear to have suffered, and he attributes it primarily to hard work and to over-eating. He states that "at these altitudes one seldom feels very hungry, and a dinner consisting of a little broth and some fruit is all that is needed, and seems to be all that one can digest. Meat should in general be avoided." The experiences of mountain-climbers differ so greatly as to the conditions of this peculiar malady that it seems hardly safe to formulate a theory for its occurrence; it is undeniably largely individual in its action, and, like the much more commonplace *mal de mer*, has its selected friends and favorites. A picturesque, but not very well printed, photographic illustration of Illampu, "the highest of the Andes," as seen across Lake Titicaca, accompanies Prof. Pickering's article. This mountain, which is better known to geographers as the Nevado de Sorata, is referred to in a communication to the Club (p. 274) as being about 24,000 feet in elevation, or 2,600 feet higher than the newer determinations of Pentland made it. We are not aware that any trustworthy remeasurements of the mountain have been made within recent years which have restored it to its old height, and as the superior of Aconcagua. We also notice on page 272 a reference to Kunchinjinga as having an elevation of 27,000 feet, instead of 28,000 feet.

—A long step towards providing a new patron saint for France was taken in Rome a few weeks ago by the publication of a decree signed by the prefect and secretary of the Congregation of Rites, which announces that the application for the beatification of the "venerable servant of God, Joan of Arc, Virgin, called 'The Maid of Orleans,'" has been received with approval, and that the case is now open. Not that the Pucelle is likely at once, or perhaps at all, to supplant the secular patron of France, the great St. Denis, but it is to be expected, in case her canonization shall follow, that her cultus will become a highly popular devotion, not only from its being fresh and new, but also from a certain aura of patriotism which will go along with it. No such devotion, however, will be permitted at present, and the Pope has, in fact, forbidden it, since the present process is only the penultimate, or even antepenultimate, step towards formal and recognized sainthood, which is certified by canonization. The preliminary local inquiries have been made at Orléans, transmitted to Rome, and approved there, and the title "Venerable" has been accorded to Joan; but further investigation will take place at Rome, and, it is to be supposed, the *advocatus diaboli* will still have an office to perform before the new saint will be proposed to the suffrages of the faithful.

—A translation of the decree of the Congregation of Rites was printed in the *Monde*, and afterwards copied by other French newspapers. It offers nothing new to the student of hagiology. It is less rich than many lives of saints in point of wonders and miracles. There is nothing in it, for instance, to compare with the well-known legend of St. Denis. It asserts the divine call of Joan, and that her vision and voices were a divine revelation. It makes much of her bravery, of her charity, of her patience under reproach and suffering, but it does not directly assert that these qualities in her rose to the point of what ascetic theologians call "heroic" virtues. Nor will the merely mundane student of history get any more satisfaction out of the decree. From his point of view it is weak, vague, "popular," in the last degree. Not one historical difficulty in the case seems to have been wrestled with, or even considered. If it had been written for use in a primary school it could not be less erudite. One sentence in it, however, calls for a word of comment; "Elle est enfin, par un crime suprême, comme hérétique et relapse, en vertu de l'inique sentence de juges qui participaient au concile schismatique de Bâle, livrée aux flammes." This statement is quite inaccurate, as may be seen by recalling a few well-known dates. Joan was burned on the last day of May, in the year 1431. The council of Bâle had been convoked for the third of March of that year, but only one person was present on that day, and the council was not formally opened till the 22d or 23d of July, and did not hold its first session till December 14. Joan's judges, then, *participaient* in a council which was, as yet, non-existent. It was at a date much later than 1431 that the council of Bâle could, upon any theory, be called schismatic. Leaving aside disputable points, it is certain that the legates of Eugenius IV. sat in its twenty-fifth session May 7, 1437, and did not

leave the city till after the thirtieth session on December 23. Who is responsible for this historical slip does not appear. It may be in part a blunder of translation on the part of the *Monde*. The *Gazette de France*, in fact, suggests that "participaient" should be "participèrent." But this verbal change leaves the real question just about where it was. At the moment of Joan's death the church was at peace, at least outwardly, and Joan's judges were in full communion with the Holy See. Pierre Cauchon, the infamous bishop of Beauvais, Joan's venomous persecutor, did figure for some brief space at the Council of Bâle; but that was not till 1435, four years after her death, and two years before the legates of the Pope withdrew from the council. When Cauchon was at Bâle, he was there in very good company, and the fact that the council some years afterward became schismatic adds no deeper shade to his infamy.

—The Société de l'Histoire de la Révolution Française held its yearly meeting at the Sorbonne on March 5. M. Jules Claretie took the chair, and, after giving a brief report of the work of the society during the past year, read a paper on the French theatre during the Revolution. He was followed by MM. Aulard, Charavay, Chassin, and Flammermont, whose communications were all of them of much interest and value. M. Charavay brought in an unpublished letter of Marceau's; M. Chassin set himself to demolish two legends, the story of the five thousand republican prisoners of Saint Florent, who were said to have been saved by the clemency of the Vendean chief Bonchamp, and the story of the passage of the Loire by the Vendeans in October, 1793, which has been represented as the exodus of a whole people from homes that had been laid waste by Republican violence. Of much more weight than any of these, however, was the really important study of M. Aulard on "Bonaparte et les poignards des Cinq-cents." This appears at full length in the *Revue Bleue*, and may be left for the present with only the statement that it shows conclusively that the story which Lucien Bonaparte used to excite the soldiers to clear the hall of the Assembly of the Five Hundred—viz., that the deputies were on the point of assassinating their general, and were assaulting him with their daggers—was a story agreed upon beforehand between the two brothers, and was made up out of whole cloth. The unvarnished truth about the First Empire was never more needed in France than now, amid the revival of the Napoleonic legend.

—All Oxford assembled on Thursday, March 8, just before the Lent term ended, to hear the inaugural of the newly appointed Regius Professor of Greek (Bywater) on "Four Centuries of Greek Learning in England." The lecture was given, according to immemorial custom, with covered head, except that brief portion of it which touched upon Prof. Bywater's predecessor. The visible mark of respect thus shown enhanced the significance of a telling phrase in which the late Prof. Jowett's power to make Greek philosophy live again in the pursuits of English youth was vividly portrayed. Bentley's achievements formed the heart of the discourse. Few at the present day could easily measure the wonderful powers of Bentley, or adequately understand how far he was in advance of his time. Even Wolff had not seen fully the significance of Bentley's discovery of the digamma in Homer. Bentley mapped out two great lines of work, which subsequent generations of scholars could but follow. The Greek lexicographers were to be edited, and though Bentley himself did nothing here, his suggestion bore its final fruit in the monumental publications of Gaidford. The other line of work which Bentley saw must be done was upon the Greek poets. Here, too, his impulse has lasted till to-day. Even now, though with larger means and improved methods, Greek scholars can find little or no work that Bentley had not foreseen and required to be done. The greatest of those whom we may call of Bentley's school was Richard Dawes, whose 'Miscellanea Critica' is still a work of the greatest importance. The attention given to it even now in Germany is a very high tribute to Dawes's scholarship. After Bentley and Dawes came Porson and his school, and the Porsonians again focussed the Greek learning of England. There has been, however, a reaction against the Porsonian preoccupation with minutiæ, and Badham, the most distinguished of the later Porsonians, died a few years since in Australia, having attracted less attention in England than on the Continent. The historical school, represented by Grote and Thirlwall, succeeded in displacing the Porsonians, but failed to maintain the former reputation of English scholarship. Of the present, the present was no fit judge, nor would the lecturer usurp either the prophet's or the politician's place in order to declare what room was still left for Greek learning, or to foretell the form in which the study of Greek would be permitted to survive.

—The libretto (as it is modestly styled) of the "Phormio" of Terence has appeared, preparatory to the performance of the play in Sanders Theatre, Cambridge, on April 19, 20, and 21. It is preceded by a notice setting forth the circumstances of its present introduction to the American public as follows:

The Boston papers are full just now of friendly tilts about the name of the new Massachusetts holiday, the 19th of April. Shall it be Concord Day, or Lexington Day? It has been suggested as a compromise that it should be called "the day on which the men of Acton fought the battle of Lexington on Concord Bridge." The *curatores ludorum* have taken the bull boldly by the horns, and called it simply *dies Concordiensis*. Just how they are to escape the wrath of the embattled farmers of Lexington remains to be seen. The libretto contains an admirable translation of the ancient Argument in English verse, and a new prologue for the occasion given in Latin *senarii* and English verse both. Even if no name were attached, it would be plain from the nimble numbers and the cheery and jaunty swing that they are from the pen of Prof. Greenough. The play itself is translated into English prose by Prof. Morgan. The English is vigorous and racy, never stiff or stilted, yet never degenerating into slang. For the public at large the convenience of this translation is obvious. It may also spare those undergraduates to whom Terence is as Choctaw, the

"Iuvenes, quos clamor et audax
Sponsio, quos cultae decet adsedine puellae,"

the mortification of being obliged to say they do not know, if they are asked the unpleasant question what this or that means—though if the programme, as rumor reports, is to be in Latin pure and simple without any English, there is another gauntlet to run. But here and there the *culta puella* may be from Radcliffe or Wellesley or Smith or Vassar, and may help out the young man.

—Another feature of the libretto, and one which will make it of permanent value to the philologist by profession, is the illustrations in photogravure. The Vatican manuscript numbered 3868 and written in the tenth century is remarkable for the fascinating miniatures of actors and scenes and delineations of masks with which it is illustrated. These were, to be sure, published years and years ago by De Berger, 'Commentatio de personis vulgo larvis seu mascheris' (Frankfort and Leipzig, 1723), and some of them occasionally by others, as by Wieseler, etc. But these old copies are not to be trusted. The aim was to make pleasing engravings rather than faithful reproductions, and they are condemned by Leo and other experts who have tried to make use of them (see the *Rhenish Museum*, xxxviii, p. 342, seqq). Through the friendly mediation of the Right Rev. J. J. Keane, Rector of the Catholic University of America, and the Rev. Dr. F. Z. Rooker, Vice-Rector of the North American College in Rome, who are gratefully thanked in the libretto, a complete set of the illustrations for the "Phormio," twenty-six in number, has been furnished; barring the coloring, they are as good as the originals. The Latin Department expresses its deep indebtedness to his Holiness the Pope and to the Cardinal Librarian of the Vatican for the privilege graciously accorded of photographing and publishing.

—The second volume of Max Nordau's 'Entartung' (Berlin: Duncker) is devoted chiefly to the psychiatrical dissection of Richard Wagner, Henrik Ibsen, and Friedrich Nietzsche, whom the author regards as the most prominent and aggravated types of the mental disease and degeneracy characteristic of the present generation. The same malady manifests itself in Tolstoi, the Preraphaelites, mystics, and symbolists, and other offshoots and after-growths of romanticism, but finds its strongest symptomatic expression in "Wagnerei," "Ibsenismus," and the "Ich-Sucht" or philosophic egoism of Nietzsche. Nordau censures in severe terms the immorality of Wagner's operas, and thinks it highly creditable to the innocence and incorruptibility of German mothers and maidens that "they are able to witness these pieces without getting fire-red and sinking into the earth for shame." Their guilelessness prevents them from having the slightest conception of the kind of scenes passing before them; "in a less childlike audience no one would venture to lift his eyes to his neighbors or could bear to have them look at him." The assertion that Wagner's operas do not represent "the music of the future," because the subjects are taken from a primitive and prehistoric past, betrays a strange confusion of the accidental nature of his theme with the essential character of his art. Nordau denies to Wagner all original creative power either as a poet or a musician; his talent is that of a great historical painter, the gift of a picturesque imagination, which he possesses in such a pre-eminent degree as to border on genius, and by means of which he produces marvellous stage effects. Ibsen and Nietzsche fare no better at Nordau's hands, and, of course, the brilliant and hapless Nietzsche, "the philosopher of

egoism," as he is styled, now hopelessly insane in consequence of overwork, is represented as a striking confirmation of our author's doctrine of degeneration. The tendency of Nordau's work is sufficiently indicated by its dedication to his "dear master," Prof. Lombroso of Turin, whose book on 'Genius and Insanity' evidently incited his pupil to a fuller discussion of the subject. Nordau's work may also be read in French ('Dégénérescence,' Paris: Alcan).

Garrick's Pupil. By Augustin Filon. Translated by J. V. Pritchard. Chicago: A. C. McClurg & Co.

A Spinster's Leaflets. By Alyn Yates Keith. Boston: Lee & Shepard.

THE reader of Miss Woolson's last novel, 'Horace Chase,' cannot forget that it issued from the press almost at the moment of the author's death, or escape from the company of sorrowful reflection. For criticism the point of view is altered. The author's life-work is accomplished, and the part is important only in its relation to the whole. Authority in literature is with the dead, but it is still too early to forecast the probabilities of Miss Woolson's surviving her generation. Every one is interested in the representation of scenes and characters that may be tested by his own knowledge, attracted by a drama in which he could have played a part. Miss Woolson has described the places we know as we know them, has peopled them with figures we can unhesitatingly put our finger on, has indeed appealed so exclusively to contemporaneous interest that time must do its sifting and settling before we can even form an intelligent opinion about the permanent value of her work. If she should survive, there will be no question about her nationality and no slurs can be cast upon her patriotism. In spite of her long residence in Europe, she took on no foreign manners or habits of thought. The scenes she loved to linger in were American, comprehensively American, extending from Michigan to Florida, and she solved the emotional problems of life in the clear-eyed, American-maiden way —a way that is often more entertaining than convincing to the rest of the world. Her books are crowded with excellent portraits of her compatriots, who, however much they differ in character, have one habit in common—they are always on the go. The only spot on earth where one may not hope to find them is at home. Miss Woolson never explained at length this constant change of base. Her households flit without warning from New York to St. Augustine, from Charleston to San Francisco, and thus literally does the American pursue both business and pleasure. Equally of course, she assigned business to the men and pleasure to the women, a delightfully typical American adjustment of burdens. By comparing her novels with Trollope's (they drew from corresponding classes, neither great nor lowly, but well-to-do), one may see how truly is America the paradise of women. Fast as her people ride, Black Care sometimes slips on behind, and sorrow and bitter disappointment take seats in specials; but it is not in the crises of fortune or the depths of despair that these people make their impression. At such moments their reality seems to drop away, and we often behold a romantic convention posing as a human being with a soul. It is in such a moment that Horace Chase falls short. Up to the climax he is admirably drawn, with understanding and sympathy. We all know him—a lanky man, sallow-faced, imperfectly educated, of indifferent manners, yet kindly, humorous, and sensitive, and animated by a sincere desire to pay the most appalling of milliners' bills. When such a man marries, as he often does, a girl not half his age, one so taken up with the things he can give—the clothes and opportunity to show them up and down the earth—that she cares little about what he is, one result is sure, in novels, at all events. We sniff the coming lover from afar, and when the knot is not to be cut in the French way, but in the American-maiden way, we wonder upon whom the duty of preventing a scandal will devolve. If the wife be, like Mrs. Chase, devoid of fixed principle excepting that of always, at any cost, gratifying herself, all may depend on the lover's coolness and caution; if he be fiery, we must look to some vigilant friend, perhaps a formerly rejected but still adoring lover. In any case, the husband cannot be counted on. His suspicions are all for his competitors in money-making, not for his wife, whom alone he has bought without calculating the chances for profit. But when, at last, he is shown upon how worthless a person he has lavished himself, how recklessly indeed he has been sold, then we believe that the American becomes as other men, and feels and shows spirited resentment.

Here is a problem of nature which Miss Woolson was not fitted to solve in a way that should carry conviction. Horace Chase, pitting patience and kindness against the pride of his wife's brother and the asperity of her sister, or exhibiting his splendid pluck and nerve as he guides the funeral train along the precipices of the Carolina Mountains, is strong and estimable and real, but, in the last scene with his wife, he is none of these things. Nothing too harsh could easily be said of Chase's wife, judged by the revelations of her conduct, her speech, and even the tendency of her thought; yet Miss Woolson abounds in explanatory excuse. She says that her heroine is "essentially feminine," and rejoices that this delightful essence had not been "refined away by overdevelopment of the mental powers, or reduced to a subordinate position by ascetic surroundings." The evidence of Miss Woolson's novels is that she estimated women by the effect they may have upon men, and regarded them always leniently if they attracted what she calls "masculine adorers." By the modern movement, the so-called emancipation of women, she appears to have been quite unimpressed. Perhaps she thought the clamor for rights all a humbug, regarding it as only a clever device for extorting further privilege from men. Presumably, she was hostile to the movement, and, in her last novel, has put her hostility on record in the person of the grotesque sculptress, Maud Muriel Mackintosh.

To lay the scene of a novel in India is to start with a heavy handicap. We instinctively anticipate a far-off echo of 'Tales from the Hills,' and are rather slow in remembering that the Indian Empire is big enough to breed a large brood of independent novelists. Mrs. Steel, the author of 'Miss Stuart's Legacy,' is happily as unaffected by Mr. Kipling as if he had never existed. She has the characteristic gifts which distinguish the novelist from the writer of short stories—the gifts of devising and sustaining a plot and of elaborating character. Her method is deliberate and thoughtful, without any appearance of striving for smartness or epigram. In incident she moves securely between the improbable and the commonplace, developing a drama not dependent for effect on detachable situations or sudden explosion of passions. Miss Stuart's coming to Faizapore is an apparently insignificant event, yet she holds in her hands the destiny of two good men and true, and of one whose virtues are less conspicuous than his defects. She is herself a passive instrument of Fate rather than an active agent. She is neither very beautiful nor very clever, but she is very nice, with no disposition to set up her inclination as a standard of conduct, the infallible arbiter of right and wrong. In a country where nice girls are scarce, it is no wonder that Belle Stuart found three lovers, and perhaps not incredible that two of them, when in danger of death, should practically exhibit their affection by bequeathing to her their worldly possessions.

Of these lovers, the forlorn and unlucky boy, Dick Smith, appeals most strongly to sympathy. He was of those predestined to failure in life and once in a while given a chance to wipe out an inglorious record by a splendid death. When, in the mountain solitude, with a mob of murderous Afghans close upon him, Dick telegraphed the English officer who had been decoyed by a false message, "Treachery! For God's sake stand fast!" and then fell dead, he was no longer "poor Dick Smith," but a hero for a world to wonder at. Philip Marsden, the lawful hero, is a tame and insignificant figure beside Dick, but Marsden suffers from the author's desire to have him always doing the right thing. When he comes back, as it were from the grave, finding Belle Stuart, now Mrs. Raby, enjoying the fortune he bequeathed her, one hopes he may go temporarily wrong, but he is correct to the end. Raby, the successful lover, is a complex person, who, to escape appearing thoroughly detestable, must be considered dispassionately. Mrs. Steel has drawn him so fairly and fully that though no one could esteem him, any one might like him. Besides Raby, Shunker Dâs, "usurer, contractor, and honorary magistrate," and Afzul Khân, the villain of the piece, are presented with singular force and completeness. In drawing the Orientals, the author seems to step out from her nation and her race, and to become one of their own people. When to such uncommon ability for characterization there is added a knowledge in detail of Indian scenes, customs, and manners, and a pleasant manner in description, it cannot be denied that Mrs. Steel has, in her first book, we believe, made good a claim to distinction in her profession.

The serious frame of mind which a properly disposed person would assume towards a novel entitled 'The Face of Death' is rudely disturbed by the first chapter, wherein a baronet of fifty years brings home his fifth wife. The emotion of horror excited by Bluebeard's closet is sacred to the wondering credulity of extreme youth, and a modern version of the legend addressed to maturity is food for smiles, not tears. So Sir Andrew Wyke's household took it, grinning openly and broadly at his matrimonial adventures and indulging in sarcastic allusion. When the fifth wife

is supposed to be lost on the mountains, an ancient servitor, being questioned about what Sir Andrew says, answers, "Nothing worth hearing; a wife more or less ain't much matter to him." Then a sister of the monster remarks to his son by the first wife:

"It is most unthinking of your father to go on marrying these silly women one after another; I can't think where he finds them. How did the last one die?—tumbled down stairs, or sat in a draught, didn't she? They really must be a great trouble to Patty."

Fortunately for Patty, they were no trouble to her. Her levity increased with her number of stepmothers. Quite young, she perceived that her father killed off his wives by unceasing worrying and nagging, and the hope of her life was for the advent of a wife who should turn on him and beat him with his own weapons. The only person whom the situation plunged in gloom was the son, Alan Wyke, and it is to his horror of the Face of Death and struggle to get away from it that the author's serious effort is directed. What interest there may be in this struggle is seriously impaired by a devouring curiosity to know whether the fifth wife is taking it out of Sir Andrew, and an avidity for details of the process. Moreover, it is evident that the author has determined upon a belief in the immortality of the soul as the only cure of that fear of death which, as Dr. Johnson said, if any man says he never felt, he lies; and an argument of which the conclusion is foreseen from the beginning is dull. Then confidence in the author's fitness for the exposition of faiths is shaken by reference to the Stoics and Cicero as examples of a universal thirst for immortality, even as belief in his practical seamanship trembles when, meaning aft, or for'ard, he speaks of the "other end of the little boat." On the whole, the book presents the strange spectacle of a writer with rather a nice talent for comedy gravely and ineffectually striving after tragedy.

The title 'Rose, Shamrock, and Thistle,' though not exactly intriguing, has the merit of descriptive accuracy. The nationality of the characters may be detected by the chosen button-hole flower, and the scene of action is the old debatable land on both sides of the Tweed. Contrary to custom and expectation, the shamrock thrusts itself where it has no right to be, not for the purpose of causing division and strife, but to plead for union and personify smiling peace. When it, or she, Miss Rhoda Carysfort, arrives at the home of her English uncle, Mr. Mayne, relations between him and the Scotch Farquhars are strained. There is a dispute about land, and an unhappy love-affair, besides many minor grievances, all waiting for adjustment by a person of tact. Miss Carysfort's tact is equal to every call, and the result she achieves is consummate happiness for everybody. Besides having tact, she was very precipitate. Crossing to England, she rushes on deck in the dark and into the arms of a stranger, who throws over her "shuddering form a Scottish shepherd's plaid," and to whom "in the gloom she clung as to a pillar of refuge." Within five minutes she confides to the stranger details of her worldly condition and several precious reflections. It is by this impulsive method that her subsequent mediations are conducted and successes achieved.

Yet, in spite of all, she is not an interesting person. Nobody in the book is interesting, nor is anything that is done or said. The stranger (of course the Scottish foe of the Maynes) is a dreary bore. To know that he referred to the people dwelling about his Scottish tower as "poor hinds," is conclusive Of the English Maynes, the daughter is worthy and colorless, and the eldest son a ridiculous prig, who "pours out treasures of knowledge" to his little brothers at their play, and only when thus agreeably occupied, permits his "grave features to relax from their classic dignity." This is the sort of book that causes the disinterested reader aimlessly to wonder on what system of selection the business of publishing is conducted; it is also the sort of book that bitterly exasperates the writer of oft-rejected MSS. and causes him to cry aloud against "rings" and inscrutable Fate. "May I be lost," he shouts, "if my novel is half so bad as that!" For his comfort be it said that his novel, unless he is afflicted with a mania for discussing "burning questions," could not possibly be worse.

In the 'Memoirs of Sherlock Holmes,' Mr. Doyle's pearl of detectives probably makes his last appearance. In the 'Final Problem,' where the game is changed and the most desperate and dangerous of criminals is hot on Sherlock's trail, they meet, grapple, tumble over a precipice and perish together. Of their bodies no trace was found, and probably none ever will be unless the spirit of the all-seeing Sherlock should personally conduct an investigation. In that case his enthusiastic biographer, Watson, will doubtless be on hand zealous to record, and perfect as ever in the rare art of self-obliteration. Except in Edgar Allan Poe's hands, the narration of the detection of crime has never been distinguished by literary quality, and he divided the interest between the horror of the crime and the mystery surrounding its perpetration. Mr. Doyle has adopted and extended Poe's method of deduction from minute observation, but has not been particular to select crimes of extraordinary atrocity or startling novelty for the display of Sherlock's acuteness. He appears to have chosen incidents at haphazard from police records and then applied a rule which may be formulated—Keep your eyes open and you must find out. His style is correspondingly matter-of-fact and succinct, and his work leaves no impression after the curiosity momentarily excited has been gratified. But he always excites curiosity, and he never falls into that vulgarity of sentiment and phrase which usually characterizes fiction worked up from police news. Considering the Sherlock Holmes stories, with such novels as 'Micah Clarke' and 'The Refugees,' we are struck by the author's uncommon versatility and his ability to provide entertainment for many tastes and moods.

M. Augustin Filon is better known in France as a historian and critic of literature than as a writer of fiction; he is, therefore, not among the French authors already popular in America. The little historical romance entitled 'Garrick's Pupil' is, indeed, the first translation of his work that we have seen. It makes a very pleasant introduction, noticeable, coming from a Frenchman, for a delicate appreciation of some authors, artists, and statesmen of the eighteenth century to whom their own countrymen are particularly bound by esteem and love. The drama has properly the flavor of its century. There is a wicked lord pursuing innocence for its undoing; a difficult complication unravelled by the declaration of the remorseful villain that he had caused two infants to be exchanged at birth; and, finally, young and tender lovers united, made happy and powerful by the immolation of the wicked lord and his wickeder mentor each on the other's rapier. This antique legend is so well set that we feel some irritation against memory insisting that we have heard it several times before. Some incidents of the Gordon riots are vividly told, though more "bookish" than the scenes that cannot be found in serious history. The dainty and wilful young actress is nicely contrasted with the rakish Lady Vereker, and it is again noticeable, coming from a Frenchman, that the young person is as good as she is beautiful, and that her most serious escapades are no more than frolics. The translation might easily have been better, yet is not vexatiously bad, and, after all, even indifferent English seems a more natural and fitting garment for such a tale than the best of French.

The fund of cheerfulness with which Nature endows the average mortal is not warranted to endure through a prolonged spinsterhood passed in the monotony of a small village. Especially when the spinster plunges for relief into autobiography is she prone to become lachrymose. Nothing except a sense of humor and a very warm heart can save her from perpetrating a book of lamentations. The "I" of 'A Spinster's Leaflets' is possessed of both saving graces, conspicuously the latter. She took an interest in her neighbors; she loved their children; she had a dream of a door-step baby—all of which kept her from contemplating herself as a rare exotic among common garden plants, unkindly left to wither on the stem. Her reminiscences are interesting and pleasantly written, though there is sometimes a strain for unusual expression, a confusion between the value of an idea and mere sound, which detracts from naturalness and desirable simplicity. One gets a little tired of the dream of the door-step baby, and welcomes the conversion of the vision into a fact. Like most realized dreams, this one does not give unadulterated joy. In spite of the old maid's tact and reasonableness and generosity and love, the boy goes wrong—wrong as if he had been her own son—and the tragedy of his wrong-doing is perhaps more bitter for her than for an actual mother. The scene where Philip confesses his transgressions indicates deep emotion, heroically restrained, and is altogether genuine. His repentance takes a form which hardly seems to be a natural development of his character, but, since it filled the spinster with contentment, there is no reason for less interested persons to cavil.

LOCKYER'S DAWN OF ASTRONOMY.

The Dawn of Astronomy: A Study of the Temple-Worship and Mythology of the Ancient Egyptians. By J. Norman Lockyer. Macmillan & Co. 1894.

MR. LOCKYER'S power over the enginery of hypothetical reasoning—that which searches out the explanations of observed facts—is, with reference to astronomy, acknowledged by all Europe. When he first entered the field of astronomy, it was as an amateur, and he now audaciously leaps into another arena where there was no thought of his apparition. The principal object of his book is to advance the hypothesis that Egyptian temples were generally oriented to the risings and settings of stars, so that a few priests, standing in the windowless cell which is the holy of holies of every such structure, and looking out along the narrow axal aisle of pillars, would be looking in the right direction to catch sight of the temple's star at its rising or its setting.

Let us see how much there is to make this a

reasonable suggestion. Certainly an intimate connection subsisted between the theology and the astronomy of Egypt. Thus, one of the hieroglyphic determinatives for a god is a star. That is to say, a scribe having to suggest the idea of a god by means of a simple picture, draws a star as likely to effect his purpose. What could better betray the Egyptian way of thinking? The very name of the god of earth, Seb, coincides with the usual word for a star (*sba*, written *sb*); at least, so that god's name has usually been read—Brugsch thinks it should be *Geb*, which would destroy this argument. But though Seb, or Geb, is god of earth, there is no doubt the planet Saturn was appropriated to him. It is needless to dwell upon such points, because the idea of the gods having stellar affinities is commonly entertained by Egyptologers.

A certain importance was attached to the orientation of temples. The notion that a man ought to face some particular object when he prays belongs to most religions, if not to all. Everybody knows that our churches look the oldest ones to the east, later ones to the west. We learn from Mr. Lockyer that the tradition is, they should be directed toward the sunrise of the patron saint's day. Many temples in Egypt are known to be oriented with precision. In particular, the pyramids of Gizeh, which have been accurately surveyed, are out of position by only 4′, 5′, and 14′, and we remember that 1′ is the *minimum visibile*, 31′ the mean diameter of the full moon on the horizon. We know, too, from the inscriptions, that the determination of the azimuth for a temple was a matter of ceremony quite as much as our layings of corner-stones, the king being sometimes called upon to perform it; and in this ceremony a star was observed.

We know that the risings and settings of stars were carefully observed by ancient astronomers. The poem of Aratus, which, though itself relatively late, reproduces archaic observations, is in evidence. The last 200 lines are entirely devoted to describing what stars are on the horizon simultaneously at different times. When the eastward movement of the sun among the fixed stars has brought a given star far enough to the west of the sun for its rising to be observed before sunrise, the star is said to "rise heliacally"; and it was by the heliacal risings chiefly that the progress of the seasons, the times for planting, etc., were ascertained. In Egypt this was particularly necessary; and it was by the heliacal risings of Sirius, and later by the cosmical risings, or risings at the same moment as that of the sun, that the date of the inundation was predicted. It would be natural to build temples so that they might serve as observatories in which such risings could, owing to the exclusion of stray light and the direction of vision to the right point of the horizon, be conveniently observed.

Thus it would seem that the hypothesis is antecedently quite probable. That which gives it importance is the fact that the rising point of every star oscillates north and south owing to the precession of the equinoxes. In the course of 130 centuries the shifting will amount to from 54° to 73° for different stars, or about half a degree per century; and in special cases it may become indefinitely rapid. Consequently, if we knew that a hundred temples of the old kingdom of known orientation had been oriented to the risings of known stars with a probable error of 1° each, we could astronomically determine their average age with a probable error of only 20 years. Now there is a good 500 years of doubt at present affecting the dates of the old kingdom; and our general conception of the course of civilization and of the nature of man depends quite considerably upon the manner in which this doubt is to be resolved.

Mr. Lockyer reports that there are but a few temples whose azimuths are sufficiently known for the purpose of testing his theory. Still, he instances 7 which he supposes directed to the rising of Sirius, 12 to that of Phact, 9 to that of Hadar, 3 to that of Dubhe, 7 to that of Etamin, 4 to the setting of Canopus, 5 to that of Capella, and 2 to that of Spica. For each of these forty he calculated the date of orientation; and upon comparison with history he finds that in every case his calculated date either agrees with that of history or antecedes it. But he well remarks that it is quite possible that many temples were erected upon the foundations of previous structures whose orientation they followed, so that the cases in which his date antecedes the recorded date are not to be counted as against his hypothesis. We add, however, that neither are they to be counted in its favor; so that the result thus far is that Mr. Lockyer's theory is unrefuted by facts, and is even in small measure supported by observation. Considering its great importance, if true, the verdict should be that Mr. Lockyer has done enough to warrant the expenditure of the time of some of the foremen of the world's work and of sufficient money to obtain sufficient data to put the question at rest.

But while we are quite in earnest as to this, we cannot blind our eyes to certain serious difficulties in the way of the theory. For example, Mr. Lockyer finds five temples oriented to the setting of Capella. One of these is the temple of Ptah at Karnak. Another is a temple believed to be dedicated to Ptah at Memphis. Concerning the cult at the others there is little evidence. But why should a temple of Ptah be directed to the setting of Capella? The so-called circular zodiac of Denderah, now in the Louvre, shows us in the place of Capella a mummified cat held out in the hand of a man wearing ostrich feathers. The projection of that zodiac is accurately enough followed to allow no doubt about this. The cat we know was the emanation of the goddess Bast, who was called the beloved of Ptah. Accordingly, if the temples of Ptah had been directed to the *rising* of Capella, we should see no difficulty. But Mr. Lockyer is positive that a star must be either male or female; that if female only its rising is to be worshipped, if male only its setting. It may be said that the figure on the Denderah planisphere that holds the cat represents Ptah. But is that likely? The scarab was Ptah's emblem; and there is said to have been an Egyptian constellation of the scarab. If so, it has been confounded by the Denderah artist with Cancer, which is misplaced where we put Leo minor. In fact, the stars of Leo minor, with a few from the feet of Ursa major, make a very good scarab, as anybody can see these evenings in the sky. This must, then, have been the part of the heavens sacred to Ptah, and it is unlikely there was any other.

Again, Mr. Lockyer makes no less than twelve temples directed to the rising of Phact and seven to that of Etamin. The former is a star of two and three-quarter magnitude, the latter fainter than two and one-third. The risings of such stars cannot be observed, we believe, even in Egypt. Only very bright stars can be seen to rise. Moreover, Etamin and Dubhe were so near north, and their risings and settings consequently so very oblique, as to be indeterminate and unattractive phenomena, which it seems very unlikely persons would be led to observe.

But our objections do not stop here. As long as astronomers busied themselves with the *times* of rising of stars chiefly without much attention to their *amplitudes*, or directions on the horizon, we can readily understand how the precession of the equinoxes could escape detection. But when they had built a few costly temples on purpose to have stars appear at their risings in the exact axes of long corridors, which temples after a few years (in the case of Dubhe after twenty years only) were found to be out of place by a whole degree, the king who had paid for them and who had, perhaps, devoted his personal attention to their orientation, would be likely to grumble and to appoint an investigating committee. Nor could the fact by any possibility be kept quiet. The precession of the equinoxes ought, then, one would think, to have been discovered and published. Mr. Lockyer supposes that it was indeed discovered, but that "the priests"—which can here only mean the whole body of the priests, say perhaps a tenth of the population—kept the matter secret. Very well, this is pretty violent, but let us suppose that it was so. Did they, then, still go on orienting their temples to the rising of Dubhe, knowing the star would not stay in that place for one generation?

Mr. Lockyer supposes that rival sects used to scheme to build their temples in each other's way, so as to prevent those others from seeing the worshipped star at its rising: and he thinks temples were abandoned and their cult put an end to in that way. At the same time he thinks that when temples were rebuilt at vast expense, the builders simply followed old lines of orientation, without taking the trouble to change them, although they could see the risings would not occur in the directions of the new temples, and even knew the principle by virtue of which there was sure to be such failure. These parts of the theory, we think, will have to be modified in some measure, even if any part of it stands. Whether, after such modification shall have been made, it will retain any great value as an arbiter of chronology is a question not to be hastily answered.

We were speaking of Ptah. Ptah was the god of truth. But that characteristic of truth which is particularly emphasized in the myths and symbolism of the god is unchangeability. Now it is unquestionable that absolute truth, if one could attain to it, is an eternal rock; but attainable truth, the most enlightened opinion, is distinguished from that which is cruder and less truthful by its life and growth and metabolism. When the Egyptians discovered the year had 365 days, they induced the king to enter the temple of Ptah and swear by all that was truthful that he would never change the length of the year nor allow any of his successors to do so. Soon it was found out that the year was 365¼ days, and matters of great concern were getting thrown into the utmost confusion. But what was to be done? The king had sworn in the temple of Truth. He had bound his successor and bound that successor to bind his successors for ever. So they kept on with the old year. In like manner it may be that when the king had once oriented a temple and had sworn to Ptah that that orientation never should be changed, the Egyptians may have conceived that it had got to stay so. They had a sort of the-boy-stood-on-the-burning-deck idea of truth. But when it had once become quite clear that the changeless orientation was wrong, there would no longer be any stinging incentive to strenuous

endeavors for the highest accuracy of orientation.

The Egyptians were priests or engineers or physicians or artisans. They were always pursuing a practical object, without unnecessary generalization. They had a decided distaste for generalization carried beyond practical needs. They hated to see things more regular than there was any use of their being. Right angles bored them. Longfellow said he *hated* science, and so he did; and so did the Egyptians. The greater their cleverness in solving practical problems, the more it brings into relief their utter incapacity for science. The mathematical papyrus is a marvel of inaptitude. The medical papyrus, recently translated, is beneath contempt. Claudius Ptolemy, if he is to be considered an Egyptian, is the only one of the race who ever showed scientific genius. Their weakness is put into a strong light when they are compared with the Chaldees, who, even when magic was their only lore, pursued that study with all the method and industry of modern savants. In particular, the Babylonians were great archæologists; and it is to the diligence with which some of them searched out their own history that the chronological accuracy of our knowledge about it is due. The Egyptians, on the other hand, cared nothing about fact. They covered the walls of their buildings, not with records of the past, but with dreams of what they would do in a future life. They loved to boast that their writings had been found in some ancient tomb or under the statue of some early king, because to their minds what was old and what was true were indistinguishable; but to veracious history they were indifferent. Of course, there are aspects—namely, all practical and theoretically ethical aspects—under which the Egyptians appear as a very admirable people; and Egyptologers become so seized with admiration for them that they are generally blinded to their scientific weakness. Erman alone, in his excellent popular work, 'Ægypten und ägyptisches Leben im Alterthum' (Tübingen, 1885), has told the plain truth.

We refer to this side of the Egyptian character here because we infer from it that it is most unlikely that that people persisted for ages in such scientific accuracy in the orientation of their buildings as to justify any inferences from it involving nice calculations. Lockyer adduces the circular zodiac of Denderah as evidence of the scientific accuracy of the Egyptians, saying (what we fully admit) that that zodiac must have been copied from a regular map of the heavens constructed about 700 B. C. That was Biot's discovery. But Lockyer rather innocently takes it for granted that that map had been made in Egypt. Not only is this gratuitous, but the nature of the projection proves that it was an importation, for it is a central projection from the vertex of a cone tangent to the sphere on the circle of perpetual occultation for a latitude little less than 40°; so that it cannot show any of those stars that are so far south as to be visible only at lower latitudes. We have been to the trouble of trying how a similar projection suited to the latitude of Denderah would look, and find it quite unlike the celebrated planisphere. Most likely, then, the original was executed at Nineveh (latitude 36½°) in the reign of Sargon, when the Egyptians, as we otherwise know, after the fashion of defeated nations, were eager to acquire that knowledge that had gained their adversaries the victory of Raphia, 719 B. C. The copy set up at Denderah in the second century after Christ cannot well have been a copy at first or at second hand, and in it Egyptian constellation figures were substituted for the Assyrian ones, except in its most scientific part, the zodiac, all the figures of which are of Chaldean origin, barring the figure in the place of Cancer, and possibly Libra. But when Mr. Lockyer asks us to judge the astronomy of the Egyptians by this monument, we must in fairness assent to that. That that people, setting up such a costly piece of work in an eminently scientific age, knew no better way than to copy the record made in Assyria eight centuries before, without glancing at the heavens to see what enormous changes the precession of the equinoxes had brought about in the interval—that, we must confess, does indeed speak volumes in respect to the degree of assiduity with which they had been prosecuting the work of astronomical observation. It is as if we had no star-catalogues better than those of Sûfî and Ulugh Beg; or as if those astronomers had done nothing but make servile transcripts from Ptolemy.

We cannot leave the book without calling attention to the perspicuous and valuable discussion of the Sothic cycle. Some of the chapters upon the religion, on the other hand, seem to us, we must say, to push theorizing further than good sense can go.

ECONOMIC DISCORDS.

The Distribution of Wealth. By John R. Commons. Macmillan. 1893.

Labor and the Popular Welfare. By W. H. Mallock. London: Adam & Charles Black; New York: Macmillan. 1893.

THERE was never a time when so great a number were crying out, "What shall we do to be [socially] saved?" as at present, nor ever one when the cries of "Lo, here!" and "Lo, there!" were more conflicting. That any one should have within a generation written of the harmonies of economics must seem to modern students well-nigh incredible. We have selected almost at random these two books as illustrating the bewildering diversity of the views which the public desiring to be educated is asked to accept. If the two authors were to read each other's works, it is clear that each would express a very derogatory opinion of the other; and some might be found to agree with both judgments.

Prof. Commons is a follower of the Austrian economists, and of course makes much of the theory of marginal utility. This theory, it is perhaps well to explain, owes its significance to the fact that when the satisfaction of a want is begun, the pleasure is more intense than that experienced as satiety approaches. Hence, as he that is full craves no food, food then offered has for him no value. Or, to take an illustration of our own, when the theory of marginal utility has been expounded until every one is tired of it, no further exposition affords any pleasurable sensation. For our own part, we think the new political economists have neglected a most important suggestion of Aristotle's, for they base their theory upon the proposition that an excess of useful things is useless, but Aristotle points out that it may be positively hurtful. Why should we not have an economics constructed upon this principle, just as the mathematicians elaborate a universe turned inside out through negative dimensions of space? We believe that several very pretty reputations might be won by young professors if they would expound political economy from this standpoint.

In justice to Prof. Commons we should say that in another connection he does present certain theories that are preposterous enough to give him claim to originality. He informs us that the right enjoyed by those now engaged in a certain trade to prevent other people from engaging in it is an extension of freedom of contract, "the essential right of freedom in industry." As the result of freedom of this kind is lack of employment for the outsiders, Prof. Commons very logically infers that they must have a right to be employed, and that a proper view of freedom requires that employers should be required to retain their workmen permanently, at such wages and upon such conditions as "the State" prescribes. But if by reason of dishonesty and inefficiency workmen are discharged by private employers, then the State will take them up. Public works shall be undertaken, and if such a thing as a deficit should occur, it is only necessary to squeeze the owners of "unearned increments" by taxation. As in Prof. Commons's view nearly all industry is subjected to monopoly, the possibilities of revenue here are beyond the dreams of Henry George. But there would be no deficit, for Prof. Commons assures us that not only would the wages of the lowest laborers be increased by 30 to 50 per cent., but the wages of all laborers would be increased by raising "the marginal utility of the marginal laborers."

While Prof. Commons finds monopoly and rent everywhere, Mr. Mallock eloquently demonstrates that the rent charge in England is a mere trifle. "In 1814 the incomes of the landlord and farmer were 56 per cent. of the total assessed to income tax, in 1851 they were 37 per cent., and in 1880 only 24 per cent." They are now only 16 per cent. If these incomes were divided among the people, it would give each man about two pence a day and each woman about three half-pence. Moreover, the holders of more than a thousand acres were in receipt of only £29,000,000 of rent in 1878, which must be now less than £20,000,000, while the million small holders whose rentals average but £76 received in the aggregate £70,000,000. Thus it appears, upon Mr. Mallock's showing, that the great landlords are scarcely worth plundering—and, indeed, when we consider the rate at which their property has lately depreciated, it looks as if it might presently vanish without the aid of the socialists.

Having shown that the proletariat would make little by confiscating the rents, Mr. Mallock then imagines a mob dividing the contents of a palatial house in London, and points out that rare pottery and pictures would not be susceptible of division without loss of value, and that in general a division of wealth would occasion great shrinkage. The net result would be that every one would find himself possessed of some kind of lodging, of £8 worth of furniture and clothes, the same value of provisions and miscellaneous goods, and somewhat less than £4 worth of jewelry. From this he justly infers that no equal division of capital is practicable, and that the efforts of the radicals must be directed to the redistribution of income.

But when the source of the national income is examined, Mr. Mallock finds that the socialists of what may now perhaps be called the orthodox or classical school labor under a grave misapprehension. They consider that all wealth is produced by the workers for wages; but Mr. Mallock contends that of the national income of £1,300,000,000, Labor produces about five hundred, while Ability and Capital produce about eight hundred millions.

For the vast increase in the income of the English people has been created by improvements in production, by the Ability which invents and applies inventions; while the manual labor is not essentially different in character from what it was a half-century ago. "Capital is Ability guiding and controlling Labor."

"A hundred years ago the utmost that labor could produce in the most advanced country of Europe was £140,000,000 annually for a population of 10,000,000, or £14 per head. The production per head is now £35, or, for each 10,000,000 of population, £350,000,000. . . . If Labor is credited with producing the whole of the smaller sum, the entire difference between the smaller sum and the larger is to be credited to Ability operating on industry through Capital."

The number possessing Ability is put by Mr. Mallock at 4 per cent. of the producing classes.

But while men of ability thus produce nearly two-thirds of the national income, they turn over a considerable share of this to the laborers. A century ago ten million laborers produced £140,000,000, but they kept but half of this for themselves. Now the same number would produce the same amount, but instead of £70,000,000, they get £200,000,000, Thus the laborer, although he works no harder than he did, receives nearly three times what he did. He gets far more than he would had the entire wealth of the kingdom at the accession of Queen Victoria been equally divided. He gets this increased reward through the competition of the men of Ability or Capital, as is shown by the fall in the rate of interest. If things go on as they have done, he will get more and more; but if he attempts to deprive Capital of its reward by confiscation, he will kill the goose that lays the golden eggs. For Ability is stimulated to exertion by the hope of wealth and the desire to provide for offspring, and if its reward is withheld, the whole fabric of modern civilization will crumble into dust.

There are several things in Mr. Mallock's argument that deserve comment, but his powers as a writer will doubtless secure him a sufficient audience capable of discriminating judgment. It is enough to say that his book in its emphasis upon the importance of able management to successful production is at the opposite pole of economic thought to such works as that of Prof. Commons, which are based upon the conception that the officers of government can profitably direct the industries of nations.

History of the Town of Harvard, Mass. 1732-1893. By Henry S. Nourse, A.M. Harvard: Printed for Warren Hapgood. 1894.

THE community whose history Mr. Nourse has compiled with so much industry and related with so much literary skill in this handsome volume, occupies the extreme northeastern corner of Worcester County, "the heart of the Commonwealth." Like other New England hill towns, it has declined in population since the railroads began to differentiate the rural districts, creating artificial centres of life and activity and opportunity along the easy grade of the watercourses. At no time numbering as many as 1,700 inhabitants, the total had retreated in 1890 to less than 1,100, whereas the first official census of the colony in 1765 showed a total of 1,126. But retrogression is not universal, for "the hay crop was [in 1771] not half what it now is," and "the production per acre was less than three-fourths as much as modern farming secures," even with nine yoke of oxen to one at the present day. In 1885, "Harvard ranked as the two hundred and thirty-fifth town in the State in population," a little lower in manufactures, yet forty fourth in agricultural products, and twenty-ninth in milk-producing. The enormous apple crop, which once went mostly to cider and demoralization, now goes to Liverpool, and the vote under local option is overwhelmingly against licensing the liquor traffic.

The town still, therefore, has a thrifty look, and the attachment of its natives has been manifested in the usual way, by endowing a church and founding a school, a public library, and a lectureship; and, in the case of Mr. Warren Hapgood (besides other benefactions), procuring the writing of this history and providing the means of publishing it. The beauty of the varied landscape and distant prospects on every hand is such as Worcester County abounds in without having the fame of some of her sister counties in this regard. The actual site of the town has a peaceful tradition, but the men of Harvard shared in the defence of neighboring settlements against the savages, served in the French wars, and bore their part manfully in the Revolutionary service. With singular independence, they sympathized with Shays's rising, and stood by Jefferson and the embargo. Their soldiers' monument testifies to their participation in the war for the Union. The first three ministers at Harvard were graduates of the college bearing that name, and so was the fifth, who was none other than the Rev. William Emerson, father of the Transcendentalist, and a school-teacher prior to his ordination; but in this secular occupation, we are told, "his inability to control a fierce temper was a bar to his success." As a clergyman the estimation in which he was held is indicated by the fact that, in order to secure his release to them, the First Church in Boston had to pay the sum of $1,000 to the Harvard society in 1799.

This circumstance made the greater Emerson a native of Boston instead of Harvard; but early in the forties (when, as he wrote to Carlyle, "Not a reading man but has a draft of a new community in his waistcoat pocket") his friend Alcott, casting around for a spot on which to "initiate a Family in harmony with the primitive instincts in man," selected Harvard. The story of "Fruitlands," briefly and not very reverently recorded by Mr. Nourse, is one of the most entertaining passages in his book. It forms part of a chapter having also to tell of the Shakers at Harvard, whose persecution is one of the few dark spots in the town's annals; and of the little religious fraternity grouped around the prophet Shadrach Ireland in the middle of the last century. He was the Harris of his day, inspiring his besotted followers with the belief that he had an immortal body, and preparing them, after his death, to welcome Ann Lee as his successor, and to be absorbed in the Shaker community. It does not appear that the Millerite fanaticism invaded Harvard, which, to be sure, would in 1843 have found itself embarrassed with another millennium supplementary to Alcott and Lane's, to say nothing of the contemporary *Morus multicaulis* mania.

The endowed school alluded to above bears the name of and is a memorial to the most picturesque figure in Harvard's chronicle, Col. Henry Bromfield. This Bostonian, who spent the last half of his life in retirement on his farm of one hundred and twenty acres, lived to be ninety-two years of age, being one of a remarkable list of nonagenarians that Harvard can boast. He carried over into the present century the dress, the manners, and domestic style of the Revolutionary epoch; a Sir Roger de Coverley, as he seemed to Mrs. Josiah Quincy. Mr. Nourse, who has omitted nothing of what we are accustomed to expect in a first-class town history, gives a rather extensive (if mostly theological) bibliography of Harvard. But while he includes Miss Quincy's memoir of her mother for the light it sheds on Col. Bromfield, he has overlooked Edmund Quincy's *Dichtung und Wahrheit*, "An Octogenary Fifty Years Since." For in this story, which may be found in the volume called 'The Haunted Adjutant' (Boston, 1885), "Col. Wyborne" is none other than Col. Bromfield; "Sanfield," which, by way of mystification, was transferred to the Old Colony and the shore of Massachusetts Bay, stands for Harvard; the black "Peter" is Othello, or Thurlo; and the Rev. "Richard Armsby" may pass for the Rev. Nathaniel Thayer of Lancaster.

The clergy of the town have on the whole been a credit to it, beginning with John Seccomb, who led the way in toleration of heterodoxy, "praying that (notwithstanding any difference in lesser matters) we may yet, wherein we are agreed, and whereunto we have already attained, walk by the same Rule, and mind the same thing." The habits of the eccentric Rev. Joseph Penniman, it is true, were unsteady, but it is not clear that he was in his cups when, called to intercede at a farmhouse for the stricken inmates, he "besought the Lord to 'be very merciful unto Bezaleel, who lieth nigh unto death in the north chamber; . . . send thy ministering angels to comfort Bathsheba, groaning with anguish in the south chamber; . . . visit with thy healing grace Judith, thy sorely afflicted handmaiden, in the bedroom down stairs.'" The ancestors of the Rev. Dr. Henry W. Bellows and of the Rev. Dr. Cyrus Hamlin were among the swarm that went out from Harvard to settle the northern wilderness when the Indian alarm was over. The exodus still continues, but there is one house in Harvard which has been occupied by five generations of the same family, and from time to time, as we have intimated, a native fondly returns from exile, bringing his sheaves with him.

The typography of this volume, from the office of the Clinton (Mass.) *Courant*, is worthy of a metropolitan press. It is well illustrated with one portrait and several views, besides a map. Mr. Nourse displays the same qualities of head and heart which made his two volumes on the adjacent town of Lancaster so edifying. There is a cheerful moral to his Harvard narrative, in which the optimistic will read New England's *Resurgam*.

Roman and Mediæval Art. By W. H. Goodyear, M.A., author of 'Ancient and Modern History,' etc. With many illustrations. Meadville, Pa.: Flood & Vincent. 1894.

'ROMAN and Mediæval Art' is written with a grasp of its subject that is not common with books of its kind. It is also interesting, partly because the author has distinct ideas to present as well as facts, partly because his style is direct and animated, partly because he does not overload his work with detail. Mr. Goodyear knows what history and scholarship are; he has made himself acquainted with his subject in his previous work, and so his facts are well selected and well arranged, and his statement of them is trustworthy. The limits of the book have made careful selection and condensed statement imperative, and the condensation has been so close that qualifications and alternatives are left out which might well have found place in a book

intended for teaching, as we suppose this to be. This gives a pronounced character of finality, and makes statements on points that are open to contest as positive as on those which may be considered unquestionable.

We must dissent here and there from Mr. Goodyear's conclusions, or at least from his presentation of them. Among the influences which destroyed Roman classic art he makes too much, we think, of the destructive opposition of the early Christians. No doubt the Christians had for the idols and temples of heathenism a great hatred, which survived, or revived, in the eighth century; but this was most active in the East, that part of the Roman world in which the decadence of art was least and its subsequent development most rapid. In Italy, the repeated edicts of the Western emperors and governors of Rome, even of the Christian Theodoric, if they prove a tendency, as exists everywhere, to plunder old monuments, show also an effort to preserve them which was persistent, and, as subsequent history shows, largely successful. On the other hand, the rapid impoverishment and depopulation of Italy, especially of Rome, the abasement of the patriciate, which had been the fosterer of the arts, and the submergence of most of Italy and the northern provinces by a flood of domineering barbarians, who had no idea of art except for personal adornment and despised its monumental side, are influences of which, we think, Mr. Goodyear does not make sufficient account.

We cannot agree with him in deciding that the art of Western Europe was on the whole Byzantine rather than anything else from the sixth century to the eleventh, for this is the drift of his statements, or that "it is not till the eleventh century that we see spontaneous efforts at improved design in Western Europe," and in assigning that century for the beginning of Romanesque art. This is too ready a solution of the "Byzantinische Frage." It is true that recent criticism has remanded to the eleventh century many monuments that had before been ascribed to the eighth, ninth, or tenth, and that the whole history of art in the West during this period is obscure; but the development of Irish and Saxon illuminated MSS. from the time of St. Columba, the Celtic goldsmith's work, and the long growth of northern monastic architecture almost from Winfried's mission to Germany in the eighth century, are not to be ignored. To say that there was no independent development, in the face of the Book of Kells, the Ardagh chalice, and the famous monastery-plan of St. Gall, to mention no later works, is going too far. In truth the subject of the monastic pursuit of the arts is slighted, and Mr. Goodyear's readers are not told that while Byzantine art was running its course in the east, and certainly influencing western and northern art, though chiefly in its decorative detail, there was a steady growth of the art of illumination on the one hand and of architecture in one of its most imposing phases on the other, among the monastic orders of the north, and that this growth, of which the Romanesque of the twelfth century was only the last fruit, furnished the lay builders of the thirteenth with most of the material, except the decorative forms, for the splendid outgrowth of the pointed Gothic.

In the same way the northern school of mediæval sculpture is slighted. There is no hint that at the time when the Pisani began the rapid regeneration of Italian sculpture, there existed in France a well-developed school, the product of generations of slow but continuous progress, whose best works are more mature and more beautiful in style than those of the Pisani, though they are for the most part limited to figures about the doorways of cathedrals. All these things point to the main limitation of the book, that the reader's attention is kept too close to the south and east, especially to Italy, and that not enough notice is taken of the share of the north, which was the predominant factor in the Western art of the middle ages. This may be due to the effort to hold fast to the main line of historical development, which is certainly continuous from the Rome of the Empire to the Rome of the Renaissance, and the following of which is one of the special merits of the book; but it robs the book of completeness and of due proportion.

We notice here and there a slip, such as no writer of a book of this kind succeeds in absolutely avoiding. For instance, the west porch of the Cathedral of Chartres (figure 111) is called the south; figure 9 is called a variant of the Ionic capital instead of the composite; the pointed vault of the Cathedral of Mainz, rebuilt near the beginning of the thirteenth century, is said to be round, and the popular confusion between the Dome of the Rock and the Mosque of Omar is here encouraged. But such errors seem unusually few. The abundant process illustrations are very well chosen and well executed, though some, as is inevitable, are from imperfect originals. The paper is, for the sake of these prints, of a kind, heavily loaded and shiny, that makes handling the book disagreeable and reading it a penance.

The Wilder Quarter-Century Book: A Collection of Original Papers dedicated to Prof. Burt Green Wilder at the close of his twenty-fifth year of service in Cornell University (1868–1893) by some of his former students. Ithaca, N. Y.: Comstock Publishing Co. 8vo, pp. 493, illustrated.

FOURTEEN or fifteen sometime pupils of Prof. Wilder, of more than three thousand he has instructed in the past quarter of a century, have made contributions to a memorial for the twenty-fifth year of his professorship. The outcome is a large volume of scientific papers with many illustrations, a list of the professor's writings, and a good portrait. Four of the articles appeal to physicians, one to botanists, one to geologists, and the remainder to zoölogists. The work is not that of beginners; the authors were pupils years ago and have since become authorities in their different lines. These essays represent their best work, and give a good idea of present attainments and abilities. The average of excellence is high—highest, perhaps, in lines of direct observation.

The substance of a number of the papers had previously been given to the public. "Temperature and Vertebræ," by Prof. Jordan of Stanford University, occupies the post of honor. Theoretical premises, however, make this article more liable to serious criticism than some of the others. It treats of the fact that in certain families of fishes genera inhabiting warmer waters have fewer vertebræ. Günther first pointed out that some northern fishes had more than their southern representatives. Gill afterward enlarged upon this; and, later, Jordan, with more data, took up the subject to determine the cause of the differences. He concludes that, "other things being equal, the numbers of vertebræ are lowest in the shore-fishes of the tropics, and especially in those of local habits, living about rocks and coral reefs. The cause of this is to be found in the fact that in these localities the influences of natural selection are most active." He finds the tropical seas among rocks and coral reefs near the shore to be the centre of competition, where the struggle for existence is "a struggle between fish and fish, and among individuals of a very great number of species, each one acquiring its own peculiar points of advantage." This would place the severest struggle for life in the midst of the most favorable conditions of existence and the least favorable to activity. The statement that in those localities "in the sea the temperature is never unfavorable to self-activity" does not appear to be substantiated by what is known of habits, or by the comparative amounts of air in warmer waters. It is admitted, further, that the explanation does not cover the whole case; numerous exceptions are noted to be otherwise accounted for. Of some of these it is said, "Perhaps the retention of many segments is connected with that strength and swiftness in the water for which the mackerels are preëminent"; and of others, "it is evident that the presence of numerous vertebral joints is essential to the suppleness of body which is the eel's chief source of power." Use is thus resorted to when selection fails; but why we should in the other cases drop an explanation based on what has been ascertained of the habits for one based entirely on theory is not made clear. Crediting the results to selection simply begs the whole question and explains nothing. The converse hypothesis, "absence of selection," is quite as conclusive and fully as reasonable. Had the investigations been carried further, to the species of the genus, the conclusion would have been unavoidable that the variations in the numbers of vertebræ correspond directly with the habits, the comparative activity, the use of the vertebral column, in the fish. This is about what is conceded in the exceptions cited. Taking a particular genus, it is seen at once that the active species, preying on the others, have more vertebræ than the others that grope about the rocks and mud in the same water. The facts are, temperature makes possible the food supply; the habits depend on the character of the food, variety in the food inducing variety in the habits; and the habits modify the structure.

Louisiana Studies. By Alcée Fortier. New Orleans: F. F. Hansell & Bro. Pp. 307.

THIS volume is made up of a number of papers on the Literature, Customs, Dialects, Folk-Lore, and History of his native State, most of which, the author tells us, have heretofore appeared in different literary and scientific journals. The subjects are varied, and while some are not treated as exhaustively as might be desirable, the *tout ensemble* will be very acceptable to the student of history and philology, as well as to the general reader who is curious of penetrating into that (to many) *terra incognita*, the old Creole State. One hundred and twenty-two pages are devoted to the literature of Louisiana under three heads, viz.: Literature in the Colony, the French Literature of Louisiana, and English Literature. The opening chapter recites, briefly, the reasons why the Creoles have so steadily held on to the language of their forefathers with an exclusiveness which long stood in the way of their writers and confined their fame within the narrow limits of their own State. Since the war the use of English has become more general, though French remains still the mother tongue, the language of the home cir-

cle. Mr. Fortier reviews the condition of literature in the colony previous to annexation, and, as a specimen, reproduces *in extenso* a poem written in 1779 by Julien Poydras to celebrate the taking of Baton Rouge by Galvez, the warlike and popular Spanish governor. The style is pompous and bombastic—peculiarities which mark the works of the second-rate French poets of that time—but the poem is not without merit. We are next introduced to the representatives of the literature of the State of Louisiana. The first name in the record is that of Judge Francis Xavier Martin of the Supreme Court, who, in 1827, published a History of Louisiana extending to the year 1815. The fact that this work was written in English, at a time when French was almost exclusively spoken in the State, gives it additional importance. This valuable history was republished in 1882, accompanied by an interesting memoir of the author by Judge W. W. Howe, and Annals from 1815 to 1861 by J. F. Condon. Next comes the preëminent name of Charles Gayarré, the venerable historian, now in his ninetieth year, whose intellect is as strong and his pen as trenchant as in his mature manhood. Mr. Gayarré's talent is versatile, and while he is known to the English-reading public only as a learned historian, he is regarded, besides, in his own State as a dramatist and novelist of no mean order. Dr. Alfred Mercier is another versatile writer who in his ripe old age wields the pen with youthful facility, and cultivates various branches of literature with equal success. Mr. Fortier gives several extracts from this writer's works. The prose writers of Louisiana have turned their attention principally to the serious subject of history; or is it the romance of history, so prevalent in Louisiana, that has attracted them? They have produced but few novels. Poetry is the favorite field of the Creole.

The following remarks, which serve as an introduction to the subject of English literature, will attract attention:

"For a number of years after the cession to the United States the conditions were not favorable to English literature. The settlers from the United States were not very numerous, and they were too much absorbed by their material interests to attend to literary pursuits. As the prosperity of the State increased, more attention was paid to education, but the culture of the people, as in other Southern States, was directed principally to statesmanship, and we had great orators, distinguished journalists, but comparatively few authors of note. It is proper to state, however, that the celebrated *DeBow's Review* exerted a great influence for many years upon literature. Its pages contain papers of value on all kinds of subjects, and it is a complete encyclopædia of the Old South. The institution of slavery is claimed by many as having been detrimental to literary activity. It was not, perhaps, so much slavery itself as the material prosperity accompanying it, which was a drawback to literature. The Southern people were content with attending to their mercantile and agricultural interests and with governing the nation to a great extent, and, although many were highly educated, few wrote in branches generally included in the term literature. Too many, however, spent their energy and their talents in defending with their pens the cause of slavery, a cause which was naturally considered by them legal and just. Slavery, in that way, injured literature."

The study on customs and dialects will prove of much interest to the student of philology. Mr. Fortier gives many specimens of that peculiar dialect spoken by the negroes in lower Louisiana known as Creole French. Curiously enough, this dialect is not simply bad French, as might be supposed, but a purely phonetic idiom, having a grammar of its own, based upon the Old French language more than on the modern. "We may understand," says Mr. Fortier, "by studying the transformation of the French into the Creole dialect, the process by which Latin, spoken by the uncivilized Gauls, became our own French." The dialect of the Acadians—the pathetic history of these unfortunate people is feelingly reverted to by Mr. Fortier—is less interesting than that of the negroes. It is less *sui generis* and more like the French of 200 years ago, studded with provincial *patois* and corrupted by the introduction of foreign expressions from various sources. It varies, moreover, according to localities. Mr. Fortier thus accounts for this incongruity:

"Canada and Acadia were settled mainly by emigrants from Normandy, Poitou, Aunis, Brittany, and Picardy, with a few from Paris. The dialectical peculiarities of the ancestors may still be found, to a certain extent, among the descendants, although they must have been very much weakened by long residence in America. The constant intermarriage of people whose fathers were from different provinces tended certainly to erase the peculiarities of speech, and at the time of the dispersion of the Acadians in 1755 their language must have been nearly uniform. I should, therefore, arrive at the conclusion that the differences in the Acadian dialect in Louisiana are due more to local influences than to the provincial peculiarities of speech of the Norman or West France ancestors. The English language has naturally exerted a great influence on the Louisiana Acadian patois, and so have the Spanish and Creole patois, producing thus a very interesting speech mixture."

The Islenòs—people from the Canary Islands who were brought to the colony in 1778—form the subject of another interesting paper. Their customs and their language (the Spanish, slightly deteriorated) are graphically described.

Part iii. deals principally with the important question of Education. Mr. Fortier presents a careful review of the condition of education during the colonial period, in ante-bellum times, and at the present day. Private educational institutions of a high order have always existed, and the State's solicitude for the intellectual development of the young has been evinced in the establishment of free or partly free schools and colleges; yet when we consider the mixed population and sparsely settled districts, we can well understand the illiteracy of a large number of the population. Only since the system of public schools has been in force has the schoolmaster been truly abroad in the out-of-the-way parishes. Mr. Fortier says in conclusion: "One can see by this brief sketch of the history of education in Louisiana that great efforts were made in the past to educate our people. Much is being done now for the cause of education, and we have every reason to hope that Louisiana will soon stand on a par, with regard to the general instruction of her people, with her most favored sister States."

The fact of the "Studies" being distinct papers, published at different times, but having reference always to the glorification of Louisiana and her people, has made certain repetitions unavoidable which would not be found in a work written on a preconceived plan. The typographical execution and general get-up of the book are very creditable.

Sewage Disposal in the United States. By George W. Rafter, M.Am.Soc.C.E., and M. M. Baker, Ph.B., Associate Editor *Engineering News*. D. Van Nostrand Co. Pp. 598.

THIS is the most elaborate and, for engineers, the most useful book that has appeared on the important subject of which it treats. In fact, so far as practice in this country is concerned, it is the only comprehensive one. It will surprise even those who are familiar with the subject to know that so much material could have been gathered from actual experience with sewage disposal works carried out in the United States, where the demand for any other disposal than discharge into a stream or into the sea first arose less than twenty years ago. The earliest works in this country for the purification of the sewage of a town were constructed at Lenox, Mass., in 1875–'76. The list of disposal works in operation in 1893, as here given, includes thirty-five towns and some half-dozen public institutions. These are described and illustrated in this book, supplementing by practical examples the theoretical portion of the text, which seems to cover the whole range of information on the questions discussed. Indeed, useful as this work cannot fail to be as a book of reference for engineers, its mass of tables and its very copious extracts from authorities will render it less attractive than it should be to the lay reader. From one important point of view, this is to be regretted, because the book contains a great deal that is of general interest, which will be very effective in forming public opinion and in propagating the gospel of cleanliness.

The value and influence of foreign study and practice in the field of sewage purification are duly recognized, but, even in the scientific discussion of details and methods, more attention is bestowed on what has been accomplished in our own country. In fact, while we must give full credit for intelligent leadership to England, and while most notable advance has been made at Paris and at Berlin, the investigations made by the Massachusetts Board of Health as to the processes actually constituting the work of purification are to be regarded as reaching the highest development of knowledge and theory on this subject; and this is fully recognized abroad. The theory of purification by oxidation, due to, and practically not taking place without, the active aid of minute organisms (bacteria) which consume the impurities and combine them with oxygen, was already formulated and had been established by laboratory experiments. The Massachusetts authorities have carried the theory and its application much further forward, have supported it by unquestionable demonstration, and have presented it in a form comprehensible to all intelligent persons. It is clearly shown that the oxidation by which the organic impurities of the sewage are destroyed in the soil of a sewage farm or in a sewage filter always requires the presence of organisms, the presence of air, and the access of both of these to the oxidizable material. The process is not a mere straining out of solid parts of the sewage; it is an actual burning up of organic matter in solution or in suspension.

This was clearly shown by the use of a filter five feet deep, filled with cleanly-washed gravel stones of the size of beans. The voids between these stones amounted to fully one-third of the total space. Sewage passed through this filter as fast as it could flow through the voids, air being excluded, would pass out at the bottom as foul as it entered at the top. When applied so gradually as only to wet the stones without filling the air spaces, the effect seemed almost magical. Sewage being applied fourteen times a day for six days in the week, at the rate of over 100,000 gallons per acre per day, 98½ per cent. of its organic matter and 99½ per cent. of its bacteria were removed. In the official report of the experiments, it is said of this filter:

"These results show more definitely than any others the essential character of intermittent

filtration. We see that it is not a straining process. By the application of small quantities of sewage over the whole surface of the tank every hour, each stone in the tank was kept covered with a thin film of liquid, very slowly moving from stone to stone from the top towards the bottom, and continually in contact with air in the spaces between the stones. The liquid, starting at the top as sewage, reached the bottom within twenty-four hours, with the organic matter nearly all burned out. The removal of this organic matter is in no sense a mechanical one of holding back material between the stones, for they are as clean as they were a year ago; but it is a chemical change, aided by bacteria, by which the organic substances are burned, forming products of mineral matter which pass off daily in the purified liquid.

"The liquid flowing out at the bottom is a clear, bright water, comparing favorably, in every respect that can be shown by chemical or biological examination, with water from some of the wells on the streets of our cities that are used for refreshing draughts by the public during the summer."

The Massachusetts investigations related to the use of all varieties of earth suitable for filtration, including the finest sands, and all demonstrated the same processes of purification.

The theory and practice of the clarification of sewage by chemical precipitation, making it fit for discharge into some water-courses, are set forth at considerable length; and collateral questions, such as the legal rights of riparian owners to prevent the fouling of streams, the availability of sewage irrigation in agriculture, and the use of ensilage for the abundant crops of sewage farms, are discussed at length and well.

Legends of the Micmacs. By the Rev. Silas T. Rand. [Wellesley Philological Publications.] Longmans, Green & Co. 1894. 8vo, pp. 452.

In addition to the legends, this volume contains short and satisfactory sketches of the life and the works of Dr. Rand, together with a paper upon the "Manners, Customs, Language, and Literature of the Micmac Indians," which, we regret to add, is not so satisfactory.

Of the legends proper, there is not much to be said. A few of them purport to be historical, and relate to scenes and events that took place in a war which these people say they waged with the Mohawks. That such a war occurred at some time in the past is quite probable; but that the events, as here described, ever happened, we take leave to doubt. The accounts are entirely too one sided, and, moreover, they do not agree with what we know of the fighting qualities of the two tribes during the past three hundred years. In regard to the remaining stories, numbering between seventy and eighty, it is only necessary to quote the admission (page vi.), that "some of them are evidently of modern date," while others "are so similar to some of our old European 'fairy tales' . . . as to lead to the impression that they are really one and the same." Such frankness disarms criticism, though, from an ethnological point of view, it is the severest comment that can be made upon the stories. As such we accept it.

In conclusion, it gives us pleasure to call attention to the amount and value of Dr. Rand's work in other lines of research. He seems to have been a natural linguist, and during the forty years—from 1846 to 1886—that he labored as a missionary among these people, he acquired not only the Micmac, Maliseet (*sic*), and Mohawk languages, but he also familiarized himself with Latin, Greek, Hebrew, French, German, etc., etc. Of all these tongues, Micmac was his favorite, as well from its "marvellous construction" as from its regularity and fulness. Into it he translated almost the entire Bible, besides numerous prayers, hymns, etc. He also prepared, and, with the aid of a small subvention from the Government, published, a dictionary of this language under circumstances that must have tested his sincerity to the utmost. Bearing upon this point, it is worthy of note that for the twenty-two years of his life, subsequent to 1864, he received no salary, but "lived by faith in God." With touching simplicity he adds: "The good Lord has always supplied my wants—not always in the way I looked for it, but in His own way."

La Diplomatie Française et la Ligue des Neutres de 1780 (1776-1783). Par Paul Fauchille. Ouvrage couronné par l'Institut de France (Académie des sciences morales et politiques, Prix Doniol, 1892). Paris: Pedone-Lauriel. 1893. Pp. xi., 619.

The intense and widespread interest which republican France manifests in the First Empire is not due to any social or political unrest. There are still many reactionaries in France, both royalist and imperialist, but, since the Boulanger fiasco, they no longer agitate under those names. Moreover, for the moment at least, their agitation is insignificant, and the overwhelming mass of the nation seems heartily, thoroughly republican. The consummation so ardently desired by moderate conservative republicans wherein there shall be two great constitutional parties, conservative and radical, but both republican, seems to have been reached since the last elections, or, if not quite attained, to be within sight. It is therefore from no longing for a new *imperator* that the French historians and French writers in general are so absorbed in Napoleon I. It is because of the great Franco-Russian alliance of to-day as foreshadowed by the league made at Tilsit between Napoleon and Alexander. Everything which relates to coöperation, either partial or complete, successful or the reverse, between France and Russia has an intense interest for the reading public in the former country. To this we owe many recent historical studies like those of M. Albert Vandal ('Napoléon et Alexandre I.') and that of M. Paul Fauchille. It was not unnatural for a people shorn of their glories and their lands to recur for consolation to the period of their greatest glory, and for fifteen years past there have appeared numerous works concerned directly with Napoleon; but the Russian alliance focussed the feeling, and is the cause of the present enthusiasm for all that concerns combined action between the two nations.

The armed neutrality of 1780 could not escape notice in the search for subjects related to the general theme. The aim of the volume before us is to prove that a league epochal in international law as well as in international relations was due, in its organization, to the initiative of France, while realized by the vigorous coöperation of Catherine II. For the special student of neutral rights in time of war this book has a high scientific value, its matter being drawn almost exclusively from contemporary documents in the archives of Paris, Moscow, and Stockholm which are not easily accessible. The author's style is clear and concise, his treatment of the subject comprehensive and philosophical. The historical method is highly technical and scientific, so that the work is a fine example of the new product, wrought out by laborious, painstaking study, which has almost entirely displaced in France the old brilliant but inaccurate literature which so long passed in that country for history. Its interest, therefore, is general, both from the nature of the subject and the character of the work; at once revealing the attitude of serious Frenchmen towards Russia, and displaying the capacity of young France for solid attainment by correct scientific methods. The student of American history will find in the volume little that is new except in matters of detail regarding both the inception and negotiation of the League. The author frankly admits the disproportion between effort and result, inasmuch as England, though mitigating the severity of her dealing with neutrals, never formally admitted the principles of the neutrality, while neither Denmark nor Sweden sustained it with energy. Russia herself used it for little but her own advantage in closing the Baltic to privateers; and when Catherine's main object was attained by the peace of Versailles, the project for a complete code of maritime neutrality was allowed to drop. The outcome of French and Russian coöperation was indeed slender, but the author does not consider that fact ominous for the present, since the principles outlined by Vergennes were seventy-six years later formulated and accepted by the Congress of Paris.

A Text-book of the Physiological Chemistry of the Animal Body. By Arthur Gamgee, M.D., F.R.S. Vol. II.: The Physiological Chemistry of Digestion. Macmillan. 1893.

After an interval of thirteen years since the appearance of the first volume, the author resumes the publication of his valuable text book of physiological chemistry. This period has been fruitful in the production of important papers on the various subjects treated of in the present volume, and the author has shown the same skill and conscientiousness which characterized his earlier work in bringing together the conclusions reached by other investigators, and has enriched the whole by the results of his own extensive experience in original research. The volume now before us covers the subject of the physiological chemistry of digestion, and treats it with a fulness that leaves little to be desired. As a particularly interesting and important feature may be mentioned that portion of the work devoted to the chemical changes produced by microörganisms in the alimentary canal. Owing to the difficulty of distinguishing in all cases between the chemical changes occurring in digestion and those taking place during absorption, it would have been more satisfactory to have these two processes described in connection with each other; but the latter subject is left for a subsequent volume, the publication of which must even be postponed, as the author tells us in his preface, until a second edition of the first volume brings the treatment of the subjects there discussed to a point representing the present position of physiological science.

It is to be hoped that the author will find himself in a position to complete without undue delay the survey of his chosen subject, for, though the work will not replace in the hands of medical students the recently published smaller manuals of Hammarsten and of Haliburton, yet, as a treatise on physiological chemistry fully representing our present knowledge of the subject, it will be invaluable to all advanced students of medical science, and to all who desire by original investigations to extend the bounds of our knowledge in directions

in which research is likely to lead to most valuable results for the welfare of the human race.

BOOKS OF THE WEEK.

Alexander, W. F. Selected Letters of Mendelssohn. London: Sonnenschein; New York: Macmillan. 90 cents.
Benson, E. F. A Double Overture. Chicago: C. H. Sergel Co. 50 cents.
Benton, R. C. The Vermont Settlers and the New York Land Speculators. Minneapolis, Minn.: Housekeeper Press.
Billings, Dr. J. S., and Hurd, Dr. H. M. Hospitals, Dispensaries and Nursing. Baltimore: Johns Hopkins Press.
Biological Lectures Delivered at the Marine Biological Laboratory of Wood's Holl, 1893. Boston: Ginn & Co. $2.15.
Black, W. Donald Ross of Heimra. Harpers. 80 cents.
Bonney, Prof. T. G. The Story of Our Planet. Cassell. $5.
Brown, H. F. Life on the Lagoons. 2d ed., revised. Macmillan. $1.75.
Cassell's Complete Pocket Guide to Europe. 1894. Cassell. $1.50.
Chopin, Kate. Bayou Folk. Boston: Houghton, Mifflin & Co. $1.25.
Clark, C. H. Practical Methods in Microscopy. Boston: D. C. Heath & Co. $1.60.
Clifford, Mrs. W. K. Love Letters of a Worldly Woman. F. T. Neely. 50 cents
Cobban, J. M. A Soldier and a Gentleman. Lovell, Coryell & Co. $1.
Coolidge, L. A., and Reynolds, J. B. The Show at Washington. Washington: Washington Publishing Co.
Conybeare, F. C. The Apology and Acts of Apollonius, and Other Monuments of Early Christianity. London: Sonnenschein: New York: Macmillan. $3.50.
Crawford, F. M. Katharine Lauderdale. 2 vols. Macmillan. $2.
Creighton, Rev. M. A History of the Papacy During the Period of the Reformation. Vol. V. The German Revolt. Longmans, Green & Co. $5.
Crocker, F. B., and Wheeler, S. S. The Practical Management of Dynamos and Motors. 2d ed. D. Van Nostrand Co. $1.
Crockett, S. R. The Raiders. Macmillan. $1.50.
Croquet, C. P. du. Le Français par la Conversation. W. R. Jenkins. $1.
Dana, Mrs. W. S. According to Season: Talks about the Flowers in the Order of their Appearance. Scribners. 75 cents.
Dana, Mrs. W. S., and Satterlee, Marion. A Selection of Fifty Plates from 'How to Know the Wild Flowers.' Scribners. $1.
Davidson, John. Plays. London: Mathews & Lane; Chicago: Stone & Kimball. $2.
Deering, Prof. R. W. Schiller's Wilhelm Tell. Boston: D. C. Heath & Co. 65 cents.
Douglass, Miss Amanda M. In the King's Country. Boston: Lee & Shepard. $1.50.
Edwards, Rev. Charles. The Rejected Symbol. J. S. Ogilvie Publishing Co. 50 cents.
Farjeon, B. L. A Fair Jewess. Cassell. $1.
Favre, Édouard. Eudes, Comte de Paris et Roi de France (882—898). Paris: Emile Bouillon.
Fowler, Frank. Portrait and Figure Painting. Cassell. $2.
Gollancz, Israel. Shakspere's Tempest. London: J. M. Dent & Co; New York: Macmillan. 45 cents.
Griffis, W. E. Brave Little Holland, and What She has Taught Us. Boston: Houghton, Mifflin & Co. $1.25.
Guimps, Baron Roger de. Pestalozzi, his Aim and Work. Syracuse: C. W. Bardeen. 50 cents.
Hardy, Thomas. Life's Little Ironies. Harpers. $1.25.
Hare, A. J. C. The Story of Two Noble Lives: Being Memorials of Charlotte, Countess Canning, and Louisa, Marchioness of Waterford. 3 vols. Randolph. $8.
Hickey, B. H. Euthanasia. *Truth Seeker* Co.
Hoffmann, Prof. Puzzles Old and New. F. Warne & Co. $1.50.
Holland, Rev. H. S. God's City and the Coming of the Kingdom. Longmans, Green & Co. $2.
Holt, Ben. Good Style, Small Expense. Baker & Taylor Co. 50 cents.
James, W. P. Romantic Professions, and Other Papers. London; Mathews & Lane; New York: Macmillan. $2.
Jessopp, Rev. Augustus. Random Roaming, and Other Papers. Putnams. $1.75.
Lane-Poole, Stanley. The Life of Sir Harry Parkes. 2 vols. Macmillan. $8.
Larrabee, William. The Railroad Question. Chicago: Schulte Publishing Co.
Lee Mary H. Margaret Salisbury. Boston: *Arena* Publishing Co. 50 cents.
Life and Later Speeches of Chauncey M. Depew. Cassell. $2.50.
Lowell, J. R. The Vision of Sir Launfal. Maynard, Merrill & Co. 12 cents.
Maclean, Rev. A. J. East Syrian Daily Offices. London: Rivington, Percival & Co.

William Lloyd Garrison,

1805–1879.

The Story of his Life told by his Children. Illustrated with over 40 portraits, views, etc. 4 vols., 8vo, gilt top, $8.00 *net.*

This important work (till recently published by the Century Company), has been reduced in price from $12.00 to $8.00, a remarkably low price for what is unquestionably one of the handsomest products of the American press.

"A biography of almost world-wide importance. . . . It will be a standard work of reference."—*Charleston News and Courier.*

"In fact, Southern history is not complete without this work."—*Atlanta Constitution.*

"It is, for the anti-slavery record, final; and the service done to our national history is as great as that to a father's memory. Its one eminent trait, however, is its justice."—*Atlantic Monthly.*

"A masterpiece of modern historical biography. . . . To call the work a mine of information would be to convey a false impression: it is rather a well-arranged library in which attendant hands are always present to point the way to the exact thing wanted. . . . Finally, the work, while as instructive as the driest manual, is as interesting as a romance."—*Boston Advertiser.*

The Nation.

NEW YORK, THURSDAY, APRIL 5, 1894.

The Week.

THE Senate is ready now to go into general debate on the tariff bill. The time already lost cannot be regained. The bad effect of delay is twofold: it prolongs the uncertainty and stagnation of business, and it gives the country the impression that the Democratic party does not know its own mind. The contrast between the business-like activity of the House and the floundering movements of the Senate is very striking. This difference is what might be expected when we look at the chiefs of the finance committees of the two houses—Mr. Wilson, a young man of education and of action, a thinker, with not the smallest trace of the demagogue in his composition, and on the other hand Dan Voorhees, a spoils politician of the ante-war period, who, although he has been in public life more than thirty years, has never identified himself with any public question whatever, least of all with any question of finance. The contrast between these two men is exactly typical of the proceedings in the two houses. If the Democratic party goes to defeat this fall, that result will be due more to the ineptitude of the persons who have charge of the tariff bill in the Senate than to any other cause. The bill ought to have been passed by this time, or, if not passed, the onus of further delay ought to be distinctly on the Republicans.

Speaker Crisp's decision to decline the Senatorship offered him by the Governor of Georgia is clearly in the interest of his party and the public service. The personal sacrifice involved is very likely only temporary, while the avoidance of a reorganization of the House at this time is of the highest importance. Mr. Crisp is nearer to being a leader of his party in the House than anybody else, and could not be spared at present. No such emergency is likely to arise in the near future, as no party is likely to have a majority of 100, with a wild and irresponsible element all the while threatening to make trouble. Whatever else next fall's elections may result in, they will certainly cut down a goodly proportion of the fungous growths that have been ornamenting the congressional dunghill for the past two sessions. Their present propensity to mischief is doubtless due to the consciousness that it is their last chance, as the places that now know them shall speedily know them no more.

The true inwardness of the interest manifested by the Home Market Club people in the Alabama campaign is exposed in the statement that Kolb, while nominally running for the Governorship, is really aiming at the United States Senatorship which will fall vacant next March. In other words, the high-tariff men of New England are raising money "as quietly as possible" to secure a Southern Legislature which will give them another vote for McKinleyism in the upper branch of Congress. It is purely a matter of business.

Never was there an administration which threw away so many chances to get glory at bargain prices. The opportunity to tweak John Bull's nose in Brazil was simply enough to make a Jingo's mouth water, and no end of able newspaper correspondents and jurists were quick to point it out; but the old fellow got off without a single insult. Then there was a noble chance for genuine American diplomacy in the Bluefields incident; and by loud protests that they were "ready" and "vigilant," and by sending off a ship or two before they knew what had actually occurred, the authorities at Washington could have enrolled themselves among the number of true patriots. So, too, in the matter of the Bering Sea regulations, it would have been so easy to let it be known that we would stand no nonsense, and to have brought England to her knees in the newspapers. But, alas! the State Department seems hopelessly given over to humdrum. It waits for advices before going to war, and actually takes it for granted that there is such a thing as good faith on the part of the English Government and such a thing on ours as dignity without bluster. It must be admitted that our foreign relations move on peaceably and prosperously under such spiritless methods, but the wasted opportunities are enough to make the earth lie heavy on certain physically and politically defunct statesmen.

The decision of Judge Edwards of the Supreme Court, in the contempt proceedings against the Hill-Maynard Board of State Canvassers of 1891, puts the final mark of fraud upon them for aiding Hill in his theft of the Senate. The judge declares that they are guilty of contempt because they canvassed the Mylod return in disregard of the decision of the Court of Appeals. If they had not canvassed that return, they would not have enabled the Hill-Maynard conspirators to consummate their theft. Maynard, it will be remembered, was present when the contempt was committed, and sat in silence when a word from him as to the whereabouts of the missing and legal return would have made the false and illegal canvass impossible. The members of the Board of Canvassers will have to pay the penalty fixed by the law, at least $250 fine, but they ought to compel Hill and Maynard to recoup them, for these two are the real culprits. What a shame it would have been to the State had this decision found Maynard occupying a seat upon the bench of its highest court! For the final verdict, placing upon the records the right interpretation of Maynard's and Hill's conduct, the people are indebted to the pertinacity and intelligent zeal of Mr. John Brooks Leavitt, who instituted the contempt proceedings, and to Mr. Alfred R. Conkling, who paid all the expenses of them.

The fate of the libel bill asked for by the newspapers has been sealed by a vote of 71 to 16. The Ainsworth bill has passed the Assembly, leaving the question of malice, where it now is and always has been, to the jury. No newspaper has ever suffered in the smallest degree from the *law* of libel since the Shipley case in 1783, when the power of passing on both the law and the facts was finally lodged in the hands of the jury. Ever since then the jury has always decided whether the libel was a libel, whether it was malicious, and what damage, if any, it had done. The judge may charge what he pleases, but as long as publication is not disproved, the defendant remains in the hands of the jury. The late newspaper libel bill was in reality an attempt to get out of the hands of the jury by making the plaintiff prove the unprovable—namely, malice. Had it succeeded, every man in the community would be at the mercy of the editors, for they would only have to deny malice to throw the plaintiff out of court. If malice cannot be inferred from a man's acts or words, he is master of the situation. What the press needs is to overcome in some manner the prejudices of jurymen, which are now all against it, and this would necessitate a very great change in the standards and management of most of our newspapers. The publishers are now the only class, not openly criminal, who deny all moral responsibility to the community for the manner in which they conduct their business, and openly proclaim that whatever they can sell they are at liberty to produce. This position, no doubt, has great pecuniary advantages, but it rouses and keeps alive a great deal of popular hostility.

"Paddy" Divver, after several months of absence from the city, resumed his duties as police justice on Sunday. He ought to devote all his energies in the immediate future to prosecuting the

World for libel. Even he ought to be able to see that he cannot remain on the bench in silence under such an array of charges as the *World* brought against him on Monday. Either he has ground, in those charges, for swingeing damages, or his presence upon the police bench is, more than has ever been suspected, both a scandal and a public menace. If what the *World* says is true, or if half of it is true, Divver's Tammany organization in the Second Assembly District is the most formidable association of criminals, thugs, and social outcasts that was ever found in a civilized community. No one can read the list of his friends and political agents which the *World* gives, with specific biographical information in each case, without a shudder, for if the leader and organizer of this gang is sitting on the bench as a dispenser of justice, what kind of a government are the people of New York living under? Eighteen of his political workers have been sent to prison, or have been fined, or have fled from justice because of crimes committed under his leadership in the election of last November. The *World* reproduces this list, and supplements it with another which is far more appalling. There are nearly forty names in it, all belonging, says the *World*, to Divver's "friends and lieutenants," who are "among the most disreputable men in the city of New York." In a third list the *World* gives the names of forty-five of Divver's followers who are on the city pay-rolls, through the grace of Divver's "pull" with Tammany Hall.

The Swiss referendum appears to be having a "boom" in this country just now. In the Legislatures of New York and New Jersey as well as Massachusetts bills are pending looking towards its incorporation in the State Constitutions, though their authors confess that there is little hope of success at present, except in the last-mentioned State. In so far as this movement springs from a sense of our low estate politically, and from a conviction that something must be done to elevate it, no one can quarrel with it. But in so far as it places the hope of political salvation in this or any other kind of political machinery, it is to be condemned as tending to distract attention from the real seat of trouble. The politicians can never be circumvented by mere machinery. It is precisely as expert machinists that they succeed, and they could speedily master the cogs and pulleys of the referendum or initiative, or any other contrivance.

Mr. Anson Phelps Stokes has a currency plan called "joint metallism," by which "gold and silver together at ratios always based on their relative market values may be made the metallic basis of currency." The reason why Mr. Stokes proposes this plan is, he says, that the general demonetization of silver, and the great reduction in its purchasing power, "have caused a general decline in values, and an insufficient metallic basis of currency, making manufacture and trade both uncertain and dangerous." Now, this fundamental proposition of Mr. Stokes's is totally denied by the monometallists, and that is why they will never consider his plan. They say, with one of the British delegates to the Monetary Conference, that the whole silver movement is simply a preposterous attempt to keep prices up when science, art, invention, discovery are knocking them down; that the fall in silver has had no more to do with the decline in prices than the fall in wheat, and that nobody has complained or is complaining of any actual scarcity in the supply of gold. It has not shown itself anywhere. Many dozens of gentlemen in various parts of the world keep telling us that it is going to show itself by and by, and that they are lying awake at night thinking anxiously about it. But there is no sign of it. The supply of gold is increasing rapidly in answer to the increased demand for it, and we believe it may be said with safety, that nobody in any country has ever yet maintained that he was unable to get gold when he had something to exchange for it or good security to borrow it on. In fact, nothing is ever heard of the scarcity of gold in business circles. All we know about it we get from bimetallic pamphlets and speeches. The great demand for some other and cheaper kind of currency comes from gentlemen with debts to pay, but if we begin tinkering the currency in order to accommodate these gentlemen, the tinkering will last for ever.

Apropos of this, it may be said to the Boston brethren who are sounding the trumpet of alarm over silver, that it is absurd of them to stay in the bimetallic camp. Their proposition, that governments, by laying their heads together, can keep two commodities at equal value in spite of difference in quantity, in cost of production, and in market price, applies, though they do not seem to see it, to other commodities than gold and silver. It would apply just as well to copper and gold or copper and leather as to silver and gold, and is ample support for the greenback theory. There is no reason in the world, on this theory, why the governments should not discard metallic money altogether, and agree that certain stamped paper should in their dominions have a certain value in exchange. In old times, when a government adulterated the coinage—that is, ordered it to pass at a fictitious value—it acknowledged it was cheating, and locked up anybody who said anything about it. The curious feature of the bimetallic and silver craze is, that its victims want the civilized governments to do this cheating in unison, by common consent, and in the light of day. The prospect opened to the modern world by this confession of ordinarily sensible and educated men that the Government has this power over currency, it is no exaggeration to call appalling. It is ammunition of the most deadly kind for the socialist, communist, populist, and anarchist, and has the promise and potency of such monetary confusion as has never been seen in any age.

The neo-bimetallists of Boston are laying great stress on the importance to international trade of "a par of exchange" between silver and gold. For want of this par of exchange they tell us that "no matter how well the manufacturer makes his goods, no matter how judiciously the merchant disposes of them, a fall in the gold price of silver may destroy the entire profit of the transaction; may even involve the parties in loss and possible ruin." This point was urged so strongly before the British Gold and Silver Commission in 1887 that they took a good deal of pains to ascertain the facts as regarded English trade with India. They found that the evil was mostly imaginary, because, when an English merchant was about to make a sale of cotton goods, for example, to India, he settled the rate of exchange by telegraph at once, after which the fluctuations did not concern him at all. They might concern the Indian purchaser, who must wait till the goods arrived. In other words, the evils of a fluctuating exchange fell on the silver-using country. It was exactly so when we were on a paper basis from 1862 to 1879. The evils of a fluctuating exchange were visited upon us, not on Great Britain, France, and Germany. It is the same way in Italy, which is now under a suspension of specie payments. It is not the Englishman who suffers in his trade with Italy by reason of a fluctuating exchange. He calls for payment in gold, and he gets it, just as he got it from us when we were in the like predicament. How absurd, then, is it to say, as some of them do, that David A. Wells, Edward Atkinson, and others should be the last persons to oppose the bimetallic view since they were bemoaning the lack of "a normal par of exchange" so many years while we were on the paper basis. Of course they bemoaned it, but they bemoaned it for our own sake, not for the sake of England; just as they might bemoan it now if they were Mexicans instead of Americans.

The census report on farm ownership and cultivation recently published shows a noteworthy increase in the number of farms and decrease in their average size throughout the South. In the

South Atlantic States the average number of acres to a farm decreased from 157 to 134 between 1880 and 1890. In the same States the number of farms increased 16 per cent., and the number of owners 12 per cent. Of farm tenants 44 per cent. more paid their rent in money in 1890 than 1880. All of these tendencies are in the right direction, and they show that the outlook for agriculture in the South is steadily improving.

Dr. Johnson objected to a certain critic that he had an unconquerable disposition to say something when there was nothing to be said. What other excuse can there be for those solemn moralists who are telling the public what to think of the unsavory suit for damages now pending in Washington? It is bad enough to have the filthy testimony printed broadcast, despite the appeals of the presiding judge. He is able to keep prurient spectators out of court, but he cannot keep the reporters out, or the newspapers from printing the disgusting mess. This practically lets the whole country into the court-room, and is a clear breach of public morality. Still, those who do not wish to read the stuff need not, and they and their families might escape were it not for the inevitable commentators, who take it for granted that everybody has read it and wishes to hear moralizings about it. From the indecent press this is to be expected; but the religious press, or some portion of it, has now gone into the business, and we read of several ministers who have taken it up even in the pulpit. Now all such comment is either pure platitude or outright pruriency. No man needs to be told what to think on such subjects. For a public teacher to do anything but maintain silence about them is to show that he has itching ears himself and supposes everybody else has, and to aid in the dissemination of moral poison throughout the community. Especially should the more resonant of the clergy remember that there are still some things, as there were in the time of the Apostle Paul, which are not even to be named publicly.

The editors of the Annals of the American Academy of Political and Social Science have taken the trouble to translate an article on "Justice in Political Economy," by the learned Gustav Schmoller, the head of the historical school in Germany, who had previously published it in his own *Jahrbuch für Gesetzgebung, Verwaltung und Volkswirthschaft*. We have read it twice over, the first time with the view of getting some notion of what "justice in political economy" is, and the second time with the view of getting some notion of what Herr Schmoller thinks it is, but have failed in both cases. Never has a knotty, if not unanswerable, question been surrounded with such a cloud of vain words. His main question is: "How does it happen that economic transactions and social phenomena so often bring forth a favorable or adverse criticism which asserts that this is just and that is unjust?" He says that when he gets a correct answer to this, the rest will be easy. The correct answer to this, at all events the only possible one, would be found in the other question—"Why is nearly every man dissatisfied with his lot in life?" The criticisms of an existing economic condition, or of any economic condition, will never cease until everybody is content; and when the historical school talks of "justice," it really means content. What these men are trying for is really some means of contenting the human race. The notion that "the State" can do this, in a reading democracy, is one of the most curious of their vagaries. Says Herr Schmoller: "The State is and must be the leading intelligence, the responsible centre of public sentiment, the acme of existing moral and intellectual power." This might have been true of the State under Frederick the Great or Joseph the Second. That it will ever be true of the modern democratic state, within any period worth thinking about, is a proposition which can only make people who know something about the democratic state smile. The State with us must and will for an indefinite period represent something rather below the average popular intelligence. Congress and the legislatures of to-day fairly represent it. This for two reasons: one is that, as a rule, the men who will try to become "the State," will not be the foremost men in the community. The other is that the masses in a democracy do not like to put "superior people" (Schmollers and the like) in power, because they do not like to be looked down on by their rulers. They are best pleased with men of their own type, and through them will try their own experiments in political economy.

The anarchist bombs seem likely to have the effect in France of producing peace and quiet among nearly all people of a conservative turn. The remarkable avowal by one of the ministers, M. Spuller, the other day that the Government had given up its petty warfare against the Church, and that he personally was sorry for the part he had taken in it, shows a growing conviction that there are far more dangerous enemies to the State than "le cléricalisme." The occasion which called out the confession was a prohibition by the Mayor of St. Denis against putting a cross at the head of a grave in the cemetery. The law forbids the display of religious emblems at funerals or other processions in the streets. The mayor construed it as applying to the graves also, and in this he has been overruled. But he might have been overruled without this declaration from the ministry. The hatred of the clergy and the Church is, however, largely a Parisian emotion. In the provinces it takes the form of indifference. The village curé is not hated; he is simply not listened to by the men, but they always want him for funerals and weddings.

The sudden zeal of the French Government for the creation of a separate Ministry for the Colonies, going so far as to make it a cabinet question in the Senate, set many to wondering if there might not be more in it than appeared on the surface. There was fresh talk of serious complications with England over French claims in Indo-China, and much mysterious wagging of heads by wiseacres. But the step seems easy to account for. It was taken, doubtless, mainly as a wise administrative measure looking to the more rapid and consistent despatch of colonial business than was possible under a mere bureau of the Foreign Affairs Department. Mixed with this was probably a lurking devotion to the great principle, "The Republic, it is offices," and a willingness to make places for a few more political followers. No little fun has been poked at the new minister, M. Boulanger. He has been Senator for the department of the Meuse, not exactly a colonial department, and is president of an omnibus company, not precisely a maritime enterprise. But he has a good record as an executive with a head for details, and there was need of such a man for organizing the new ministry. Its creation testifies to the growing burdens and responsibilities which the colonial enterprises of France have brought in their train.

Bastiat's dispute between Fooltown and Boytown continues—the disputants in this case being France and Italy. Since they began to enact hostile tariffs against each other the trade between them has declined 564,000,000 francs. This is an enormous loss, but, instead of taking steps to repair it, they are trying to see which one has lost most and which one ought to feel worst. The usual way to settle such questions will probably be adopted by the high-tariff statisticians—by considering all that is exported a gain and all that is imported a loss. Thus, if it should turn out that the French exports to Italy had declined only 100,000,000 francs, while its imports from that country had declined 150,000,000, the figures being exactly reversed on the other side, it would be evident that Italy was getting the worst of it, and that the hostile tariffs ought to be kept up in the interest of France, or perhaps made more hostile than ever. It will be strange, however, if they cannot do some good figuring on the other side of the line. Fooltown was always able to cope with Boytown in that way.

THE SEIGNIORAGE VETO.

THE message of the President giving his reasons for vetoing the Bland seigniorage bill has been received with some little disappointment in financial circles, by reason of two short paragraphs at the conclusion of it. These seem to have been pinned on after the sound and really profound argument against the bill had been made. That the bill would be vetoed there was no longer any doubt. Nor was there any doubt about the grounds on which the veto would be based. The bill was an attempt to reverse the policy agreed upon and enacted at the extra session by a large majority of both houses of Congress after an almost unexampled contest. It was an attempt to infuse more silver into the circulation without adequate provision for its redemption in gold, which the law plainly intends and requires. These were sufficient reasons for vetoing the bill. The President could not have done otherwise unless he had gone crazy since last November.

The two paragraphs which are incongruous with the rest of the message are these:

> "I am not insensible to the arguments in favor of coining the bullion seigniorage now in the Treasury, and I believe it could be done safely and with advantage if the Secretary of the Treasury had the power to issue bonds at a low rate of interest under authority in substitution of that now existing, and better suited to the protection of the Treasury.
>
> "I hope a way will present itself in the near future for the adjustment of our monetary affairs in such a comprehensive and conservative manner as will accord to silver its proper place in our currency; but in the meantime I am extremely solicitous that whatever action we take on this subject may be such as to prevent loss and discouragement to our people at home, and the destruction of confidence in our financial management abroad."

That these paragraphs are of no practical importance we shall presently show. At the same time they are not destitute of importance in their effect upon the imaginations of men. The friends of sound finance will be apt to think that the President is not quite so sound as they had taken him to be, while the silverites of all degrees will be encouraged to renewed efforts by the apparent concession to their views. The extent of this purely intellectual influence in either direction can be determined only by time.

It is hardly necessary to recapitulate the President's objections to the bill. They strike us as making this one of the best of Mr. Cleveland's state papers and one of the best in the Government's files. They are transfused with the thought that the gold standard must be preserved, that the faith and credit of the Government are so pledged, and that all business interests are conditioned upon it. Whatever tends to countervail this must be opposed, resisted, prevented. This idea is found even in the paragraph to which exception is taken, and which contains the suggestion that the coining of the seigniorage would be admissible if there were ample means provided for the redemption of the resulting coin or currency in gold. The President here says: "Give me the means to keep the gold reserve good and you may have this batch of 55,000,000 nondescripts." He had previously referred to the heterogeneous nature of our currency and deprecated the addition of a new variety to it. Now he says that this is a measurable and not a large quantity, and that he will not object to it if he is provided with ample powers to keep it at par with gold.

We have said that this is of little practical importance. There is no probability that the silver-men will consent to any issues of bonds whatever, least of all any issues which have for their avowed object the gold redemption of silver. In their view any such thing is an indignity to silver and a degradation of it. They hold that silver is as good as gold if you only think so. At heart they want to have the dollar scaled down to forty-nine cents or some other low figure. Any step which thwarts this intention will be opposed by them, as the Sherman repeal bill was, to the last extremity. Therefore, if the President's suggestion is to be taken as an offered compromise, it will fail for want of acceptance on the other side. If it should be accepted, it would not result in any addition to the silver burdens of the Government. It would only be like a bank receiving authority to put out a new lot of notes on condition of making adequate provision for their redemption.

The President's other suggestion, that he hopes for such an adjustment of our monetary affairs as will accord to silver its proper place in our currency, must refer to international action. No interpretation but this will harmonize with the other parts of the message. The legal place of silver in our currency is that of a subsidiary coinage. This has been its place *de facto* ever since 1834, and *de jure* ever since 1873. None of the subsequent legislation has changed its place. The badge of a subsidiary coinage was put upon it in the Bland-Allison act of 1878 and in the Sherman act of 1890. The place which it now holds is, in our judgment, its proper place, and we do not expect to see it changed.

THE SOUTH CAROLINA WAR.

THE outbreak in South Carolina over the enforcement of the liquor law is treated so sensationally by many of the newspapers, both in their news and editorial columns, that the average reader must be puzzled as to what has really happened and as to the merits of the controversy. To most people the affair comes with all the suddenness of an entirely unexpected outbreak, but those who have kept close track of developments in the State for two or three years were quite prepared for it.

Before the civil war South Carolina was ruled by a small element of the population—the landed aristocracy in the shape of the slaveholders, and the classes naturally allied with them. After the governmental debauch of Northern carpet-baggers, freedmen, and local rascals in the reconstruction era, power returned to the old hands when Hampton secured the Governorship in 1877. For a dozen years things went on much as before the war, the negroes being intimidated so that they did not dare to vote, or cheated out of their rights if they went to the polls. But there gradually grew up a strong opposition among the whites to the dominant and really respectable element, and towards the end of the eighties it became plain that a revolt was imminent.

The political upheaval throughout the country in 1890 naturally furnished the occasion for an overthrow of the old dynasty in South Carolina. The leader in the movement was Benjamin R. Tillman, who had already become prominent as a leader of the farmers, and his supporters gained control of the Democratic organization, so that he was easily nominated for Governor. An independent Democratic ticket was put in the field, headed by a representative of the old régime, but Tillman was elected by a vote of more than four to one, and he was easily reëlected at the end of his first term.

Tillmanism thus became supreme in the State. It was really only Populism under another name. It represented an organized protest against almost everything in the former government, not only in methods, but in personnel. Tillman is a demagogue, who perceived that there was a prejudice among the masses of the whites against what was vaguely called the "aristocracy," and that it would be easy to play upon this prejudice by assuming the rôle of a representative of the "people." The farmers seem to have had some ground for complaint against the management of the railroads, and of course Tillman was shrewd enough to utilize this feeling. There was some jealousy of Charleston and the other cities among the rural districts, and Tillman made this, too, serve his purpose. The unsettled condition of things which had prevailed during much of the time since 1860 had weakened the hold of conservatism, and the people were more ready to accept novelties than ever before since the Revolution.

The result of all these causes was that Tillman became almost supreme, the Legislature only recording his will. He enjoyed his possession of power as much as any man ever did, and he constantly sought new ways of signalizing his dominance. One of these was the passage by his Legislature of what is known as the dispensary liquor law, by which in July, 1893, the State assumed entire control of the liquor traffic, sales

being forbidden except at the dispensaries. A State board of control buys and tests the liquors, and appoints county boards, which in turn appoint local dispensers, who can sell liquor only in bottles, not to be drunk on the premises. A local-option section enables any town by a vote of its citizens to prevent the opening of any dispensary within its limits.

So novel an experiment would probably have aroused more or less opposition in any State under normal circumstances. In South Carolina, under the conditions which then prevailed, its enforcement by such a man as Tillman was certain to provoke disorder. Ever since last summer there have been difficulties of one sort and another, and the opposition finally culminated last week in an assault by a mob upon a force of State constables and informers in Darlington, with loss of life on both sides. The Governor thereupon called out the troops, and some companies refused to obey his orders. The hostility between Tillman and the "old families" is so bitter that even military organizations in which the influence of the latter is supreme are ready to disband rather than help him enforce the laws. But some of the rural companies are true to him, and he seems at last to have obtained all the military force he needs.

Tillman has been characteristically offensive in his attitude during this controversy, and has committed some acts of a highly questionable nature, like his attempt to prevent the Western Union Telegraph Company from sending any despatches except those which he approved. But he represents the authority of the State, and he is trying to enforce a State law which was legally enacted—a law, too, which, though novel, is an experiment that ought to be fairly tried. The sober second thought of South Carolina can hardly fail in the end to sustain his position.

The situation is aggravated by the spirit of lawlessness which makes people in South Carolina careless of statutes and reckless of human life. The force and fraud which were employed to reinstate the whites in power during the reconstruction era have left a legacy of unsound ideas which will not be easily displaced. The whites began by shooting and cheating the blacks; they end by using the same sort of tactics upon each other. The cure of the evil will doubtless be slow and hard.

PAYING FOR "PEACE."

Mr. Wheeler H. Peckham, in an address before a Good Government Club last week, made some extremely interesting statements concerning the inside working of Tammany government. In the old days, he said, the fate of city legislation was decided by the lobby at Albany, and the process of obtaining what one wanted was usually described in Mr. Tilden's phrase as "sending up the stuff." At present, according to Mr. Peckham—

> "Tammany Hall takes the place of the lobby. At its head is a man who handles a large amount of money yearly and is accountable to no one. He says whether a bill shall pass or not. They are all afraid of Tammany. Many corporations pay large amounts for peace, as they put it. The Metropolitan Telephone Company pays, I understand, $50,000 a year for peace. I know of one corporation which pays a similar amount. I tell you that every day of their lives these Tammany men are bribed and bribe others. Of course there is sometimes a cry of investigation. This time they can't find a lawyer. What's the reason? I know, for myself, it is because they wouldn't give me the power, without which I wouldn't act, and because they wouldn't allow me to direct the prosecution whither I wished."

This is a specific statement of what is a matter of general knowledge in this community. It has been stated many times that during the last session of the Legislature, when Tammany was in control of both houses, there was, for the first time in many years, a total absence of measures affecting the interests of various corporations in this city. None of the regulation "strikes" appeared among the bills. None of the railway, insurance, and other corporations found it necessary to send counsel to Albany to oppose hostile measures or advocate friendly ones. It was pretty generally known that all such matters were "arranged" here, and that somebody acting for Tammany Hall collected the "price of peace" from all corporations and institutions and persons that were at the mercy of the law-makers. Mr. Peckham cites two instances in which the price was $50,000, a figure sufficiently handsome to explain in large measure the sudden wealth which fell upon Mr. Croker and other Tammany magnates.

But Tammany is not in control, at least outwardly, of the two houses of the present Legislature. If the two corporations which Mr. Peckham cites are still paying $50,000 each for peace, to whom are they paying it? Is Tammany still acting as collector, and, if so, what arrangement has been made with Platt, who is supposed to control the Republican majorities of the two houses? Is it possible that the cause of the trouble which Platt has in controlling those majorities is due to a Tammany arrangement for a division of profits with individual members? Are some of the profits being used to prevent investigations as well as to block anti-Tammany legislation? Mr. Peckham says the reason why he would not act as counsel for the Senate investigating committee was "because they wouldn't give me the power, without which I wouldn't act, and because they wouldn't allow me to direct the prosecution whither I would." This is merely direct evidence in support of what has been very plainly established by circumstantial evidence. Platt has not allowed Tammany to be investigated, the Legislature has not allowed any anti-Tammany measures to pass, all measures to which Tammany is opposed are either "hung up" or are treated with a benumbing indifference.

Then, too, Platt is spending a great deal of time and money upon the organization of a Republican machine of his own in this city which has no excuse for existence save as a Tammany annex. Whence comes the money, as well as the motive, for this organization? The *Tribune*, which is lending all its aid to the new machine, has been at the same time giving no aid or support worth anything to such important city measures as the Chamber of Commerce rapid-transit bill, the bill to cut down Tammany's income from the sheriff's office, or the bill to make the overthrow of Tammany possible by giving the next mayor power to remove heads of departments. What do all these remarkable instances of tenderness towards Tammany on the part of its ostensible political enemies, mean? Why is it that, when Tammany is so demoralized by exposures and internal dissensions that it is fairly tottering to a fall—is so shaky on its foundations that a determined push would overturn it—a Republican Legislature, the Republican boss, and the chief Republican organ not only refuse to give the push, but unite in protecting it against assault from other quarters? There is a great mystery here which needs elucidation, and we can see no light from any direction save that which Mr. Peckham's statements indicate. Platt and the *Tribune* are openly clamoring for a division with Tammany of the spoils and abuses of the Police Department. They cannot, therefore, complain if people suspect them of sharing in other divisions secretly, especially when they combine to oppose all inquiry and legislation which would interfere with Tammany's profits and make a division impossible.

GOOD WORK FOR "GOOD AMERICANS."

We think there can be no doubt that any hope of reform in the consular service which may have sprung up in the public mind has been all but killed by the promptness with which Mr. Cleveland allowed Mr. Quincy to make "a clean sweep." We do not recall any other occasion on which the work was done so promptly after the accession to office of a new President, or any occasion when a gentleman was called into the service for that special purpose, and was allowed to resign as soon as he had done it. Nor do we recall any other occasion in which the officer most responsible for the condition of the consular service—namely, the secretary of state—was allowed to wash his hands of the whole business of filling it, and substantially repudiate all connection with it.

The tariff-reformers, when working for Mr. Cleveland's election, and ridiculing the reciprocity arrangements of the McKinley bill, always maintained that an increased foreign trade would be the result of reduced duties on imports, and especially on raw materials. But they also maintained that this increased foreign trade would hardly be possible without an improved consular service. That Mr. Cleveland would improve the consular service was therefore nearly as prominent an expectation of the reformers as that he would press for a reduction in the tariff. This expectation, too, was heightened by the warning he gave at the Villard dinner, that there was to be no "revelling in spoils," which, if it meant anything, meant that under his administration appointments to office would be made, in a fair degree at least, for the good of the service. The astonishment of the public was great, therefore, when a young man, with no knowledge of the consular service, was allowed to make a sweeping change in its officers with less inquiry and greater haste than had ever been displayed under any previous administration.

Fresh attention has been called to the subject by an article in the April number of the *North American Review*, from the pen of Mr. Wharton, who was Mr. Josiah Quincy's predecessor in the office of assistant secretary of state. Here is his account of the kind of persons who get consulships: "Politicians in the narrowest sense of the term"; "broken-down and unsuccessful professional or business men"; "invalids"; "men of moderate means" who wish to educate their children abroad, and wish for some occupation as a "pastime"; and "worthless" fellows who have "worn out the patience and endurance of their friends" at home. This unhappy crew are paid very much according to their deserts. Fourteen of them get $5,000 and over; seven get $4,000; seven $3,500; thirty-one $3,000; fifty-one $2,000, and ninety-five $1,500 or $1,000. Out of this they have to pay their own passage to and from the most distant posts. The holders of the smaller posts naturally run badly into debt, and, when their heads are cut off by a new administration, leave their debts unpaid, and literally beg their way home, or "beat" it, as the tramps say. The name of American consuls at many ports is a name of odium and disrepute, and the relief of destitute ex-consuls creates a serious demand on the purses of American bankers or well-to-do Americans living or travelling abroad.

Why this terrible national disgrace does not make more impression on "good Americans" and American Jingoes, we have never been able to understand. These two classes of persons have a passionate desire for a large navy, with the usual accompaniments of coaling stations, Gibraltars, Maltas, Adens, and Capes of Good Hope. The navy is intended to impress foreigners with our greatness as a nation. Lieut. Staunton, who is the latest popular writer about it, foreshadowed its disregard of foreign customs regulations, by making it take an American vessel seized for a violation of them in a foreign port, out of the hands of the local authorities by force, and described our Government as supporting this act of brigandage by a bloody war. Now a navy is a very imperfect means of impressing foreigners. It will be a long time before we have any navy which will not seem insignificant to the English, or French, or Russians, or even Italians. It will, moreover, cost an enormous sum before we get it, and but few foreigners will ever see it. It may visit a few ports, but if it behaves as Lieut. Staunton intimates that it may, civilized men will dread its appearance off their coasts as the French and the Saxons of the eighth century used to dread the approach of the Northmen. In the meantime there is a cheap and ready mode of spreading our fame as a great republic through the foreign world and winning a respect of the best kind for the American name, and that is by filling our consulships with good and well-paid men. In most foreign towns the American consul is supposed, as the consuls of other nations are, to represent fairly well the morals and manners of the best class of his countrymen. What a dreadful impression, then, he gives of us if he is dirty, if he is a drunkard, if he lives in a poor quarter, if he pays neither his landlord nor his grocer nor his butcher; if he is an ignoramus or an imbecile, and speaks no language but his own and that badly. Why will not the "good Americans" and the Jingoes take up this great reform, and, pending the creation of a big navy, fill our consulships with men who will fairly represent our culture and morality? Would it not be far better to work on the imagination of foreigners in this way than by presenting them, as Lieut. Staunton proposes, with the spectacle of "a hell of death and destruction" wrought by one of our battle-ships?

AN HISTORICAL STUDENT IN GREECE.

NAPLES, February, 1894.

As the steamer approached the eastern shore of the Adriatic, a young gentleman asked in perfect seriousness: "How far are we above the sea level here?" The question seemed natural: surely no other sea or ocean connected with the strait before us, narrowing between the bleak and snow-capped coast of Epirus and the golden islands which are the northernmost reach of Greek territory. In a land where so little water runs down hill, might not some run up hill? Yet it was to correct in my own mind the tendency to look upon Greece as a political Atlantis, a region now existent only in song and story, that I was come thither. I wished to see for myself what could be learned on the ground by matter-of-fact students of sober history, unversed in Greek archæology or literature; and especially to see how far physical conditions might seem to have affected Greek federal or centralized unions. If in the four weeks available it has not proved feasible to learn much, at least many strongly held preconceptions have been removed.

The first of those preconceptions was that the journey would be long and wearying. By timing one's departure to catch the weekly steamer from Brindisi, it is possible to leave Naples at noon, and to be in Athens, after a very comfortable trip, at four in the afternoon of the second day. Internal travel in Greece is difficult and often exhausting; fortunately most of the places which the tourist is likely to visit can be reached, or nearly approached, by the vertebral railway line from Patras to Athens, with its branches to Laurion, Nauplia, Tripolitza, Olympia, and Agrinion. The Corinth Canal, which ought to be so convenient to through travellers to Athens, is not yet used by any of the large lines and seems likely to be a commercial failure; the local steamers, to judge by that which carried us from the Piræus to Itea through the canal, have all the discomforts described by the guide-books, but are full of picturesque people and bring the traveller into intimate relations with Greek scenery. Yet the waters of both the Corinthian and Saronic gulfs and of the open seas are surprisingly lonely: in a whole day one sees only a few fishing craft where the navies of the ancient world abounded. Off the highways of iron or salt-water, travel is tedious. Few wheels roll on the excellent new chausées, zigzagging up the mountains to the hill villages. Horses abound, but only once did we see a fiery little animal, with short perpendicular neck and delicate head, such as curvet in the Parthenon friezes. It is picturesque to see the peasant men and women sitting sidewise in the big packsaddles, but it is fatiguing to the Occidental; while the mule tracks have the characteristics of a Kentucky dirt road—steep hills, a stony path, muddy bottoms, and no bridges. Hotels outside of Athens and Patras are notoriously defective, and the traveller who sees anything but the most frequented parts of Greece must make up his mind to spend much time and nervous energy and not a little money.

Yet even in the most conventional journey one is rewarded by strange and beautiful scenery. The sea is like no other sea: blue shades into darker blue, and thence into unusual greens. The mountains are both less and more beautiful than one expects. During almost the whole year the lower ranges are brown, arid, and desolate, especially Hymettos and Pentelikon, the background to Athens. On the other hand, they take on in the afternoon a wonderful violet haze. Most surprising are the great stretches of magnificent winter snow mountains, both in the Peloponnesus and north of the Gulf of Corinth. Parnon and Erymanthos and lofty Kyllene, Kiona, Helikon, and Parnassos carry wide smooth snow-fields, which gleam like Monte Rosa. Especially from Delphi is one impressed by the height, variety, and grandeur of the surrounding mountains. Nowhere, away from Naples or Amalfi, are to be found such combinations of sky, sea, and mountain—blue ranges seen across blue waters against a blue horizon, or the golden sky enclosing the faint green outline of distant islands.

Perhaps the modern Greeks would exchange some of this beauty for fertile plains and wooded mountains. Greece seems in most

parts a very barren and poor country, much inferior in natural advantages to Italy. Doubtless ancient forests and irrigating canals have disappeared, but it is hard to believe that the country could ever have had great wealth, except through commerce. At present there is a pitiful lack of the evidences of civilization. Piers and harbors are almost wanting; except in Athens and Patras there is hardly a modern building in the country higher than two stories. In a country renowned for its masonry there are very few cut stones; the ancient ruins have been broken to fragments, and broken again, till the usual walls are of sun-dried brick; and I saw not a few wretched thatched huts which appeared to be permanent dwellings. Even the castles, both ancient and mediæval, have with few exceptions wholly disappeared, and those which one sees were nearly all built by the Turks, as at Nauplia, or to keep out the Turks, as at Corfu. Nothing strikes one more in Greece than the poor and dirty villages which have taken the place of the ancient cities. Occasionally a town, as in the case of Itea, has the broad, straggling streets and two-storied verandas of a North Carolina village; oftener, like Arachova, they are collections of rude and dirty stone and mud buildings, huddled along a disgusting lane. Elsewhere in western Europe the churches have an historical and architectural interest. But while the Italians were making the mosaics of St. Mark's, the encrusted chapels of Palermo, and the Lombard sculpture, the Greeks could do no better than to assemble fragments of ancient buildings and heap them in confused fashion into pitiful little Byzantine chapels. When one sees how little there is in Greece later than the fall of the Roman Empire and earlier than the present century, one begins to understand why Greek history is of so little account between 500 and 1800 A. D. The few relics of the War of Liberation from the Turks (1820-29) light up that magnificent episode; but from the present Government of Greece one learns only that the United States is not the only country in which the national legislature seems incapable of putting measures through.

Passing from the land to the people who inhabit it, the lack of continuity from ancient times is startling. "The Greeks," said an ingenuous writer of a college-examination book, "were the first people who invented intelligence." In many respects the modern Greeks keep up the character of a shrewd, energetic, and gainful race, busy and productive. They have also a strong national feeling, to which the country owes most of its handsome public buildings; for the Academy, Library, and Museum at Athens, the Museum at Olympia, and many like structures, are the gifts of wealthy individuals. When one first lands at Corfu, he seems to recognize in the handsome men and the beautiful peasant women the classic Greek type. On the mainland, however, doubt begins to arise whether there are any Greeks. In the group of thirty or more people gathered on the little steamer bound to Itea were a well-dressed and well-bred lady, an officer in dark uniform, a coquettish person in a white cloud, a shepherd in a shaggy cloak and tight knee-breeches, a Turk cross-legged, near his wife in a yashmak rolled up in a rug, with two voiceless children, and a gentleman in round red cap, fustinella (white kilts), smoke-colored gaiters, and a black overcoat. Of this typical assemblage, not one had Greek features. Indeed, I have seen but three or four men and not one woman who looked like contemporaries of Pericles; one would see more Greek types in Rhode Island or Alabama. Outside of the agreeable and well-featured upper classes, there is, on the contrary, a rudeness of features more suitable for Tartary than for Hellas, where are the descendants of the "well-greaved Achaians."

It is difficult to resist the conviction that modern Greece, as Kipling says of Russia, is "the most Western of Eastern nations." The scenery is Oriental, the towns are Oriental. From the windows of the old mosque in Nauplia, the prisoners look down and draw up clean linen by a cord, as they might at Smyrna; in Old Corinth the fountain bears a Turkish inscription, as it might in Adrianople; a line of dirty and ill-natured camels, tied head to tail, brings loads of olives from Salona to the oil mills at Itea; an Eastern wail issued from the lips of the priests who walked in a funeral procession at Aigion. The Turkish occupation has left an ineffaceable stamp on the country.

Out of the mixture of races springs one of the pleasures of a visit to Greece. Everywhere are to be seen most picturesque costumes, recalling the ancient dress of the people. A loose blue tunic, belted to the waist, comes straight down from the monuments. Apparently the elaborately plaited fustinella, or kilt, is a latter-day adaptation of the same garment. The women very commonly wear a narrow white skirt not unlike those of the Caryatides of the Erechtheum; and the embroideries of their sleeves and skirts are like the embroideries sold by the Phœnicians. Besides these costumes others are common: gray rough-hooded cloaks, with knee-breeches and stockings; white cloaks and breeches; blue Turkish bags; and the remarkable Montenegrin costume of dirty brown, the seams all turned over in black. Unfortunately these costumes are now rapidly disappearing; already the trouser has conquered half the men, and in a few years the picturesque fustinella will become, like its kindred garment the Scotch kilt, nothing but an historical anachronism.

What is there for an historical student in a country so poor, so altered in race and character, so denuded by the ice-sheet of Turkish domination? At least "every schoolboy knows"—or rues it if he has forgotten—that the peculiarities of ancient Greek history and life were due in great part to the physical conditions of the country. Are not the small States and the intense city life and the individuality of the Greeks accounted for by the separation of the region into isolated valleys among the mountains? It does not require very keen observation to see that this influence has been exaggerated. The Alps and the Pyrenees are not to be compared with the Greek mountains, seamed with easy passes, which were often crossed by hostile armies, and were usually open to internal trade and travel. A visit to Argos and the Akrokorinthos brings home the importance which the ancients attached to a citadel site not too near the sea; and it is easy to see that the well-harbored coasts of Greece, thrust as they were across the great trade routes of antiquity, gave to Athens and Corinth and other commercial cities a position not unlike that of Venice a thousand years later. But the geology of Greece does not explain its history. The physical conditions of national life and union were better than those of the Roman state, and yet Greece missed the opportunity of founding an empire.

To the ruins of Greece, therefore, we must look for the secret of the marvellous life of the Greeks. Here, except in the matchless remains at Athens, I must own to some disappointment. The battle-fields even of Salamis and Marathon can only suggest; they have retained nothing. It is the sanctuaries, temples, cities, palaces, and roads from which one must expect most, and the Greek ruins are few and mournful. To be sure, there are few superincumbent strata of later historical settlements to obscure them. A few buildings of the Roman period bear testimony to the boastful use of unnecessary mass which characterizes Roman architecture as well as Roman civilization; but usually what is left is unmixed Greek work. Yet everything is so shattered and despoiled that it is hard to reconstruct. At Eleusis there is little but a splendid platform; at Olympia not one column was found standing; at Delphi the giants plainly got the better of the gods, and destroyed their sanctuaries by rolling great masses of rock down upon them from the mountain side, so that the very temple floors are crushed and upheaved. Of Chalkis and Aigion and Argos, there is hardly a trace. In many places the very walls seem to have crumbled into dust, and to have been blown to the four winds of heaven. From the sites rather than from the ruins one must seek inspiration.

Four of the most famous sites, Olympia, the Isthmus, Delphi, and Athens, have a special interest to the historical student because they were centres of Greek national life. Of these Olympia had fewest qualifications to be a political focus. The plain in which it lies is brown and unattractive, it was never defensible, and was conveniently situated only to the Peloponnesus and the western Greek colonies. The Isthmus, where Alexander was hailed as head of Greece, had a proper site for a national capital; but the political prestige of the situation went to Corinth, which was never a commonwealth-builder. Delphi is one of the notable spots of the world, not simply because of its wonderful scenery and its famous shrine, but because in it are still visible the foundations of a building in which assembled the only permanent council of the Greek race. It could not have been chance that on either of the two ancient roads to Delphi the traveller caught no view of the sacred precincts till he was almost upon them. Here, if anywhere in Greece, one can put one's self into the place of the ancient Greek, for here is still unchanged that which awed him—the stern cliffs, the great chasm from which issues the Castalian spring, the gorge below, and the rock wall opposite. Just now the French School is industriously at work upon the excavation, and although there is faint hope of finding any valuable sculptures, the wealth of inscriptions promises to shed new light on the history of the Amphictyonic Council. Of Athens, and especially of the Acropolis, one can only say that there is nothing more beautiful than the most beautiful; and that the historical student shares the delight of the archæologist and the artist. Here also is brought home to the mind the position of Athens as a world city, far too great for Attica, and almost mighty enough to make itself the master of a united Greece.

In Athens is now established a centre of intellectual life which is likely to be important for the study of Greek history. The National University, Academy, Library, and Museums must aid the Greeks to understand and study their own history; and the four foreign schools offer a πού στῶ to the investigator from over seas. Already centres of archæological and philological learning, they are likely to serve also the student of history. Each has its house, its corps of students, its library, its lecturers; and an admirable spirit of coöperation opens to the stu-

dents of each the advantages of all the others. Here is one place in the world where Frenchmen can work with Germans, and English and Americans agree without a treaty of arbitration. No one who has listened to Dr. Dörpfeld's cogent exposition of his grounds for believing that he has discovered the aqueduct of Peisistratus can fail to see how much the archæologists can teach the historians about covering the ground thoroughly, and patiently tracing every thread of evidence to its end. In this admirable and growing work the American School bears so honorable a part that a wish springs up for a similar school in Rome.

I could not leave Greece without making special visits to the sites of the two best organized Greek federations, Ætolia and Achaia. As a reader of Freeman, I felt well acquainted with the rude and mountainous country inhabited by the robber Ætolians. A very brief visit led to the belief that the country, if not the people, had been misrepresented. The centre of the Ætolian League was a broad, lake-studded region, bordering on one of the largest rivers in Greece, and within easy reach of the western and southern seas. Unfortunately, I was not able to reach the ruins of Thermon, the capital, and to explore the radiating valleys.

The Achaian League lay on what now, as in ancient times, is the main highway in Greece, and it was not difficult to visit the site of the capital, Aigion, and of several other cities. It was necessary first to dispel an impression that the country had been only a narrow shelf between inaccessible mountains and the Gulf of Corinth. In reality, the narrow gorges open inward, and communication by land from city to city was not very difficult. In size and character it is not unlike the strip between the Hudson and the Berkshire Hills. Such a land was favorable to the establishment of federal government, for it abounded in strongholds, had communication by sea and land, had a defensible frontier, and included much fruitful soil. Still more, the component cities lay where they were all exposed to four powerful enemies—Macedon, Sparta, the Ætolian League, and Rome. Yet why should the idea of an elaborate federation have come to those people rather than to the cities of eastern Greece. Why should it have later disappeared from the mind not only of Greece but of the world? Neither the soil nor the mountains nor the painfully scanty ruins of the cities answer the question.

As we passed out of the Corfu Straits and headed again for Italy, there swept past us a quick succession of craft. An English seventy-four asked for news of Buonaparte's Egyptian fleet; a Turkish pirate hovered inshore; a Venetian merchantman asked for a new supply of Greek fire; a Byzantine imperial vessel announced the death of Justinian, and a Roman galley the victory of Actium; an Athenian trireme bade us keep hands off the Corcyrean allies of Athens; and the shallop of King Alcinous bore toward Ithaca the "stranger, handsome and tall." Was all this only a red-sailed fishing-boat? Are Greek mythology and history only what we now see in Greece? The historical student brings back a keener appreciation of the unfavorable conditions over which the ancient Greeks triumphed, a greater admiration for the few great works that are left, and an imagination quickened by the sight of the background of Greek history.

ALBERT BUSHNELL HART.

PASQUIER'S NAPOLEONIC MEMOIRS.—VII.

PARIS, March 23, 1894.

DURING the Hundred Days, Napoleon made a reform in the imperial institutions. The "Acte Additionel aux Constitutions de l'Empire" was a liberal effort, something like the ministry of Émile Ollivier at the end of the Second Empire. The "Acte Additionel" guaranteed the liberty of the subject. Pasquier, instead of leaving Paris, remained there by the advice of Fouché. "The Emperor," said Fouché to him, "will be obliged to leave for the army before the end of the month. Once he is gone, we shall be masters of the ground. If he gain one or two battles, he will lose the third."

"This perfidy of Fouché, Napoleon's minister," says Pasquier, "is one of the most singular incidents of this epoch. What is still more astonishing is that the Emperor, who could not be completely ignorant of it, left him his portfolio, which he kept in a position where he had so many ways of being dangerous. Did he not dare to dismiss him? Did he think him more dangerous outside of the cabinet than in the cabinet? Or was M. Fouché protected by his well-known habit of deceiving everybody?"

Fleury de Chaboulon, one of Napoleon's secretaries, has given an account, in his Memoirs, of a secret negotiation which took place at this period between Fouché and Prince Metternich, its object being the return of Marie Louise and the young King of Rome to France. If we may believe Fleury de Chaboulon, Metternich did not feel bound to defend the rights of the Bourbons; he was thinking of the Duke of Orleans as King of France, or as Regent for the young King of Rome. Talleyrand was not wholly unaware of Metternich's sentiments, as is seen in a letter which he wrote on April 23 to Louis XVIII., who was then at Ghent. He says, however, in this letter, that Marie Louise absolutely refused to return to France, and that there would be no question of her regency. He also notified Louis XVIII. that the Emperor Alexander was thinking of the Duke of Orleans, not as Regent for Napoleon's son, but as King. These are the words which he places in the mouth of Alexander, in a conversation which the Emperor of Russia had with Lord Clancarty:

"'The Duke of Orleans is French, he is a Bourbon, he is the husband of a Bourbon; he has sons; he served, in his youth, the constitutional cause; he has worn the tricolor cockade, which, I often said in Paris, ought never to have been abandoned; he could unite all parties. Do you not think so, my Lord? and what would be the opinion of England on this point?' Lord Clancarty replied that it seemed very doubtful to him that England would ever abandon the principle of legitimacy."

Talleyrand had a great talent for reproducing long conversations very exactly in his despatches. He evidently wished to warn Louis XVIII. against the indifference or the hesitation of the great Powers; at the same moment, he was in direct correspondence with the Duke of Orleans, who had left France at the same time as Louis XVIII. but had not followed him to Ghent. On leaving the King, Louis-Philippe wrote to him to separate his cause entirely from that of the great Powers. Louis XVIII. replied vaguely, and asked him to join him at Ghent. Louis-Philippe remained, however, quietly at Twickenham. As for Talleyrand, who had also been summoned to Ghent, he contrived to arrive there only after Waterloo.

Pasquier, notwithstanding the advice of Fouché, retired for a time to the Château du Marais, which belonged to Mme. de la Briche, the mother-in-law of M. Molé. He found there M. Molé and M. de Barante, who had also retired to Auvergne. They had not to wait long; the campaign of 1815 ended almost immediately in the disaster of Waterloo. Immediately after the battle, Mme. Pasquier, who had remained in Paris, sent a messenger to her husband, informing him that Napoleon had come back to Paris a few hours after the news of the defeat had arrived. As soon as the Emperor found himself at the Tuileries he announced his intention to continue the war and to ask new sacrifices from the country. He was disposed at times to negotiate with the Chambers, at times to act without them. The Deputies, on motion of Lafayette, declared themselves in permanent session, and resolved that "any attempt to dissolve the Chamber would be a crime of high treason." They invited all the ministers to come at once to the Chamber.

Fouché thought himself master of the Chamber of Deputies. Napoleon soon became convinced that he had nothing to do but to abdicate. Lafayette was determined, if he did not abdicate, to propose to the Chamber the *déchéance* of the Bonapartist dynasty. Queen Hortense, Mme. Mère (the mother of Napoleon), his brothers, all pressed him to sign his abdication and to seek safety in America. Fouché brought to the Deputies the act of abdication, in which Napoleon said: "I offer myself a sacrifice to the hatred of the enemies of France. May they be sincere in their declarations that they have no other object of enmity than my person. My political life is ended, and I proclaim my son Emperor of the French, under the title of Napoleon II."

What was to be done with the Emperor? He still remained in the Élysée. All round the little palace and its gardens were crowds of people screaming, "Vive l'Empereur!" Napoleon thought himself obliged to come to the window or on to the terrace, and thank them. Pasquier had returned to Paris:

"I saw him one day," he says, "on the terrace. I had not seen him since my last conversation with him in 1814, the day before his departure for the campaign in France, and I could not but feel the deepest emotion on seeing him now reduced to come out and acknowledge by repeated bows the acclamations of the rabble. . . . His physiognomy, naturally grave, had become sombre; he sometimes tried to smile, but the expression of his eyes was full of sadness."

As soon as he found himself in Paris, Pasquier saw M. de Vitrolles, who had been kept some time in prison by Fouché and afterwards set free by him. There was still a fear that Napoleon would join the remainder of the French army, which was marching towards the Loire. He left the Élysée for the Malmaison, and his person was guarded by General Beker, who was known to be very inimical to him. Nobody knew at first what were the dispositions of Marshal Soult and Marshal Grouchy, who had still 80,000 men under their orders. Vitrolles soon ascertained that they had no desire to continue the war, and placed themselves at the disposal of the Bourbons. Napoleon was losing time at the Malmaison. More than once he thought of going to America, where he would, he said, consecrate his leisure to the study of science. He offered to accompany Arago. Orders were sent to Havre to have two frigates in readiness for him; he asked the foreign plenipotentiaries for safe-conducts, but they had not been sent; the allies were advancing, and it was soon too late for him to go to Havre. He left on June 29 for Rochefort, with General Beker. When he heard that the Prussians had

crossed the Seine, all his hesitation was at an end; he gave himself up as a prisoner to the English Government.

Pasquier judges thus the conduct of Napoleon after his return from Elba:

"From the moment of his arrival at Golfe-Jouan up to his arrival in Paris, he was admirable in his resolution and in his resources of execution; his proclamations during this epoch have a character of pride and greatness which moves the imagination and the heart. . . . After this brilliant début, he did not recover the same accents; he did not find himself on his accustomed ground; he could not dominate either men or events. He thought it necessary to make an appeal to the sentiments of liberty and independence; he could not evince his secret desire of reassuming his despotic habits, which he was obliged to renounce."

Pasquier criticises Napoleon for not having immediately after the return from Elba occupied Belgium with 25,000 men. "After the battle of Ligny, he lost time and did not follow up the Prussians closely enough. He did not keep sufficiently under his hand the corps of Marshal Grouchy. During the battle of Waterloo, he directed the movements from too great a distance; a cavalry charge which might have been decisive, was made too early and compromised his last resource." Is it true that Bonaparte, during the three months which have sometimes been called the "Century of the Hundred Days," was not quite himself, and that his genius, like his physical forces, was declining? Who can answer such a question exactly? We shall soon have the volume which M. Henry Houssaye is preparing on this very period, and we hope to find in it some new documents.

The anxiety at Ghent had been very great during the battle of Waterloo; for a moment it was thought that the English army had been beaten, and Louis XVIII. was preparing to take flight. It was fortunate for the Bourbons that Wellington's victory gave to him and to England a preponderating influence, for at Vienna the deliberations of the Congress had shown that Louis XVIII. had no better friends than the English. The Emperor Alexander had been estranged from him since the first days of the restoration in 1814; he discovered that Talleyrand had concluded during the Congress a secret treaty against Russia. The first information of it had been given by the Duke of Vicenza to a secretary of the Russian Embassy. A copy of the treaty was subsequently found on M. Reinhard, minister of France to Frankfort, who had been arrested by some Prussian soldiers on the high road between Frankfort and the French frontier. The Emperor Alexander was very indignant at this discovery, but he would not complain, and he forbade M. Pozzo di Borgo, whom he had accredited to Louis XVIII. at Ghent, to say anything about it. "They are low enough now," he said, "and it is not the time to make them feel the extent of their wrongs."

Wellington did not lose any time; he advised Louis XVIII. to come at once and establish himself in French territory. Louis XVIII. went first to Mons; he was joined there by Talleyrand, who advised him not to enter France till the war was ended. Louis XVIII. resisted this advice, and Talleyrand left him for a few days, joining him again on the advice of Wellington, and they entered Cambrai together. Talleyrand had yielded to the King on one point, he triumphed over him on another; he obtained the dismissal of M. de Blacas, who was considered the right-hand man of Monsieur and the princes, who were adverse to constitutional institutions.

The Prussians arrived on the heights of Meudon, and, in order to avoid unnecessary bloodshed, Marshal Davout signed a capitulation with them at Saint-Cloud. The French troops retired towards the Loire, and the National Guard was charged with the mission of preserving order in Paris. After the departure of the troops, the royalists began to prepare for the return of Louis XVIII. The King was approaching. Pasquier went as far as Arnouville to meet him. He found there a number of carriages and of visitors. The King, hearing of his arrival, at once sent for him, and received him in the midst of his council. By Pasquier's advice the King decided to start for the capital, but not till the next day, as there was still some agitation in Paris, and the National Guard still wore the tricolor cockade. After the council he was informed by Talleyrand that the King offered him a post in the cabinet—that of Justice or the Interior. Pasquier chose the ministry of justice. Talleyrand informed him also that Fouché was minister of police.

"Seeing the profound astonishment which I felt, he said: '*Que voulez-vouz?* everybody has been imposed upon by him. The Duke of Wellington, who has had his head turned by him, has declared that Fouché is the only man who can guarantee the security of the capital, and consequently of France; he came in person to beg the King to admit him to his councils. We are just now under such obligations to the Duke of Wellington that there is no possibility of resisting his demands. Moreover, the Faubourg St.-Germain swears only by M. Fouché; all the letters and emissaries that have reached the King and the princes during the past fortnight have spoken only of him.'"

And so Fouché, the terrorist, the regicide, the minister of police of Napoleon during the Hundred Days, became the minister of police under Louis XVIII.

Correspondence.

THE DUTY ON COAL.

To the Editor of The Nation:

Sir: In the article on Senate amendments to the tariff bill (issue of March 15) I read: "The duty on coal is of much less consequence, as it affects only a corner of New England," etc. That other interests of some importance are affected will, I think, appear from the following facts:

California produces no coal, and, the coals of Oregon and Washington being unfit for many purposes, a large part of the consumption in the State is necessarily from foreign sources. For the ten years ending January 1, 1894, the total importation of coal for California has been 11,620,000 tons, of which 6,814,000 tons, or more than 60 per cent., paid the duty. During this time, therefore, this small and not overprosperous community has been taxed over $5,100,000 in order that the "small corner of New England" may have its coal from Pennsylvania or Virginia instead of from its natural source of supply.

Besides this direct tax, and its effect on manufacturing, there results an indirect evil from the fact that the staple wheat crop is carried away in foreign sailing ships, whose cargoes here are mainly coal, there being little else for them to bring under the other beneficent provisions of our law. Any check to our use of coal means, therefore, larger outward freights for wheat and smaller prices for the farmer. A. H. P.

San Mateo, Cal., March 23, 1894.

JUVENAL MISQUOTED.

To the Editor of The Nation:

Sir: I thank your correspondent "Y." for calling attention, in your issue of March 22, to my misquotation in the Latin words concluding my communication in the "Bishops' Symposium" of the *Independent* of March 8. I wrote hastily. The hexameter measure of the words as I penned them satisfied my ear. I did not stop to note the unsatisfactoriness of the sense. I am mortified to have seemed to put into the mouth of the vigorous and incisive Juvenal the flat and unprofitable meaning which my error of utterance conveys.

Daniel S. Tuttle,
Bishop of Missouri.

St. Louis, Mo., March 26, 1894.

THE DIRECTOR OF THE NATIONAL GALLERY.

To the Editor of The Nation:

Sir: In No. 1497 of the *Nation* there is a note on the succession to the post of Director of the National Gallery in London, which impresses me, an old reader and collaborator of that generally most just and judicious paper, very painfully. I do not know what good the intervention of the *Nation* in the matter could do to the chances of Mr. Colvin, but it seems to me that the evident animus of the information as to his relative merits is more likely to do him harm than good, should it come to the eye of Lord Rosebery. Judgments vary very much as to how "remarkably well Mr. Sidney Colvin has already acquitted himself in somewhat similar [?] posts," but people who have any sound knowledge of art generally consider him as quite the very most unfit candidate for the succession to Burton of all those in the field. He has a literary reputation merely, and in the course of his literary career he has never expressed an opinion on matters of art which showed his capacity for individual judgment. He is understood to have the support of Sir Frederic Leighton for the appointment, but I have not heard of any other qualified person who endorses his claims; but as the nominee of Sir Frederic he is far more likely to run into that abyss of subservience to the Academy of which you seem to have such a horror, than Mr. Poynter would be. He is neither painter nor connoisseur, while Poynter is both, and there are other candidates whose qualifications are superior to those of either of the named, if knowledge of pictures is the chief requisite. For fear of repeating the blunder the *Nation* has committed to the disadvantage of another candidate, I do not canvass them.—Yours truly, X.

Italy, March 20, 1894.

[Our approval of Mr. Colvin was by no means unqualified.—Ed. Nation.]

EARLY LATIN POETRY.

To the Editor of The Nation:

Sir: In the April number of the *Atlantic Monthly*, Prof. Tyrrell has an article on "Early Latin Poetry." On page 508, speaking of Accius, he says:

"We have already heard his confident answer to the aged Pacuvius, and we are told by Valerius Maximus that when Cæsar entered the Collegium Poetarum, a kind of ancient analogue of the French Academy, Attius did not rise. He acknowledged the superior rank of Cæsar, but added, 'Here the question is, not who has most ancestors, but who has most works to point to.'"

Can it be that Prof. Tyrrell is ignorant of the fact that not the dictator but C. Julius Cæsar Strabo, the writer of tragedies, is meant? Certainly no one reading the quotation would suppose that the allusion was to any but the great Cæsar.

On page 507, Prof. Tyrrell says: "He [Pacuvius] learned the bitterness of being eclipsed by a younger rival, Attius." There seems to be no authority for such a view. Cicero and Varro distinctly assign the palm of tragedy to Pacuvius; the poets of after years speak of the two with practically the same degree of commendation, and the story of the relations of the two told by Aulus Gellius gives an impression of anything but bitterness.

Respectfully, SAMUEL BALL PLATNER.

MARCH 28, 1894.

SYLLABICATION.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of October 26, 1893, page 311, a correspondent, quoting Suetonius as to Augustus Cæsar's avoidance of syllabication, and his disposal of letters at the end of lines in writing, translates *circumducit* "draws a line round them." Why not "draws them around," *i. e.*, bends the line of writing at the end, as many do now? Otherwise, how could he avoid dividing the word? Would not drawing a line around the last letters be equivalent to dividing the word? N.

[We have referred this query to our correspondent, who replies as follows.—ED. NATION.]

"We would gladly adopt 'N.'s' translation of *circumducit* by *bends*, did not that English word require *flectit* in Latin, and were not our version on p. 311 in keeping with Facciolati's interpretation of *circumducit* as 'lineâ ductâ circumscribere,' and with Freund's definition —with reference to the custom of Augustus— 'to place letters remaining at the end of a line below it, and draw circular marks around them to indicate that they belong above.' To the same purpose is the rendering of John Clarke of Hull as printed in 1732, namely: 'Augustus never divides his words so as to carry the letters that cannot be got in at the end of the line to the next, but puts them below the other enclosed within a semicircle.' It may be that the Emperor in fact bent a word downward on approaching the end of a line, but the word *circumduco* does not so declare. If, however, he did break off some letters from a word, his defence would be that he did so not in deference to any school of syllabicators, but yielding to the narrowness of paper."

"MEND OR END."

TO THE EDITOR OF THE NATION:

SIR: In the *Westminster Budget* of the 16th instant, Mr. John Morley apparently gets the credit of having devised this combination. There must be many, however, who do not require to be told that Carlyle has, in the eighth of his *Latter-day Pamphlets:*

"It behoves thee to be in nameless remorse, till thy life either *mend or end.*"

Carlyle, in turn, I have more than once seen spoken of as having first jingled *end* with *mend.* Yet he was long anticipated in so doing:

"I had the charity to interpret, that most part of My subjects fought against My supposed errours, not My person, and intended to *mend* Me, not to *end* Me."—Anon., *Eikōn Basilikē* (1649), p. 138 (ed. 1824).

Unless my memory misleads me, this is one of the passages which Hallam brings forward in his argument against attributing the *Eikōn Basilikē* to Charles I. Those passages, if I recollect his words aright, are such as he thinks the king would have disdained to write.

To what extent *mend* and *end* were formerly balanced against each other, I am unable to say; but at least one author of the seventeenth century was rather fond of them, to express the ideas of amelioration and extinction:

"I had rather we should *mend* than *End.*" Rev. Edmund Hickeringill (about 1680), *Works* (ed. 1716), vol. i., p. 21.

"He looks on, and will either *end* our sufferings, or *mend* us by suffering." *Id.* (1662), *ibid.*, vol. i., p. 279.

"The worst I wish them is to 'mend, not *end*, them." *Id.* (1682), *ibid.*, vol. ii., p. 50.

Bishop Andrewes, in a sermon preached at Christmas, 1614, allowed himself to be seduced, by the appellative *Immanuel*, into speaking, paronomastically, of *Immanu-hell* and *Immanu-all.* Nothing strange is it, then, that his clerical contemporaries are found to have paltered with *end* and *amend:*

"Death . . . would *end* and *amend* all, wert thou prepared for death." Rev. Dr. Robert Harris, *Samuels Funerall* (1614), p. 6 (ed. 1618).

"Vntill Christ either *amend* or *end* all disorders." Rev. Dr. William Hull, *Mirrovr of Maiestie* (1615), p. 14.

With instances of *mend* and *end*, *amend* and *end*, as metrical rimes, I do not here concern myself. F. H.

MARLESFORD, ENGLAND, February 17, 1894.

N. B.—To my letter in No. 1487 I wish to add a little, by way of supplement.

The quotation there given, from Fielding's *Tom Jones*, for *pretty considerable*, is in Book ix., ch. vii. The expression is seen again in Book xviii., ch. iii. And the date of *Tom Jones* is 1749, not 1750, which I named.

The quotation for *pretty considerable* from Smollett's *Sir Launcelot Greaves* is in chap. iv., near the end. But modern editions, such as I have been able to consult, omit *pretty* from it. In Smollett's *Works* (ed. 1806), vol. vi., p. 187, occurs my quotation from *Humphry Clinker.*

And here are two kindred quotations, not before adduced:

"From a *pretty considerable* distance." Oliver Goldsmith (died 1774), *A Survey of Experimental Philosophy* (1776), vol. i., p. 43.

"The chapel was . . . at a *pretty considerable* distance from my chamber." Anon., Trans. of *The Invisible Man* (1800), vol. ii., p. 140.

With respect to *realize*, Abp. Whately, having used the word, comments on it as follows:

"I mean, in the English, not in the American, sense of the word 'realize.' To 'realize' a scheme, &c., means, with us, to make it 'real,' 'to carry it into effect'; with the Americans, it means to 'form a strong and vivid conception of it.' I acknowledge the want, in our language, of a single word adequately expressing this; but circumlocution is better than ambiguity." *Additions to the Seventh Edition of Elements of Rhetoric* (1846), p. 7, foot-note.

As I have already shown, *realize*, so far as at present appears, was, in the latest sense imposed on it, used originally in England, and was only first popularized by Americans. Nor have Englishmen felt that its alleged ambiguity outweighed its utility, as is evidenced by the acceptance which they have accorded it. What is further observable, beginning as hardly better than pietistic slang, it has come to be thoroughly liberalized and secularized. The Archbishop's exemplification of the manner in which we, like most Englishmen, often employ *realize*, is not, by the way, felicitous. F. H.

Notes.

A WORK dealing with Christianity and Socialism, called 'Vox Clamantium,' is to be published by A. D. Innes & Co., London. Hall Caine, S. R. Crockett, Richard Le Gallienne, Lewis Morris, Alfred Russel Wallace, Tom Mann, and Dean Stubbs are among the contributors.

Another coöperative work is 'A Policy of Free Exchange,' announced by the Appletons, with Thomas Mackay for editor, and Wm. Maitland, St. Loe Strachey, W. M. Acworth, Bernard Mallet, and the Hon. Alfred Lyttelton among the chapter writers.

A new 'Harmony of the Gospels' is about to be issued by Silver, Burdett & Co., Boston.

Siborne's 'Waterloo Campaign' has been issued in a new edition in England, in the "War Library" (New York: Charles Scribner's Sons). The book itself is the standard English authority for the campaign of 1815, and the new edition is an excellent example of cheapening without spoiling the form of the publication. The paper is good, the type is clear, the maps and illustrations really help the reader; so that one gets in the stout 16mo of eight hundred pages everything that was essential in the atlas and two volumes 8vo of the earlier editions, while the price is reduced to a mere fraction.

The tenth volume of Mr. G. H. Wilson's 'Musical Year-Book of the United States' (season of 1892-1893) is late in making its appearance, but by way of compensation it contains almost twice as much matter as any of its predecessors. The main title is not sufficiently comprehensive, for the musical records of the Canadian cities are also included in these pages. Mr. Wilson has found the task of collecting and editing all this material too great for one man, and has therefore invoked the assistance of Messrs. Cady, Krehbiel, and Hale to superintend the Chicago, New York, and Boston sections, while Mr. Wilson took care of the Columbian Exposition music, of which a full record is given. More than a hundred cities are included in the alphabetical list, and it is surprising to find how many of them had orchestral and choral concerts. Indeed, Mr. Cady calls attention to the fact that in some places the ambition displayed is altogether too great. Among players every one wants to be a soloist, and the young choral societies are not satisfied with anything but the biggest and most difficult works. Mr. Hale, in his review of the Boston season, is unjust to Mr. Nikisch, and writes entirely in a cynical tone which will do little to help along an exotic art in need of tender nursing to grow among us. To musicians, and conductors in particular, nothing could be more valuable for study and comparison than the full programmes here given of all the Seidl, Damrosch, Nikisch, and Thomas concerts of the last season. A comparison of the composers shows that Wagner usually leads, Beethoven coming second. As regards our oldest and leading orchestral society, the Philharmonic, Mr. Krehbiel notes that financially the last season was the most successful one in its history, the sum paid to each active member of this coöperative society for twelve concerts having been $246, which was $21 more than he ever received before. The 'Year-Book' is published by Clayton F. Lummy, Chicago.

Mr. Winfrid A. Stearns of the Atlanta University has gathered in pamphlet form the articles on bird-life in Labrador which appear-

ed serially in the *American Field* of Chicago. The mechanical work has been done almost entirely by nearly seventy-five colored persons of both sexes, and the brochure shows what good printing this class can be taught to produce.

A handsome "monthly review of current scientific investigation" has just been launched by the Scientific Press, No. 428 Strand, W. C., London, under the title of *Science Progress*. An editorial committee, well distributed among the specialties, coöperates with Messrs. Henry C. Burdett and J. Bretland Farmer, the conductors. One of the number, Prof. G. B. Howes, has a brief but effective paper on "The Present Outlook of Vertebrate Morphology," which he regards as good in virtue of a reaction against excessive devotion to the idea "that ontogeny is generally recapitulatory of phylogeny." Another very interesting review, by W. B. Hemsley of Kew, is on "Insular Floras."

Bibliographica is the title of a quarterly magazine modelled remotely on M. Octave Uzanne's *Le Livre*, with an appointed life of only three years. It is to be published by Kegan Paul, Trench, Trübner & Co. in London, and by Charles Scribner's Sons here. The list of contributors is exclusively British, except that contributions are expected from M. Octave Uzanne and M. Henri Beraldi; no American name appears in the announcement. Among the contributors are Austin Dobson, Andrew Lang, Richard Garnett, William Morris, A. W. Pollard, and Miss Prideaux. Among the topics to be treated are manuscripts, early printed books, libraries, book sales, illustrations, book-plates, and bindings. The "Bibliography of Early Printed Music" is a promising paper, and so is the "Vicissitudes of Manuscripts."

The *Mémorial Diplomatique*, whose unique value for publicists and journalists as a record of the text of diplomatic documents has been long established, will branch out somewhat in the new (32d) volume upon which it is just entering. It has secured the collaboration of distinguished writers who will still further enhance its value and readability. For the sake of extending its circulation it offers a trial subscription for one month for the mere postage—fifty centimes.

The *Revue Blanche*, in its March number, adds to the store of Stendhaliana by the publication of two documents not hitherto known. One is a little paper of useful hints upon Italian travel, entitled 'Avis aux têtes légères,' which Beyle drew up for the use of his two sisters, who, in the autumn of 1824, were setting out upon a southern journey. It is of no great value, save that it incidentally throws a little light upon the state of the soul of the writer. The other document is both interesting and curious. It is a record of the impressions of a juror at the trial of one Berthet, an ex-seminarian, who shot a certain Mme. Michoud while she was in church assisting at mass. This story is really a key to Stendhal's 'Le Rouge et le Noir.' Berthet is Julien Sorel, whose history furnishes the groundwork and main lines of the novel; and hints of some other of its personages, like Mme. de Rénal and even Mathilde de la Môle, appear.

The most interesting article in *Petermann's Mitteilungen* for February is an account of southeastern Borneo by G. Schneiders, a mining engineer. The mineral resources of the island consist of gold, platinum, diamonds, coal, lead, copper, antimony, and other minerals of less importance. Two obstacles have hitherto prevented their full development, the want of means of conveyance between most of the mineral districts and the coast, and the restrictive policy of the Government, which will grant concessions of land for mining or agricultural undertakings only to the native-born Dutch or to foreigners who have for a long time been residents in the Dutch colonies. There is also great difficulty in obtaining labor. The Chinese are the best workmen, but the Government for some years has not permitted any of this industrious race to enter Borneo, apparently from motives of self-preservation. Herr Schneiders formed a very favorable impression of the Dyaks, the so-called head-hunters of the interior, who proved themselves useful as guides and hunters. Their religion he describes as a debased fetishism, though the ruins of ancient temples, and antique vases filled with gold and silver which are objects of special reverence, are memorials of a once-prevalent Buddhism. An admirable map after the most recent Government surveys accompanies the paper. This is followed by a physical description of Montenegro by Dr. K. Hassert, who discusses the cause of the present treeless condition of the high plateau, and calls attention to the great progress made in the cultivation of the fertile district bordering upon the Lake of Scutari. It is illustrated by a map colored so as to show the character of the soil and its products in all parts of the principality.

The committee having in charge the Sixth International Geographical Congress, which is to be held in London in 1895—the last was held in Berne in 1891—have issued a circular indicating in general terms the programme on which they desire the Congress to be conducted. The most interesting feature is the announcement that "geographical problems connected with colonization will probably be dealt with in some detail, and therefore those interested in or connected with the colonies of all European countries are especially invited to attend." Communications may be made in French, German, Italian, or English. There will be a Geographical Exhibition in connection with the Congress.

The departure of the pioneer company of Freeland colonists for British East Africa, and the announcement that a second expedition is to follow next month, the precursors of thousands of colonists from every part of Europe, has excited much comment. Mr. Stanley and other writers have pointed to the grave complications which may arise from the fact that an Austrian association is about to occupy territory within the British sphere of influence. Then, it is asked, who is to guarantee that the rights of the natives will be respected by this irresponsible community of whites? The statement has been made that the colony was to be planted on certain unoccupied but fertile highlands to the east of Mt. Kenia. It seems very doubtful, however, if any land fit for European colonization is uninhabited. The fact that the pioneer expedition is heavily armed (the question of taking machine-guns was discussed) would seem to indicate that the leaders expected to be obliged to use force in taking possession of their allotted territory, or to defend themselves afterwards. This lends a grimly comical incongruity to the latest attempt to solve the social problem and to secure to each man the right to the profit from his own labor.

In a letter to the London *Times* Mr. Fred G. Jackson announces that the funds have been provided to enable him to carry out his long-contemplated polar expedition. It will consist of a sledging party of six men and a few Samoyeds, and the base of operations will be the southern shore of Franz Josef Land. Here substantial winter quarters will be established, and, in the spring, depots at intervals of thirty or forty miles will be made as far as possible to the north. Light canvas collapsible boats are to be carried for use in case there should be any open water. In this way, Mr. Jackson, who has had considerable arctic experience, hopes to reach the Pole. He expects to start this summer and to be absent three years.

Dr. E. Knipping, formerly meteorologist of the Imperial Japanese Weather Service at Tokyo, and now of the Deutsche Seewarte at Hamburg, publishes in the *Archiv* of that institution for 1893 a useful paper on the tropical typhoons of the South Sea, between the Paumotu Archipelago and the Australian continent. The research is based upon all the storms observed during a century and more just passed, the sources of information are given, and the frequency of the hurricanes and their paths are plotted. About 90 per cent. of the 125 hurricanes discussed took place in our winter season, December to March, nearly a tenth in April and November, with a few scattering ones in May, September, and October. Regular increase in the number of storms from December to March obtains near the Fiji Islands, while in the vicinity of the Samoan Islands and New Caledonia the epoch of greatest frequency falls in the month of January. The prevalent direction of these dangerous cyclones is southeasterly, and Dr. Knipping's long sea service, together with his high meteorological attainments, qualify him excellently for the preparation of such sailing directions as he has incorporated in his paper for the use of ships caught within the range of these destructive typhoons.

A curious incident, which is not without a certain scientific interest, has lately happened at the menagerie of the museum at Paris. Some time last year Baron Walter Rothschild gave an apterix to the museum. This bird is rare in New Zealand, which is the only place where it is known to exist, and of the very greatest rarity in Europe, since it is of so delicate a habit that almost all the specimens that have been sent have died on the voyage. The managers of the museum, therefore, as was natural, treated their prize with lavish care. A special cage was made for him, the temperature of which was watched anxiously, and his food, which consisted of meat only, was carefully chosen and prepared. But before very long, nobody knew how, he suddenly disappeared, and nothing was heard of him till the night of March 8, when he was discovered by a night watchman and brought back. The tender exotic had been living, as it appears, in the cellars of some new houses that are building in the Rue Buffon, and had been for the last five months exposed to the rigors of a cold climate, getting his food when and how he could. He comes out of this difficult experience in the best of health and of condition.

From a brief obituary notice of the late Mr. George William Childs which appears in the *Revue Encyclopédique* of March 15 we transcribe the following bit of literary news: "Childs a publié sous son nom un recueil d'anciennes ballades."

A gentleman in Cambridge writes to us as follows: "Passing Gore Hall the other day, I was forcibly reminded that in library administration the balance between the power to buy books and the capacity for storing can be rudely disturbed. They are carting away for storage 15,000 of the least used—not unused—books in Harvard College Library to make

room for new purchases. In a year's time another thinning out will be necessary, and then the library of a great university will be put in the ridiculous position of the library of Congress, piling its books as if they were cords of wood."

The formation is announced in England of a Brontë Society, the object of which is to acquire literary, artistic, and family memorials of the Brontës; photographs of persons and places identified with them and their works in Yorkshire, Ireland, Cornwall, Essex, Brussels, etc.; copies of all books and fugitive articles illustrating the novels and the districts in which the Brontës resided—to place these acquisitions at Haworth, or some other appropriate locality, for the free inspection of members of the Society, and to offer them for public exhibition. The annual fee for membership of this Society is a half crown, due January 1, and for this an annual report will be sent post free in the following December; the fee will also cover free admission to the Museum when established. Life membership may be secured by payment of two guineas. Membership fees may be sent to Mr. F. C. Galloway, West Bowling, Bradford, Yorkshire. Mme. Emma C. Cortazzo, 330 Dartmouth Street, Boston, will be glad to furnish information on this subject, unofficially, to those interested.

—The *Century* for April is freakishly made up at the beginning by means of a story without words, as we may call it—"From the Old World to the New," a series of not extraordinary designs by André Castaigne, showing the transformation of an immigrant into an American. This number adds to Lincoln literature an article by Mr. John G. Nicolay on Lincoln's Literary Experiments, with specimens in the form of verses, fragmentary notes for lectures, and a lecture, all hitherto unpublished. The verses were written in 1844, when a political campaign had taken Lincoln back to that part of Indiana where his boyhood was passed, and are full of the pathos of those early associations. The lecture on "Discoveries, Inventions, and Improvements" was delivered as late as 1860 in Springfield, Ill. It is evidently a mere skeleton which the ready speaker filled out to suit the occasion, but is characteristically humorous. Neither verses nor prose specimens are of value in themselves; but as phases of the development that produced the Gettysburg oration, they are interesting. An always timely subject is discussed by Col. George E. Waring, jr., in his paper on methods of sewage disposal, or, as he otherwise entitles it, "Out of Sight, Out of Mind." In "Hunting an Abandoned Farm in Connecticut," Mr. William Henry Bishop sets forth entertainingly a melancholy situation, though he gives good reasons for considering it less bad than has been reported. "Topics of the Time" discusses the Myers ballot-machine, a contrivance for insuring an honest vote by eliminating as far as possible the human element from it. The "Open Letter" on forestry legislation in Europe gives valuable data on this subject.

—In *Harper's* Mr. George W. Smalley discourses on the House of Lords, or "English Senate." He ranges the opponents of the House of Lords into three classes: those who, like John Morley, would abolish it altogether; those who would abolish it if some more efficient and popular substitute could be provided; and those who would reform the existing House. To this last category belong those of the Lords themselves who are sufficiently abreast of the times to realize that a change must come and to dare to espouse it. Among these is the present premier, Lord Rosebery, who twice—in 1884 and in 1888—proposed to his colleagues to reform themselves. His propositions were of course defeated, the second by a vote of 97 to 50. An article on Yale University, by Prof. Arthur T. Hadley, describes the evolution from the embryo of 1700 that was afraid to call itself a college, to the flourishing institution of to-day. Prof. Hadley lays stress on the importance to the recent progress of the university of the incorporation of the Sheffield Scientific School as a coördinate department in 1886, and the liberalizing of the academic courses which President Dwight has brought about. The professional schools and the post-graduate courses have also been weighty elements in the change, introducing as they have done a large body of advanced students whose presence is an example and a helpful stimulus to the undergraduates. The article closes with a sympathetic defence of athletics, in the course of which the rather specious remark is made that the "high-stand" man works for himself, whereas the athlete works for the college—as if the adulation the successful athlete receives were not the most personal of incentives.

—Readers of the *Atlantic* will find an opportune article in A. Lawrence Lowell's "The Referendum in Switzerland and America." Those who object to any further extension of this institution in the United States will not overlook the recent examples in Switzerland of its enabling ignorance to hinder, and prejudice to compel, legislation. For example, by means of the referendum, compulsory vaccination has been abolished on the one hand, and on the other a persecuting measure against the Jews has been embodied in the Constitution, in defiance of the advice of the highest legislative body. It is, moreover, an expensive piece of governmental machinery, as the author demonstrates. He emphasizes the fact that Switzerland is a small country, with comparatively little legislation, whereas in any one of our States the amount of such legislation would make a similar use of the referendum impracticable, not to say impossible, on physical grounds alone, and costly in the extreme. In the other political paper of the month, William R. Thayer considers some causes of the Italian crisis. The two literary essays are on "Nature in Old English Poetry," and "Early Latin Poetry," by Richard Burton and Prof. R. Y. Tyrrell respectively.

—*Scribner's Magazine* devotes, as usual, a good deal of its space to art. The frontispiece, a *genre* picture by Frank Bramley, A.R.A., gives Mr. Hamerton the opportunity for a brief sketch of the Newlyn school, of which this artist is a prominent member, and incidentally of Newlyn itself, a quaint little fishing village near Penzance, England, where the twenty or more painters composing the school have formed a colony. There is an elaborate article on "French Caricature of To-day," by Arsène Alexandre; and William A. Coffin has a "Word about Painting," in which he warns the American school against the sensationalism and affectation that threaten to pervade it. The literary article of the month is from the pen of Austin Dobson, who writes in his pleasant style of Mr. Robert Dodsley and his book-shop "At Tully's Head," in Pall Mall. Like Rousseau, Dodsley served an apprenticeship as lackey, but he had the ability to raise himself from his menial position, and to become both a literary success himself and a patron of greater writers. Mr. Bunner's "The Bowery and Bohemia" is disappointing and inadequate; each topic—the quarter, and the tribe of poor artists and writers supposed to haunt it—being made the excuse for bringing in the other, without anything in particular being said about either.

—Mr. Lester F. Ward, who has done yeoman's service before in the cause of fair play for women, has an article in the *Monist* for April, in which he holds up to ridicule the argument by which Ferrero would show that women ought not to engage in productive labor. The theory that women are to "sit on a cushion and sew up a seam," is part and parcel of the theory that they exist only for the pleasure of men—a theory little congenial to the hardy Anglo-Saxon race, though it is the warp and woof of the views concerning the relation of the sexes which prevail in Italy and France. In Max Nordau's new book, 'Degeneration'—the technical name of that form of mental disease which the author shows to be the characteristic of the writers "de tout à-l'heure" in France, and of which erotomania is the most constant symptom—it is pointed out that nothing is more futile than to address argument to persons in that condition, and it is not any more likely that Prof. Ward's argument will be effective in the quarter against which it is directed. But for one who enjoys an admirable presentation of a subject, supported by wide-reaching biological and sociological considerations, his article will prove most interesting reading. In one passage, however, there seems to be a curious error on the part of the proof-reader. It stands thus:

> "The whole upper part of the animal series may be regarded as anomalous; and the anomaly is a radical one, since it represents a change from normal female superiority to abnormal male superiority—a change brought about by the females themselves through sexual selection, whereby they have surrendered their sceptre and bartered their empire for an æsthetic gratification. To some this may seem a degeneracy, but few would wish wholly to restore the Amazonian régime."

The writer doubtless intended to say "few *men* would wish," etc. There would seem to be no reason why women should look with disfavor upon a return to nature in the shape of a restoration of female supremacy, any more than men find the abnormal régime which prevails at present peculiarly distasteful to them.

—A subject of the greatest difficulty and delicacy is brought up by the proposal of the Belgian Government to authorize children born out of wedlock to investigate their paternity by legal measures. The *Réforme Sociale*, in commenting upon this proposal, calls attention to the fact that the French code explicitly prohibits any such proceeding. It is evident that this proposal goes much further than one giving the mother a right of action against the father, which to a certain extent is known to our statute law, and which is covered partly by the legal fiction of loss of service to the parents. Whether any good result will be attained by allowing illegitimate offspring, when they reach the age of twenty-one years, to bring actions to establish their parentage, is very doubtful. Should the experiment be tried in Belgium, as seems probable, the result will be everywhere watched with a lively interest. We observe, by the way, that Mr. Robert T. Swan, the Massachusetts Commissioner of Public Records, in his current (sixth) report, returning to his useful theme of the overworked town clerk, states

that "some clerks record as the father of an illegitimate child the person named by the mother, and such a record has been used in court; others have awaited the decision of the court in bastardy proceedings before inserting the name of a father, while as a rule, either 'Unknown' is entered or a blank space is left to puzzle searchers of the records hereafter."

—Mr. Swan's exposure of the excessive, unreasonable, indefinite, and ineffective requirements of town clerks in Massachusetts deserves careful study by legislators and legal reformers. Entries on the records are enjoined of matters concerning which the clerk has no official knowledge, while those who have have no right to meddle with his records. For instance, "he must send to the Board of Prison Commissioners the name of the chief of police, and is under penalty if he neglects it, although he has no official knowledge of the appointment, and it is a question, moreover, whether such an officer exists under the statutes." Again, "bonds of certain town officers are to be filed 'with the town.' The clerk is custodian of the files, and consequently is custodian of his bond for dog-license money, and, if also treasurer or collector, of his bond as such. In one town a defaulting clerk and collector destroyed his bond." From all this results the greatest want of uniformity in keeping the records, the most slovenly care of them. The more faithfully and fully they are preserved, the greater the problem how to store them securely, and this is the problem with which the commissioner is principally concerned. He recommends, on the one hand, a law providing for the destruction of rubbish at certain intervals, and, on the other, a law making the elective town clerk's term at least three years, and the county clerk's five, "and politics should be ignored." The good effect of the statute creating the commissioner has been, by rendering vaults and safes necessary for the preservation of the records, to lead to the erection of town halls, library or memorial buildings, "built wholly or in part by individuals," with provision in them for town offices. In the smaller towns Mr. Swan recommends that vaults or safes be provided at the charge of the Commonwealth. He illustrates his report with photographic copies of mutilated early records, two of them from the town of Natick, the scene of Eliot's labors, exemplifying "probably the only town records in that [Indian] language in the State." Finally, he proposes an act to establish a State standard record ink. As we have had occasion to say before, these reports have a universal interest, and it appears that Rhode Island has lately taken notice of them, and is doing something to rescue its records from dispersion and decay.

—In the almost entire absence of local government in Ireland, the position of magistrate (with appended initials, J. P., "Justice of the Peace") carries with it perhaps more weight than in Great Britain. J. P.'s, in conjunction with stipendiary magistrates, dispense justice in the local courts. They grant or refuse spirit licenses. They outnumber on the poor-law boards the elected guardians. It has always been the policy of both British parties to reward adherents in Ireland and strengthen their own position by appointments to the bench. A recent Parliamentary return (No. 463, session 1893), giving the occupations and religious persuasions of Irish magistrates, is therefore particularly interesting. We learn that 3,821 are Protestants and 1,403 Catholics—the relative percentage of Protestants and Catholics in the population being 25 per cent. and 75 per cent. respectively. In some counties, as in Wicklow, where the Catholics form 79 per cent. of the population, the proportion of Catholic magistrates is but 11 per cent. of the whole number. Strange to say, in Belfast there is the nearest approach to an equilibrium —20 per cent. of the magistrates and 26 per cent. of the population being Catholics. Upon the whole, considering the measures formerly taken to depress the Catholics, and the fact that their appointment to the bench began only in 1829, the proportionate number to which they have attained takes us somewhat by surprise. Of the total 5,224, 3,182 belong distinctly to the ascendancy class, while 1,439 are more of the people—merchants, traders, farmers, or physicians—leaving a balance of 603 whose sympathies it may be difficult to surmise.

A NEW EDITION OF THE MORTE DARTHUR.

The Birth, Life, and Acts of King Arthur, of his Noble Knights of the Round Table, their marvellous Enquests and Adventures, the Achieving of the San Greal, and in the end Le Morte Darthur, with the Dolourous Death and Departing out of this World of them all. The text as written by Sir Thomas Malory and imprinted by William Caxton at Westminster in the year MCCCCLXXXV and now spelled in modern style. With an Introduction by Professor Rhŷs and embellished with many original Designs by Aubrey Beardsley. Volume I. London: Dent; New York: Macmillan. 1893.

Sir Thomas Malory has no reason to complain of the "iniquity of oblivion." To be sure, he has been pretty well obscured in person—for the editors and critics have not made up their minds whether he was an Englishman or a Welshman, sir knight or sir priest—but his book has had a vogue that he little dreamed of. The causes of this popularity it would be interesting to investigate. So far as they coincide with merits in the book itself, they have been often set forth; but there are other causes which one must suspect have been no less potent though less talked about. In the first place, the 'Morte Darthur' "met a demand," "filled a long-felt want." Caxton tells us that he was urged by many noble gentlemen to publish some account of King Arthur, and that, when his scruples as to the historical reality of that "King and Emperor" had been in some sort removed by the citation of Gawain's skull and Cradock's mantle, and the tomb at Glastonbury, and other pieces of extant testimony, he consented. How much of this entertaining preface is mere publisher's flourish, it is hard to say, but one thing is certain: the 'Morte Darthur' met with immediate success. It was very convenient for all kinds of readers to have a body of the scattered Arthur romances at hand in a single volume and in the vernacular, and the work became at once for Englishmen the orthodox version of the whole "matter of Britain." Few inquiries were made as to the taste with which Sir Thomas had selected his materials, or the fidelity with which he had reproduced his French originals. An interested and uncritical public was waiting for some such compilation, and a welcome was ready for it in advance.

In the pseudo-classical period Malory's renown suffered eclipse. His subject was too "romantic" for the classicists, and his language and sentiments were too "rude." But even the pseudo-classical influences have contributed indirectly to his subsequent fame. They made the whole Arthurian matter seem so remote that, when the dawn of the Romantic revival appeared, few Englishmen were tempted to search beyond Malory for older forms of these stories. The 'Morte Darthur' emerged again into the light of popularity, and regained without an effort its position as the orthodox version. Even to-day, when the Old French romances have lost something of their remoteness, Malory's compilation, whether immediately or through the adaptations of Tennyson and others, is the main source of our ideas about the Round Table and consequently of many of our literary conventions about the middle ages.

The language in which the book is written is no doubt another cause of its popularity. Archaic enough to be attractive, and not too archaic to be readily intelligible to cursory readers, Malory's diction has flattered many excellent persons into the belief that they were masters of Old English—and that has been no small recommendation for it. This is not a dignified ground for admiring a piece of literature, but it has none the less had its part in calling forth the somewhat extravagant praise which the 'Morte Darthur' has met with. Apart from its antique flavor, Malory's style has no doubt a charm of its own; but this charm, we suspect, would not have prompted such epithets as "incomparable" and "unapproachable" but for the titillation of the reader's vanity just refered to. However, we have no wish to run a tilt at the highly decorative figure of the old knight that modern critics have done their best to keep in the lists. The 'Morte Darthur' is indisputably a classic, and we should be sorry to see it despised. It may be hoped, notwithstanding, that tract of time will bring about a somewhat more discriminating regard.

The scholar has many quarrels with Sir Thomas Malory—but those are private affairs to be fought out at a distance from newspaper publicity. The lover of literature has his quarrel, too, and that of a more serious nature and not to be compounded without great argument. Malory is perhaps to be credited with having kept the Arthur stories alive in the knowledge of modern English writers; but his deserts in this direction, however considerable, are almost counterbalanced by a very special demerit. Selecting his materials (and perhaps forced to select them) without much discrimination, he has reproduced and made almost exclusively current various late and bad versions of excellent old stories, and—what is worse—various scandalous misrepresentations of heroic personages. The vogue of the 'Morte Darthur' has been so great that the moderns have too seldom gone beyond it for literary material, and, as a result, the book has impoverished our literature only less than it has enriched it. The most flagrant offence of this kind is the case of Sir Gawain.

In the earlier romances of the Arthur cycle Gawain is a most amiable and charming person. He is invincible in the field and in the lists, but he is even more remarkable for his courtesy. This courtesy is of the true ring; it is not hollow, it is not acquired, it is a part of the man's nature, and finds expression in every word he says and every deed he does. His faith is unblemished; his generosity and the nobility of his heart are unwavering. This is the Gawain of the old French verse romances —the Chevalier au Lion, the Perceval, and the rest—and this is the Gawain of the fourteenth-century romances in English. He is seen at his best in the beautiful 'Gawain and the

Green Knight,' by an unknown contemporary* of Chaucer.

This, however, is not the Gawain to whom Malory introduces us. Following late French prose romances which had systematically debased Gawain to exalt Lancelot, he has represented the paragon of the Round Table as a pitiful, treacherous creature—a blusterer and a bully. Tennyson follows Sir Thomas, and so we have the flower of Arthurian chivalry maligned in such verses as these:

"Light was Gawain in life, and light in death
Is Gawain, for the ghost is as the man."

"The hall long silent till Sir Gawain—nay,
Brother, I need not tell thee—foolish words—
A reckless and irreverent knight was he."

"To this the courteous prince
Accorded with his wonted courtesy—
Courtesy with a touch of traitor in it!"

And hence, too, we have the unforgivable libel of 'Pelleas and Etarre.' We cannot help thinking that this degradation of Gawain, which has robbed modern literature of a figure that it very much needs—an Arthurian hero with no nonsense about him—is a heavy charge on the soul of Sir Thomas Malory.

But, whatever our grudges against Malory, and however much we may feel inclined to protest against the superlatives so often applied to him, we must extend a cordial welcome to the present edition. It is, of course, not meant for specialists, whose needs have been competently met by the elaborate volumes of Dr. Sommer. It is not intended to be studied, but to be read—for it is beautifully printed in large type and with commendably black ink—and to be looked at, for it is a rather sumptuous book and has an abundance of pictures. The text is Southey's, with some corrections. The spelling and punctuation have been judiciously modernized, but the grammar and phraseology have not been interfered with. There are glosses—rather scanty, it must be admitted, and not always exact—at the foot of the page. There is an interesting preface by Prof. Rhŷs, which occupies itself chiefly with Arthur in Welsh literature, but, of course, settles nothing. The volume before us contains nine books of the 'Morte Darthur'; a second volume will complete the work.

The designs with which Mr. Aubrey Beardsley has embellished this volume are frankly decorative rather than illustrative. The ladies are very lank and often snaky-haired, the knights are seldom athletic in appearance, and there is a vast deal of posing. But on the whole the full-page pictures assist one to enjoy the book, and the headpieces of the chapters, as well as the borders which adorn the first page of each of the larger divisions, are almost uniformly successful. At three things, notwithstanding, we must enter a protest: the hideous caricature labelled "Merlin," which should be relegated to the forest of Broceliande as soon as possible; the ugliness of some of the ladies' faces, which makes the sense ache at them; and the Ethiopian cast of countenance given to Morgan le Fay and La Beale Isoude.

TWO ENGLISHWOMEN.—I.

The Story of Two Noble Lives, being Memorials of Charlotte, Countess Canning, and Louisa, Marchioness of Waterford. By Augustus J. C. Hare. 3 vols. A. D. F. Randolph & Co. 1894.

It is to be regretted that the editor of these volumes should have added to the interesting materials placed in his hands so much that is irrelevant. There is also a good deal of repetition, and, besides inserting a number of letters from Lady Waterford to himself, scarcely one of which contains matter of general interest, the editor has introduced long extracts from his own letters and diaries which might well have been abridged if not altogether omitted. He would have done wisely had he confined his work to two volumes.

Charlotte Stuart, Countess Canning, and Louisa Stuart, Marchioness of Waterford, were the only children of Sir Charles Stuart, afterwards Lord Stuart de Rothesay, and Lady Elizabeth Stuart, daughter of the Earl of Hardwicke. Sir Charles Stuart was appointed British Ambassador in Paris on the conclusion of the peace in 1815, and remained there for many years, residing in the house purchased for the British Embassy from Pauline Borghese, the favorite sister of Napoleon Bonaparte. Here Charlotte, named after her godmother Queen Charlotte, was born in 1817, and Louisa in the following year. Their grandmother, the Countess of Hardwicke, who was a very shrewd old lady, wrote in 1820 a curiously accurate description of the characters of the two children:

"Charlotte is almost beautiful, and quite fascinating, which is more than beauty. She will be one, I think, who will chain men to her while she hangs on them for support. Louisa will need no man's help, but will be mainly able to give it in mind and body. Charlotte will have her reign early, but Louisa will establish hers, though late, permanently."

Both sisters were beautiful. Charlotte was lovely from a child, with one of the most expressive countenances ever seen; Miss Berry used to say of her, "One cannot speak of Char [her name in her own family] in sober terms of praise." Louisa's beauty, which was far more striking, developed later. Charlotte, when seventeen, became attached to Charles Canning, the only surviving son of the great statesman. He was a young man of the utmost promise, having taken a first-class in classics and a second in mathematics at Oxford; but Lord Stuart de Rothesay (who, whatever were his talents as Ambassador, seems to have been most trying in his own family) vehemently opposed the marriage, solely on account of his political animosity to Charles Canning's father, who had then been dead for some years. Charlotte was forbidden to speak to her lover, but she used to watch him through the railings of the parapet as he rode past her father's house. Old Lady Hardwicke was most indulgent to her grandchildren, although until her death at the age of ninety-five she ruled her daughters, one of whom was then seventy-six, with a rod of iron. She at length induced Lord Stuart to consent to the marriage, and it took place in 1835. In 1837 Charles Canning succeeded to the peerage created in favor of his mother, and became Viscount Canning. Lady Canning was appointed lady in waiting to Queen Victoria, and never were sovereign and subject more devoted to each other. Like her sister, Lady Waterford, she could never bear to be idle. In 1854 she was active in selecting nurses to send out to the Crimea. She saw numbers of volunteers and had to reject many, but finally she sent out a party of really good nurses, under the command of Miss Nightingale. The Canning Nurses' Home in Calcutta, which has done excellent work, was thought to be the fittest memorial of her life in India. In 1855 Lord Canning was appointed to succeed Lord Dalhousie as Governor-General of India. Lady Canning had no wish to go, but her words were, "I will not take any part in the decision, only be ready to follow like a dog." India was indeed an exile to her. Those were not the days in which powers of organization like those of Lady Dufferin could have sway: the wife of the Governor-General was a mere figurehead, and led a life of complete isolation and of trying emptiness. This to Lady Canning was peculiarly galling, as may be gathered from scattered remarks in her letters.

The one pleasure of her life in India was the improvement of the gardens at Barrackpore, the country-house of the Governor-General, within a drive of Calcutta. Here she made terraces, planted shrubs, opened out views, and constructed a broad walk along the bank above the Ganges. She writes with delight of the banyan-tree under which she could sit, and of her double hedge—one side of poinsettia like a scarlet wall, the other of dark blue ipomœa. She began careful drawings of the beautiful flowers and shrubs, hundreds of which drawings are still preserved.

Serious difficulties had occurred in Oude before Lord Dalhousie was relieved by Lord Canning, and in 1857 the Indian mutiny broke out, almost unexpectedly. None of the authorities at first realized its extent, or the vast difficulties presented by any attempt to suppress it. It was a period of unexampled trial, danger, and responsibility for the Governor-General. During that terrible time Lady Canning never left her husband, bearing the trying heat of Calcutta, the monotony of the same ride or drive every day, the absence of all companionship, the constant arrival of bad or anxious news, the sad deaths of general after general sent to the front, and supporting Lord Canning through a period of strain the extent of which has never yet been fully grasped. Lord Canning could not even enjoy the refreshment of a drive to Barrackpore, for he dared not leave his post for an hour. Lady Canning wrote that he had hardly time for any rest or exercise, for "literally very few hours pass that there is not some matter of life and death to be decided." She continued her series of beautiful drawings of flowers from nature, finding that the occupation soothed her, for "the hands could go on and keep the head from working."

Neither Lord nor Lady Canning had the least apprehension of personal danger, although, after the European body-guard was established in Government House at night, Lady Canning acknowledged that it was right. The misrepresentations in the newspapers greatly troubled Lady Canning. In her letters home she once more contradicts the story of the greased cartridges said to have been forced upon the native troops in order, by depriving them of caste, to compel their conversion to Christianity. She absolutely contradicts the reports of mutilation of European ladies during the mutiny. Many indeed were killed, but without torture or delay. But Lady Canning was especially distressed by the spirit of revenge and the bloodthirsty feeling of Europeans in India. She gloried in the name of Clemency Canning, given to Lord Canning first as a nickname of contempt and reproach, but afterwards fully recognized as his best title of honor. She wrote home:

"It would charm the English-Indian public to hang and blow from guns any number of people, and I believe Canning is terribly unpopular because he is *just* and firm too. There is a positive thirst for blood: a spirit of revenge which is dreadful. I always say, 'Let us be severe and punish, but not unjustly, and, above all, let us be unlike these monsters, and not copy them.' But the things people say they would like to do are quite as bad as the acts of the Nana." "The burthen of all abuse in newspapers is always the same—leniency to natives! And that means an accusation for which

* Mr. Gollancz's conjecture that this was Ralph Strode, the philosopher, can hardly be taken seriously.

they consider that recall in irons would be a faint punishment."

Lady Canning considered that the cry for vengeance in the English papers was nothing to the savage tone in Calcutta. "People here," she writes, "would like every Sepoy to be hanged at least—whether for his deeds or his thoughts. If one mildly observes that the men at Barrackpore, who have never been out of our sight, did not share in the massacres five or six hundred miles off, people say, Oh, but in their hearts they approved and would like to do the same by us." Lady Canning busied herself with preparations for the numbers of destitute widows and children who came down to Calcutta, most of whom were absolutely in rags and without shoes. After the relief of Lucknow a procession four miles in length was sent off, entirely composed of wounded officers, ladies, and children. Lady Canning gave up her own clothes to these ladies, and procured supplies of necessaries for them from her friends in England. It was her wish to have the marble figure of the Angel of the Resurrection holding the martyr's palm placed over the well at Cawnpore into which the Nana had thrown above two hundred English ladies and children.

When it was seen to be necessary that Lord Canning should remain in India for an additional year, Lady Canning, though writing of the bitter disappointment it was to give up counting the months till she should be at home, added that she would not grumble, as it was only fair that the heavy task of putting so much into working order should be done by an experienced Governor-General instead of a new one. Lord Clyde's message to her was that he felt Lord Canning would choose "to complete his bit of history." Lady Canning rejoiced in her husband's appointment as first Viceroy of India, as showing that his great services were at length appreciated, and she had, as Sir Bartle Frere wrote, "the unalloyed happiness of seeing justice gradually done to Lord Canning by his countrymen, while the natives look on him as their truest friend and benefactor." She delighted in his determination not to remain in India one day after the six years of exile were completed; and in her last letters she wrote, "I can think of nothing but the joy of getting home. . . . The hard trial of India is almost over." In August, 1861, Sir Hugh Rose, afterwards Lord Strathnairn, was invested with the order of the Star of India, and on that occasion Lady Canning, cheered by the thought of her return home, seemed to regain much of the "beauté merveilleuse" for which she had been celebrated. Those who saw her in her white dress and diamond coronet, with a spray of real ivy twisted in her beautiful hair, little thought that on that evening she was seen in public for the last time. A month later Lady Canning paid her long-wished-for visit to Darjeeling, taking advantage of Lord Canning's absence at Allahabad, where he invested with the Star of India the Begum of Bhopal, of whom he said: "She is not entitled to it by beauty; but for pluck, loyalty, and cleverness, she is a ruler in a thousand." Lady Canning thoroughly enjoyed Darjeeling, and "the wonderful view in which you see at a glance 27,000 feet out of a mountain 28,000 feet high." On her journey back she stopped to sketch in a marshy plain, and arrived at Calcutta on the 8th of November suffering from jungle-fever. She wrote one letter home, in which she spoke of Lord Canning's expected return as her best restorative. When he arrived on the 10th, she exerted herself to show him her Darjeeling sketches, but she never rallied, though she could always be aroused by his voice and would smile at him till extreme weakness ended in unconsciousness. On the 18th of November Lady Canning died in her husband's arms, spared, as her sister wrote, "from pain and from the agony of feeling what this news would cost us all." In the early morning of November 19 Lady Canning was buried in a spot chosen by Lord Canning in the private garden at Barrackpore, "close to the Ganges, shaded by great trees and the flowering shrubs she was so fond of, and looking upon the beautiful reach of the river she so often drew, and upon many of her own alterations and improvements."

Lord Canning never recovered from his great sorrow. On the first of March, 1862, that day so ardently wished for by Lady Canning, he left India, but he returned only to die. He could not bear to speak of his loss, and he never smiled. But when, shortly before the end of his illness, his sister said, "You are going to Char," his "whole countenance brightened up." Lord Canning was only forty-nine at the time of his death, Lady Canning, whom he survived seven months, only forty-five. It may truly be said that both laid down their lives in the service of their country.

DIPLOMATICS.

Manuel de Diplomatique: Diplomes et Chartes. Chronologie technique, Éléments critiques et Parties constitutives de la Teneur des Chartes. Les Chancelleries. Les Actes privés. Par A. Giry. 8vo, pp. xvi., 944. Paris: Hachette & Cie. 1894.

In the flood of sciolistic books of which the press is so prolific, it affords the critic no little satisfaction to meet with one like the present which is the outcome of abundant and accurate knowledge and of long and patient labor. Although it has the aspect of being intended only for the comparatively limited class of investigators who have to deal with charters and other original documents, such a work is indispensable to all students of history who seek for knowledge at its sources. It is a reproach to the English historical school that it has not yet fairly naturalized in the language the comprehensive term diplomatics, which may be found, it is true, in the dictionaries, but is still an exotic, unfamiliar to the vernacular, though for a couple of centuries it has been in common use among Continental scholars. No one who seeks to thread his way among chronicles and records but requires to have within reach some work of this kind with which to fix a date, to determine the accuracy of a narrative, to weigh the comparative probabilities of conflicting statements, or to test the genuineness of a document.

The questions which are thus continually arising are of the most varied character, and their solution involves the application of tests, many of them purely technical and all of them to be gathered only by patient scholarship from a vast variety of sources in which they lie hidden. Successive generations of scholars have labored at their accumulation since the time of Du Cange and the Benedictines of St. Maur. A glance at the table of contents of the nine hundred pages of this portly volume will show how wide a range of knowledge is required for the task—technical chronology, numismatics, palæography, sphragistics, philology, the nomenclature of individuals and of officials, the routine of the chanceries of the different nations, and the legal formalities customary at various times and places. Of these chronology alone occupies more than three hundred pages of closely digested matter. Few things are more puzzling to the novice than the variations in the computation of the new year, the changes in the calendar, the habit of dating by church festivals, fixed and movable, and saints' days, and the regnal years of obscure potentates and prelates; and even the expert continually requires tables and calendars for reference. It was not without reason that the Benedictines entitled their huge digest of history 'L'Art de vérifier les dates,' for the verification of dates often necessitates the most minute historical knowledge.

If the ability to determine the exact significance of genuine documents is thus of prime importance, none the less so is the capacity to discriminate between the genuine and the spurious. The forger has been busy in all ages, and the evidences of his industry are to be found in nearly all archives and cartularies. The popes, for instance, were constantly fulminating the direst threats against the manufacture and falsification of papal letters, and were as constantly unable to suppress the factories of such documents which flourished in Rome and other cities. There seems to have been nowhere the slightest hesitation in procuring and exploiting such fraudulent papers; and if they occur to the student most frequently among the muniments of abbeys and bishoprics, this was probably because the clergy were more versed than the laity in such mysteries, and were more careful in the preservation of their archives. M. Giry, indeed, tells us that a list of those who resorted to such devices would include all the ancient abbeys, but the secular clergy and the laity were equally eager thus to substantiate claims well or ill founded. The concluding chapters of his volume, in which he gives a rapid sketch of some of the more notable developments of this industry, are full of interest, although, somewhat strangely, he omits all reference to one of the most remarkable of all, the 'Plomos del Sacro Monte' and the 'Cronicones,' originating at the close of the sixteenth century, and, after condemnation by the Holy See, revived in the second half of the eighteenth by a factory of forged documents in Granada, which extended its operations until it furnished to all purchasers fraudulent wills, letters patent, titles of nobility, etc., etc.

To churches and abbeys forged charters were useful in establishing claims to lands and feudal rights and to immunities and privileges of every kind. In the case of laymen they might minister simply to the gratification of vanity in proving antiquity of lineage, or to more substantial pretensions of succession to inheritances and even to kingdoms. One famous in diplomatic annals is that by which the descendants of a certain Eudes le Maire claimed that in the eleventh century he performed a pilgrimage to Jerusalem, in vicarious performance of a rash vow made by Philippe I. of France, and was rewarded by an exemption from imposts for his posterity in both the male and female lines. In 1336 they succeeded in obtaining from the royal chancery a confirmation of the pretended grant; the race naturally multiplied all over France, for its daughters were most desirable matches, until there were thousands who in virtue of the privilege enjoyed immunity from all public burdens, and it was not until 1752 that it was definitely pronounced fraudulent. More generally known are the exploits of François de Rosières, Archdeacon of Toul, who supported the claims of the Guises to the crown of France by interpolations in their genealogy

showing their descent from the Carolingians. Father André de Saint-Nicholas, Carmelite prior of Moulins, was a more accomplished forger, who produced charters showing the Carolingian descent of the house of Bourbon—charters which, although condemned as forgeries by Mabillon and Baluze, have been accepted and used by the authors of the 'Art de vérifier les dates,' the 'Gallia Christiana,' and the 'Recueil des historiens de la France.' Even Mabillon and Ruinart were deceived by a still more skilful fabricator, Jean-Pierre de Bar, who furnished Baluze with documents for his 'Histoire généalogique de la maison d'Auvergne,' showing that the Dukes of Bouillon were descended from the ancient Dukes of Guienne, and were thus on a level with the Bourbons. Baluze was more than suspected of complicity in the fraud, and suffered disgrace in consequence. Still more insidious is the document known as the 'Charte d'Alaon,' manufactured to support the pretensions of the Spanish Hapsburgs to the throne of France by proving the descent of the Kings of Aragon from the ancient kings and dukes of Aquitaine. This ingenious fraud, which purports to be a confirmation by Charles the Bold, in 845, of gifts to the monastery of Alaon in Urgel, with nine confirmations at various times up to 1041, has furnished a crowd of fictitious names and dates and facts to French history, where some of them still remain.

These few examples will show the exceeding caution with which the historian must scrutinize the documents before him. The difficulty increases ten-fold when frauds have been accepted by writers of authority and have passed into current books of reference, for then even the most carefully conscientious may be led astray. It is easy thus to understand how indispensable to the student is such information as M. Giry has here gathered together and presented clearly and methodically. In the chronological portion we could have wished that he had not omitted the Hijra from the tables, and that in place of the calendars borrowed from the Benedictines he had given us a series of almanacs similar to those in Augustus De Morgan's 'Book of Almanacs,' issued in 1851, which we have found much more convenient for daily reference. The 'Glossary of Dates' and the list of saints' days are fuller and more satisfactory than any we have hitherto met with, yet such compilations can never be wholly complete. *Vendredi de Crois aourée*, as a synonym of Good Friday, might save an inquirer some trouble. The reader of Spanish Chronicles might like to be told that *Nuestra Señora de la O* or *de Alaon* is the same as *Expectatio B. Mariæ*, December 18. Under St. Martin might be inserted *S. Martinus calidus* and *Saint-Martin bouillant* as synonymous with *St.-Martin d'été*. *Onze mille vierges* should find a place, with a reference to *Ursule* and *Virgines*. St. Peter Martyr, whose feast is April 29, is omitted. But these are trifling deficiencies which can readily be supplied in the future editions that must undoubtedly be called for of a work so convenient and so useful to all serious students of history.

BOOKS ABOUT THE STAGE.

Charles Lamb's Specimens of English Dramatic Poets who lived about the time of Shakespeare, including extracts from the Garrick Plays. Now first edited anew by Israel Gollancz, M.A. London: J. M. Dent & Co.; New York: Macmillan & Co. 2 vols.

Plays and Dramatic Essays. By Charles Lamb. With an Introduction by Rudolf Dircks. London: Walter Scott; New York: Charles Scribner's Sons.

The Theatrical 'World' for 1893. By William Archer. London: Walter Scott; New York: Charles Scribner's Sons.

Entre les Frises et la Rampe: Petites études de la vie théâtrale. Par Alphonse Daudet. Paris: Dentu; New York: F. W. Christern.

Écuyers et Ecuyères. Par le Baron de Vaux. Paris: J. Rothschild; New York: F. W. Christern.

HAS due meed of praise ever yet been paid to Lamb for his rediscovery of Shakspere's contemporaries in the drama? A rediscovery his publication of 'Specimens of English Dramatic Poets' assuredly was, and it was Lamb who pointed out the path to be followed by Gifford and Dyce, by Mr. Bullen and the other editors, on the one hand, while on the other he made the way straight for Hazlitt and Whipple, for Lowell and Mr. Swinburne. And all these critics, with scarce an exception, have said ditto to Lamb in considering Shakspere's predecessors and contemporaries and successors primarily as poets. But to consider Marlowe and Ben Jonson, Beaumont and Fletcher, Massinger and Ford as poets only, as writers of beautiful verse fit to be quoted in a volume of extracts, is to take a very narrow view of the most glorious period of English literature. That Lamb did not take a broader view than this is obvious enough; indeed, he confesses it in a letter to Hone, saying, "Poetry is all I know." These volumes, which Mr. Gollancz has most admirably edited, are proof enough that Lamb did know poetry. But they are proof also, were any needed, that Lamb seemed not to care for the vital action which in a play should underlie the merely literary clothing. Lamb rarely picks out the really dramatic passages, the actable parts, the dialogues lending themselves to the highest histrionic treatment. In his hands, and in the hands of his followers, Hazlitt and Lowell and Mr. Swinburne, the dramatic value of the works of these poets of the stage has received only cursory consideration. Taine and the late Mr. Symonds are almost the only writers on this period of English literature who remember that Marlowe's "Faustus" and Massinger's "New Way to Pay Old Debts" and Webster's "Duchess of Malfy" were written primarily to be acted, and only secondarily to be read.

In the present volumes Mr. Gollancz reveals himself almost equal to Canon Ainger as a loving editor of Lamb. He has taken infinite trouble in incorporating the "Garrick Extracts" with the "Specimens," and in arranging them chronologically, as far as our present information will permit—for there is still an immense field of labor open to the future historian of the Elizabethan theatre. Mr. Gollancz has further corrected erroneous statements as to the authorship of the plays from which Lamb quoted, besides amending the text, in which there were countless faults. The introduction is a model of knowledge and sympathy and tact, and the two volumes exhibit throughout a welcome union of exact scholarship with an appreciation of what is best in literature.

Not worthy of comparison with Mr. Gollancz's masterly editing is the volume of selections edited by Mr. Rudolf Dircks, in the preparation of which he seems to have followed very closely a collection of 'Charles Lamb's Dramatic Essays' which an American author published two or three years ago; especially does Mr. Dircks's preface, both in what it contains and in what it omits, resemble the introductory essay of the American editor. Mr. Dircks's differs from the American collection chiefly in that it includes also Lamb's four plays. It contains the notes on the Elizabethan dramatists; and it omits the minor dramatic criticisms which the diligence of Lamb's later editors has disinterred.

Almost the only student of the acted drama who has called attention to Lamb's attitude toward the dramatic poets he loved is Mr. William Archer, who had a paper on "Webster, Lamb, and Shakspere" in the *New Review* of January, 1893, elicited by a special performance of the "Duchess of Malfy." We regret to find that this paper is not included in the volume of current theatrical criticism which Mr. Archer has now sent forth, and which we hope will be the first of an annual series. That the modern stage is awakening has long been evident to careful observers. There are men in England and in Germany (as well as in France and Scandinavia) who have something to say in the theatre, and who know how to say it as it must be said in the theatre. Although even now the material on which the dramatic critic must work is not as abundant in London as in Paris, it is far more so than it was a score of years ago, immensely more than it was in Lamb's day, for example. In Paris M. Sarcey still refuses to reprint his weekly articles in the *Temps*, but M. Jules Lemaitre reprints his, and so do men of less importance—the late Auguste Vitu, for example. Mr. Archer is easily the equal of M. Lemaitre as a critic of the acted drama; if he lacks a little of the brilliancy of the Frenchman, he has a keener insight into the conditions of the theatre, and a more cosmopolitan outlook. Mr. Archer is indeed the best dramatic critic of Great Britain since George Henry Lewes, and he is superior to Lewes in his devotion to the drama, which was only one of Lewes's many interests in life. Especially worthy of study is Mr. Archer's analysis of "The Second Mrs. Tanqueray," and especially notable is his overwhelming retort to the doubtfully honest accusation that Mr. Pinero had plagiarized from Herr Lindau. In a letter of pleasant reminiscence joined with a discussion of the obvious improvement of the British drama of late years, Mr. Archer inscribes his book to Mr. Robert W. Lowe, the editor of Cibber's 'Apology' and of Doran's 'Annals.'

Into a volume of the pretty "Petite Collection Guillaume," M. Alphonse Daudet has gathered half a score of old newspaper articles of his, more or less connected with the theatre. They are slight and graceful and empty; the little book can be read in half an hour, and it will be forgotten in one-quarter of an hour. Two of the articles are reviews, one of M. Legouvé's 'Soixante ans de Souvenirs,' and the other of Fanny Kemble's 'Records of a Girlhood.' Perhaps the best of all is the first essay, flimsy as it is, "Le Comédien travaille," in which the method of study of leading French actors is considered.

Just how fairly a volume about circus riders may be called a book about the stage, need not be discussed here and now. The Baron de Vaux's 'Écuyers et Écuyères' is a higgledy-piggledy, helter-skelter conglomeration. There is a "preface" by M. Henri Meilhac, which is not a preface at all, but a delightfully clever letter of a would be bare-back rider's mother, with the response of the ex-rider to whom it is addressed. There is an "introduction" by M.

Victor Franconi, surviving representative of the famous circus family, and a "study" of scientific riding by M. Maxime Gaussen. Then in the book itself are biographies by the Baron of some fifty celebrities of the circus, male and female, chiefly the latter, with accounts of various circuses in France and elsewhere, chiefly the former. Scattered through the text are about two hundred and fifty illustrations, portraits of modern riders, facsimiles of old engravings, sketches of difficult feats. The point of view is all but exclusively Parisian; one chapter does contain outline portraits of Barnum and Renz and Hengler. Yet the book will be precious to the future historian of the circus, who shall some day set before a waiting world the connected history of horsemanship and of the feats which delighted our ancestors as they delight us.

Historic Green Bay. 1634–1840. By Ella Hoes Neville, Sarah Greene Martin, and Deborah Beaumont Martin. Green Bay, Wis.: Published by the Authors. 1893.

"On the map drawn by Hennepin, dedicated by him to William III. of England, and published in 1697, the name Green Bay first appears. In tolerably correct form the Baye des Puans is traced, while the whole of the peninsula extending from the mouth of Fox River to Porte de Mort [*sic* for Butte des Mortes] is included under the general name of Baye Verte."

Such is the language of our authors (p. 178). The truth is, that on the map above mentioned neither of the names Green Bay and Baye Verte is to be found at all. The legend there is simply *Baye des Puans*. Nor yet is the name Green Bay discoverable on any other map till more than three-score years afterward. The earliest map known to us where it occurs is Carver's, published in 1778. The name Baye Verte appears, if at all, at a still later period. It is mentioned in this history as used by Judge Reaume, and we have traced it in various documents some years before his appointment, which was not till 1803. It was evidently a translation from the English Green Bay, and, therefore, later than that name. Baye Verte appears in Brodhead's 'New York Colonial History' (vii., p. 658) as early as 1764. But *that* Baye Verte is in Nova Scotia, though cited by some who have just enough of learning to misquote, as in Wisconsin.

The first writer who speaks of the name Green Bay seems to be Carver, who was there in 1766, and says: "Sept. 18, arrived at Ft. La Bay on a bay in Lake Michigan termed by the French the Bay of Puants, but which since the English have possession [1761] is called by them the Green Bay." He adds that they so called it because, when a voyager left Mackinaw before vegetation started, he would find all things already *green* at the Bay. It will be noticed that Carver calls the settlement on the bay Ft. La Bay, and not Green Bay. One of the earliest mentions of the town by the latter name was in 1804, when, according to Morse's Gazetteer, "Green Bay on Lake Michigan contains 50 souls."

We doubt whether the name Langlade should have the prefix De. It has none in his commission from the King, which our authors give in facsimile (p. 106). It is never used by Parkman. It is wanting in letters from Gov. Carleton, etc. Hence it has a pretentious look, being a *signe de noblesse*. Ticonderoga is said to stand at the *head* of Lake George (p. 104), the French dauphin to have died in the *tower* (p. 224), and reference is made to a hitherto unknown work of Parkman, 'A Half-Century of Dishonor' (p. 85). But the most surprising statement is, that "the savage horde came upon Braddock's army when encamped for dinner—that the camp was at once placed in an attitude of defence," etc., etc. (p. 100). Contrast this with a sentence in Parkman: "The advance had just passed a ravine, and the main column was on the point of entering it, when the savages yelled the war-whoop," etc. ('Wolfe and Montcalm,' i., 214).

Enough of fault-finding. 'Historic Green Bay' is an excellent book well indexed. The oldest real town in Wisconsin has such a story as no other town in the State can boast, and her daughters have told the story well. The peccadilloes to which allusion has been made are, as Horace would say, only freckles on a fair face. Nor would we be at pains to correct them did we not view the volume as worthy of more than one edition, and sure to have it. Life in Green Bay has been many-colored. The first pioneer adventured thither in quest of Chinese celestials. The next comer raised aboriginal aspirations to a celestial empire not of earth. The next brought firewater and firearms, taking furs more needed elsewhere. The town was a thoroughfare, the gate of the far South and the far West, whether men were traders, explorers, or warriors. Hence it was in touch with Jeff Davis, President Taylor, John Jacob Astor, and even a lost Bourbon prince visited there by Prince de Joinville (p. 225). In the silver ostensorium presented to the mission there in 1686 and still in perfect preservation, being now owned and treasured by the State Historical Society, it has a relic far older than anything extant west of the Alleghanies, and seldom surpassed anywhere in point of religious interest. Its art is worthy of its material, and its inscription more precious than either. In all these aspects and many others—especially as the oldest garrison town in the commonwealth—the authors have described their unique home. They have written a book which few can lay down till the last page has been read. That page sets forth to the life a maple-sugar camp—a "sugaring-off." If some things by the way have seemed bitter, here is a finale that will leave a sweet taste in all mouths.

An Introduction to the Study of Political Economy. By Luigi Cossa, Professor in the Royal University of Pavia. Translated by Louis Dyer, M.A., Balliol College. Macmillan. 1893. Pp. x, 587.

Students of political economy who design to devote themselves to a prolonged and comprehensive study of the subject have been placed under a great obligation to Prof. Dyer, in virtue of his painstaking translation of Prof. Cossa's unique work. Following the hint contained in a brief notice of the Italian original in No. 1447 of the *Nation*, the translator has added a subject-index, thereby very greatly enhancing the value of the work. For the benefit of those who think of buying the 'Introduction,' it seems proper to point out that its title is hardly calculated to convey a just idea of its scope and purpose. One naturally thinks of an "introduction" to a subject as a book for beginners, but nothing, in our judgment, could be less desirable than for a person innocent of political economy to start in with reading Cossa. The book is divided into two parts, a "Theoretical Part" of about one hundred pages, and an "Historical Part" of about four hundred and forty pages. The theoretical part discusses the scope and method of political economy, stating, in general with clearness, both the author's own views and the views of the most prominent writers on this head, and making running commentaries on the latter. Even this part, then, is not a systematic exposition of the logical and methodological aspect of political economy, expounded and illustrated for the benefit of beginners, but is largely historical and critical. As to the historical part, the mass of literature discussed in it is so enormous that analyses of even the most important works and characterizations of even the most important theories are necessarily too condensed to be illuminating to students who are not equipped in advance with a sound knowledge of the chief theories of the science.

Not a word of this is said, however, by way of depreciation; on the contrary, the book furnishes far more than any one could expect from its modest title: it really constitutes an extraordinarily comprehensive and in the main very acute critical and historical survey of political economy. The value of such a survey to the professed student of economics, both as a book to be read and as a book to be referred to, is evident. To be able to obtain, in the compass of a single volume, some characterization of the work of any one of the 2,000 writers on economics cited is in itself no small help. Fortunately, too, the enormous learning of the author is coupled with a shrewdness and common sense which frequently manifest themselves in more or less epigrammatic judgments calculated to exercise a very salutary influence upon the young economist. Thus, throughout the work, there abound expressions of the author's opinion that the departures from classical theories are, as a rule, rather matter of form than of substance. *E. g.*, on p. 65: "Mediocrity, conscious that it can make no useful discovery, will always make what noise it can over mere questions of form." Again, on p. 395, after bestowing the very highest praise upon Charles Gide, Cossa goes on to say that he is really "far nearer the company of the classical school than he would readily believe." Some of our author's remarks on the historical school may likewise be instanced; as where he speaks (p. 85) of their proposing "to shape economic legislation for to-day on an imperfect knowledge of yesterday's facts"; or where he says (p. 412) that, "in his most excellent monographs on value, on transportation, and in his masterpiece on money and credit, Knies seems to have forgotten all about his historical method." Finally, we may cite a passage (p. 361) in which Cossa defends the classical economists against certain German critics:

"Where, then, are we to find the lineaments conventionally drawn in so many pictures of the Manchester School, drawn especially by our German fellow-workers? There is nothing of all this in Mill, nothing in Cairnes, and nothing whatever in Marshall; on what, then, is the picture based? Is it not drawn from the inner consciousness of those who must have something which will be easy to demolish by argument?"

It must not be inferred from these examples (to which many equally striking ones might be added) of rather sharp criticism of modern "schools," that Cossa is a champion of the classical political economy pure and simple. On the contrary, he finds much to praise in the work that has been done in almost every direction in the past quarter of a century. Himself a pupil and admirer of Roscher, he has the greatest sympathy with historical research as applied to economics; and as to other directions which economic investigation has taken, both in our own time and in preceding generations, he has, in our judgment, only too catho-

lic an appreciation of the merit of all well-meant work. All the more weighty, then, is his insistence on the cardinal and permanent importance of the work of the great English economists.

But, after all, the usefulness of the book resides less in the author's expressions of opinion than in the comprehensive survey he gives us of the history of the science. To those familiar only with its development since the last quarter of the eighteenth century, its earlier history as sketched by Cossa will be full of interest. Thus, to be told that the first clear recognition of the connection between increase of population and improvement in the yield of the soil is contained in a work by Bolero, published at Rome in 1588, or that Ricci (1787) was the first to base upon the principle of population scientific maxims of almsgiving, or that Copernicus wrote, about 1526, upon the invitation of King Sigismund of Poland, a pamphlet which "explains clearly the functions of money," condemns debasement and seigniorage, and anticipates "Gresham's Law"—information like this will be equally new and interesting to most readers. Still, so far as the prescientific history of political economy is concerned, the strongest impression that will be produced on the thoughtful reader must be the realization of the wilderness of drivel, of obscure and groundless economic controversy, from which the world has been saved since the time of Adam Smith; for, murky as are some of the controversies of to-day, they are as light itself in comparison with the misty disputes of a hundred and fifty or two hundred years ago.

In Memoriam John Larkin Lincoln. 1817–1891. Boston: Houghton, Mifflin & Co. 1894.

THE task of criticising a book published by a son in commemoration of a father is always ungracious; but it is hard to give praise to the memorials of Prof. John Larkin Lincoln put together by Mr. W. E. Lincoln. The book is large and showy, and includes two portraits of Prof. Lincoln, taken so nearly at the same age that one seems superfluous; but its contents are singularly disappointing. The biographical matter includes a memorial address by Prof. George P. Fisher; autobiographical notes, diaries, and letters, comprising detached passages of early and middle life; and, later on, an appendix, with various personal anecdotes and reminiscences of friends. There is no continuous and authoritative life, unless a portion of the copious index may be called so, in which, under Prof. Lincoln's name, the principal events of his career are noted, including some not otherwise mentioned, notably his marriage; the names of his wife and children are not given, nor is any special mention made of them anywhere. Even of this meagre allowance of biography much is occupied by details of foreign travels, mostly over beaten tracks and affording little that is novel, while the mass of college anecdotes is like any other such mass—stories which doubtless provoked hearty laughs when told for the twentieth time at a commencement dinner, but few of which show any individuality. The best parts of the biography, if it may be so called, are the "Notes of Life," the Diary at Columbian College, and the Reminiscences of Lincoln's instructors in Germany.

The bulk of the volume consists of a dozen or more essays or lectures by Prof. Lincoln, a few of a biographical, but mostly of a literary and philosophical character. The subjects are chiefly taken from classical literature, as might be expected from a Latin professor. They all show the same characteristics—thorough and extensive reading, keen appreciation of outward form and literary relations, considerable power in bringing the substance of the subject before those to whom it is not much more than a name; but with no very great penetration into the deeper problems of such authors as Goethe, Lucretius, Plato, and Tacitus. The writer is throughout conservative, both in the old and legitimate, as well as in the new, use of the word; he is content with old lines of thought and expression, and thoroughly dislikes anything adventurous. Perhaps the best piece of criticism in these essays—and, after all, Freeman did the same thing much better—is an acute exposure of Mr. Gladstone's wild deduction of Homer's Olympian theology from the fragments of Hebrew tradition. But the essays as a whole show little more than the skill of the old-fashioned teacher, who gives his pupils a fair but not exciting account of what the world's geniuses have done, to the end that they may rejoice and be thankful that they themselves are not among them. If Prof. Lincoln's hearers must be informed of inflammatory branches of learning, it was expedient to keep the fuel of their minds seasonably damp.

At Brown University, confined by its constitution within certain recognized lines of thought, Lincoln's restrained learning was thoroughly acceptable. He was admired, respected, and loved. One contributor to the anecdotes in this volume can speak with fervor of his taste and skill in translation, whereas the versions in this essay are notably dry and conventional. He was exactly the man for the place, where a freer and profounder scholarship would have been distrusted and disliked. His grateful pupils subscribed for the portrait by Herkomer, of which a photograph appears in this volume, and for a memorial fund, which will hand on his memory, we fear, much more lastingly than this filial tribute. The author, indeed, deprecates harsh criticism by a preface intimating that he has done his best; especially he regrets that, not possessing his father's fund of learning, he has not felt sure of various classical phrases and names. From some misprints, he tells us, he was saved by the intervention of a more scholarly friend. It is a pity that he overlooked *Herodotus* for *Heraclitus*, on page 434.

Les Origines de l'Ancienne France. Par Jacques Flach. X. et XI. siècles. II. Les Origines Communales; La Feodalité et la Chevalerie. Paris. 1893.

ONE lays down the second volume of Prof. Flach's great work with a renewed feeling of gratitude to the author, but also with a sense of disappointment which it is impossible to avoid. This is not because the volume does not continue to exhibit the merits which we noted in the first. There is the same exhaustive study of the field; the same full and systematic presentation of the evidence; the same abundance of new and suggestive interpretation. But the new views of the author upon some important points are so revolutionary and so diametrically opposed to the first appearance of the evidence that the feeling which they excite on the first reading is one of distrust and hostile criticism, rather than of confidence that here, at last, we may be getting hold of a thread which will lead us through the tangled evidence to correct conclusions. It is impossible also to avoid the impression that M. Flach is admitting to some extent into this volume that metaphysical and theoretical interpretation of history which was so great a temptation to earlier French historians, but from which the younger school is so remarkably free; nor can we entirely shake off the suspicion that there is, in one particular at least, a less cautious and critical treatment of the evidence than we have been accustomed to expect from him. The reasons for these doubts will be indicated as the plan of the work is presented.

The first volume, issued in 1886, contained M. Flach's description of the disorganization of society in consequence of the decline of the Roman state and of the German invasions—a result to be seen in incomplete and incompetent states, and finally in the general confusion of the age when the Carolingian empire fell to pieces. This period contained the beginnings of later institutions in the temporary expedients adopted to avoid the worst evils of the times, as in the case of the feudal system, but its essential characteristics were insecurity and anarchy. No better picture of the political disorder of those days has ever been made than that in the first volume of this work. With the second volume, the third book in his plan, the author begins the study of the effort of society to reconstruct itself, to find in the débris of earlier institutions and in the new expedients of the preceding age the material out of which a new organization could be constructed as a starting-point of general order and security. In other words, this volume begins the attempt to depict the formation of the more important institutions of the later middle ages as they arose out of the political chaos of the tenth century under the pressure of necessity—the necessity for some sort of orderly government. This brief statement of the general plan is enough to show the great importance of this study by a scholar of such proved insight and usually of such careful inductive methods as M. Flach. It is, notwithstanding the qualifications above expressed, one of the most remarkable books of this generation, and one which no student of mediæval institutions can afford to neglect.

The first steps towards the reorganization of society the author finds in various forms of local or private organization, formed to meet local or individual needs, but gradually taking on a public character. These are the rural commune, the urban commune, and the feudal system. In studying the origin of the rural commune M. Flach attacks with new arguments the supposition of Fustel de Coulanges that the village community did not exist among the Franks—a supposition already abundantly disproved by other investigators. It is interesting to notice that from his examination of the early evidence he arrives at a conclusion strikingly like that reached by Prof. Earle and stated in the Introduction to his 'Land Charters,' viz., that the *villa* and the community constitutions existed together. There is no indication of any knowledge of Mr. Earle's suggestion, and the evidence studied is entirely different, so that the similar conclusion is reached by an independent investigation. This theory in its general features—some points of detail being still in need of elaboration—is undoubtedly the most satisfactory yet proposed. In the opening chapters on the urban commune the condition of the cities during the earlier middle ages—in the transition period between the Roman municipalities and the communes proper—is examined, and a clear idea is given of the divided character of authority and of the great diversity of right and privilege in the cities at the beginning of the communal movement. These are both mat-

ters of great importance in relation to the later history of the cities, but they are usually omitted from the account.

Up to this point this volume is entirely in line with the first, and we can only be grateful to the author for the fresh treatment and the new material. It is when he begins to consider the origin of the communal constitution that serious doubts first arise, and they continue with each new subject to the end of the volume. He attacks, indeed, the reigning German theory of the development of municipal institutions out of market privileges with evidence that must be considered, at least for France; but he regards the special communal constitution as an outgrowth from a single one of the private corporations—merchant or trade guilds—which obtains a controlling influence in the city and so becomes a public corporation. This is not the old theory of the development of municipal institutions out of the guilds advocated by Wilda and his followers. It hardly seems so probable as that at first sight; and the essential difficulty, how the single guild obtains control and is transformed into a public corporation, is not clearly overcome. The history of the early stages of feudalism was one of the most valuable parts of the first volume. The later history of that institution in this volume contains the author's most revolutionary and most doubtful theory. He supposes that from the tenth to the thirteenth century the personal element, the vassal relation, remained the leading feature of the feudal system, as it had been in the preceding age, and that only later the land element, the fief, became important. This point M. Flach has certainly not proved, and his treatment of the evidence on the subject cannot be called impartial. One can hardly avoid the conclusion that he has been led, unconsciously in all probability, to this special theory regarding feudalism by the influence of his fundamental theory, that the private, and so later the public, organizations of this period are based upon the family, that they are an application of the family idea to organizations beginning in a time of otherwise entire disorganization. This theory seems to have influenced also his study of the commune, and it is certainly open to the charge of being metaphysical and à priori rather than the result of careful induction. The author considers very briefly a fourth form of organization, chivalry, and reserves for later treatment the King and the Church.

This volume is remarkable, like the first, for its full quotation of the sources, many of them never before printed. It brings into frequent use also a new body of evidence, the *chansons de geste*. These may certainly give us more light than they have hitherto been made to yield, if used with care, but it is open to question whether M. Flach has not in some cases taken as a trustworthy statement of a fact of the tenth century something which is in reality only the twelfth-century poet's idea of what the fact was or what it ought to have been.

It may be remarked in closing that the French are as great sinners as the Americans and English in the matter of wood paper—a fact which bids fair, in a couple of centuries, or even less, to make the present-day documents of these nations as rare as those of the tenth century, and their scholarship as difficult to prove.

Der Cicerone. Von Jacob Burckhardt. Sechste Auflage, bearbeitet von W. Bode. Leipzig: E. A. Seeman. 1893.

The 'Cicerone' appears this time in four volumes, the fourth containing nothing but the well-planned index of places. The 'Cicerone' is well known as the best companion the student can find for a leisure hour in Italy. As a connected account of Italian art, it is lucid, tactful, and suggestive; as criticism of individual artists or single works of art, it is appreciative, interpretative, and rarely fails to find "le mot juste." Burckhardt, as might be expected from the author of the 'Civilization of the Renaissance,' criticises without reference to the Catechism, and without pretence of being able to say precisely what colors an artist had on his palette while painting a given picture. His purpose is to connect the art of the Renaissance with the thought and feeling of the time, to show to what an extent the art is the product and expression of the civilization.

The merits of the 'Cicerone' were recognized long ago, and the section on painting was translated into English by Mrs. Arthur Hugh Clough. More recently a complete French translation has appeared. But many important discoveries have been made since the first appearance of the 'Cicerone,' and later editions have been edited by Dr. W. Bode, who has attempted to bring the work up to date. Unfortunately he has turned the sections on sculpture and painting into a happy hunting-ground for theories and attributions which have but slight chance of gaining acceptance. The volume on painting in the new edition has been considerably improved by the acceptance of many of Morelli's discoveries, but Dr. Bode has rarely taken the trouble to acknowledge his debt to Morelli, while he goes out of his way to let us know where he considers himself superior. Originality at any cost seems to be Dr. Bode's plan in editing, and this leads him in a work not intended for specialists interested in the controversy, but for the public, to turn around, now that all critics have agreed that the "Fornarina" of the Tribuna was painted by Sebastiano del Piombo, and ascribe this picture to Raphael.

Instances like this could be cited in great number, but a word must be said about the index, which the editor presents with a flourish of trumpets. Pretending to give it greater fulness, he has crammed it with a number of items snatched hastily from Crowe and Cavalcaselle, or from his own note-books, having no connection whatever with the text of the 'Cicerone.' In the Archbishop's Palace in Milan, for instance, there is no picture in the least resembling Lotto, and it would be hard to account for Dr. Bode's finding there a "Madonna and Two Saints" by this master, if we did not happen to know that Crowe and Cavalcaselle had mistaken a copy in this collection after a Previtale for a Lotto.

No notice seems to have been taken of the changes in location of works of art that have occurred since earlier editions, and the number of misdirections and mistakes is still great. The Niccolò Alunno of Deruta has now been in the Perugia gallery for many years. Most of the pictures of the Vicenza churches were placed in the communal gallery long ago. The student, it is true, is no longer directed to Massa Marittima instead of to Massa Fermana in pursuit of Crivelli, but the new index mixes up Castiglione Fiorentino near Arezzo with *Castel* Fiorentino, near Siena. This example, taken at random, must suffice, but very many others could easily be presented. The 'Cicerone' deserves much better editing than the director of the Berlin Gallery has been pleased to give it. A translation of the entire work into English, carefully revised in accordance with the present state of connoisseurship, and indexed properly, is an enterprise worth suggesting to an enlightened publisher.

Japan. By David Murray, Ph.D., LL.D. [Story of the Nations.] G. P. Putnam's Sons.

In appraising a new book on Japan—unless the author be a master of the language in both its archaic and modern forms—one has to look at the personality of the writer. If, to literary industry and skill in the arts of compilation, the author adds personal experiences that enable him in some degree to control and check his authorities, his work may be of peculiar value. In this instance the writer had good opportunities of studying the country and people, for he was during several years the honored and successful adviser of the Mikado's minister of education. There are here a firmness of touch and warmth of coloring which are lacking in the narratives of hasty tourists. There is especially that appreciation of perspective which is often exasperatingly absent from the sketches of those who give us "the real," or the æsthetic, or the religious or political Japan.

Holding closely to the idea of the *story*, Dr. Murray is unusually full in that part which deals with the times when clocks or almanacs were unknown in Japan. Not that he falls into the traps so nicely laid in the native literature, which is ridiculously full of the details of events alleged to have taken place a millennium before time was recorded, but which do so uphold the theocratic dynasty of the Mikados. On the contrary, being familiar with the work of Bramsen, Satow, Aston, and other puncturers of the bubbles of Queen Jingo, of Wani, the Korean teacher of the thousand-character classic, who in tradition made exposition of this document two centuries before it was composed, Dr. Murray refuses to find solid ground of history until the long-lived chiefs of the Yamato have had their day, and rulers of ordinary duration of life begin to reign. Yet, accepting the myths and legends as reflections of Japanese thought and representations in outline of history, he has selected with excellent taste and judgment the prettiest and most interesting portions of the narratives of the 'Kojiki' and other ancient compilations. In this respect Dr. Murray's book has peculiar value.

In telling the story of Japanese development during the middle ages, our author has the advantage which comes from utilization of the work of research done by the scholars who have filled that uniquely valuable treasury of the Transactions of the Asiatic Society of Japan. A good long chapter is devoted to Toyotomi Hidéyoshi. It may be that this man, a parvenu, was the greatest in Japanese history; and so it seems from Dr. Murray's story. Yet until the life of the unifier Iyéyasu is written with that fulness of research, in both Japanese and English, which, for obvious reasons, has been lavished on Hidéyoshi, we must continue to believe that Iyéyasu was Japan's greatest son. The Tokugawa régime, the episode of seventeenth-century Christianity, the story of feudalism and the advent of Commodore Perry, are all treated luminously and with proportion; but in writing of the restored empire the author's pen perceptibly warms to its work. With the makers of New Japan Dr. Murray wrought face to face.

Having a mathematical and chronological mind, he has given us a work exact in its notes of time. Hence, in the appendix, besides lists

of emperors and shōguns, we have the Japanese year, periods, and the laws of Shotoku Taishi, the lay-patron of Buddhism and promoter of education in the seventh century. In selecting illustrations, commendable care has been taken to avoid hackneyed material. There are several new pictures of decided interest, notably the portraits of Xavier, Perry, and the cabinet ministers in the seventies. As a rule, there is a creditable absence of slips of the pen and printer's mistakes. We note, however, the old spelling Saghalien, which is apt to put one syllable more than necessary in Saghalin; on p. 311, "Galowin," evidently a misprint for Golownin; and the repetition of the frontispiece picture of the great bell in Kiōto on p. 289. There are some statements which might have been more fully and clearly made had other interesting items been conjoined with those given. Yet the book, as a whole, reminds one rather of a well-turned casting for which there has been superabundance of metal, or of a gem from which much has been cut in making the facets, rather than of a work for which material has been lacking. Within the limits imposed by the series of which it is a part, this book stands as a good piece of honest workmanship, besides being thoroughly enjoyable.

The Nation.

NEW YORK, THURSDAY, APRIL 12, 1894.

The Week.

THE prompt passage by Congress of the bill to carry out the findings of the Paris arbitrators in regard to the protection of seals in Bering Sea, and the passage of a similar bill in the House of Commons, show, as Sir Richard Webster said, what a monument the arbitration was to "what could be done by fair argument toward settling dangerous international differences." Six years ago we had Mr. Phelps calling for a "resolute stand," and "earnestly recommending that the vessels that have been already seized be firmly held, and that measures be taken to capture and hold every one hereafter found concerned in it [sealing]." Four years ago we had Mr. Blaine rejecting Lord Salisbury's proposition to submit the questions in dispute to arbitration, and affirming that the United States would insist that their "rights within the Bering Sea and on the islands thereof" were "absolute." That meant that more English ships would be seized upon the high seas, and that meant war, as Lord Salisbury flatly told President Harrison it did; whereupon the latter concluded that he was in favor of arbitration after all. We may thank our stars he did, and when we see the absolute harmony of both parties and countries in agreeing now to do what Sir Julian Pauncefote vainly tried to get Mr. Blaine to do in 1890, we get some idea of how senseless the whole controversy was. The country never had any real interest in it, and never could be made to squeeze out a single tear over the sufferings of the gravid seals. Nor did it ever realize how near to a causeless and shocking war the Washington hot heads brought us in 1890, with their baseless contentions, so that it is not now in a position to appreciate properly the great victory for peaceful methods won by the Paris decision and the laws executory thereof now enacted.

What became of the dignity and deliberation of the Senate when this highly important Bering Sea bill was passed? It was introduced and ordered to a third reading on Monday, and passed without debate or division on Tuesday. Is not this dangerous haste for a revisory Senate? Could not Stewart have shown with ease that, if we had purchased more silver, we should not have purchased so many seal-skin sacques, and hence that the double standard is involved? If he had started in to do so, could he have been stopped? It begins to look as if it was less the rules of the Senate than the unruliness of the Senators that paralyzes Senatorial business. The Senate can pass a Bering Sea bill or a *Kearsarge*-rescue bill with lightning speed, but a tariff bill it must go on mulling for weary months.

The Treasury receipts are picking up. From internal revenue there was collected in March within $122 000 as much as in the same month a year ago. The income from customs continues to show a great falling off, but this is only what is to be expected and what must infallibly go on until the new tariff becomes operative. Then there will no doubt be a great rush of importations and a great swelling of the Treasury receipts. In anticipation of the passage of the McKinley law, importations increased at a tremendous rate, because that law put up the duties, and importers naturally wanted to stock up as fully as possible under the old rate of taxation. But the Wilson bill is to put duties down, and importers, just as naturally, are bringing in goods only from hand to mouth. All which shows that the interest of the Treasury, as well as every business interest, calls for the speediest possible passing of the tariff bill.

The increased internal-revenue receipts are a sure sign of reviving business. The best of it is that a similar increase is seen in the English revenue, which indicates that the international tide is rising. In fact, the unexpected turning of a deficit into a surplus in the British exchequer, together with the more cheerful tone of the Board of Trade, must cause great searchings of heart with our neo-bimetallist friends who are so anxiously watching for England to get down on her knees to them. Is there any "justice" in prosperity enjoyed by a country so hard-hearted in respect to silver? We submit this question to the ethical economists. Meanwhile, turning to our own improved fiscal outlook, we see good reason for believing that the deficit for the current year will not run much if any above the $50,000,000 realized by the recent loan. Another thing that the returns imply is, what has been so often shown in our financial history, the tendency of our public revenue to overtake growing expenditures. It is safe to say that, from the internal revenue and the customs duties, we could, within two years, get all the revenue needed without recourse to the vexatious income tax.

In the matter of bringing the tariff bill to a vote in the Senate, it is gratifying to see a disposition on the part of the Democrats to push things. It is also gratifying to see the Republicans begin filibustering against speedy action. This is gratifying because it shows how hollow is all their talk about being confident of beating the bill, and also because it will prove to the most thick-witted Democrat that if it is good Republican policy to go slow, it is good Democratic policy to go fast. Some heads are too dense to find out which way to go till they see the other fellows start, and then they know enough to go in the other direction. There is no need of another Democratic speech on the tariff bill. The party managers ought to leave all the talk to the Republicans from this day on, and press steadily for a vote. No vote will now be changed by anything that is said. The particular form of the bill as it passes the Senate is of no great consequence, as the final form will be determined in conference committee in any case; and the sooner it is sent there, the sooner will the country know what the law is going to be.

Senator Hill's speech on Monday changes nothing. Everybody knew before that his mind was filled with a consuming jealousy of Mr. Cleveland, and his exhibition of the same old sores was to have been expected. Everybody knew, also, that he would not dare to say explicitly that he would vote against the tariff bill to which he and his party are pledged, and he did not. His remarks on the income tax are mainly a compilation of the opinions of sound thinkers, and in so far they are sound. Where he got those charming flowers of rhetoric which he here and there hung upon some projecting corner of his speech—such as "the lovely cynosure of the nations" and "the sea-wall of our paradise"—we leave those to guess who know something of the history of others of his oratorical productions. The chief question raised by his speech is, Will it be possible to defeat the income tax in the Senate? We think it very unlikely. There are, to be sure, a considerable number of Democratic Senators who will vote against putting the tax in the bill—possibly as many as eight. But there are at least as many Republican Senators from the West who will vote for it. One of them, Senator Dubois, has been quoted as being ready to vote not only for the income tax, but also for the whole bill. The Populists will, of course, vote for it. Senator Cullom will vote for it if he has not changed his mind since 1870. In that year he favored an income tax with an exemption of $2,500, and defended it on precisely the same grounds as are now urged in support of an exemption of $4,000. That is to say, as Mr. Schenck, the Republican

chairman of the ways and means committee of that year, put it, an income tax with a high exemption cannot be "odious," "for the simple fact that people like a tax which somebody else pays." That was good Republican doctrine in 1870, and Senator Sherman then held it substantially.

The several "armies" that are marching over the country and converging upon Washington city are having a hard time of it. In several of the towns through which they have passed, the food and lodging provided were not to the liking of the troops, although there was an ardent and universal desire on the part of the inhabitants to offer them every inducement to move on. In Oakland, California, a subscription of $200 was raised to accelerate the steps of the recruits of Coxey's army, 600 in number, who had enlisted in San Francisco. The mayor of that city had generously sent them over to Oakland by boat at his own expense. The Oakland people were naturally indignant, but they clubbed together and hired a train of box cars to move them to Sacramento. When the army reached the station and found that they were not to ride in passenger cars, they refused to go, and marched back to the place where they had spent the night. Then the militia were called out, and, after a protracted negotiation, the army agreed to ride in box cars as far as Sacramento, where they expected that the Central and Union Pacific Railways would furnish them transportation to the East, and the towns along the road furnish rations. They are probably going to Washington to insist that "the Chinese must go." They are the ones who prevailed upon Congress to pass the Geary bill and other like measures. If they ever do reach their journey's end, it is to be hoped that they will insist on having comfortable quarters in the cloak-rooms and committee-rooms of the House and Senate, and free access to the restaurants, until the Chinese question is settled.

Another phalanx settled down at East St. Louis. This is Frye's army, or one wing of it, hailing from Texas and the Southern border. These "sojers" had the bad luck to receive an offer of $1.50 per day to work at digging trenches for the laying of pipe by the East St. Louis Water Board. They refused it, of course; but when the facts became known, the soft-hearted and soft-headed people who had been supplying them rations free, stopped doing so, in consequence of which the army has actually suffered from hunger. Besides this unfeeling conduct on the part of the inhabitants, the railroads have refused to carry them eastward; so they are left stranded on the verge of a cheerless summer.

Coxey is a horse-dealer when not marshalling his hosts. He left his forces some days ago, and travelled by rail to Chicago to attend a sale of his own horses. He arrived the day after the sale. The prices realized were very unsatisfactory. He had given an order to the auctioneer to sell without reserve, so he found that a horse which he valued at $1,000 had been sold for $145. He was very angry at this result, and blamed the Government for it. The trouble, he said, was the shortage of money. Horses that cost $1,000 would bring only one-tenth of their value, because there was so little money in circulation. "We have introduced a bill," he continued, "providing that the general Government shall issue $500,000,000 to be divided among the States pro rata, $20,000,000 a year till the whole is distributed." Coxey wants also "to abolish the usury system." By these two methods, viz., issuing money to the States and abolishing interest, he thinks that horses might bring a good price after the new system was fairly started. Other dealers say that the real trouble in the horse market is the multiplication of trolley and cable lines of street cars all over the country, which have thrown out of employment thousands of horses, and that the only cure for this is to breed fewer horses and more cattle, sheep, and swine. Coxey will never believe this. Meanwhile Col. Wm. G. Moore, the chief of police of Washington city, is getting his forces in readiness for Coxey, and proposes to arrest him as soon as he arrives within the jurisdiction. There is a law in force in the District of Columbia making it a penal offence to bring any person there, knowingly, who is likely to become a public charge. This is one of the oldest laws in the country, dating back to the early colonial period. It will fit Coxey's case nicely, and will give him leisure to perfect his financial plans before the next horse sale comes off.

The overthrow of the Populists in both Kansas and Colorado seems to be assured by the result of the municipal elections last week. Wherever party fights were made in Kansas, heavy Republican gains are reported, not a single case having occurred where the Populists held their ground. In Colorado the Populists carried only six towns, against twenty-two last year, and their majorities were reduced in these six. Although the Populists have been favorable to woman suffrage, the greater part of the women in each State voted against that party in these local elections, as was the case in the municipal contests in Kansas last year. Their attitude will doubtless be the same in the State election in Colorado next fall; and although that dreadful crank, David H. Waite, had nearly 7,000 plurality for Governor in 1892, it seems quite safe now to predict that the Populist party will be "snowed under" in November. The task will be still easier in Kansas, where, on a vote four times as large as Colorado's, Lewelling's plurality in 1892 was only about 5,500, with the Democrats generally supporting him heartily. An equally effective fusion is out of the question this year, and the swelling Republican tide would easily overwhelm it if the managers of the two parties could arrange a joint ticket.

We are glad to note in a Southern newspaper some views regarding the East and "the money power" by a public man which are calculated to inform the reader rather than to inflame an ignorant prejudice. "I want to lift up my voice," writes Judge W. R. Hammond to the Atlanta (Ga.) *Journal*, "and enter my protest against the clamor that is being raised, and the prejudice that is being engendered, by our public men and newspapers against what they are pleased to term the money power of the East." He says that this feeling pervades the South and West, and has already reached such a pass that "no public man can afford to show his head in the South unless he rushes forward with precipitate haste and declares his everlasting and undying opposition to the money power of the East." He proceeds to declare his conviction that "no more fatal mistake was ever made by a people, and that to persist in it will only bring disaster upon our own heads." Judge Hammond pronounces the prejudice of the Southern people against the East both unjustifiable and ill-advised. The East has the capital of the country, and the South needs this capital. The only reason Northern capital does not flow South more freely is a lack of confidence, and this will only be aggravated by the growing spirit of animosity. He proceeds:

> "It is not fair to call Eastern capitalists money sharks. Their dealings with the people of the South have not proven them to be such. They do not exact high rates of interest, but are satisfied with very low and reasonable returns. They want good security, and will not lend or invest without it if they know it. But their experience with certain classes of our people has taught them that they must not be too confiding, and when they keep their money at home we fall to abusing them and call them hard names."

The *Journal* endorses Judge Hammond's position, and declares its belief that "the demagogues in politics and journalism who make angry denunciation of another section of our common country their stock in trade, underestimate the intelligence of the Southern people." The surest way of showing this is for the sensible men to follow Hammond's example and speak out.

The woman-suffrage movement received a further impetus last week in the passage by the Iowa Legislature of a bill giving women the right to vote at

municipal or school elections involving an issue of bonds or increase of the tax levy. This makes three large and adjacent States in that part of the Union—Iowa, Kansas, and Colorado—in which women can vote in municipal elections, while in Colorado they can also vote in all other elections. This full right seems likely to be extended them in Kansas when the men vote on the constitutional amendment next November. The movement has also made more headway in Massachusetts this year than ever before since the annual agitation before the Legislature began in 1867. A measure giving women the right to vote in city and town elections was passed by the House of Representatives week before last—the first time that such a bill has ever got through one branch—but was rejected by the Senate last week. The discussion has shown a growing indifference and half-heartedness on the part of former opponents, remonstrances from women having nearly ceased. The political aspects of the matter have been very curious. While not a partisan question, most supporters of the bill in the House were Republicans, and the Democrats generally opposed it. But some of the Republican managers and editors insisted that its practical working would help the Democrats in the cities, and called upon Republican Senators to "save the party" by rejecting the measure. A bill which had passed the House by a large Republican majority was thus defeated in the Senate through the efforts of the Boston *Journal* and Henry Cabot Lodge, now the recognized machine manager of his party.

The Republicans have carried Rhode Island by a larger plurality than they have had in a State election for many years, and have secured overwhelming majorities in both branches of the Legislature, thus making certain the election of a United States Senator. This result is not different from what every competent observer of political currents in and outside the State had expected. It would be difficult to find a Northern State in which a similar result would not be expected and recorded were an election to be held in it to-morrow. There is an anti-Democratic wave sweeping over the entire country, and its effects are felt in "reduced Democratic majorities," even in Texas. The hard times have much to do with this, but the main cause is blundering incompetency exhibited by the Democratic majority in Congress, and especially in the Senate. The whole country is so weary and disgusted with a party that can do nothing but dally and talk, when trade and industry are in suspense and can be restored to activity only by prompt action, that it is with extreme difficulty that any man of intelligence can say a word in defence of the Democrats, much less vote with them. We have little expectation, however, that a realization of the meaning of the elections will penetrate the Senate chamber and affect the minds of the remarkable personages who are conducting the Democratic policy in that body.

The small amount of pains that Croker seems to take in the matter of concealing his wealth, and the absence of any demonstration on the part of his followers on his return, gives some color to the belief that he contemplates an early retirement from politics. A man who can afford a sixty-day trip in a private car must be very well off, and fully entitled to keep a stock-farm and a racing-stable. It is probable that it was in order to have these things that he went into politics twenty years ago, and, having got them, there seems to be but little reason for his staying in politics. He has now far surpassed Tweed in luxury and extravagance. Tweed had a house on Fifth Avenue at the corner of Forty-fourth Street, but it was very inferior to Croker's. The inside was quite commonplace. He spent most money on the stable, which was handsomely wainscotted and had a fine sitting-room in it in which the Boys used to assemble for punch on Sunday mornings. But he never attempted the external display in which Croker indulges. His greatest outlay was on the Americus Club at Greenwich. This was a gorgeous abode, it is true, but it was not reserved for Tweed's own use. The humblest Tammany Boy could become a member of the club, and, if he was unable to pay for his drinks and other good things, Tweed cleared off the deficit. Anybody who saw the Boys on Monday morning coming back to their labor in the City Hall in the summer of 1868 and 1869, hearty, rubicund, and frolicsome, must have acknowledged that Tweed was a generous and public-spirited man. Croker's pleasures, on the contrary, are strictly selfish, and his expenditures on his own comforts and amusements, colossal. It seems hardly possible that he expects the Tammany rank and file to put up with the spectacle. There are some things the common Tammany men cannot stand, and great personal display on the part of the chiefs is one of them. There are certain expenses which are well known to be permissible : a large diamond pin for the shirt front is one of them. A good house, not in a fashionable neighborhood, is another. A pair of fast trotters is another. Plenty of champagne, and rich dresses for the wife are also allowable. But for a stock farm, a racing stable, and private cars there is no precedent. If Tammany can stand them, it will show an immense advance in the science of government in this city.

The defeat of the English Ministry, after a strong effort to prevent it, by a majority of one—the Irish being largely absent from the division—is another bad sign of the times. The dissensions among the Irish, too, seem to be increasing, and also their recklessness about exposing them to the world. Worse still, the Liberal press has begun to abuse the Irish and defy them. All this looks like an early dissolution, and does much to corroborate those who have maintained all along that Mr. Gladstone's retirement meant a great deal. It is probably only now that we shall begin to see what his influence on the Liberal party and on the Irish really was. No other man could have held together the discordant elements of which the Liberal party was and is composed. Whether any other man can now, remains to be seen. The appearance, too, of the "Labor candidate" at the Lanarkshire election to cut down the Liberal majority one-half has an ominous look. At the election of 1892, "Labor" had only just begun to "feel its oats," so to speak, and yet it did the Gladstonians a good deal of damage. Many things have happened since then to exalt its horn and sharpen its expectations. Lord Rosebery is said to be popular with the Labor element, but a rich peer, who has horses on the turf, can no longer get a strong hold of the masses in England. The notion that he can is a tradition of the old times, when peers spent fortunes fighting for county seats. Labouchere, in objecting to a peer for the premiership, was doing a very futile thing under the circumstances, but he was simply in advance of his time.

The *Indépendance Belge* publishes a curious table respecting the accidents to workingmen for which indemnity claims were made in 1893, classified according to the days of the week on which they occurred. The striking thing is the great number of Monday victims—a consequence, the *Indépendance* thinks, "non du repos, mais de l'alcool dominical." By Thursday the effect of Sunday libations has been reduced to a minimum, and even unlucky Friday has a far better percentage of immunity than has blue Monday. Saturday accidents are numerous, but this fact is said by the Belgian Labor Bureau to be due to the unusual number of falls from stairways and windows and ladders incident to the Saturday cleaning-up. Taking the country through, the *Indépendance* estimates that upwards of 600 accidents happened to workingmen on Mondays and Tuesdays, due solely to the influence of Sunday drink. This is an important consideration bearing upon the question of employers' liability for such accidents. Must they indemnify the intemperate as well as the abstemious ? If they are bound to pay for accidents, should they not have the right of supervising the habits of their workingmen so as to guard their safety and their own pockets ?

VAGABONDS' DISEASE.

We read in the *Medical Journal* that Dr. Raynaud recently gave an important clinical lecture in Algiers on the diagnosis of "vagabonds' disease." The origin of this morbid condition may be inferred from its name, but the difficulty is to distinguish it from other forms of disease which it closely simulates. Some of its symptoms, for example, resemble those of malarial poisoning, and others would lead the unwary to take it for a genuine case of Addison's disease. But Dr. Raynaud was able to differentiate it successfully, and to demonstrate that its deceptive resemblances to other ailments were due to the "effect of scratching and lousiness," and to that "of poisons carried in the blood and irritating the nerves."

That the country is now suffering from an epidemic of political vagabonds' disease is clear. Its most fearful ravages are to be seen in Coxey's army, and in the recruits for it gathering in various parts of the land; but it is not limited to them. It may be diagnosed in every man in every country who prefers agitation to work. Like its medical analogue, it often simulates other diseases. It deceives some worthy and many foolish people into confounding it with the disease of poverty and of lack of work. But it is not that. Coxey's and Frye's men do not want work. They refuse it in transit, and they would feel insulted and outraged if it should be offered them in Washington.

What they want is precisely what the young Paris dynamiter Henry wanted, and so frankly avowed that he did, in a letter which the Count de Kératry has lately published. It was a letter addressed to a member of the Municipal Council of Paris, and protested against the latter's assertion that "what the workingmen of Paris want is work, and it would be an insult to them to suppose that they are asking for bread, not for labor." After speaking of the way education had "opened the minds" of the rising generation, the young anarchist went on:

> "Do you imagine that work for the city of Paris will satisfy their needs? Certainly not, and there is no hope for these young men except in a *bouleversement complet* which will enable them to establish a society that will provide for every one according to his needs. Nor are these needs only those of the stomach. Do you suppose that we have no right to intellectual and artistic enjoyments? Do you imagine that a man who earns four francs a day can buy books out of that sum and go to the theatre, not to mention other things? And how would he get time to enjoy himself if he worked all day?"

Evidently this is only a simulation of the genuine disease of the unemployed. It is the fruits of labor and saving that these men have their eyes fixed upon, and they have no idea at all of either laboring or saving. Any work that an honest man can set his hand to, used to be the demand of the unemployed. That is the demand of the bona-fide unemployed now, but there are vast numbers of the professional unemployed abroad in the land who have got far beyond all that. It has to be for them just the right sort of work and the right rate of wages, or they will none of it.

We do not know that there is anything particularly new about this vagabonds' disease, except its extent and severity at present. As long ago as Socrates's time the contrast was well recognized between "those who work and those who will not work, but who reflect intently on the means of subsistence." There is no doubt a tremendous amount of such reflection going on in Coxey's army. Outside of the studies and classrooms of socialistic professors of political economy, we do not believe that anywhere has there been more intellectual labor expended on the problem of giving everybody a bellyful without working, and crying, "Hang the expense." But with all the taking thought on this subject since man shed his tail, no way has ever been devised of living simply by reflecting intently on the means of subsistence. The gentry who have lived by their wits in this world are few and far between, and their careers have almost always, at some point, touched the stocks, or the jail, or the gallows.

Dr. Raynaud's treatment for vagabonds' disease is "baths and a tonic regimen." It is high time the authorities along Coxey's route began to apply it to his "industrial" soldiers who will not work. A literal bath would no doubt have its terrors for them, but what they need is the cold douche of strict police supervision, of the application of the laws against tramps, of the refusal of food without work for it. The thing has ceased to be a joke, and the infinite capacity of the American people to make a farce out of serious political events was never seen to worse advantage. The good-natured citizens who ironically cheer the onward march of these vagabonds, and keep them supplied with food, partly for the joke of it and partly to get rid of them the sooner, ought to see that they are not only preparing a serious problem and burden for the local authorities at Washington, but are blowing up this ridiculous movement into such proportions as to be a national disgrace, and doing all they can to multiply in this country the Henrys who despise labor but insist on having the fruits of labor. The tonic regimen of our vagabonds cannot begin too soon, and it is to be found in the work-house, the police stations, the wood-yards, and the penitentiary.

THE GREAT GODDESS ARGENTUM.

We have received a letter from Mr. Anson Phelps Stokes on his system of "joint metallism," in deprecation of our remarks last week. Far be it from us to accuse Mr. Stokes of sympathy with dishonesty or anarchism, or of any desire or intention to aid or abet them. Of course it would be silly to do so. But a strict regard for truth compels us to express, as often as the opportunity offers, our solemn conviction that all attempts, whether made in Boston or in New York, to persuade the world that the use of silver as full money of account, whether jointly with gold or not, is in any sense a duty of the Government, or is called for as a protection for the poor man against "gold-bugs" or "Wall Street sharks," promote populism, communism, anarchism, greenbackism, and simple silverism, and do threaten this country with unnumbered woes.

Nearly all the trouble has arisen out of the personification of silver as a moral being which began in 1877-8, and of which we find a trace in Mr. Stokes's letter where he speaks of the "historical and just position" of silver. This, if it means anything, means that there is some position, in the currency or financial arrangements of the nation, which is due to silver as a matter of right and by prescription, and that it can, as an individual or a corporation can, *claim* a place in our medium of exchange, of which we cannot deprive it without a breach of the moral law. To our minds there has been nothing more extraordinary than this since Moses, on coming down from the mountain, found the Israelites, in spite of the most patent proofs of the divine sovereignty, worshipping a golden calf of their own making. It illustrates admirably what to many people now seems incomprehensible, the tendency of the whole ancient world to mythological explanations of the universe. The notion that silver has rights and virtues, that it is courageous and faithful to its friends, and loves the poor, and has made itself an historical place, and is entitled to justice—all of which propositions have been maintained during the last fifteen years by American orators and writers—shows how near we are, in spite of Christianity and science, to the state of mind in which men deified the moon and sun, the mountains, the streams, and even wild beasts and oxen.

To us silver has the same historical position, and has the same rights under the moral law and the United States Constitution, as wheat or leather, wampum or cowries, or coal. There was a time when wheat was twice as dear as it is now, but did it acquire an historic right to be kept at that price, and do we insult it by selling it at 64 to 66 cents a bushel? It has played a more prominent part in the world's history by far than either silver or gold, and ought to have a far higher place in our affections than either. And yet it is bought and sold on margins by Chicago and other speculators, with an indifference to its peace and comfort which is well

calculated to excite the indignation of an honest worshipper. Most other commodities which have played a prominent part in the growth of our civilization have the same story to tell. The march of science has cheapened them, by lessening their value to mankind; but if they are to be worshipped as silver is, that is, treated as moral beings instead of simply brute instruments of human comfort and convenience, we must go back to barbarism. All who know India acknowledge that the sanctity of the cow is in that region a serious hindrance to progress. It cuts the Hindu population off from both beef and a good quality of leather. It sometimes leads, as it did the other day in Bombay, to riots and murders. It is, of course, difficult for those who look on the cow as simply an animal which furnishes milk and hides, to avoid occasional displays of irreverence or levity in her presence; and this wounds the Hindu, as our silver-men are wounded by want of respect for silver, in their tenderest part. But what is the remedy? None that we know of except the growth of knowledge and more scientific conceptions of the universe.

Silver is a metal which mankind has found useful as currency in times past, when its value, like the value of nearly all commodities, was pretty steady. Various circumstances, concerning which there is more or less dispute, have deprived it of a good deal of its usefulness as currency, and there is a general disposition among the nations which can afford gold, to discard it. The one way to meet this tendency is to show that the value of silver is likely to be again steady. To claim for it divine honors or moral rights is simple paganism, and immensely ridiculous. Hides were once wonderfully useful as clothing. Indeed, they were, in northern climates at least, probably the first clothing man put on after his own hide became too tender for exposure. Did this give hides an historic position? Did it give them a claim to justice? Did it make the use of broadcloth a wrong to them over which the human conscience should reproach itself?

FARMS AND FARM MACHINERY.

Mr. E. V. Smalley of St. Paul has in the current *Forum* an interesting article on the effect of farm machinery upon farm labor. The self-binding and reaping machine will do the work of ten men with sickles. The "header" is an invention which so far has been used principally in California. It is propelled by six horses and is steered by a wheel in the rear; it clips off the heads of the grain and delivers them to wagons driven beside it; it will cut twenty-five acres in a day, and will do the work of a platoon of men under the old style. A sulky-plough, with four horses and carrying two ploughshares, has doubled the area which one man can plough over in a day. Combination-harrows in like manner will go over three times as much ground as formerly. From the time of the Pharaohs to our own day, seeding was done by scattering the seed from a bag carried by the sower as he walked over the field. Now two or four horses haul a six or twelve-foot drill and save the time of several men. In all these cases the saving in human labor has come from inventions which substitute horse-power. To utilize such devices fully requires farms large enough to warrant the keeping of animal equipment sufficient for the best economy.

Another kind of labor-saving has been effected by the employment of steam power. To the thresher, with fanning-mill and straw-carrier, is now added a device which saves the labor of human feeders and band-cutters. This threshing combination is run by a portable steam engine which burns straw for fuel, and which, when its work at one farm is done, can use its own power to convey itself to another. Farming operations which require the movement of the power over the ground with the progressing work, have not been helped by steam. Field steam-engines get caught in rough or wet ground, and cannot be relied on. Yet it is possible that another generation will see as marked improvement here as in threshing. Electricity has been applied successfully to so many uses that it is within reason to believe that it will be made to serve the farmer in those parts of his work which need only some outside power to double or quadruple his efficiency. Mr. Smalley's conclusion is: "At a very moderate estimate, the farmer of our day with the help of machinery exerts a productive force equal to that of three men in the days of his grandfather."

It is clear enough that this fact has an important bearing upon the prices of farm products. A decline in price is an inevitable result of such savings in labor and in cost of production. Certainly we cannot charge up all our falling quotations for grain as losses against the farm. Yet one result is to discourage bonanza farming. Low prices for wheat and high prices for land have changed the outlook for large farms. A big farm, run simply as a business venture, with superintendent and gangs of laborers, and of which all the crop is sold, does not differ in principle from the factory. Such a farm "manufactures" grain for market, and, because of the chances of crops and prices, really runs more risk than a hat or carpet factory. On the other hand, the rising prices of land tempt the sale of acres to secure the profit on the original investment — perhaps but a twentieth of the present values. Purchasers of 160 or 320 acres (one-quarter or one-half a section) have this advantage over the bonanza owner; they are sure of a living, rent free, and are dependent only upon their money crop for ready cash to pay for groceries and mortgage interest. Yet even such a farmer must have land enough to allow him to use to the best advantage the improved farm machinery of which we have spoken. It is a well-known axiom in the business world that a merchant should try to make up for decreasing profits by selling a correspondingly larger quantity. The farmer in the West, perhaps unconsciously, is moved by the same reasoning, and as prices for wheat or other products fall, he endeavors to employ machinery so much the more efficiently that he may produce, at the same expense if possible, double the quantity of grain by farming twice the acreage. In such a process the incompetent owner must give up his land to the more enterprising farmer. An eighth of a section (80 acres) or a quarter (160 acres) no longer makes an economical farm. The play of these forces seems to set limits in both directions to the number of acres which can be advantageously worked. Though farms containing one section (640 acres) are numerous in Minnesota and the Dakotas, their number is not increasing. Mr. Smalley regards 320 acres as about the average farm under present conditions in regions where there is nothing (such as stumps or stones) to hinder the free working of agricultural machinery.

Yet, while such an average limit may be set now, we cannot assume that it will remain so. Continued low prices for wheat will slowly work out a further revolution in Minnesota and Dakota. More improvements in farm methods will be demanded so that profits may not fall with prices. If electricity can help the farmers out, there will be inventors who will try to apply it. In this and other ways it may easily be found that a still larger farm than 320 acres can be worked by one farmer with advantage with better machinery. It will be recollected that more improvements in machinery were made during and immediately after our civil war than at any similar period in our history—because the needs were great. Necessity is still the mother of invention, particularly in the United States.

ANOTHER "WAR."

It is quite evident that we are on the eve of another journalistic "war." The notes of preparation come loud and clear from numerous offices. The old Warriors of the Chilian conflict are all sharpening their sabres and are filing the rowels of their spurs. The war is of course to be with England. The conduct of that power in not claiming Hawaii has left a feeling of great bitterness in many an American heart, which

has been aggravated by her failure to make "a naval demonstration" in favor of the Queen in the neighborhood of the Islands. She is now going to practise the grossest duplicity with regard to the Bering Sea matter. She has engaged under the arbitration at Paris to pass an act of Parliament carrying out the regulations settled by the arbitrators. The act has passed or is passing the House of Commons. The English counsel say it is perfect in all respects. Mr. Bayard says it is, too. But it appears there is a clause, 7, which provides that if the naval officers in command of the cruisers are satisfied that the master of a ship caught sealing had not had notice of the passage of the act before sailing, he is not to be punished personally. Now the Warriors say that this is all nonsense, that the real clause 7 provides that the act is not to apply to vessels which sailed before its passage, and that they may go on sealing all summer. Sir Charles Russell, the British attorney-general, denies this. Everybody denies it who has seen the act. But why should these denials stop the war? The times are ripe for war. Advertising is dull and sales are small. A war would stimulate both.

From exclusive information received about two months ago, many Warriors were satisfied that Great Britain would never pass an act at all, but just go on catching seals until we blew her out of the water. In that case the United States was to "act alone." It is true she has now passed an act, but what an act it is! The *Evening Sun* says, "There is serious doubt how far it goes." The Providence *Journal* calls for a "prompt and emphatic protest." The Chicago *Journal* is naturally "too much exasperated to regard any longer with calmness either Canadian brutality or English duplicity." The *Mail and Express* says that "once more" (last time not mentioned) "this administration has been overreached by England. Does any one think President Harrison or Mr. Blaine, etc., etc." The Boston *Journal* says it is "a successful game of bluff against the American Government." The penalty for sealing without a license imposed by the American act is a fine of not less than $200 and imprisonment for not more than six months. The penalties in the British act are doubtless the same. But we have had for some time an act making sealing unlawful, within certain dates. The British have not. It is now lawful for a British subject to go sealing. To send him to jail and fine him for disobeying an act which was passed while he was at sea, and of which he had no notice, would be something new in British jurisprudence, and apparently a violation of natural justice. In fact, it is a fair question whether ignorance of the act would not be a bar to conviction in any court of justice. Therefore, the British act allows the commanding officer of the cruiser, if he is satisfied that the captain of a sealer whom he has caught did not know of the passage of the act before he sailed, to let him off without arrest or trial. But, of course, he ceases to catch seals from that moment.

This much in explanation of a rather silly row. But we do not put it forward as a reason why there should not be a war. There surely must be some earthly punishment for the immorality of Great Britain, and as no other power seems disposed to tackle her, why should not our journalists undertake it? Her conduct with regard to Hawaii we have already mentioned. Her monopoly of the South American trade is equally provoking. Senator Lodge in his great silver speech shows that "it is England which is to-day the great enemy of any effort for the restoration of silver to the world's currency."

> "I do not mean," said he, "the whole of England, but the bankers and moneyed interests of London. . . . England is governed in her attitude towards silver solely by her own interests. She is not engaged in maintaining the gold monometallic standard because she is in love with what some persons declare to be an economic truth. She is engaged in maintaining it because her bankers and capitalists believe it pays. Therefore, it seems to me if there is any way to strike England's trade, or strike her moneyed interests, it is our clear policy to do it in the interest of silver."

Now, can there be any better way of "striking her trade and her moneyed interests" than war? We can cover the sea with fast cruisers who would destroy or shut up in port all her mercantile marine in a month, and put a stop to her infernal habit of buying our produce and giving us her damnable goods in exchange. We want her gold, and her gold we cannot get except by force. Moreover, there is a moral side to war which cannot be overlooked. Knowing that these London bankers and moneyed interests are sticking to the monometallic system "in their own interest," and "because it pays," should we allow them to persist in their vicious courses? Ought we not with our resources to "pull" these banking-houses, so to speak, in the interest of mankind? We have already in Hawaii struck a splendid blow for chastity. Should we not in England strike another blow for unselfishness and silver? The spectacle of superb disdain for profit which we ourselves show in all our transactions, has evidently been thrown away on this brutal Power. It is time to give her a touch of real Christianity at the cannon's mouth. And it must stir every American (not to say journalistic) heart to know that, when the blow is struck, it will be struck for a modest, unassuming metal like silver, which vaunteth not itself, and is not puffed up, and if people do not like to buy it at one dollar and twenty-nine cents an ounce, goes quietly and patiently at sixty-three and a half cents an ounce. A war for silver and to punish the wicked English bankers who use gold "because it pays," would in truth kindle once more in the modern world a flame of that sacred thirst for right and justice which seems for the present to have taken refuge in Coxey's army.

THE AWAKENING OF HINDOSTAN.

LONDON, March 30, 1894.

CASUAL visitors to the House of Commons are not likely particularly to notice a certain quiet, elderly gentleman, under-sized, slightly built, sallow-complexioned, kindly-eyed, with white hair and beard, and wearing gold spectacles, who occupies a seat on the second bench below the gangway. Yet upon him centre the political hopes of tens of millions of the human race; his death would perhaps be sincerely felt as a personal, a real loss by a greater number than would that of any other person. This man is Dadabhai Naoroji, "member for India," by grace of the electors of Finsbury.

The more it is considered, the more wonderful appears the sway of the United Kingdom over India; two North Atlantic Islands, smaller in area than the State of California, controlling a territory four thousand miles distant in the torrid zone, thirteen times their size, and with eight times the population—a territory held so firmly and yet so lightly as to require but one-twentieth (in proportion to population) the display of military force required to attach a component part of that kingdom, professing a common Christianity, and conquered seven hundred years ago. From time to time our hearts sicken, and our cheeks flush with indignation, at the well-authenticated accounts of brutal wrong and outrageous oppression inflicted in our name in the East. We cannot glory in empire which had its rise in lust of gain and aggrandizement, not in the spirit of Bishop Heber's hymn. Such empire must be accepted as a fact, calling, not for idle repinings over the past, but for the discharge of the responsibilities entailed upon us in the present; and we should not, perhaps, dwell so much upon the degree in which the exercise of this empire falls short of Christian ideals as on the manner in which, in present intention and effort, it rises above all previous ideals of empire on such a gigantic scale.

There are perhaps some hundreds of young Indians in London, of all races and of all creeds, engaged in study or business. Girton and Newnham, as well as Oxford and Cambridge, have their Indian alumni. There are also numbers of Indian residents and Indian visitors, often of princely rank. When at assemblies, mixing with these our Indian fellow-subjects upon terms of perfect equality (in so far as we are equal to them), there is something exhilarating and inspiring in the thought that we are all bound together under the same power, that our interests are to a certain extent identical, that, theoretically, at least, we stand upon the same level. It is a measurable approach to a "federation of the world." While as yet there has been no realization of the Imperial proclamation issued after the Mutiny—a proclamation guaranteeing equal consideration and protection for the poorest Indian ryot and for the British noble—it was yet an irrevocable step forward. The old ideal of India, a land to be exploited for the benefit

of a chartered company, was superseded by that of India to be governed for the benefit of its inhabitants. If, as has been said, to stand on London Bridge and watch the traffic rolling by would be a cure for separatist aspirations in the mind of an Indian potentate, so will study by young Indians in the Inns of Court and the universities prevent their ever resting satisfied with less fair dealing and liberty in their own country than are accorded on English soil.

On the other hand, the democracy of the United Kingdom are realizing the extent to which "Indian methods" of government and administration might react upon them at home; they are beginning to observe that most British gentlemen, after a few years' service in India, whether as simple writers or as proconsuls, return deeply imbued with suspicion regarding the masses and with reactionary notions of government. Then, again, the close intercourse with a mass of acute religious thought such as exists in India, impervious, for the most part, to Christian dogmas, yet combined with a high standard of civilization and of daily life, has doubtless largely contributed towards the modifying of old notions regarding the necessity of belief in the creeds of the schoolmen, for happiness in this life and hopes concerning the next. Thousands here are learning that the lives of many professing Christians in India are more "heathen" than those of the heathen themselves; which helps to bring home the truth that real Christianity consists in a life and not in a name—that "the heathen in his blindness" may be more truly Christlike than the professing Christian. British missionary effort may be well content if it can counteract, even in a small degree, the heathenizing influences of British occupation. The attitude of mind, in the future, of young Britishers who are likely to be called to positions of responsibility in the state towards the natives of India, cannot but be modified by present emulation with these in classical and mathematical triposes, rowing contests, and cricket elevens.

Nowhere, though as yet but feebly in comparison with what they ought to be and will yet be, are the stirrings of the national conscience regarding India more marked than in the House of Commons. The idea of empire loses force in no degree with the increase of democratic sentiment; it has, however, become purified and elevated—interfused with a nobler conception of duty towards the governed. Returned Anglo-Indian officials are no longer having it all their own way. A committee has been formed of members determined that more attention shall in future be given to the claims of the people of India. Powerful impetus has been afforded to this movement, both within and without the walls of Parliament, by the circumstance of two quiet American ladies (Mrs. Andrews and Dr. Kate Bushnell), by their investigation of the cantonments system, having brought to their knees Lord Roberts and a great department. It is felt that we are indeed living in a fool's paradise regarding Indian administration when it has been possible for Anglo-Indian officials for many years deliberately to defy the declared will of the House of Commons, and when, but for a combination of saintlike devotion, tact, and "Yankee" 'cuteness on the part of two ladies travelling without credentials, the British public would still be blinded as to a continuance of the foulest practices.

The mainstays of the Indian movement in Parliament are Mr. Naoroji and Sir William Wedderburn. Mr. Naoroji is a Parsee, son of a Parsee priest, born at Bombay in 1825. After a distinguished career at the Elphinstone College, he attained to the professorship of mathematics and natural philosophy. In 1855 he became partner in a Parsee firm in England, still keeping his grasp of Indian affairs, establishing the Indian Association, and helping several public men, such as Mr. Fawcett, to graduate in their studies of Indian problems. Twenty years later he returned to India as prime minister of the native State of Baroda. He was shortly afterwards made a member of the Legislative Council of Bombay. For many years past he has resided in London, devoting himself mainly to the cause of his people. He is an eloquent man, speaking English with no more foreign accent than many of the Welsh members. He is one of the most regular attenders in the House, an ardent Liberal, but seldom intervening in debate except on Indian subjects. Sir William Wedderburn, member for Banffshire, born in Edinburgh in 1835, entered the Bombay civil service in 1860, served as judge at Poona, then as member of the High Court of Bombay, and ultimately was appointed secretary to the Bombay government. He retired in 1887. He is a remarkable instance of an official of long service and high standing in India who has returned home imbued with deep sympathy for and appreciation of his fellow-subjects in that country. These gentlemen are aided by others who have visited India and made its affairs their special study.

Education, railway communication, intercourse with the United Kingdom, the establishment of a widely extended and powerful and irrepressible vernacular press, have led to an awakening throughout the population of Hindostan, and a sense of oneness among its different States and religions and many tongues such as never before existed. This awakening has found a voice in the establishment of a native congress which, in different parts of the continent, and with a gradually increasing attendance, has met annually since 1885. Commencing with 72 delegates from public meetings and native constituted bodies, they have latterly numbered 1,800.* The delegates are both male and female. They include "all sorts and conditions of men": at the last of which I have an analysis there were 7 princes, 7 sirdars and chiefs, 2 rajahs, 10 nawabs, 8 members of council, 260 chairmen or members of municipalities, 180 chairmen of local boards, 50 magistrates, 12 fellows and 250 graduates of universities. There were lawyers, landholders, merchants and traders, professional men and women, Christian and non-Christian priests, teachers, journalists, and artisans. "It is difficult," says a contemporary report, "to conceive any possible body of men more thoroughly representative of the higher, middle, and upper-lower classes of the Indian community." The preponderating creed was Hindu; then came Mohammedans, and, in smaller numbers, Parsees, Christians, Jains, Sikhs, Jews. Bombay and Sindh sent the larger number; Madras, the northwest provinces and Oudh, the central provinces and Berar, Bengal, Behar, Orissa, and Assam come next; then the Punjab. Surely the world never before saw such consultative assemblies, and the United Kingdom may be proud of them as the best results of her rule. The gatherings take place in the cooler season, about Christmas, and last for three or four days. Sir William Wedderburn presided at the Bombay congress of 1889. (Mr. Bradlaugh also was there and received a wonderful ovation.) Mr. Naoroji has since presided, for the second time, at the last which met at Lahore, on the 27th of December. His reception at Bombay and other places which he visited gave occasion for scenes of extraordinary enthusiasm. Many who have witnessed the pomp and pageantry attendant on the arrival of a viceroy, who have been present at receptions accorded to members of the royal family, declare that the spontaneity and enthusiasm manifested towards the member for Finsbury were "unprecedented in the annals of the country."

His opening address at Lahore, the debates and resolutions of the Congress, enable us to gauge the present opinions and wishes of the Indian people. We find expressed, in the first place, unswerving allegiance to the United Kingdom, and in the next a firm determination that in India the empire shall be administered by the Indian people, as in Great Britain it is administered by the British people. The necessity for many changes in the laws and administration is pointed out. The poverty of the country is dwelt on, and the need of economy in taxation. The currency question received attention. The failure to carry out the resolutions of Parliament regarding the cantonment scandals formed the subject of one resolution. Greater facilities for education, a larger share in the civil-service appointments, were demanded. One of the most pressing grievances appears to be the "Home charges"—the shameful extent to which money burthens, incurred in England by the English people, are charged upon the Indian budget; not only the home training of cadets and troops who spend only part of their service in India, but their cost of transport, and the keep of British war vessels in Indian waters. India pays not only for the enormous salaries of governors and officials, but also for retiring pensions, every penny of which is spent in the United Kingdom or on the Continent. There is something incredibly mean in the wealthiest nation in the world "entertaining" in her capital Eastern potentates such as the Sultan and the Shah of Persia, and charging the cost upon the people of Hindostan. Just in proportion as the retention of the country is declared necessary for British greatness and prestige, is the shabbiness manifest of throwing all the cost of its retention upon its people. The Colonial Offices in London were built at a cost of £100,000, and are kept up at an annual charge of £200,000 by the British people simply because they dare not attempt to throw the charge on their colonies. The India Office was built at a cost of some £635,000, and is maintained at an annual charge of £230,000, out of the pockets of the Indian people, without their having a word to say in the matter. Mr. Naoroji well put the case in his opening address at Lahore:

"There is a strange general misapprehension among the people of the United Kingdom. They do not seem to know that they have not spent a single shilling either in the formation of the British Indian Empire or in its maintenance, and that, as far as I know, every farthing is taken from the Indians, with the only exception in my knowledge that Mr. Gladstone, with his sense of justice, allowed £5,000,000 towards the last Afghan war, which, without having any voice in it, cost India £21,000,000. I cannot blame the people of the United Kingdom generally for this mistake, when even well-informed papers give utterances to this most unfortunate fallacy. As for instance a paper like the *Statist* . . . says, 'Whatever may happen, we must defend India to our last shilling and our last man,' while the fact is that they have not spent even their first shilling or any shilling at all, but on the contrary derived benefits in various ways from

*The numbers to which the congresses have attained are found so unwieldy and expensive that restricting the members to 1,000 is contemplated.

India of millions on millions every year. Nor have the fighters in creating and maintaining the British Indian Empire been only the British soldier to 'the last man.' Indian soldiers have done the main work, and if India can be made prosperous and contented, as it can be by true statesmanship, the Indian soldier will be ready to fight to 'the last man' to defend British power. . . . Again, the *Statist* says: 'We are at this moment spending large sums of money in preparing against a Russian attack.' Not a farthing of the British money. Every farthing of these 'large sums,' and which are crushing us, is 'imposed' upon the people of British India."

The Indian National Congress has thirty-four standing committees in different parts of the country. Besides these there is a British Committee, with offices in London, which has charge of the publication of *India*, a monthly journal. As yet the Government refuse officially to recognize the Congress, so that all representations on its behalf must come through the Parliamentary Indian Committee.

D. B.

PASQUIER'S NAPOLEONIC MEMOIRS.—VIII.

PARIS, March 29, 1894.

To do Pasquier justice, when Talleyrand informed him that the King had thought it necessary to confide the ministry of police to Fouché, he made a strong remonstrance. He admitted that it was necessary to give some satisfaction to Fouché; "but," said he, "I do not believe that it is necessary to call him to the Council, and to admit him to the intimate circle of the King; there are spots which cannot be effaced, meetings that cannot take place without wounding delicacies which ought always to be respected. I pity the King very much for having such a minister, for I pity myself for having such a colleague. But since it is decided, and the King is resigned, we too must submit and keep a good countenance." The new cabinet was to be composed of Talleyrand in the Foreign Office, Baron Louis in the Treasury, Marshal Gouvion Saint-Cyr in the War Office; the other ministers were to be Fouché, M. de Jaucourt, the Duc de Richelieu, and Pasquier. Talleyrand conducted Fouché to Arnouville, where he took the oath. Fouché afterwards prided himself greatly on having, in this first interview, given the King the most salutary advice. "I have," says Pasquier, "reason to think that he merely muttered a few words of gratitude, a few protestations of fidelity."

The Prussians were already occupying the garden of the Luxembourg and the Tuileries when Fouché assembled the members of the provisional government, and, by his advice, a message of dissolution was sent to the Chambers, with the explanation that the intentions of the allied sovereigns were unanimous as to the choice of a sovereign for France—that they had engaged themselves to reëstablish Louis XVIII. on the throne. "In this state of things, we can only pray for our country. Our deliberations having ceased to be free, we are of opinion that we must separate." And thus ended the session of a Chamber which had vainly tried to establish constitutional institutions, which had had no influence on the course of events, and had served only to create new complications in the most complicated situation. The signature of Carnot was found at the end of the message sent to the Chambers. The King made his entry the next day; the National Guard preserved order in the city, and the crowd received the old King with acclamations which astonished those who, a few days before, were sincerely giving utterance to the darkest forebodings.

The occupation of France was much more stringent in 1815 than it had been in 1814. The Prussians, who formed the vanguard of the coalition, manifested the most dangerous disposition. Marshal Blücher had occupied in great haste the garden of the Tuileries and the Carrousel; from his windows the King could see the Prussian tents in the court and the guns turned towards his palace. On the request of Humboldt, the Prussians consented not to establish themselves in the Jardin des Plantes. The bridge over the Seine called the Bridge of Jena, in memory of one of the greatest defeats of the Prussian army, Blücher intended to blow up, and the mine was already prepared when Louis XVIII. authorized M. de Talleyrand to declare that he would himself go and place himself over the mine; the bridge was thus saved.

The news from the provinces was terrible. The greatest excesses were committed by those who had been the allies of imperial France, by the Bavarians, the Würtembergers, the Badenese.

"It seemed," says Pasquier, "as if the whole of Europe wished to invade France. Though the show of such numerous forces had become absolutely useless, it was thought necessary to give to the French nation the spectacle of the irresistible power to which it was ordered to kneel. Not a single corps, notwithstanding the rapid success of the Duke of Wellington and of General Blücher, notwithstanding the occupation of the capital, had suspended its march; all those, from the frontiers to the Rhine, who bore a gun, all those who were not indispensable to the guard of the states and of the fortresses, were concentrating on the French territory. More than six hundred thousand men, covering the provinces of the East and of the North, soon penetrated as far as Normandy and the provinces of the right bank of the Loire."

On the 10th of July, the Emperor of Russia, the Emperor of Austria, and the King of Prussia arrived in Paris. It is easy to imagine under what difficulties the Government was carried on. Pasquier for a moment had two ministries—the Home Office, where he took M. de Barante for his under-secretary, and the Department of Justice, where he chose M. Guizot, whose name begins to appear at this unfortunate period. Pasquier had to choose the new prefects, to see that public order was preserved during the difficult operation of disbanding the army of the Loire—an operation which had been imposed by the allied sovereigns, and which Talleyrand had not dared to refuse, though the remainder of the imperial army might well have formed a nucleus for the royal army. Pasquier is never tired of complaining of Talleyrand. On this question of disbanding the army he says:

"As for Talleyrand, his extreme levity, his profound indifference on the gravest subjects, never were more sadly manifested to my eyes than in this circumstance. I tried for a moment to enlighten him on the political side of it; he seemed not to care for it. His mind did not go beyond the difficulties of execution; none of the possible consequences for the future seemed worthy of fixing his attention. 'It cannot be otherwise; nothing can be done without it; the sovereigns demand it imperiously; there is no possibility of refusing.' Such were invariably his answers. I must add that the King, Monsieur, and the Duc de Berry had on this point no greater scruples, no greater regrets."

It was impossible (as Pasquier himself is obliged to confess) for the King not to have a lasting impression of the defection of the army when Napoleon arrived from Elba; he could not but look on it as a military revolt, and the allied sovereigns perforce took the same view. The disbanding of the army which had fought at Waterloo was a political necessity. With all his apparent indifference and levity, Talleyrand has never been accused of a want of political insight; if he made no opposition to the disbanding of the army, it was probably because this measure was really indispensable.

Pasquier passes a severe criticism on the final acts of the Congress of Vienna, which were published at this period:

"I was much struck at first by the inconvenience to France that might result from so many points of contact with Prussia which were given to it, and also by the constitution of the kingdom of the Netherlands, which was contrary to all the ideas that had been prevalent in French politics since Richelieu. I must confess my apprehensions were strongly checked and shaken by the noisy joy which was affected by the persons who surrounded Talleyrand, by the satisfaction which pervaded his bearing and his language. It seemed, when you heard him and his friends, that nothing greater had ever been achieved in any epoch by any French negotiator."

Fouché had made two lists of persons who had been particularly compromised during the Hundred Days. The first list was to include those who might be impeached for high treason, since they had attacked the Government with arms in hand, and had assumed public offices. They were to be tried by court-martial. The second list was to include those who might be the object of less severe measures. To Fouché it was a labor of love to make proscription lists. "What was not our astonishment," says Pasquier, "to see him bring to the Council two enormous lists which had three or four times more names than was necessary, and on which, without any scruple, he had put together his most intimate political friends and some obscure enemies on whom he wished to make his vengeance felt. The whole Council was revolted by the exaggeration in the number and by the spirit which had presided over the choice." Many names were struck off; there remained only eighteen on the list of the persons destined to be court-martialled, and thirty-eight on the second list. On the former were Marshal Ney and Gen. La Bédoyère, as well as M. de la Valette. Marshal Ney was arrested in the mountains of Auvergne, near Figeac. Pasquier had hoped that he would leave France, and no special order had been issued for his arrest. M. Décazes was prefect of police, and was, says Pasquier, very unjustly accused of having issued special orders for Ney. Fouché's position in the Council was a very singular one; he never spoke in the discussions, but he brought in from time to time long and well-written reports on the state of the country, which he invariably depicted in the darkest colors. The King asked him not to give any publicity to these confidential reports. One of them, however, was published, and Louis XVIII. decided to dismiss Fouché. Fouché was aware of it, and, at his request, the Duke of Wellington called on the King and urged him to retain Fouché. "He is," said the Duke, "the only tie between you and a great part of your people; many consider him the only guarantee of their personal safety, and, if your Majesty dismisses him, they will fall into a disquietude which will lead them to despair. On the other hand, the royalist party, which is already so unreasonable, will become impossible to govern." Louis XVIII. felt constrained to keep Fouché. The person who had told the latter that the King wished to get rid of him was, in Pasquier's opinion, M. de Vitrolles, whom the King had chosen for secretary of the Council, and who was in most in-

timate relations with him. Vitrolles had been thrown in prison during the Hundred Days, and felt convinced that he owed his life to Foucher.

There was a great coldness between Talleyrand and the Russian Emperor. Nobody was aware of it, but Pasquier soon discovered it. Early one morning he was riding with M. de Nesselrode when the conversation fell upon the affairs of France. Nesselrode spoke of the misfortune of the association of the royalists with Fouché, of the bad effect which such an association had on all parties. "This bad effect," said Pasquier, "would have been much counterbalanced by the entrance of the Duc de Richelieu into the cabinet, as was intended; but the Duke refused. Why did not the Emperor Alexander use his influence over him to determine him to accept?" Nesselrode answered that times were much changed. "In what?" said Pasquier. "Is it not always the same France? Is it not the same house of Bourbon? Do you not find in affairs the same men with whom you came to so good an understanding?" And he named Talleyrand. Nesselrode said not a word at the mention of Talleyrand's name. Pasquier then spoke of the generosity of the Emperor; he should always count upon it. "Yes," said Nesselrode, "but he himself ought to feel confidence. He has been taught to be suspicious." Nesselrode evidently thought Pasquier thoroughly informed of all that had been going on during the Congress of Vienna. At Vienna Talleyrand had allied himself with the central powers of Europe and with England, and had separated France from Russia. Pasquier's remarks on this subject have a special interest at a moment when France, estranged from the central powers, is drawn again towards Russia. This great question of the natural alliances of France is still *sub judice*, and it is more burning now than it was in 1816.

The Talleyrand-Fouché cabinet could not last long. Talleyrand desired very much to send Fouché as minister to the United States. "He must not only," said he, "leave the cabinet, he must leave France." The ministry resigned and Pasquier communicated Talleyrand's decision to the King, who merely said, "Very well! let us dissolve the ministry. As for you, you will remain. I shall keep you." Pasquier refused, and the next day Louis XVIII. said to Beugnot: "Could you ever have believed that M. Pasquier would prefer M. de Talleyrand to me?" Pasquier in reality disliked Talleyrand, but he had a notion of what a cabinet meant under a constitutional government; he knew that there must be some solidarity between its members. The King, intelligent as he was, looked upon the ministers as the mere servants of the monarchy, the *gens du Roi*. The Duc de Richelieu formed the new cabinet, and here ends the third volume of these very valuable memoirs.

Correspondence.

WOMEN AND THE JURY-BOX.

To the Editor of The Nation:

Sir: Your correspondent "G. S.," in the *Nation* of March 29, deems it contrary to justice that women are excluded from serving as jurors in such cases as the one he alludes to now pending in Washington. He complains that unfortunately there exist in the minds of men two distinct codes of sexual morals, one for the man and one for the woman, and thinks woman-suffragists will rightly insist that women as well as men ought to be tried by their peers.

We hear it often repeated nowadays that simple justice demands for men and women the same standard of morals. This, at first sight, seems self-evident; and yet it is easy to show that the proposition involves a serious fallacy. If all people, or the great majority of people, were unmarried, the proposition might be tenable; but the moment we take into consideration the mischief produced in the family by the sexual sins of either the husband or the wife, the matter is altogether changed. The wife has the incomparable advantage of knowing under all circumstances that she has her own children about her. The husband's case is quite another where there is a laxity of morals. Herein lies the difference; and that, where doubts arise, the wrong done to the husband is immensely greater than that done to the wife, seems at all times to have been tacitly acknowledged by public opinion. Hence the stricter code for women. So long as the peace and happiness of the family are taken into consideration, this must remain the rule.

When female suffrage becomes universally established, women will, of course, have to serve on juries. There are grave psychological objections to such practice, but it is by no means easy to establish these to the satisfaction even of those who wish to study the question in an earnest spirit and without political bias. The trouble is that as yet we have nothing that deserves the name of a scientific psychology available for practical purposes. If you say that women are too easily carried away by sentiment instead of being guided by sound judgment, how will you prove it? Your own little circle of acquaintances is far from sufficient to establish such a general proposition. The statistical method which would at once settle the question cannot be employed, because as yet we possess no method of psychological measurements. When Quetelet's 'Anthropométrie' appeared, it was a great disappointment to many that he had made no attempt at measuring psychic quantities, though Fechner, in his 'Psycho-Physik,' had at least made an attempt to apply his *Maassformel* also to matters of mind. The whole school of Wundt and his disciples has as yet produced nothing to our purpose, and we shall have to make our experiments and gather wisdom slowly in the hard school of experience.

Respectfully, Werner A. Stille.

St. Louis, April 3, 1894.

GERMAN PROFESSORS' WIVES AND DAUGHTERS.

To the Editor of The Nation:

Sir: In the article "Women at the German Universities," published in the *Nation* of February 15, 1894, and signed "J. B. S.," the writer states that the wives and daughters of the German professors are, with some exceptions, ordinary ill-educated women. Intimate association with a very large circle of professors' families enables me to deny such a statement and affirm the exact opposite to be the case. The average German girl receives an education far superior to that of the American girl. Every girl, the common working classes excepted, upon leaving school at the age of sixteen or seventeen, has had, besides a very thorough elementary education, instruction in literature, universal history, natural history, natural philosophy, botany, history of art, French, English, and often Italian, given by competent professors and teachers. The daughters of professors are certainly no exception, as the professor may choose his wife among the best of families, and as a rule takes advantage of this opportunity. A certain modesty and want of self-reliance may make the German woman appear to disadvantage beside the American who at school compared her ability with that of the American boy, and through this association gained more freedom socially as well as intellectually.

The idea that the American girl is doing pioneer work regarding the admission of women to the German universities is also a mistake, as I know of a case of a young lady having had great difficulty in gaining admission because an American applied at the same time.

E. L. W.

Carlsruhe, March 22, 1894.

Notes.

Frederick Warne & Co. will publish in thirty-six monthly parts 'The Royal Natural History,' edited by Richard Lydekker, and illustrated by 1,600 cuts and 72 colored plates.

Francis P. Harper, New York, has nearly ready a new edition of John Heneage Jesse's 'Memoirs of King Richard the Third,' in two volumes, with rubricated title-pages and illustrations printed on Japan paper. He will in time publish Maj. Zebulon Pike's 'Account of Expeditions to the Sources of the Mississippi, 1805-1807,' which Dr. Eliott Coues is engaged in editing, uniform with Dr. Coues's monumental Lewis and Clark.

'Crazy Book-Collecting, or Bibliomania,' a translation of a work, by Bollioud Mermet, Secretary to the Academy of Lyons, first published in 1761, anonymously, is about to be brought out by Duprat & Co., New York.

A new authorized translation of Th. Ribot's 'Diseases of the Will' is announced for speedy publication by the Open Court Publishing Co., Chicago.

Charles L. Webster & Co. will issue immediately 'Tom Sawyer Abroad,' by Mark Twain.

J. B. Lippincott Co.'s spring announcements include 'Bill Nye's History of the United States,' illustrated by F. Opper; 'Travels in a Tree-top,' by Dr. Charles C. Abbott; and a limited large-paper edition of Stillé's 'Major-General Wayne and the Pennsylvania Line,' with extra illustrations.

John Fiske's 'War of Independence' is to be reissued as a part of Houghton, Mifflin & Co.'s "Riverside Literature Series," forming a double number at a low price. It will be accompanied by a biographical sketch of the author.

Three acceptable reissues are the cheaper edition of Mr. Benjamin Ellis Martin's 'In the Footprints of Charles Lamb' (Scribners), and Edmund Lee's 'Dorothy Wordsworth' and Miss Barlow's rhymed 'Bog-Land Studies' (Dodd, Mead & Co.). The second edition of these humorous and pathetic Irish pictures—true poesy—has been revised and enlarged.

A welcome is sure to await also the square rubricated pocket edition of the "Tempest," the text that of Aldis Wright in the Cambridge Shakspere, the tasteful typography and accessories Dent's (New York: Macmillan). The Droeshout portrait, with Ben Jonson's verse, serves as frontispiece.

The long line of the Harpers' uniform revised edition of William Black's novels is extended by 'Donald Ross of Heimra' and 'Stand Fast, Craig-Royston!'

The London Royal Geographical Society puts forth a seventh edition of its fruitful 'Hints to Travellers, Scientific and General,' with the

customary overhauling and enlargement. Hints on outfit are followed by medical and surgical hints, by instructions in surveying and astronomical observations, as well as in observations for time and longitude. Photography, meteorology, natural history, anthropology, industry, and commerce have also their chapters. The necessary tables, charts, and cuts are provided, and the cover bears the metric scale in juxtaposition with the English foot measure.

We have nothing to add to our description and commendation last year of Burdett's 'Hospital and Charities Annual,' in presence of the fifth edition, for 1894 (London: Scientific Press; New York: Scribners). This work is not merely statistical, but is an earnest contribution to advanced ideas in charitable endeavor. We quote the sub-title of this admirable compendium: "Containing a review of the position and requirements, and chapters on the cost of management, of the voluntary charities, and an exhaustive record of hospital work for the year." No doubt can attach to its claim to be "the most useful and reliable guide to British American and colonial hospitals and asylums, medical schools and colleges, religious and benevolent institutions, dispensaries, nursing and convalescent institutions." Mr. Burdett was one of the vice-presidents of the International Hospital and Nursing Congress at Chicago, and was greatly impressed by the proceedings in the Nursing section.

It would equally tax our ingenuity to say anything new of Mr. J. Scott Keltie's 'Statesman's Year-Book' for 1894 (Macmillan). The editor calls attention especially to the recasting of the naval sections. We will suggest his adding to the list of non-official publications respecting the United States Schouler's and Rhodes's histories, Poore's 'Political Register and Congressional Directory,' Edward McPherson's invaluable 'Handbook of Politics,' published in the even years; Appletons' 'Cyclopædia of American Biography,' and Baedeker's 'United States.' It might also be well to take notice of the American translation of Tocqueville's 'Démocratie en Amérique,' here cited only in the original.

The contents of the third and concluding volume of the 'Orations and Addresses of George William Curtis,' edited by Prof. Norton (Harpers), are wholly of a memorial nature—one half relating to the civil war and the Revolution, the other to eminent deceased civilians, including in this rough division a centennial local historical discourse, and the tribute to Burns at the unveiling of his statue in Central Park. The most delicate of all these tasks—and it was a labor of love—was the eulogy of Wendell Phillips delivered before the city authorities of Boston in 1884. Mr. Curtis's tact and discrimination were never better shown. Sumner, Bryant, and Garfield he had already commemorated; and with Lowell he was to cap his own literary monument in the year which took him from us. With the Brooklyn address on his lifelong friend the volume closes.

A correspondent writes to point out a wild misprint on page 301 of the second volume of Mr. Lowell's 'Letters,' a book which shows from end to end evidences of the minutest care in its making. "Resuscitate Sambo" the writer is made to say, where, as the context concerns Don Quixote, "resuscitate Sancho" must be meant. But merely human skill and watchfulness appear to be quite inadequate to guard against errors of the press. In the present instance, in spite of whatever natural annoyance he might feel at the fatality, one fancies that Mr. Lowell himself would hardly be able to keep from laughing at the notion of such a queer waking-up of the wrong passenger.

Accident has so much to do with the production of biographies that it is hardly strange that so popular a writer as the late Dr. J. G. Holland has but just been commemorated in a formal Life ('Josiah Gilbert Holland,' by Mrs. H. M. Plunkett; New York: Scribners). The little volume before us betrays the admirer, but not the practised book-maker or competent portraitist. It fills a gap, but it is not a literary monument. Still, one may get from it some idea of Dr. Holland's character and achievement. There are several portraits and views.

The student who is familiar with Prof. Thomas Preston's 'Theory of Light' will welcome the appearance of his 'Theory of Heat' (Macmillan). The plan of the work is similar to that employed in the former volume. An historical account is given of the subject, and then the classical researches are described, together with an outline of the mathematical theories. From all this the general reader can get a comprehensive view, while the specialist is provided with a valuable book for reference.

Prof. Glazebrook's little treatise on 'Light' (Macmillan) is one of the Cambridge Natural Science Manuals. It embodies the author's experience in conducting a course in the Cavendish Laboratory. We remark that the experiments are not severely quantitative—indeed, are in general qualitative—whereas in American physical laboratories the tendency is to make all work quantitative. Prof. Glazebrook is well known as an authority in his specialty; his text-book is correct and well arranged.

'Telephone Lines and their Properties,' by William J. Hopkins, Professor of Physics in the Drexel Institute of Art, Science, and Industry (Longmans), is intended, according to the preface, for the practical man; but the author has also endeavored to make it serve as a basis for a lecture course to students. He has therefore given, in addition to practical hints to telephone engineers, a certain amount of the theory of periodic electrical currents. The practical part of the book is the result to a large degree, we infer, of personal experience, and is therefore good. The theoretical portion would afford a very meagre basis for a lecture course to even elementary students. No student intending to become an electrical engineer, and especially a telephone engineer, should be led to suppose that he can make any solid advance without a good knowledge of mathematics. The valuable work of Oliver Heavyside in telephony is not mentioned. In spite of the abstruse form in which Heavyside has put his results, there is much in his work that should be referred to in even an elementary treatise on telephone lines.

Mr. Philip Atkinson, in his 'Electric Transformation of Power and its Application by the Electric Motor, including Electric Railway Construction' (D. Van Nostrand Co.), aims to give in untechnical language the main facts pertinent to his theme. The book contains short descriptions, accompanied by illustrations, of the principal dynamos and motors now in vogue. The author has excluded all historical matter and all reference to antiquated forms of electrical apparatus; and the student or general reader who desires to know what dynamos and motors are now in practical use will find this little treatise valuable. One could take exception to the language of the definitions given. For instance, it is stated that "electric potential" is that condition in bodies which represents the relative electric energy manifested by them. One could hardly obtain a clear idea of electrostatic potential and magnetic potential from this, and it would have been better to limit the definition of potential to the mere statement that in general it represents the work done in bringing a unit charge or a unit pole from infinity up to the given point. It is stated, in the paragraph on storage-battery traction, that, under this system, the power station and motors cost just the same for construction and maintenance as the trolley or conduit systems. This has not been conclusively proved.

Last August we noticed the Bureau of Education's World's Fair exhibit of 5,000 volumes for a popular library (now permanently preserved at the Bureau in Washington), and the accompanying classed catalogue. The dictionary catalogue has just been added to the others in No. 200 of the Bureau's publications, and now this stout missionary volume of 600 pages will, we hope, begin its travels *in partibus*, promoting the founding of public libraries and revealing the arts of cataloguing and classifying.

Visitors to Rome will be benefited by knowing of the useful little series of handbooks to the Roman collections of painting and statuary (the Edelweiss Collection) which are being brought out by Prof. Venturi of the Italian Ministry of Public Instruction, the competent pupil and successor of the veteran Cavalcaselle, now retired from the headship of the Department of Early Italian Art, by reason of age (Rome: La Società Laziale). Prof. Venturi's series, condensing in handy form the conclusions of the united intelligence of that admirable department of the fine arts of the Italian Ministry of Public Instruction, gives the important facts of the lives and careers of the painters, and the relations of their schools, with such facts as are known of the particular works, as now identified. The latest volume of the Edelweiss Collection is that for the Borghese Gallery.

Dr. Moriz Heyne's 'Deutsches Wörterbuch' again gives signs of life in the section containing R–Setzen (Leipzig: Hirzel; New York: Westermann). Its distinguishing feature is its abundant citations from the best literary sources, from Luther and Hans Sachs to Heyse, Treitschke, and Ranke. Of the nearly 600 pages in this half-volume we have examined seven consecutive decades in order to note the frequency with which Goethe and Schiller are drawn upon, and in but one of the seventy pages did both names fail to appear, and that bore Schiller's. A like but not so pervasive a companionship is observable in the case of Bismarck and Moltke, who seem, of the men of to-day, most often quoted in their terse and stirring diction. "Setzen wir Deutschland, so zu sagen, in den *Sattel!*" says the man of blood and iron, "reiten wird es schon können!" These illustrative passages are clearly printed in Roman type, with volume and page indications. The completion of this dictionary is much to be desired.

M. Joseph Reinach has collected a series of extracts illustrative of the highest forms of eloquence in France from Mirabeau's time to the present day. The book, which bears the title 'L'Éloquence française depuis la Révolution jusqu'à nos jours,' recalls many a name almost forgotten and many a talent very brilliant in its day. It is essentially a class-book, but the excellence of the extracts and notes will commend the volume to the general reader.

Jules Carrara is a belated romanticist who, in his 'Heures Intellectuelles,' first series (Pa-

ris: Fischbacher), writes pages of very watery criticism on French poetry in general and Victor Hugo in particular. It is sincerely to be hoped that the series will stop here, for there is nothing to be learned from such effusions.

Calmann Lévy has published in convenient book form M. Brunetière's *discours de réception* and the Comte d'Haussonville's reply. The discourse is all the more interesting in view of the journalistic discontent it evoked, and also of the noisy and stupid student demonstrations against the great professor and essayist.

Gyp's 'Le Journal d'un Philosophe' (Paris: Charpentier) is a delightfully impertinent and witty relation of the Panama scandal and other political affairs of the time. It makes capital reading.

Prof. E. J. James of the Wharton School of Finance and Economy, Philadelphia, desires the addresses of all students of Halle now resident in America who would like to join in a congratulatory message to the University on occasion of its two hundredth anniversary, to be celebrated in August next. The message will be submitted to each person before his name is appended to it. Upwards of fifty signatures are already assured.

Following close in the wake of the American report of the committee of ten on Secondary Education, comes the announcement of a royal commission of fourteen men and three women to consider what are the best methods of establishing a well-organized system of secondary education in England, "taking into account existing deficiencies and having regard to such local sources of revenue from endowments or otherwise as are available for this purpose, and to make recommendations accordingly." The appointment of women on a royal commission on education is without precedent, but is an innovation which, a correspondent states, "has been received with general satisfaction throughout the country." The three female members of the commission are Mrs. Henry Sidgwick, principal of Newnham College, Cambridge; Mrs. Sophie Bryant, D.S.C., mistress of the North London Collegiate School for Girls and the well-known author of a suggestive little book, 'Educational Ends,' and Lady Frederick Cavendish, a member of the "classes" who has identified herself with various efforts to extend educational influences among the "masses." Besides these ladies, the personnel of this royal commission includes notable representatives of such other special parties in interest as the universities, the London County Council, the school boards and elementary teachers' associations, the public schools, the Teachers' Guild and College of Preceptors, the Nonconformists' establishments, and the working classes, its chairman being the Rt. Hon. James Bryce, M.P.

Those who are interested in the courses in economics at the Plymouth (Mass.) School of Applied Ethics, which will open on July 12, can obtain already a list of lecturers and topics from the secretary, S. Burns Weston, 118 South Twelfth Street, Philadelphia. The programme of dates is yet to appear.

We receive from the Interior Department seven samples of the Geological Survey's work in New York for the great Atlas of the United States, whose publication is still long to be deferred. The scale is uniformly 1:62,500—provokingly near an inch to a mile. There are two major sheets, one representing New York city and vicinity, with a range from Hastings to Long Branch, and from Flushing and New Rochelle to the Orange Mountains, including Newark and Paterson. A not inconsiderable part of this sheet coincides with the State Atlas of the New Jersey Geological Survey. The other represents Albany, and embraces Troy and Schenectady, ranging from Bemis Heights, Saratoga Lake, and Ballston Spa to Castleton on the Hudson. Intermediate reaches of this river are delineated on the adjacent quarter-degree sheets, called "West Point," including Peekskill, and "Poughkeepsie," including Fishkill; and on that called "Kaaterskill," which takes in the Mountain and Kaaterskill Houses and Onteora and Twilight Parks. We have, besides, a "Fort Henry" sheet, showing the upper part of Lake Champlain, Crown Point, Vergennes (Vt.), and Westport (N. Y.), and the adjacent sheet showing the glacial region about Elizabethtown. The topography is marked by contour levels at twenty-foot intervals, and the common roads and railroads are laid down. We judge that the engraving of these handsome maps has been executed by the Survey's own staff in Washington.

A lady who has been examining Elias Dexter's photographic reproduction (New York, 1862) of St.-Mémin's American portraits, notifies us, as a matter of general interest in the case of this invaluable series, of two erroneous ascriptions which she has discovered. No. 26, "Mrs. Yeaton," 1807, should be Mrs. John Thomas Ricketts; No. 693, "Mrs. Alex. Smyth," 1805, should be "Mrs. William Newton" of Alexandria, Va. Our informant owns the coppers and proofs of these portraits of her kinswomen.

—In preparing for the Columbian Exhibition, our Government applied to Pope Leo XIII. for photographic copies of documents in the Vatican archives showing the Papal action in regard to America during its early history. The Pope assented, and the photographs were exhibited at Chicago. Mr. J. C. Heywood, an American (Harv. Coll., 1855), to whom, as one of the Pope's chamberlains, or, as he describes himself in the dedication, "e cubiculariis S.S.D.N. ense et pallio distinctis," the application was made, has now issued an edition of the photographs with the text printed on the opposite page—an assistance for which those who are not versed in the reading of crabbed writing and skilful in the expansion of mediæval contractions will be grateful. That is to say, all who see the volume; for as only twenty-five copies were struck off, "for presentation to the more illustrious libraries," it will not reach many eyes. Prefixed is a portrait of Pope Alexander VI., photographed from the painting by Bernardo Pinturicchio in the Borghese palace in the Vatican, which shows, what was already well known, that there was no truth in the story that Alexander had his mistress, Rosa Vanozza, serve as the model for the Virgin to whom he was praying, since the Virgin is not represented at all in the picture. Pope Leo was generous in his response to the request of the United States, and did not limit the photographing to documents concerning the Columbian discovery. The first ten relate to a bishopric in Greenland beginning nearly three centuries before Columbus, in 1206, and ending in 1492. Three contain the famous partition of the New World between Spain and Portugal in 1493 by Alexander VI.; two praise Bartholomew and Diego Columbus; and eight prescribe the sending of missionaries and bishops for the conversion of the American savages. Most of the documents have already been printed elsewhere, but of course it is more convenient to consult them together, and it is interesting to see them in the chirography of the time. It is to be regretted, therefore, that the edition is so extremely small. One would like to learn which are the favored libraries. We only know that the British Museum is one of them.

—The field of negro folk-lore, so delightfully revealed to the public a few years ago by Mr. Joel Chandler Harris, has already borne excellent fruit in the works also of Mr. Charles C. Jones, jr., and Miss Mary A. Owen. It is interesting to note that the value of the material already collected has been recognized in Europe: in Sudre's recent work, for example, 'Les Sources du Roman de Renart,' the negro animal tales of this country are constantly cited. At the suggestion of Miss Alice M. Bacon, some of the teachers and resident graduates of the Hampton Normal and Agricultural Institute at Hampton, Va., have lately formed a Folk-Lore Society, and have sent out to the Hampton graduates a circular provocative of research in the line of folk-tales, including animal tales and the like, customs, traditions of African ancestry, or of transportation to America, African words surviving in speech or song, ceremonies and superstitions, proverbs and sayings, and songs, with words or music or both. This circular has already produced an effect, and some of the material collected under its influence has been published in the monthly *Southern Workman and Hampton School Record* (January-March, 1894, vol. xxii., Nos. 1-3). It is greatly to be hoped that the Hampton Society, without in any way losing its local character or independence, may be affiliated to the American Folk-Lore Society, which is so deserving of encouragement, and whose journal offers a wider circulation than any local paper can do. It would also be well to control in some scientific manner the collection of material, and the excellent circular already sent out might be supplemented by a more elaborate *questionnaire*, models for which may be found in the *Annuaire des traditions populaires*, Paris, 1887 (by P. Sébillot), and in Mr. Gomme's 'Handbook of Folk-Lore' (London, 1890).

—Readers of scientific literature can hardly fail to notice the very different practices of American, English, and Continental writers in giving credit to their own countrymen for scientific work. The general rule is, that the French writer never attributes any work to a foreigner if he can find an excuse for crediting a compatriot with it; and the same was true with English writers until quite recently. Germans, on the other hand, have aimed at strict impartiality, not only for the sake of truthfulness itself, but perhaps to avoid exposing themselves to the imputation of ignorance of what was done abroad. In the case of American writers, however, a curious reversal of the English and French practice used sometimes to be noticed in the avoidance of any unnecessary allusion to the works of their countrymen, and even a preference for attributing discoveries to foreigners. We supposed that this practice had about died out, but there has just come to our notice, in the recently completed vol. v. of the publications of the Astronomical Society of the Pacific, a curious piece of evidence that it is not extinct on the Pacific coast. In his anniversary address as president of the Royal Society of London, Lord Kelvin described the work of two American astronomers in discovering and explaining the law of periodic variation of the latitude, in the following terms:

"Some time previously it had been found by Mr. S. C. Chandler that the irregular variations of latitude which had been discovered in different observatories during the last fifteen

years seemed to follow a period of about 427 days, instead of the 306 days given by Peters's and Maxwell's dynamical theory, on the supposition of the earth being wholly a rigid body. And now the German observations, although not giving so long a period as Chandler's, quite confirm the result that, whatever approximation to following a period there is, in the variations of latitude, it is a period largely exceeding the old estimate of 306 days. Newcomb, in a letter which I received from him last December, gave what seems to me to be undoubtedly the true explanation of this apparent discrepancy from dynamical theory, attributing it to elastic yielding of the earth as a whole. He added a suggestion, especially interesting to myself, that investigation of periodic variations of latitude may prove to be the best means of determining approximately the rigidity of the earth. As it is, we have now, for the first time, what seems to be a quite decisive demonstration of elastic yielding in the earth as a whole, under the influence of a deforming force, whether of centrifugal force around a varying axis, as in the present case, or of tide-generating influences of the sun and moon."

On page 43 of the publication in question, in a notice from the Lick Observatory, prepared by members of the staff, an abstract of Lord Kelvin's conclusions purports to be given, in which the paragraph referring to Chandler is wholly omitted, although forming the most important part; and in the paragraph relating to Newcomb's work words are omitted from Kelvin's statement in a way that might be called garbling, because it makes him appear as claiming for himself a discovery which he attributed to another.

—In connection with the subject of the variation of latitudes attention may be called to an important memoir by Bakhuyzen of Leyden presented to the Royal Academy of Sciences February 24, confirming Chandler's period from observations. Thirty-five years of observations at Pulkova, Greenwich, Berlin, Strassburg, Leyden, Potsdam, and elsewhere have conducted him to a periodicity of about 430⅜ days, with no evidence whatever of a change in the length of this period, and a value of its coefficient equal to 0″.168. The author also presented the results of his discussion of tidal observations at the Dutch station of Helder in the years 1855–1892, which give indication of a marked fluctuation of the sea level amounting to ⅝ inch in a period of about fourteen months, or practically the same as that of the latitude variation. The two results may be regarded as in entire accord, and seem to prove that the rigidity of the earth is about 1½ times as great as that of steel.

—The coming summer season is to be perhaps the most busy in arctic exploration of any year since the closing of the expeditions which were sent out in search of Sir John Franklin. Seemingly, there will be four main expeditions in the field at one time—those of Peary, Nansen, Wellman, and Jackson. Three of these have declared openly for the "farthest north," and it is to be assumed that Mr. Peary, whose main exploration centres about the delineation of the land-masses lying to the north of Greenland, will not hesitate to look poleward if a proper condition of the Frozen Sea presents itself. Indeed, it is known that he has prepared himself for just this contingency. At this writing, if he has successfully carried out the programme which he arranged before his departure, he is at Independence Bay, in lat. 81° 37′, preparing for or already undertaking the unknown journey northward. From last accounts received concerning the Nansen expedition it is almost safe to assume that the daring Norwegian has already reached the Siberian "drift" to which the fate of the *Fram* is to be consigned for a period, possibly, of three years. Mr. Wellman has selected for his "dash for the pole" the Parry route of 1827, taking to the Frozen Sea north of Spitzbergen. It will be interesting to note how far the experience of three-quarters of a century and the improvements in various directions which have been made during that period will tend to promote success, especially in the case of a leader who is an absolute novice in arctic exploration. The Spitzbergen route—or the nearly parallel Franz-Joseph Land route, which is to be followed by Mr. Jackson—is by many considered to be the most practicable avenue leading northward; and in a good season, with proper men and equipments, no difficulty ought to be experienced in far surpassing Parry's brilliant record of 82° 45′.

—An expedition supplemental to that of Mr. Peary will also be despatched this summer, under the auspices of the Geographical Club of Philadelphia, to Northwest Greenland, mainly with the purpose of bringing back the party now quartered there. It is expected that Mr. Peary will return to Bowdoin Bay in the last week of August, prepared for the homeward journey in the first week of September. This revival in arctic exploration will hardly be looked upon with favor by those who had believed that the end to such "useless" ventures had come with the Greely disaster, or who agreed with the late Commander Weyprecht that the arctic exploration of the future should leave the Polar question out. The Philadelphia Geographical Club also fathers an expedition to Labrador, which is to go out in June, under the leadership of Mr. C. E. Hite, a member of the Peary Relief Expedition of 1892.

—Mr. Henry Bradley has completed the first letter assigned to him as co-editor of the 'New English Dictionary,' and the thin instalment *Everybody–Ezod* just issued (Macmillan) shows that the letter E requires 488 pages. This allows D, on which Dr. Murray is at work and which is to be bound up with E as vol. iii., some 800 pages. The first two volumes, A–B and C, show a continuous pagination, but D–E will have two sets of folios—a matter of no consequence, or the very slightest. The tail end of E, with its shoal of compounds of ex-, extra-, etc., is superficially not very attractive, but it really possesses much interest for the student, if only in the realm of obsolete words and meanings. The historical notices of *exchequer*, *excise* (with its American usage confined to the tax on liquors), and *executive* (also in its special American constitutional significance) arrest attention; and there is a discussion of *Excelsior* as used adverbially on the State seal of New York, and by Longfellow in his poem, which leaves the latter instance a clear solecism, and the former in doubt. But the poet at least has given an abiding extension to the Latin; and was not that other American a poet who named the cushion stuffing of curled shavings which was patented in 1868 "excelsior"? Our British cousins make no claim to this word. Hawthorne in 1837 ventured *everyhow*, and no predecessor is cited; Jefferson leads the citations for the use of *extra* as an adjective (1780), Campbell's 'Rhetoric' in 1776 pronouncing this abbreviation (for *extraordinary*) a barbarism, along with *penult* (for *penultimate*). *Exterritoriality* and *extraterritoriality* both go back to Wheaton in 1836. Finally, *exclamation-point* is peculiar to American grammar; and *extend a* (promissory) *note* has passed unrecorded because also an Americanism, we presume.

—Syntactically, we find worth observing that all the examples under *everybody* exhibit it coupled with a distributive pronoun, as (1530) Lord Berners, "Everye bodye was in theyr lodgynges," (1820) Byron, "Everybody does and says what they please," and (1866) Ruskin, "Everybody seems to recover their spirits." Here the verb is in the singular, but we also have (1759) Bishop Warburton, "Every body else I meet with are full ready to go of themselves." The rule appears not to hold with *everything*. *In evidence*, taken over from the French, is first assigned to *Blackwood*, "18—," an indefiniteness seldom tolerated in this Dictionary; but we may also read under *excisemanship* "1837 Lockhart, Life Scott (F. Hall)," in default of chapter and verse. *Exploit* in the French sense is first met with in the *New Monthly Magazine* of 1838, and Carlyle next found it handy in 1847. *Ex post facto*, we are reminded, should properly be written *ex postfacto*. *Ex-libris* came into being in 1880, and already in 1890 there is a *Journal of the Ex-Libris Society*. For *university extension* we are referred to Mansel in 1850. George Augustus Sala is quoted for *Exposition* in 1868, and as the latest possible use of this naturalized word we have "The World's Columbian Exposition at Chicago in 1893." *Evolution* begins with Lyell in 1832; and Spencer flashes it on in 1852 to Darwin (1859), who then creates *evolutionist*. *Eye* is the most considerable single word in this instalment: its diverse forms almost baffle enumeration. Have they all been caught, or are there still some which may be styled, *pace* Sir Thomas Browne and Dr. Murray, *extradictionary*?

TAINE'S ORIGINS OF CONTEMPORARY FRANCE.

Le Régime Moderne. Tome II. [Les Origines de la France Contemporaine.] Par H. Taine. Paris. 1894.

The Modern Régime. Translated by John Durand. New York: Henry Holt & Co. 1894.

WHAT estimate should we form of the great work on which Taine's reputation must ultimately rest? Only after the lapse of years can a final answer be given to this inquiry. Time, and time alone, tests the character of literary as of other achievements. Still, the eighteen years which have passed since the publication of the first volume of 'Les Origines de la France Contemporaine,' combined with the fact that each of Taine's seven volumes is marked by the same merits and the same defects, makes it possible to pass a preliminary judgment on the result of his labors. His work, it is true, is incomplete, yet its general bearing and effect are known to every student; and while every one must regret that Taine did not bring his analysis of the influences which have produced modern France to a close, still his warmest admirers must admit the high improbability that an additional volume would have added to or taken anything material from our author's high reputation.

That Taine has achieved much must be patent to even the sternest of critics. He has, in the first place, gathered together an immense store of authentic and invaluable information about the Revolution and its results. Every page of the seven volumes teems with facts. To any one who possesses the least experience of the labor involved in original research, and of the equal, or greater, labor involved in lucid exposition of the results

obtained by research, there is something appalling in the thought of the toil which must have gone to the production, not of a chapter, but even of a page, of Taine's monumental treatise. Readers who, when young, delighted in Carlyle's 'French Revolution,' must, in their mature age, when brought face to face with Taine's researches, feel ashamed of having been deluded into accepting a didactic rhetorician as a serious historian. Taine, again, has not only collected facts, he has made them visible to that very dull class known as the intelligent public. But he has achieved much more than this: he has, by the mere force of truth, cut at the root of a thousand popular delusions. Louis Blanc, Michelet, Carlyle—even Quinet, whose insight is in many respects extraordinary—though disagreeing in many things, have one characteristic in common. They are all victims of one delusion: they all assume that the Revolutionary leaders, whatever their demerits and however terrible their wickedness, were men of gigantic mould, gifted with astounding genius, and inspired by tremendous passions. This assumption is the basis of the whole Revolutionary legend, and this assumption Taine has proved to be false. The meanness, the sordidness, the incompetence of the Revolutionists become, to any one who has studied Taine's book, at least as visible as their wickedness.

The moral of his writings is this: The violence of revolution no doubt occasionally opens new paths by which obscure talent may rise to eminence, but it far more certainly frees from restraint the covetousness, the sordidness, the brutality, and the cowardice of human nature, and lets us see, if we have eyes to use, how terrible is the condition of any State where the bonds which keep in constraint the wickedness and folly of mankind are for a moment relaxed, and all that is vile and stupid in man is allowed to come to the front. Our meaning may be shown by one instance only among the scores of illustrations by which Taine enforces his teaching. The horror of the September massacres is now acknowledged by every man of common humanity; but Taine makes it apparent that the cowardice and folly which tolerated, were at least as great as the recklessness and the bestial brutality which perpetrated, this slaughter of innocent men and women. The massacres—and the same thing holds good of the whole Reign of Terror—brought no benefit whatever to France. Not the cruelty of the Parisian mob, but the bravery of French soldiers saved France from destruction. It is the vainest fancy that the massacres repelled a single Prussian or Austrian regiment. What the murderers of September achieved was to insure the failure of the Revolution. Cruelty and treachery mean, and always will mean, impolicy and folly. This is the lesson enforced by Taine's volumes; and to have driven it home so that it can be neither neglected nor disputed is his noblest achievement as an historical moralist.

Though no candid critic will underrate the industry and thoroughness of Taine's research, it is difficult even for an admirer to consider the whole effect of Taine's labors without a sense of disappointment. Taine has not produced a history, or anything like a history, of the Revolution. Nor is there the least reason to suppose that, had he been permitted by fate to bring his book to a close, he would have left to the world what the world still wants, a thorough and systematic narrative of the Revolution in France. The facts he has accumulated together, and the indications he has given of the sources which must be explored by any one in search of additional knowledge, will be invaluable to some future writer. No wise man will ever tell the tale of the Revolution without consulting Taine's volumes again and again; but it is not in Taine's volumes that that tale is to be found. They are fragmentary. About particular topics, even about particular men—such, for instance, as Danton and Napoleon—Taine's pages contain many details which are of value. His hints—they are not more than hints—about the condition of France after the fall of Robespierre, deserve to be carefully followed up. But the defect of his work is that it is fragmentary; no one could understand its bearing who did not carry in his mind a general outline of Revolutionary history; and—what is really singular—Taine, after piling together facts and anecdotes illustrating some aspect of the Revolution in which he is interested, does not properly sum up their effect. From Taine's chapters the reader derives a vivid notion of the horrors of the Reign of Terror; but, after a careful examination of Taine's statements, we have found it impossible to obtain from our author any definite statement as to the number of victims who perished under the Jacobin tyranny. On this point, the ascertainment of which is of crucial importance, a few pages of Mr. Morse Stephens's history are more valuable than the whole of Taine's analysis of Jacobin supremacy.

Taine, it may be said, did not intend to write a history. So be it. But his want of historical perception mars his success even as a writer on the theory of the Revolution. You cannot take one part of a great movement and give a fair account of that part without at any rate some reference to the whole. Mr. Morse Stephens's doctrine that violence and tyranny at Paris in some way contributed to the repulse of the German invaders, is a mere paradox, though he is undoubtedly right in holding that the Reign of Terror is misunderstood unless you take account of the struggle of France for national existence. Yet it would be possible to read Taine's volumes without gathering from them that, during the agony of the Revolution, France was engaged in a struggle with external foes.

'Les Origines de la France Contemporaine,' however, was never intended to be a history. It must not, therefore, be tested by the criteria which we apply to the works of Gibbon, of Macaulay, or of Michelet. It is a book of political philosophy elucidated by lessons drawn from the Revolutionary annals of France. Taine's speculations may be most fairly compared with the speculations of Tocqueville, though such a comparison does not place him in a very favorable light. The permanent reputation of a political theorist depends on the truth and the originality of his thoughts. It is a touch of originality or genius which made Tocqueville a classic from the first moment that his writings became known to the public. Can any one assert with truth that Taine has added any true and novel ideas to the political thought of the day? In every word he writes about the *ancien régime* he is nothing but a disciple of Tocqueville, and, when Tocqueville's guidance fails him, Taine exhibits a want of any coherent thought about the progress of the Revolution. Tocqueville introduced to the world one or two definite ideas—such, for example, as the conception of the survival in France of sentiments and even of institutions derived from the time of the Bourbon monarchy—which influence our whole way of looking at the Revolution. Quinet has shown that the Revolutionary leaders were at every turn thwarted by an incapacity for solving the ecclesiastical problems of the time. Doniol, again—to take a writer not exactly of the first class—impresses upon his readers the all-important fact that to reform the land tenure of France was, from the beginning of the Revolution and for many years subsequently, as urgent a necessity and as difficult a feat as it is to-day to reform the land tenure of Ireland. What, again, we ask, are the new and true speculative ideas to be derived from Taine? We are inclined to answer, None. Yet, after all, this reply may be unjust. It is possible that in England or America Taine is of necessity judged unfairly, for he has taken up the commonplaces of English political doctrine and illustrated them from the annals of modern France. Burke, Macaulay, and—though the combination is an odd one—Herbert Spencer have, it may be conjectured, supplied him in the main with his anti-Revolutionary principles. No one, of course, can suppose for a moment that Taine has not thought, and thought vigorously, for himself, but he is one of those thinkers whose own reflections lead them inevitably to the conclusions already reached by English liberal conservatism.

Taine's true aim, however, it may be said, was neither to write a history nor to put forward new and striking ideas as to the progress of society. His avowed object was, by analyzing the ideas and the institutions of the Revolution and the Empire, to account for the condition of modern France. This is, it may be presumed, a fair statement of the end he wished to attain. He desired to look at French society from a purely scientific point of view. His object was knowledge. But here again it is extremely doubtful whether he has attained his end. Two characteristics detract from the scientific value of Taine's work. The one is that Taine's treatment of the Revolution is far too polemical; his position is always the attitude of an assailant. At one moment the earlier Revolutionists, at another the Jacobins, or Napoleon, and now, it may be, French education as it exists, are the object of his attack. His criticism is trenchant, it is always effective, it is often just. But hostile criticism is not impartial investigation. The polemical attitude is inconsistent with the scientific attitude. Hence, though every reader must be convinced of Taine's earnest desire to see everything in the light of truth, and to free himself from the influence of partiality and passion, it is almost impossible not to feel that Taine's judgments lack perfect justice. It is hard to deal too severely with the errors and crimes of Napoleon. Still, it is clear that, had Napoleon not possessed great qualities for which Taine hardly gives him credit, he would never have risen to his eminence among the rulers of mankind. The vices of the Revolutionists or the weakness and the follies of their opponents hardly admit of exaggeration; yet even on this point Taine indirectly exaggerates. He never brings clearly into view the dilemma from which each party in succession found it all but impossible to escape. Reliance on the support of the Parisian mob meant connivance at outrage and crimes which made it impossible to establish free institutions in France. Repression of the Parisian mob meant reaction, and, probably enough, the restoration of despotism. Just because Taine will not recognize the existence of this dilemma, he is unjust in his judgment of every party. Take, for example, the odious device by which the Convention prolonged its own power after its dissolution, and survived in part among the Assembly which succeeded it. No adventurers ever perpetrated a viler fraud on the nation, yet even the scoundrels of the

Convention had something to urge in mitigation of extreme condemnation. The history of France for the last hundred years is proof enough that abdication on the part of the Revolutionists would have led to a reaction fatal to all the best results of the Revolution.

The second characteristic which detracts from the scientific worth of Taine's speculations is that, though he supplies his readers with facts, with anecdotes, with references, with quotations, and the like, he does not provide his readers with the means of estimating the worth of the evidence on which his conclusions rest. To give one example only of our meaning, it would certainly add greatly to the weight of the statements as to the horrors committed during the Reign of Terror to know that the truth of these statements is in every case quite beyond the reach of doubt. But since a good number of these statements were made at a time of reaction against Jacobinism, one is not absolutely certain that the Jacobins themselves may not have been the victims of slander. Certainly nothing is too devilish to be credible of the ruffians sent forth by the Convention to terrorize France. Still, the proverb that the devil himself may be painted blacker than he is, contains a profound truth which an investigator into the history of revolutions neglects at his peril.

If Taine has produced neither a history, nor a body of new and striking political speculation, nor a scientific analysis of the Revolutionary movement, he has assuredly not labored in vain. His seven volumes are much more than a monument of unrivalled industry; they are a storehouse of information; they are an exposure of baseless traditions and of popular delusions.

TWO ENGLISHWOMEN.—II.

The Story of Two Noble Lives, being Memorials of Charlotte, Countess Canning, and Louisa, Marchioness of Waterford. By Augustus J. C. Hare. 3 vols. A. D. F. Randolph & Co. 1894.

THE third volume of 'The Story of Two Noble Lives' deals chiefly with Lady Waterford, whom Mr. Hare calls by the ridiculous name of Our Lady. It is crowded with trifling details, and contains much which is mere fulsome praise.

The striking beauty of Louisa Stuart, set off by the fair hair which fell far below her knees, formed a decided contrast to the dark hair and pensive grace of her sister, Lady Canning. Louisa had many admirers, but at the age of twenty-one she had seen no one for whom she could care. In 1839 Lady Stuart de Rothesay took her daughter to the famous Eglinton tournament, at which Henry, third Marquis of Waterford, acted as one of the knights. He was known, from his many strange exploits, as the Wild Lord Waterford; he hated society and lived only for sport. To all appearance there could have been no congenial topic between him and Louisa Stuart, who was devoted to art and thoroughly enjoyed society. Yet he fell in love with her at first sight, and she by no means discouraged him. When Lord Waterford, too shy to make any advances himself, induced his sister to write for him, Lady Stuart de Rothesay said to her daughter: "I have had the most extraordinary letter from Lady Sarah Ingestre, a proposal for you from her brother. Of course, I must lose no time in writing a refusal." To her astonishment, Louisa replied: "Oh, but wait a little. I should like to think about it first." Lady Stuart could not believe that Louisa was serious, and wrote to her husband (then Ambassador at St. Petersburg) of Lord Waterford's "boisterous, rough manners, without the slightest interest in any concerns within doors, or within the doors of Parliament especially." After many demurs on the part of Louisa Stuart's family, and many representations that in order to win her Lord Waterford must give up the races and steeplechases in which he nearly always met with dangerous accidents, he was accepted, and the marriage took place in 1842, three years after the Eglinton tournament. Lord Waterford was devoted to his home at Curraghmore, in the south of Ireland, and not only could not bear to leave it himself, but could not bear his wife to be away. She spent only a very short time in England each spring, and in later life much regretted having been so divided (for the seventeen years during which Ireland was her home) from all her family and friends. Lady Waterford's life at Curraghmore was most monotonous, and her days were generally spent in solitude. Lord Waterford seldom returned from hunting before ten o'clock at night; he would then go to bed for a couple of hours and dine at midnight. Yet Lady Waterford was always ready to welcome him, and did not even complain of the weary weeks she had to spend in a wretched hunting-box, where she had no occupation whatever out of doors. At Curraghmore she improved the cabins on the estate, set up a woollen manufactory, supplied lime for whitewashing, seeds for gardens, and even gave lessons to the peasants in making beds and cleaning rooms. She laid out a garden, designed terraces, built a church (the windows for which she painted herself), and although Lord Waterford could not endure having visitors, she was always occupied with drawing or reading, and never seemed to miss the society which she had so much enjoyed. She even wrote: "I could scarcely say how happy I feel all day. Sometimes I think it is too much, and that much trial must come some day, and then I shall know how little fitted I am to meet it."

Lord Waterford was devoted to his wife, and was guided and influenced by her in all things. A few weeks after their marriage she had a terrible accident when out driving with him, and was for a time in imminent danger. He would allow no one but himself to cut off her beautiful hair; part of it he used to frame a portrait of her by Landseer, and he desired that the rest might be buried with him. When Lady Waterford recovered, her hair grew again till it more than touched the ground. The great sorrow of Lady Waterford's life was that she had no children, but, although regretting this till her death, with an almost passionate longing, she devoted herself to the children of Lord Waterford's brother, and to those of his sister, Lady Sarah Ingestre, afterwards Countess of Shrewsbury. In the terrible Irish famine of 1847 Lord and Lady Waterford exerted themselves to the utmost in giving relief of all sorts; Lady Waterford's action being publicly acknowledged in the House of Commons. It was a shock to them when, in 1848, their tenantry turned against them, under the influence of Smith O'Brien and others. The house at Curraghmore was fortified with cannon, the windows were barricaded, twenty-five soldiers were quartered inside, eighteen special constables watched day and night on the roof, and the occupants lived in a state of siege. Lord Waterford went about armed to the teeth, chasing mobs and rallying those men on whom he could rely. Lady Waterford could not go out at all, for a band of men (misnamed Fenians by Mr. Hare) had threatened to carry her off to the hills, or perish in the attempt. In an attack on the village several men were killed, and an attack on the house was hourly expected. But matters gradually quieted down, and in July, 1849, Lady Waterford was able to write that "the whole house has recovered a peaceable appearance." She returned to her former occupations, drawing being her greatest pleasure. One day she "put a new mouth to an old family picture instead of one which Waterford had cut out to stick a cigar into it."

Lord Waterford frequently had terrible accidents out riding; and in March, 1859, he was thrown from his horse while hunting and killed on the spot. He left Ford Castle, his property on the Northumbrian Border, to his widow, and on the death of her mother she succeeded to Highcliffe, a small estate on the Hampshire coast, near Bournemouth. Between these places Lady Waterford passed the thirty-two years of her widowhood. She did not resemble the old French lady whom she heard describe a widow's cap as "le vrai bonnet de la liberté," and both her mother and sister justly feared that she would be the victim of minds far inferior to her own. Lord Canning's early death was an especial loss to her, for she had looked forward to his being "a real brother, counsellor, and guide." Lady Waterford bitterly felt the loneliness of her life, and constantly refers to it in her letters.

"In my life it is the want of home affection which is so despairing, and the feeling that *never* again may I have it. Friends are kind, but friends *cannot* do to fill the home blank. . . . I live amongst the shadows of all who are gone. . . . You don't know how sad it is always to think of *things*, and not *lives*, . . . feeling so *very* lonely, without one soul to sympathize, and always obliged to swallow every little trouble."

Yet Lady Waterford was full of energy, and never had an unoccupied moment. At Ford she restored the castle, rebuilt the village, made new roads, constructed bridges, built schools, planted the bare hillsides, improved the gardens, and erected a beautiful fountain to the memory of her husband. She wrote:

"I love old things too, but I rejoice in the *providence* of progress, without which England would be such a country as Spain—a blank among nations—and I can see a desolate waste made frightful [*sic* for fruitful?] (its beauty lost) with a most utilitarian delight. I love *heads* that have done such great things for England as her engineers, and think the romance of their useful lives greater than that of a knight-errant."

At Ford Castle Lady Waterford frequently spent months entirely alone, especially in winter; she liked it at the time, but when she left she wrote of the intense enjoyment she had in watching the *faces* of people in the railway carriage or at the stations. At Highcliffe she received many visitors. When, in 1887, she expected Cardinal Howard, she wrote:

"My last sight of him was as an officer in the Life Guards, when I danced with him (the last time I ever danced), and at that same ball I saw Mlle. Eugénie Montijo, then called 'The Spanish Heiress,' and never saw her again till I met her as a widow and deposed Empress in Walker's hat-shop."

Another visitor was Mr. Gladstone. In answer to a question of Lady Waterford's, one of Mr. Gladstone's daughters wrote:

"Yesterday my father was saying he did not believe he would be alive now if he had not always kept his Sundays quite apart from his ordinary, and specially his political, life. Not only because of the pure refreshment it has always been to him to turn to holier things on that day, but because it has enabled him to

learn more on religious subjects than perhaps any other layman, and so has given him that firm and splendid ground which has ennobled and hallowed all his actions through life."

In one of Lady Waterford's letters she says: "I must own my pleasures are not people, but things, and the tastes that God has given me." The chief of these tastes was her exceptional talent for painting. Countless drawings of hers exist, the coloring of which is most beautiful; and many have been exhibited in London. She wrote, "I do *love* my art, far more than ever, and long to do a great work." This great work proved to be the painting of the walls of the school at Ford with ten large frescoes, representing scenes from the Lives of Good Children. The figures both of the children and of the older persons introduced are all portraits of the villagers, and were striking likenesses. The subjects, with the exception of "Christ Blessing Little Children," are taken from the Old Testament.

In the last year of Lady Waterford's life she suffered from gradual brain-decay, and in May, 1891, she died, at the age of seventy-three, at Ford Castle. On her tomb at Ford two mottoes, which she always kept before her in her room, have been carved. One is the Waterford motto, "Nil nisi Cruce"; the other is the motto of the Delavals, from whose family Lord Waterford inherited Ford Castle, "Dieu me conduise."

MORE FICTION.

The Watchmaker's Wife, and Other Stories. By Frank R. Stockton. Charles Scribner's Sons.

Marion Darche : A Story without Comment. By F. Marion Crawford. Macmillan.

The Copperhead. By Harold Frederic. Charles Scribner's Sons.

Yanko the Musician, and Other Stories. By Henryk Sienkiewicz. Translated from the Polish by Jeremiah Curtin. Boston: Little, Brown & Co.

Brothers and Strangers. By Agnes Blake Poor. Boston: Roberts Bros.

The Faïence Violin. By Champfleury. Translated by William Henry Bishop. D. Appleton & Co.

Can This Be Love? By Mrs. Parr. Longmans, Green & Co.

The Delectable Duchy. By "Q." Macmillan & Co.

Novel Notes. By Jerome K. Jerome. Henry Holt & Co.

John Ingerfield, and Other Stories. By Jerome K. Jerome. Henry Holt & Co.

Drolls from Shadowland. By J. H. Pearce. Macmillan & Co.

Mr. Stockton's latest book of stories is written in the vein of his most delicate drollery. His peculiar humor and his peculiar imagination are perfectly fitted to the form of the short story, and fill, to utter satisfaction, a new sense created by themselves. It is not character, but predicament, that is his specialty (*pace* Pomona and a few others), and the originality of his situations is brought about by his fancy (one would like to let the pen slip and call it fantasticy) working with an attendant spirit of naïveté. Each story is a combination of circumstances which no one else would ever have thought of, told with a certain wide-eyed, gentle guilelessness, and a gravity which does not even allow itself to be demure, but wears so skilful an air of the absence of mirth that one can fancy the very elect, the Lady and the Tiger, debating in their far-away caves the question, "Did he know he was funny?" It is noticeable that personal misunderstandings play almost no part in Mr. Stockton's stories; nearly all tell the plain truth—Asaph, prince of indolents, being an exception. It is the plain truth which causes the surprise, if, indeed, that can be called a surprise the contrary of which no one ever suspected.

Mr. Crawford is a transferable *genius loci*, and in 'Marion Darche' his sense of New York is conveyed with his accustomed precision and lightness and talent for selection. That the local atmosphere is rarefied as the story mounts, is perhaps only in obedience to all atmospheric law. We thank Mr. Crawford for indicating a New York which is neither the Vaudeville Club nor the slums. His suggestion that there are those who love New York the city and not the social centre, is daring, but will command attention, particularly as it comes from a man who is in a sense a citizen of the world, and who, though at home in India and Italy, remains sufficiently an American not to think that only that which is alien is human.

The opening chapter shows his special talent to perfection, and further whets interest with a gay modern conversation between the sub-hero and the sub-heroine which leaves the reader expecting delightful things of the principals. It is disappointing to find, instead, that the story relaxes as it proceeds. The author's pen grows listless; naturally the admirer of the author is unable to withhold the tribute of imitation. It is in vain that incompatibility, embezzlement, lost identity, and the shadow of bigamy enliven the plot; as it warms the reader cools, and concludes that Mr. Crawford's originality has for once taken the whim to be commonplace. Yet the book is not dull to the unreadable point nor to the exclusion of bright sayings. A house decoration which is like "an inflamed Pullman car"—a girl who "had a soul and bestowed now and then considerable attention upon its religious toilet"—a man whose "so-called gifts had turned out to be only tastes"—are plums worth a thank-you. But, viewed as a story or as a study of character, this novel is too aggressively made, not born.

Mr. Harold Frederic's sketch of a Copperhead of a farmland township in northern New York is written in his usual clear and defined style with his usual desire to do the Copperhead justice. Viewed at this distance, in the person of the patriarch farmer, Abner Beech, he makes a picturesque figure; he stands grim, gaunt, hard, among his corn rows, his cows, and his cheeses; he reads Scripture so that "you could hardly listen to him going through even the genealogical tables of chronicles dry-eyed. His Jeremiah and Ezekiel were equal to the funeral of a well-beloved relation." He denounces the son who loves the daughter of an abolitionist, ignores him during his service in the Union army, and softens only when the abolitionists have "smoked the damned Copperhead out," when his home is in ruins and his boy has come back from Antietam with an empty sleeve. It is a fresh and interesting contribution to the history of all that went to make the war. The Laodiceans of our great struggle have seldom figured heroically or even picturesquely in the tales of the time. For them to have their chance now in fiction is not likely to do any harm. Mr. Frederic has done his task well, and has set the little drama felicitously in the region where his muse wanders with the freedom born of intimate knowledge.

Henryk Sienkiewicz is no less story-teller than novelist. Witness five stories of his recently given us in a translation by Jeremiah Curtin. Artist to the finger tips, Sienkiewicz in this little volume is touching, tragic, droll, by turns. There are many ways of conveying truth. Sienkiewicz's way is to tell, and then to leave inference to the reader. He gives facts with exquisite fidelity, but what the reader most feels is the subtle suggestion of fact under the facts. The wonderful union of truth within and truth without, made more wonderful by the non-insistence upon either, is the especial hall-mark of this craftsman, whose scope seems boundless. The stories deal with the sorrows of Germanized Poland, with the loneliness of exile, with the comical rivalries in the grocery business of a new American town, with the degradation and ruin of the Polish soldier fighting for Prussia in 1870. In all these there is one likeness, the magnetic attraction of the author's pen-point for the particular incidents which signify. In this he resembles Maupassant, with whose stories these worthily class themselves.

'Brothers and Strangers' is a book towards which one feels as the father of the Swiss family Robinson felt towards those of his sons who burned their fingers in their greedy haste for soup, and whom he rewarded, rather than the calculating son who had not burned his, but had helped himself with precocious decorum. The others were faulty but natural. This novel is wholly unimportant, but one is moved to commend it beyond many that are more clever, for its simplicity and for an unassuming realism which refrains from exclaiming, "See what a real book am I!" It goes straight to work and asks no favors. The story is small; the local color, derived from Boston and from a little town in New York, while faithful, is not insisted upon; but a portrait or two modestly put forth show a nice feeling for characterization and a nice observation of the world as it is. These things, being clearly written, make a pleasant even if not serious addition to literature in its lightest vein.

Mr. Bishop has translated, and in the main well translated, Champfleury's story of 'The Faïence Violin.' Sainte-Beuve called it "a unique study in moral pathology"; the hero is a china-collector, the heroine no other than the faïence he adored. It is a charming little story, as delicate as the pottery it celebrates, and full of the humor which is a special trait of Champfleury's writing. Mr. Bishop's brief preface, giving a sketch of the author, is of a befitting grace—the grace of an old miniature found in a Parisian bric-à-brac shop.

Mrs. Parr's little novel 'Can this be Love?' is sound, kind, and gentle. Its feeling, if not its English, is wholly above reproach. Readers may rely upon it that it is a love story and not a sermon, and that it will not lead them into the fatigues of mental disquiet, socialistic heresy, or doctrinal doubt; excellent, we should say, for nervous prostrates and for the public which feeds on "pretty little stories."

No pretty little stories are "Q's," but morsels of literary food concentrated to the last degree. Their material is keen perception, humor, and a great love of Cornwall; the result is a series of sketches which might well borrow the name of De Roberto's Italian stories, "Processi verbali," for their manner is that of reports, rapid, exact, and unembellished. One thinks of Charles Reade's swiftness of telling, but there is none of Charles Reade's self-consciousness of style. One thinks of Hardy's

peasants in reading of "Q's" Cornish folk, but, being here the principals and not accessories, they hold the attention even more. One thinks, too, of the fidelity of Mary Wilkins's work, and finds that the absence from Cornish soil of the "inflamed New England conscience" permits greater variety of topic and a freer play of humor. A score of incidents are told, without haste, without rest, with only so much of landscape as serves for background and for carrying out the note which sounds in the preface, of love for garden, wood, and sea. There is great diversity of matter—poetic, comical, gruesome; but one treatment marks all—that of the narrator and not the commentator; moreover, of the expert narrator, who, having seen everything, understands leaving out as well as telling. If there is ever a lack of point in any of the stories, it is as point is lacking to a crystal sphere of which the very absence of salient angles is its charm. The long preface, in italics, affords an appropriate text for protesting against that iniquitous practice of printing, which must have been invented by a needy oculist.

If the Princess Scheherezade, instead of telling tales to the Sultan, had read to him all the anecdotage to be gleaned from the press of the nineteenth century, the report of the proceedings would have made Jerome's 'Novel Notes.' It is a dictionary of dog stories, servant stories, snake stories; stories of suicides, of houseboat parties, of soldiers, of fever patients, of omnibus conductors, of dreams. It is impossible that all should be poor, and unthinkable that all should be good; in truth, many of them are extremely amusing, but fully five of them are foolish. Mr. Jerome's pathetic plea to be taken seriously sometimes, removes one's hesitation in saying that at least one of the stories is altogether too horrible to have found utterance. On the whole, we advise any one who intends to read the book to take it as the Sultan did his stories—one at a time. The illustrations are as copious as if the book were Green's History.

The petition to be judged "from some other standpoint than that of humor" is offered in the preface of another book of Mr. Jerome's, a collection of stories of which "John Ingerfield" is the first. There is novelty, certainly, in the scheme of each of them, and Mr. Jerome is right in thinking that three of the number are not funny. The other two are, as we think, the best. No matter how original Mr. Jerome's pathos is, his pathetic style is tedious. To be funny—"ce qui s'appelle" funny—is his birthright, and in that realm it is that he chiefly glimmers.

'Drolls from Shadowland' is the name of a unique group of imaginings—a sort of grown-up fairy story, where the fairies are grim, fateful spirits, and the scene of their spiriting is the wide, sad world, full of sin and grief and longing. Each little sketch is like a delicate, short-lived flame that shoots up for an instant and throws a pale ray upon the human heart or human lot, when, lo! it is gone again; but it has lived and cannot be forgotten, for it is of the very essence of poetry.

The Monism of Man; or, The Unity of the Divine and Human. By David Allyn Gorton, M.D. G. P. Putnam's Sons. 1893.

Genetic Philosophy. By David Jayne Hill, LL.D. Macmillan & Co. 1893.

NUMBERLESS men write about philosophy without dreaming that any further qualification is necessary than having read a quantity of books on the subject and having something they would like to say. Not desultory reading, but hard, systematic study, with accurate reflection, with continual comparison of one's own ideas with those of the strongest men, to see if one's own are capable of improvement in definiteness and force, and this training carried on for at least half-a-dozen years steadily, are the minimum requirements for enabling a man to address the philosophic world without making himself a nuisance. When this point has been reached, if the philosopher will only take the time to write his book short, saying what he has of new to say in the smallest compass in which it can be stated with perfect clearness, he will earn the benedictions of his readers.

Both the above volumes contain eclectic hodge-podges drawn from authors of various merit, but mostly weak. The writers display a charming unconsciousness of the problems their originals had in mind, and frequently quote passages whose real significance they quite miss. Each has been reading and thinking, not altogether without good sense, until he has collected a bookful of reflections of no value, which he now inflicts upon the public. Dr. Gorton, though a medical man, quotes Eduard von Hartmann as authority for a fact of physiology. He speaks disrespectfully of Hahnemann, as "a peer among peerless physicians"—unless this is meant to convey a compliment. After an inconsequential chapter on "The Unity of Divine and Human Agency," he gives two replies to himself, one signed *Scientist*, the other *Theologus*, both in his own incomparable style of thought and diction, peers of his peerlessness, and then replies to them, signing his reply *Radicus*. If he had made it *Radiculus*, it would have come somewhere near a real word and an appropriate one.

Dr. Hill is president of the Baptist University of Rochester, and as such is entitled to be treated seriously, though we must seriously say he sheds no lustre upon his institution by writing about matters which he does not understand. Thus, he seems to imagine that the discovery of Neptune is somehow to the credit of "Bode's law," although that "law," which good logic never would have admitted, was finally exploded by the violent violation of it in the case of Neptune. The only thing it had to do with the discovery was to suggest that the planet might be found in a place very remote from that where it was found, and thus probably to cause Leverrier to overlook the possibility of the perturbations of Uranus by Neptune being of the unusual kind which it turned out that they were. Though we have only space for this instance, there are plenty of other proofs of Dr. Hill's incompetence to treat of his subject. It is a pity, because the title of his book and those of several of the chapters are decidedly appetizing. But we can find nothing in it of any value.

The Beginnings of the English Romantic Movement: A Study in Eighteenth Century Literature. By William Lyon Phelps. Boston: Ginn & Co. 1893.

MR. PHELPS'S little book is correctly described in the title-page. It is a "study" in the proper sense of an often abused term, for it presents, in surprisingly small compass, the result of investigations obviously minute and laborious, and it is a contribution to orderly knowledge. The beginnings of the English romantic movement, the author holds, date back to the first quarter of the eighteenth century; and he further maintains that during the second quarter of that century, and especially during the fifth decade, the movement was much stronger than is commonly supposed. His task is, then, to trace some of the forces which, in the "age of prose and reason," prepared the way for the great romantic revival at the beginning of the present century—forces often working obscurely, but necessary to be understood if one is to have any clear conception of the genesis of nineteenth-century romanticism.

After due preliminaries as to the romantic ideal and the aims of the pseudo-classicists, Mr. Phelps proceeds to consider reactionary tendencies—discovering several unwitting traitors in the Augustan camp, some of them in the very shadow of the Prætorium. He then treats in special chapters the Spenserian revival, the influence of Milton, "Gothicism and Chivalry," and ballads. Norse mythology, Welsh poetry, and Ossian are appropriately discussed together. The poet Gray, whose literary development Mr. Phelps regards as exemplifying the whole romantic movement, has a chapter to himself.

In collecting evidence the author has been forced into dangerous companionships. He has had to associate with some very dull writers, and with others who, if not dull, betray the uneasy self-consciousness of the timid innovator. It is much to his credit that he has come off uncorrupted. He writes clearly and unpretentiously, his skill in condensation is rather remarkable, and he keeps his own and his reader's spirits up from first to last. Though solid, the book is never heavy. It can easily be read through at a sitting.

The first publication of a young scholar, Mr. Phelps's book is of course not without defects. Here and there his style is a trifle rough, now and then his vision is not quite sure, and, in a few instances, his facts admit of some trifling correction. But we have no disposition to insist on these petty flaws. We welcome the volume as a contribution to literary history, and we shall look with interest for a more ambitious work from the same hand.

The Theory and Practice of Banking. By Henry Dunning Macleod. 2 vols. Longmans, Green & Co. 1893.

THIS is the fifth edition of a book that is in some respects of enduring merit. The author's idiosyncrasies are too well known to require comment, and they are perhaps as conspicuous here as in any of his books. But in spite of his absurd self-conceit, his exasperating repetitions, and his infuriate denunciation of those whose opinions he dislikes, there is a leaven of sound sense and genuine learning permeating and lightening the whole mass of his writing. It is undoubtedly true that Mr. Macleod's works have to a considerable extent affected English thought upon the problems of currency and banking, and he at all events deserves praise for carrying out the plan of tracing the gradual development of sound practice and eventually of sound theory in this department of finance. Perhaps in no instance is the process of evolution more striking, for the successful bankers are the survivors of a struggle for existence in which the casualties have been prodigious in number; and even these survivors have frequently distinguished themselves by giving wrong explanations of their success.

It is impossible to read these records of human fallibility and perversity without reflecting upon the melancholy spectacle of our own currency. It would almost seem that the painful experience of other countries had been thrown away upon us, and that our legislators might presently begin the construction of a

banking system upon unknown lines. It is upon this account that we call attention to this new edition of a book that is already of some antiquity, for whoever will peruse it will at least receive from it a deep impression of the extreme difficulty and slowness with which sound ideas of banking have made their way in the past, and will be the more disposed to hold fast to whatever has stood the test of practical experience. Although Mr. Macleod's style of narration is not the most agreeable, the history of banking contains many interesting features, and the account of the "currency theory" deserves especial attention from those who are struggling with the problems that our own system of currency presents.

The Venetian Painters of the Renaissance. By Bernhard Berenson. G. P. Putnam's Sons. 1894.

THIS is a small book, containing, in the text proper, only seventy-eight pages, but the writer's ideas are interesting and worth attention. His thesis is, in brief, that "Venetian painting is the most complete expression in art of the Italian Renaissance," and he supports his contention with very good reasons. Like most critics who approach painting from the literary rather than the technical side, he is somewhat unjust to Veronese and more than just to Tintoretto, whom he admires for his thought, and, consequently, as much in his bad work as in his good. His preoccupation with art rather for what it tells than what it is, takes its extremest form when he says that "other schools have accomplished much more in mere painting than the Italian. A serious student of art will scarcely think of putting many of even the highest achievements of the Italians, considered purely as technique, beside the works of the great Dutchmen, the great Spaniards, or even the masters of to-day." If this were true, it might not affect Mr. Berenson's admiration for Italian painting, but he may be sure the painters would not reverence and admire it as they do. It is because of Titian's quiet perfection in the painting of flesh, Tintoretto's mighty composition and swing of brush, Veronese's unequalled and serene mastery over the most difficult problems of art—technical qualities all—that the painters reverence these giants of old.

What will prove most useful to many in Mr. Berenson's book is the "Index to the Works of the Principal Venetian Painters," which occupies sixty-three closely printed pages. The attributions are "based on the results of the most recent researches" by Morelli and others, although some of them are made independently by the author himself. Many of them, naturally, are at variance with those of the catalogues of museums, but it is refreshing to see that of the sixteen pictures allowed to Giorgione the "Partie Champêtre" of the Louvre is one. The attribution of this most lovely and most Giorgionesque of paintings by Crowe and Cavalcaselle to a nameless "follower of Sebastian del Piombo," always seemed an absurdity. Per contra, it appears that the most recent opinion attributes the famous "Concert" of the Pitti Palace to Titian, thus robbing Giorgione with one hand while giving with the other. It is somewhat surprising to find how few of the Veronese in Venice are allowed by Mr. Berenson to be genuine—only two, for instance, of all those in the Ducal Palace, and none of the ceilings in San Sebastiano.

BOOKS OF THE WEEK.

HOUGHTON, MIFFLIN & CO., Boston.

11 East 17th Street, New York.

Two New Books.

"I tell you that when we have settlements of TRUE MEN AND WOMEN put right down among these hopeless creatures, then, and not till then, shall we touch the sore to heal it."

Joanna Traill, Spinster.

By ANNIE E. HOLDSWORTH,

Author of "Bonnie Dundee," "Bellhaven," etc.

Miss Holdsworth is one of the most popular of the younger English novelists, and in "Joanna Traill, Spinster," she has treated the now widely agitated question of individual rescue work among fallen women with great power and at the same time with delicacy. The book presents a possible solution of the question, but is primarily a well planned and interesting novel.

Cloth, 12mo, price, $1.25.

MARK TWAIN'S NEW STORY.

Tom Sawyer Abroad.

By HUCK FINN.

Edited by MARK TWAIN.

Mr. Andrew Lang has called "The Adventures of Huckleberry Finn" *the great American novel.* Certainly there are no characters in modern fiction more popular with young and old than Tom Sawyer, Huck Finn, and Nigger Jim.

A Western professor invents a wonderful flying machine, and it is widely announced that on a certain day he will make an ascension. Our three travellers are, of course, in the machine when it starts, and soon find themselves sailing over the Atlantic Ocean. They finally land in Africa.

The opportunities for thrilling and humorous situations can readily be imagined. The interest never lags, the humor is delightfully spontaneous, and there are many strong pathetic touches in the book.

Stamped cloth, square octavo, 240 pages, with 28 illustrations from original drawings by Dan Beard. Price, $1.50.

IMPORTANT LATE BOOKS.

Our Village.

By MARY RUSSELL MITFORD. With unpublished half-tone portrait of the author. 16mo, 348 pages. Bound in colored cloth, 60 cents; fine white vellum cloth, gilt top, 75 cents.

RECENT PUBLICATIONS OF THE

AMERICAN ECONOMIC ASSOCIATION

Volume VIII., No. 6.

THE FIRST STAGES OF THE TARIFF POLICY OF THE UNITED STATES.

By WILLIAM HILL, A.M. of the University of Chicago. 162 pages. Paper. Price $1.00.

A careful scientific treatment of this interesting topic, showing especially that protection was a part of the purpose of the framers of the Constitution.

Volume IX., Nos. 1 and 2 (January and March, 1894).

Progressive Taxation in Theory and Practice.

By Prof. EDWIN R. A. SELIGMAN, Ph.D. of Columbia College. 222 pages. Price, paper, $1.00. A cloth edition of this work has also been published. Price $1.50.

The only scientific work on the subject in English and the latest and most complete in any language. A thorough historical and critical study of the practice of progressive taxation and of the theories on which it has been upheld.

Full list of the fifty numbers of the publications sent on application. Address inquiries and orders to SECRETARY AMERICAN ECONOMIC ASSOCIATION, ITHACA, N. Y.

The Nation.

NEW YORK, THURSDAY, APRIL 19, 1894.

The Week.

THE speech which Senator Lodge delivered on April 10th, before what the *Tribune* assures us was a "small but select audience" in the Senate chamber, is a striking illustration of the temptations which beset the scholar in politics. He set out apparently with the firm intention of taking high rank as a thinker, and began a philosophical dissertation on the different theories of government which underlie free trade and protection. Here we find that the let-alone theory, with its absurd talk about the rights of the individual and free competition, has become antiquated, and that all powerful minds have now gone over to the let-nothing-alone theory, under which protection and socialism and bimetallism find their place and justification. The rather dreary waste of political scholarship through which this thought was developed was dotted here and there with little oases in the shape of maxims worthy of Burke or Bunsby. One of them is the profound saying that "the true and lasting source of wealth is production"; and while the sagacious hearer is marvelling that he had never thought of that before, the orator goes on to show that trade is a bad thing, because it is "a tax upon production, on account of the cost of transportation." The truly wise and happy nation will go on piling up superfluous products, and eschew trade as it would a pestilence.

Towards the end of his discourse the scholar thought it necessary to let his small but select audience down from the thin air of speculation and give it a touch of cold facts. This is always perilous for political scholars, and Mr. Lodge promptly fell under the condemnation of his favorite author, Carlyle, for saying to the "hard fact," "Thou art not this way but that way!" The "fact" which he set out to establish was that wages in England had fallen from 12 to 15 per cent. in the last twenty years. This might seem a pretty difficult thing to prove for the ordinary politician, inasmuch as the investigations of Mr. Giffen and the statistics of the Board of Trade establish the conclusion that wages have risen in England from 30 to 50 per cent. in the past half century. But this is no difficulty at all in the way of the scholarly politician. He summons as his only witness a Manchester bimetallist, says that his gloomy talk about the ruin of England is all the testimony we need, and then goes on to speak solemnly of how "we see that in fifty years free trade has proved utterly unable to maintain wages in England, much less increase them." This is scholarship as she is politicked.

Senator Morgan was stung into denying on Wednesday week the plain-spoken charges of the Minnesota Democrats made against him and the other protectionist Democrats in the Senate, but his denial was singularly irrelevant. He had been named in the Minnesota address as one of the men who, "in the secrecy of the committee-room, browbeat the sub-committee with threats of open opposition to the bill unless the special industries they represented were also granted protection or given increase of it." Now how does Mr. Morgan meet the charges that he got, in this way, a duty put on iron ore and on coal at the behest of the Alabama manufacturers? Why, by the following naïve declaration:

> "I am satisfied with the bill now taken up by the Senate as it came from the Senate committee. I propose to vote for it without any amendment whatever, so far as I now know."

In other words, having done what the Minnesota Democrats condemned him for doing, he urges his satisfaction with the results of his intrigue as a reason why he should never have been condemned at all. His peculiar defence would call out from his accusers, if they had a prophet Elijah among them, such a question as the latter addressed to Ahab, after that wicked king had got hold of Naboth's vineyard: "Hast thou killed and also taken possession?"

Happy-thought bimetallism seems now to be the order of the day. The Senate spent several sessions debating a proposition to get Mexico to let us do her silver-coining for her. All the great lights agreed that it would be a splendid scheme, as it would keep our idle mints going, and somehow start China into absorbing silver at a tremendous rate. Mr. Gallinger had read a letter of Moreton Frewen's, certifying to the fact that "the Chinese can absorb silver in the form of coin very rapidly." Close students of Chinese laundrymen in this country have noticed the same phenomenon among them, and the capacity of Ah Sin to absorb packs of cards indicates what might be done in stowing away silver "in the form of coin." Anyhow, Moreton Frewen tells us the hope of bimetallism now lies in getting "that mysterious nation" "westward across the Pacific" "to absorb even an ounce of silver per capita." All the Senators are, of course, devoted to the absorption of silver, in the form of coin or bars indifferently, and so they all voted for the resolution calling upon the President to request Mexico to let us do her minting, and at once start the absorbing process in the mysterious nation. To no one did it occur to inquire what view of the case the Mexican Government might take. Who could doubt that Mexico would cheerfully give up her excessive seigniorage on the silver she coins and her revenue from export duties on the same, and give us all the profits and all the glory of starting up the absorption? But, alas for the happy-thought bimetallists, news comes that the Mexican authorities look upon the whole project as preposterous, and will have nothing whatever to do with it.

The decision of the Democratic caucus to pass a rule for "counting" a quorum in the House is a confession that Democratic absenteeism is regarded by the party managers as incurable. With forty members more than enough to make a quorum of their own, they are able to muster one only by prolonged effort, and then it vanishes at once. Private business and political indifference or insincerity keep from fifty to sixty Democratic Congressmen all the while away from Washington, and the Republicans have had an easy time of it holding their opponents' noses to the grindstone. What ex-Speaker Reed has been playing for all the session is to force the Democrats to adopt his method of declaring a quorum present. He has now succeeded, so far as the substance of the proposed new rule goes. Its form, however, and the way chosen to enact it, are different in important particulars from Mr. Reed's. He made his rule to count a quorum out of his own head, and without authority from the House or from precedent. He made the rule in order to make it—that is to say, he counted a quorum in order to get authority to count a quorum. That is a far different thing from an orderly decision of the House to adopt a certain way of determining the presence of a quorum. And when that determination is left, as is now proposed, to appointed tellers, and not lodged, as it was under Mr. Reed's rules, in the hands of the Speaker alone, who is always fallible and often arbitrary, the thing becomes much less offensive and open to abuse. In such matters as parliamentary rules the form is sometimes of more account than the substance, and it cannot be denied that the form of the rule now suggested has great advantages over the one in force in the Fifty-first Congress.

Still, the Democrats in this matter are hopelessly on the wrong scent. They will never find the cure for their troubles

in any scheme of counting a quorum. With all the aid of his rule, Mr. Reed had to have a quorum of his own party present to pass partisan laws. Does not every one remember the famous Republican campaign picture of the House, showing an empty Democratic side? The Democrats would not stay to be counted in 1891, and the Republicans will not in 1894. Mr. Reed had to have 167 Republican votes as a quorum in order to enact partisan legislation, and Mr. Crisp will have to have 179 Democratic votes for that purpose. No parliamentary trick can get around that necessity. At Albany the thing is settled by the State Constitution, which makes sixty-five affirmative votes—a quorum—necessary to pass a law through the Assembly. At Washington the thing is settled by partisan feeling, which justifies Representatives in staying out of the House and compelling their opponents to furnish their own quorum. It was so in the Fifty-first Congress, and it will be so in the Fifty-third and in all others. The real contrast—the fatal contrast for the Democratic party—lies in the efficiency of the Republican organization under Mr. Reed. With a margin of only nine or ten votes above a quorum, it was able to have a quorum present whenever needed, and to pass the laws the party had decided to pass. The prolonged floundering of the Democrats, with a party majority four times as great, is daily winning for their opponents the votes of men who say: "Give us a party, right or wrong, which can do what it sets out to do."

Ex-President Harrison, who is delivering lectures on some branch of the law out in California, seems to keep up his thinking on public questions in a remarkable degree. We are very glad to agree with his latest views, as expressed to the Union League Club of San Francisco at a reception on Tuesday week. This is what he said:

"I hold that our revenue laws should be so framed as to keep American mills open, and not to shut them. I believe it is worth our while to build a navy, and, incidentally, to have a coaling station within easy reach of our country somewhere in the Pacific. I don't want to annex the world, and I have not been much of an annexationist; but, when I find a spot which must be taken by us or some one else, thereby securing a station of the utmost importance to the United States, I say let us take it in."

The man who would gainsay these sentiments would, in our opinion, be unfit for human society. Any one who would frame revenue laws so as to shut up mills would be a monster. And the man who would refuse a coaling station which somebody else wanted, and we could keep without trouble or expense, would be a low fellow. But we would take no coaling station, or even accept it as a gift, unless somebody else wanted it. This is essential. It is a principle of the nursery which children of a larger growth should cling to firmly. For this reason we hold, that when we want a thing it is a sign of unfriendliness for other nations not to want it also.

But the opinion which commands our most cordial concurrence is this:

"The ex-President said it was strange there should be so much distress now. Whoever has done it, or however it came about, it is un-American and should be repudiated by the people."

We have always held that distress was "un-American." Whenever we see a man in distress we know him to be either a foreigner who has not caught the spirit of our institutions, or a bad American who has been idling away his time in Europe with luxurious noblemen. For this reason the people cannot rise against it too soon and bring its authors to justice. We are glad to say, however, that no people in the world has ever taken to it kindly. Mankind has repudiated it from the earliest days. Adam found himself face to face with it when he came out of Eden, and was justly indignant with it, and in his anger planted potatoes and other vegetables and sought nitrogenous food in the woods with his boomerang. We are glad to see a man of President Harrison's thoughtful disposition in the field against it. With so many people disapproving of it, it must soon leave our shores.

Probably nothing more disgraceful even as a joke has ever occurred in the United States than the march of "Coxey's army." Day after day these people have passed by farms which are suffering for want of labor, and received provisions from the villages on their way. Of late the sheriffs and chiefs of police have begun to bestir themselves, but on the whole the "army" makes its way southward at a fair speed. There is no question that it is doing a great deal to bring discredit everywhere on American institutions and society. The movement may be a joke, but foreigners can never understand a joke as elaborate and prolonged as this. The uninterrupted march of 1,000 or 500 ragamuffins on the capital of a great nation to force the Government to issue irredeemable paper, in order to employ them on public works, is not calculated to raise either American intelligence or prosperity in the eyes of the world. But, deplorable as the spectacle is, is it not the legitimate outcome of ex-President Harrison's doctrine that the Government is bound to find work for the "unemployed"—the unemployed being every man who says he has no employment? And is it not the outcome also of the protectionist preaching that employment depends on the existence of the McKinley tariff, without which America grew and flourished for a hundred years?

The Republicans of Colorado are improving the enthusiasm aroused by their success in the recent municipal elections to begin immediately the work of organization for the contest of next fall, when State officers will be elected and the fate of Populism will be settled. The canvass thus opened will be followed with interest by the rest of the country as the first in which women have participated in that State, or, for that matter, in any State except Wyoming, which is really too small to count. The town and city elections seem to have settled the question that the women of Colorado will vote, registration having been general, and the percentage of ballots to registration unusually high. The indications are that they will also take much interest in the preparations for the State election. In a number of places Republican clubs are being organized composed of both men and women, and with women represented among the officials. The spectacle is a novel one to outsiders, but it is rapidly becoming so common in Colorado that the newspapers are already treating it quite as a matter of course. There is no dispute in either party that the great majority of the women are against the Populist follies, and that their participation in the next election makes the overthrow of Gov. Waite much more probable than it would otherwise be.

That was an interesting decision rendered by Judge Nott of the Court of Claims at Washington on Monday, that the President has a right to approve a bill after the adjournment of Congress, provided he does so within ten days. The question will doubtless be carried to the United States Supreme Court for final decision. It is odd that a verdict from that tribunal has never been secured. The opinion of such commentators upon the Constitution as Story has been the other way—that the power of the President over a bill ceases with the adjournment of the session. Such, too, has been the almost unbroken practice. As the moment of adjournment approaches, there is always a great rush to secure the Executive signature, under the belief that he cannot lawfully affix it an instant afterwards. But there is one important precedent on the other side. Lincoln approved what was known as the captured-property act eight days after the adjournment of Congress, and the constitutionality of the act thus signed was recognized through its treatment by every branch of the Government as valid. It would be in the public interest if the President could have more time to consider the mass of bills which are always hurried through in the closing hours of a session; and, if he really possesses this power, the fact ought to be affirmed by the Supreme Court, so that he may exercise it without question

We trust the New York Constitutional Convention which meets this summer will not overlook the influence of the press in cherishing and promoting hostility to foreign nations, and preparing the popular mind to take offence at trifles, and to love violence as a means of settling disputes, and in diffusing a spirit of lawlessness among the young officers of our navy. In no way can this be met so effectively as by an article making all editors under sixty, and not physically infirm, who advocate a war, liable to serve in the field or on board ship immediately on the outbreak of hostilities. As age in no way diminishes their capacity for mischief, they might after sixty be compelled to serve in the ambulance corps on shore or as surgeons' mates on shipboard. We believe, in all seriousness, that this would be likely to save the nation hundreds of millions of dollars, and the human race untold misery. If we may judge from our history, war between the United States and any other nation in the world would be unlikely to the verge of impossibility but for the press, which in this matter displays just as little sense of responsibility as it does in the collection of "news." Fictitious accounts of battles in which we blew the enemy out of the water, might be made punishable as a misdemeanor, on the application of the Young Men's Christian Association.

A terrible fellow is Colonel Phil Thompson of Kentucky, who appeared for Mr. Breckinridge in the late breach-of-promise case. Colonel Phil some years ago murdered a man in cold blood on a railroad train, on suspicion of improper relations with his wife, and had a roaring trial of his own. One would have expected that in this case, therefore, he would appear as the champion of domestic purity. Far from this, he was a furious defender of Breckinridge, and shocked the entire South by the affirmation that his client is no worse than other men. Two of the Louisville papers have commented on it with such severity that we should not like to be in the shoes of the editors when Col. Phil gets home and has time to attend to them. The story that the case has been pushed or supported by the "Briggs men" in order to break down Breckinridge's weight as an opponent of the "higher criticism" in the General Assembly, has, we are pleased to believe, not a particle of foundation. But it is quite certain that Breckinridge's career as a religious or semi-religious orator is closed. Neither Sabbath observance nor the Confession of Faith can get any more help from him.

The registration bill which Mr. John Morley has introduced in the House of Commons proposes to deal with the anomalies in the British law which have long vexed the souls of the Radicals. One is the length of residence required for registration — six months. This has borne very hardly on workingmen, who in these hard times have been obliged to move about a good deal in search of work. It is proposed to reduce it to three months. Another is the practice of holding elections throughout the kingdom, on a dissolution of Parliament, on different days. The writ merely directs the sheriff to make a return before a certain date, and he has the interval, generally a fortnight, in which to select his day. This often enables people who vote as freeholders to vote twice, and sometimes as much as six times, in different constituencies. If the elections all took place on the same day as here, this would no longer be possible. But, to make assurance doubly sure, the bill adopts the Radical principle of "one man one vote," and forbids the casting of more than one vote by any man anywhere. The Tories cling to this plural vote for freeholders on the ground that it is a just and proper protection for property against numbers. But their strongest objection to the present bill is that it makes no provision for "redistribution," or, as we say, for reapportionment. There are in this field very great anomalies, in spite of the redistribution act of 1885. The Tories are particularly anxious to get a whack at the Irish representation, which is now very much greater, as compared with the English and Scotch constituencies, than the population of Ireland at present warrants. But the right to interfere with it is doubtful, as the number of Irish representatives was settled by the Act of Union, which has at least some of the characteristics of a treaty with the Irish nation. To diminish their number would, therefore, make a prodigious uproar. The Liberals will make a desperate fight for the bill before dissolving, as they think it will increase their vote by about 100,000.

Sir William Harcourt's budget, about which so many sensational rumors have been set afloat, is a pretty tame affair after all, except in the matter of the income tax. Here the growing power of the Radicals in the Liberal party is again demonstrated, not only in the increase of a penny in the pound, but also in a scheme which practically makes the income tax a graduated one. This bill is already denounced by the Tories as an attack upon them because they are rich, and doubtless there is some truth in this. There is this to be said, however, that if the rich Tories had not got up their scare about the insufficient navy, and forced the Government into making extraordinary naval grants, there would have been no deficiency to provide for and no graduated income tax. In so far the men are hit hard who deserve to be. Mr. Goschen's objections to the plan for consolidating the five existing classes of death duties into one "estate duty," also to be graduated, are that the provisions are so complicated as to require the most prolonged and careful discussion by Parliament. The poor tax collectors ought also to be remembered, lest there be more of them to imitate the old Westmoreland distributor of stamps who said, after one of Mr. Gladstone's innovating budgets: "Sir, my head, sir, is worn out; I must resign. The Chancellor, sir, is imposing of things that I can't understand."

There is no subject, probably, on which there have been so many aberrations of the human mind as money, but we question if there has ever been a greater one than "Dr. Arendt's plan for raising the price of silver." Four states, England, France, and Germany, and the United States, are to receive silver bars and issue certificates against them, and the value of the bar is to be fixed annually by a majority of the states concerned "whose representatives would meet every October—each country to have one vote for each million of population." The reason why there is so much fuss about silver now is that it is supposed to be possible, by some sort of huggermugger, to convert it into a reliable standard of value. But Dr. Arendt proposes to change the value of the standard of value every year by a popular vote. The making of contracts under this system would cause scenes of uproarious mirth. It fully resembles a system by which the yard measure would undergo revision every year, and a convention would decide annually what was meant by an agreement to deliver 1,000 yards of broadcloth. A majority of the nations, with one vote for every million of inhabitants, might decide one year that 1,000 yards meant 1,200, and another year that they meant only 800. The London *Spectator* said recently that the American people would have to go through a good deal of suffering before it would resolve to leave currency to experts, as it leaves astronomy. This is probably true, but it is not true of America only. Currency is getting into politics everywhere as the socialistic theories spread; and the power of the Government over its purchasing power is a sacred article of the socialistic creed. Unluckily, large numbers of people who ought to know better and who are not socialists, are playing into their hands by proclaiming that the Government has this power. The craze will never be over till the Government agrees to stamp the weight and quality on all metals brought to it, abolishes legal tender, and lets people make their own bargains in their own metal. The notion that the Government can raise and keep up the value of commodities indefinitely by merely saying "Go to," is a suggestion of the modern Satan,

FACTS FOR BOSTONIANS.

THE *Vicksburg Herald* is an influential paper in Mississippi, and it prints every week paragraphs like the following:

"It makes hard-working farmers and enterprising merchants tired to hear the 'plenty of money' cry played upon by the Wall Street organs. They tell of the surplus in the large cities, and even hint at still more contraction being necessary.

"Of course there is plenty of money with cotton, wheat, and all agricultural products selling at only two-thirds of their normal value. If agricultural products would only sell for half their value, the surplus money in the banks would be still greater.

"What the farmers want is plenty of money, with agricultural products bearing such prices as to make agriculture reasonably profitable. The merchants desire that condition also, for if the farmers are prosperous, the merchants are prosperous. But the trouble is, that Cleveland and Sherman don't care a continental for a farmer."

In connection with this let us mention that in a Democratic primary in Louisiana held on Saturday last to nominate a Congressman, a vote was taken on the leading questions of the day, among them the income tax and the free coinage of silver. For the income tax the vote was 3,446 against 151. For the free coinage of silver the vote was 3,270 against 226. These facts, added to the above quotation, give us a fair idea of the opinions current at the South on the two great questions of currency and taxation.

The truth is that what we have gained by the repeal of the Sherman silver law is, in the main, the abandonment of the attempt to keep, single-handed, an unlimited quantity of silver at par with gold. We have not yet got out of the heads of the Southern people the three following dangerous notions: that an unlimited quantity of silver money would be a good thing; that it is the duty and is within the power of the Government, to keep up the price of commodities; that the people of the North and East have got most of the money that there is, and are enjoying it in complete indifference to the sufferings of the rest of the country, and that it is therefore right to impose a tax which will fall principally on their incomes.

It was most unfortunate that so many people here at the North believed that the victory of sound currency was completely won when the Sherman law was repealed. The truth was that it left untouched in a large part of the country the great delusions out of which the Sherman law sprang, and which it was intended to satisfy. Its repeal was simply a surrender to stern necessity. There was no money in the Treasury to continue the purchases for which it provided. Foremost among these delusions was the belief that the Government can raise or lower the standard of value; that it is its duty to supply money to the people, and that the bankers and others who refuse to lend it without security are selfish and designing persons, who ought to be taxed into good behavior.

The first duty of intelligent men, when the struggle of last fall was over, was, it seems to us, to engage heart and soul in the great work of public instruction as to the nature and functions of money, and to abstain rigidly, for a while at least, from any words or acts which would be likely to aggravate the prevailing popular errors on this subject—errors more threatening probably to the immediate economical future of the country than any with which we have ever had to contend since the foundation of the government. The appearance of the currency in the political arena was the greatest misfortune which has befallen the nation except the civil war.

The almost immediate initiation of a movement in Boston, therefore, of all places in the world, to spread and enforce the belief that it is the duty of the Government to take charge of the currency and see that there is a proper quantity, and that there is now or will shortly be a terrible scarcity of currency unless something is done to bring silver into general circulation, was a very startling phenomenon. It surprised people in this part of the world nearly as much as a meeting in the same place in 1864 to advocate the retention of slavery would have done. There is no quarter of the Union in which the lucubrations of Gen. Walker and his associates will not be taken as full corroboration of the charge that Cleveland and Sherman are responsible for the low price of farm produce, and that unlimited silver would cure most of the economical evils from which the world is now suffering. It is true that these gentlemen ask for the aid of foreign nations in this great work of redemption. But to the Southern farmer this is all "poppycock." He thinks it natural for men who go to Europe every summer to talk in this way, but he fails to understand why a great country like America should be dependent on "abroad" in a matter of such vital importance. The idea he has got hold of is that all governments at this crisis owe silver to their people, and that the reason why European governments do not let them have it is that they are controlled by the "gold-bugs" and the "money power"; and he asks, not unnaturally, why our government, which is truly a government of the people, should be subject to such influences.

It is of course humiliating, considering how much we plume ourselves on the popular intelligence, to have to acknowledge that very few of the unlimited-silver men have the least idea of the precise manner in which free coinage would benefit them. We have a score of times asked men who know the Southern people, how they suppose the silver would get into their pockets after it was coined, but all acknowledge that they have never thought the matter out at all. They know, of course, in a general way that the price of farm products is regulated by the price we get for our surplus abroad, and they know, too, that nobody who owns silver would give it to them for nothing. But, strange to say, this knowledge does not seem to connect itself in any way with their politics. You may show them as much as you please that after a man got his silver coined at the mint, he would not part with it except to purchase something or to lend it on good security; they will still hold that Cleveland and Sherman, in refusing to coin more freely, show that they do not "care a continental for a farmer." It seems to us, therefore, that Gen. Walker would have been much better employed in leading a corps of lecturers on economical topics into the South than in starting a bimetallic society at home.

THE SPIRIT OF THE NAVY.

THE report of the Senate committee in relation to the Hawaiian Islands is a document full of mysteries, but the key to most of them is to be found in the well-known Jingoism of the chairman, Senator Morgan. Incidentally he tried to please everybody concerned in the Hawaiian affair, with the natural result of pleasing nobody; but his main intent was to make his report a powerful argument for a big navy, and the Nicaragua Canal, and coaling stations thick as blackberries, and general bumptiousness and insolence in foreign relations. This crops out in the first map appended to the report. It is a "Naval Chart of the Pacific and Western Atlantic," and is covered with converging lines of bright green, which intersect each other (in a way little short of miraculous) at the Sandwich Islands, thus making it plain to the comprehension of a child, and by truly childish methods, that the Hawaiian Islands are the true "cross-roads of the Pacific," and that we must have them, or for ever lose our self-respect.

Similar ulterior ends appear again and again in Mr. Morgan's examination of the various naval officers who came before the committee. The questions as to their knowledge of what took place in Honolulu in January, 1893, were perfunctory, and the real interest lay in the inquiries made relative to naval policy and naval strategy. This is truly a matter of the highest importance, for if we are going to have a new navy, the spirit and attitude of its officers are of more account than the size of the ships or the number of the guns. Such a revelation of animus and wonderful ideas of international law as Lieut. Staunton made in his *Harper's* article is a most alarming symptom of the spirit of the new navy. We regret to say, however, that it is paralleled, if not outdone, by some of the testimony in the Senate report.

Rear-Admiral Belknap, for example, thought that "we ought to assume control [of Hawaii] right away," so that, in Senator Morgan's language, "we might there establish our naval station and have in the middle of the Pacific a means of offence and defence against the fleets of Europe and Asia." Not a word about the rights or wishes of the inhabitants of the islands, but all a question of naval strategy with the islands of the world like so many pawns at the disposal of the masters of the game. This was put even more bluntly by Capt. Wiltse, who landed the troops in Honolulu. It must be said for him that he had some faint conception of the proper way to recognize a revolutionary government, and that at the very moment when Stevens was hurrying off to the shivering revolutionists his recognition of them, prepared beforehand, as he himself testifies, Capt. Wiltse was saying to them, in answer to their entreaties to be recognized: "We cannot recognize you when there is another government across the street." Still, on the main question of international policy and the proper use of the navy, he put the case in the frankest Jingo fashion. A few days after the revolution he said to a gentleman who now testifies as to his exact words:

> "All this talk about who has a right to vote and who has a right to govern in these Islands is bosh. I do not care a cent about that. The only question is, Does the United States want these Islands? If it does, then take them."

Nearly all the officers who were examined by Senator Morgan agreed with that terror of the world's navies that we cannot be too quick about preparing for a naval war in the Pacific and fortifying Pearl Harbor as the true way of bringing to naught the craft and power on an enemy's ships — "say British ships," as the Alabama Senator would innocently remark. We are glad to say, however, that his profound strategy was shown to be decidedly of a fresh-water kind by one or two officers who had the slight advantage over him of knowing something about distances and the steaming power of men-of-war. Commander Ludlow reminded the chairman of some of the elementary truths of naval warfare, such as the fact that the "Pacific is a very large ocean," and that it would be just like an enemy's fleet to make light of the circumstance that the "key" of it was in our possession, and "pass you, get in behind you, and you would never know it in the world." He also observed, with a deplorable lack of reverence for "keys," that if an enemy ever wanted it, he would send a fleet and "shell the place to pieces." "Then," said the startled mariner presiding over the committee, "we do not need a navy." Commander Ludlow replied, however, that we did need one, and a big one, if we expected to fight any great naval power, but that the absurd thing was to suppose an enemy would pay any attention to our coaling stations or land fortifications, as if it were against the laws of war to pass within 2,000 miles of them.

Most luminous and cogent were the views of Commander Houston also. He held that "in time of war and without a navy equal or nearly equal to that of the greatest naval power," the possession of the Hawaiian Islands "would be a source of weakness rather than strength." "We should ultimately have to let them go," he maintained, "after having wasted a lot of money." As to the likelihood that this country would authorize the creation of a great naval force, he thought that a calm inquiry as to the attitude of Congress and the country on that question would show the thing to be so improbable that "we need seek no further for reasons for not acquiring the islands."

"MUNICIPAL MONOPOLIES."

A LITTLE book called 'Social Reform and the Church' has just been published by Prof. J. R. Commons. One chapter in it advocates "municipal monopolies," by which the author means the "distributive enterprises"—such as the manufacture of gas and the furnishing of electric lighting and the public operation of all the means of transit. The writer is professor of economics and social science in Indiana University. He is also secretary of the American Institute of Christian Sociology. Further, he is certified to by Prof. Ely, who is himself a director of economics in the University of Wisconsin. Prof. Ely says that all who want "vigorous thinking, clear thinking, and a right spirit," will hear of something to their advantage by applying to Prof. Commons.

A plain newspaper man who is neither professor, director, nor secretary, and who has no clearer idea of Christian sociology than the French anarchist's—namely, that it is the doctrine that a little roast beef goes well with the bread of life—will be forgiven for a good deal of trepidation in venturing into such a many-capitalled presence. As Pascal's Jesuit would say, any opinion coming from such a source must be highly "respectable." We were lately rebuked for flippancy in speaking without bated breath of the "head of the historical school in Germany," and who knows what kind of a school Prof. Commons may be the head of? Still, no thinker, however labelled, can object to a humble exposition of his views, and that is all we mean to undertake in regard to those of Prof. Commons on "Municipal Monopolies."

We gladly give him credit for having come within a thousand miles of the truth concerning the actual condition of "the State," as embodied in our city governments. He admits that there is nothing ideal or divine about them. He speaks of our "corrupt cities," and agrees "that city government must be improved before these industries can be safely intrusted to it." In fact, "without civil-service reform it is better to go along as we are." Still, this does not prevent him from maintaining that, "with public ownership of the monopolies, city government in America may be expected to take on generally a high plane of morals and efficiency." That is to say, the way to make politicians quit stealing through paving and street-cleaning contracts, and corrupting the police and fire departments, and loading down the pay-rolls with incompetents, is to turn over to them the business of making gas and furnishing electricity and running all the street-car and omnibus lines. How the thing will be made to work that way, Prof. Commons does not explain, but it must be on the principle of the "surfeit cure" for drunkenness.

He brings forward a lot of figures to show how much more cheaply cities can furnish gas and electric lighting than private corporations can. In a note, however, he admits that his statistics have been "ably criticised." An ordinary man, having no connection with any institute of Christian sociology, would say they had been riddled. Whatever plausibility is left to them depends upon the fact that, as Prof. Commons innocently remarks, "public financiering is based on different principles from private." In other words, a private corporation reckons-in cost of plant, deterioration of machinery, repairs, improvements, etc., while "public financiering," as exemplified in many of the reports he refers to, takes no account of all that, because, as Prof. Commons again explains, "expenses are paid out of taxes." This might seem objectionable to some carper, but the professor is ready for him with the following thrust: "How can a city government be pure and noble when we look upon its reform merely as a matter of reducing the tax-rate? Men are better than taxes."

After mastering this principle, which is a neat alternative to Director Ely's famous dictum that we must look at these things "from a broad social standpoint," and not ask too curiously where the money is to come from, the reader will be ready to go on and take in Prof. Commons's explanation of the advantages of having cities operate street railways. "Freight as well as passengers" would be carried "free of charge." No pedestrian is now compelled to "pay toll" for walking in the streets, and by parity of reasoning no charge should be made for riding or shipping goods in street cars when they are owned by the city as the streets are now owned. Furthermore, and this is a most timely point, "men out of work could ride in

search of employment, instead of wearily tramping the streets." Doubtless they would if they could, but would they ever stop riding? However, we will not quarrel with any of the points in Prof. Commons's description of his New Jerusalem street railways, except with one. He says: "Profits from the street-car business would be spent at home instead of in Europe." This we venture to doubt. We do not believe that even a director of economics could make any profits, to be spent either at home or in Europe, out of a road that made no charge for freight or passengers.

Finally, Prof. Commons draws a delightful little sketch of "the way the thing can be done." The mayor appoints a "director of transportation." This officer appoints a superintendent. He is to be a "scientific expert," and his office is not to be "political." He is, however, to appoint all the foremen, and the foremen all the operatives, and the smell of politics is to be on none of their garments. All appointments are to be made for merit only, and no dismissals are to be tolerated except for incompetence. It is all quite paradisaical. There is nowhere in sight a Mayor "Tom," or a scientific expert "Mike," to molest or make afraid. Still, we know that this is no idyllic dream, for we have the word of a director of economics that it is "vigorous thinking, clear thinking, and in a right spirit." Otherwise we should have been tempted to take our lives in our hands, and run the risk of mortally offending some "school" or other by saying that all this is precisely on a par, both for vigor of thinking and benevolence of intention, with the schemes of the little girl who goes out into the kitchen and tells the old colored cook that she is going to give her a white satin dress with real lace trimming when she gets rich.

WOMEN AT THE UNIVERSITY OF LONDON.

LONDON, March, 1894.

THE University of London is notoriously not a teaching body, but an examining board, with a Government charter granting the right to confer degrees. Degrees are conferred in arts, science, medicine, surgery, law, and music, and the courses and examinations required are among the most severe of any in the world. A failure in one subject at examination means failure in all, and the whole work of the year must be done over again before the student can proceed. This necessarily makes graduation within the regular period a most difficult matter. Three sets of examinations—matriculation, intermediate, and final—arranged at stated periods and spread over at least two years, are required before a candidate may graduate, and another year of still harder work is necessary before he may take the degree of master or doctor. Honors in each subject comprised in the regular examinations are open to students of exceptional ability desiring to win distinction in any line. For these the examinations are far more difficult and the standard of attainment much higher than that of the simple "pass" examination.

To this institution women have been trooping by the thousand ever since 1878. I might say since 1867, but the step which was taken in that year was only tentative and met with little favor among women. The University was at that date empowered to institute special examinations for women, and the subjects chosen were those which the board presumed would be preferred by the women themselves. But this did not work at all. The women did not want to have their dishes chosen for them, and very few cared to avail themselves of the privilege. Besides this, it was a significant fact that women won distinction not so much in the "special," but in the regular classical and scientific subjects of the University. It was evident that they did not want a scheme of instruction devised especially for them any more than they care for those wildly exciting items of interest which the newspaper editor imagines are the only things in his "woman's column" that touch the female heart. What they wanted was access to the ordinary degrees and honors and subjection to the same tests as those imposed on the men. In 1878 this desire was obtained. The Senate and Convocation of the University received from the Crown a supplemental charter, "making every degree, honor, and prize awarded by the University accessible to students of both sexes on perfectly equal terms." Thus the University of London was the first academical body in the United Kingdom to admit women as candidates for its degrees. That this equality is no mere form is evidenced by the fact that the University registers and calendars make no distinction whatever between male and female students. The names of men and women are mingled indiscriminately in the lists, either alphabetically or according as their attainments place them; the papers of all students go up to the examiners numbered, not signed, and the claim that women have access to all honors and prizes on an equal footing with the men is justified by an honors list swelled with women's names.

The women proved their appreciation of this state of things by flocking at once to the University. The statistics of the Register are instructive. Since their admission in 1878, 4,364 women have applied for matriculation, against 44,151 men since 1838; and of these, 2,558, or more than one-half, have passed, falling short of the proportion of successful male candidates by hardly an appreciable fraction. In fact, the average proportion of successful candidates at any examination is about 50 per cent., women as well as men. This fact is suggestive of much that is interesting regarding woman's brain-power in competition with man's. Again, it is interesting to note in connection with the number of women seeking a university education, that the proportion of women candidates during the fourteen years between 1878 and 1892 has reached one-tenth the number of men during the fifty-four years of the University's existence, or, in other words, an annual average of nearly one-half that of the men, the average of male applicants per year being 817 and of female 312. As 50 per cent. of the candidates fail, these figures, of course, include a certain percentage who go up a second time, thus reducing the proportion of new candidates; but this applies to the men as well as the women, and the fact of application remains the same.

Turning now to the degrees, out of 611 women candidates, 415 have taken the degree of Bachelor of Arts; 28 out of 37, Master of Arts; 70 out of 136, Bachelor of Science; 2 out of 3, Doctor of Science; 1 out of 6, Bachelor of Law; 31 out of 38, Bachelor of Medicine (with right to practise); 4 out of 6, Doctor of Medicine; and 4 out of 8, Bachelor of Surgery. Thus the University has conferred 555 degrees on women during the fourteen years of their presence at the examinations. It will be seen that, in every case but two, more than one-half (or the usual 50 per cent.) of those who went up for a degree succeeded. This is a percentage fully as great as that of the men, and it is worthy of remark that in the case of two degrees it is somewhat greater, and that, too, in science. It will be observed that almost four times as many women are drawn to the arts as to science, medicine, and law put together. The probable reason is that the arts course furnishes a far more general education, being a combination of classics, English, modern languages, and as much mathematics and science as the average woman cares about; while, on the other hand, the scientific course is pure science, and on that account more specialized and technical, appealing to peculiar talents or professional objects. It is noteworthy, however, that the women who have tackled science have done so with marked distinction.

The honors lists of the University are so full of feminine names under all subjects that it is difficult to choose examples. In the faculty of arts, first-class honors have been taken every year by women in classics, English, French, German, mathematics, and mental and moral science. Those who have taken second and third-class honors are too numerous to mention in the small space available here. But this is not all. To be in the honors division at all is distinction enough, whatever class may be awarded, but many are the women who not only have won first-class honors in more than one subject at the same examination, but have also attained the special distinction of a scholarship, exhibition, prize, or medal. These are awarded at the intermediate and degree examinations to "that candidate who shall have distinguished himself the most [in the subject in question] of all the candidates who have passed." The faculty of science records women in the first-class honors division in botany, zoölogy, and experimental physics, some of them holding scholarship marks. Even in law, two women have won second and third-class honors, and this with private study only. Nor does the faculty of medicine tell a different tale. Few women have entered it, but the greater part of those few have notably distinguished themselves. In 1890 a woman took first-class honors in three different subjects with a medal in one of them, and both scholarship and medal in another. But it would be wearisome to proceed further with these examples. I have taken them at random out of pages bristling with names. Every year since their admission the women have been in the honors lists, and every year some woman in some subject has taken the highest honor which can be conferred by the University.

Thus it is no empty claim that the women are on absolutely the same footing as the men. The same examinations and distinctions are open to them, for which the same papers are given and the same University recognition is awarded, as at graduation they receive their degrees with the men from the same platform and in the same academic costume; the only difference being that the Chancellor rises when he presents the diploma to a woman.

ELIZABETH CYNTHIA BARNEY.

ITALY AT THE CROSS-ROADS.

ITALY, March, 1893.

NOT a week passes without the publication of a new book on the actual conditions of this country, on the political situation, on the social, moral, and material ambient in which the masses live, move, and have their being. Of these new publications the most notable are 'L'Italia al Bivio,' by an ex-deputy and very popular Neapolitan, Emilio Giampietro; 'In Sicily: Events and their Causes,' by Napoleone Colajanni, the father of Sicilian socialism (or rather of socialism in Sicily); and 'The Present Conditions of Sicily,' by the Marquis San Giuliano,' ex-secretary of agriculture and commerce. The singular unanimity of opinion among men so diametrically opposed to each other in their political tendencies and acts as these three writers proves that the facts which have passed under their notice and led to the conclusions are real, general, and typical indications of the present state of Italy.

"To-day," writes Giampietro, "everything withers, decays, dies. Economical depression has stricken all production, distrust of the morrow is universal among the majority of Italians. A profound discouragement prevails and prevents any initiative. . . . Our chief political men—those who were our leaders in former times, those who united thought and action—seem fossilized; others, unconscious of the actual present. Most of them, weary and hopeless, have all proved themselves incompetent to resolve the difficulties of to-day. To hear them talk, to see them work, is a painful spectacle. The heroes of the Italian revolution seem to believe that time will stand still in their hands; for them thirty years of new life have passed over their heads unheeded. No throb, no breath, no aspiration of modern life (*modernità*) has vibrated in their souls. They believe that all problems can be resolved by fresh financial sacrifices, and by faith in certain abstract idealities which they imbibed during their legendary revolutions. Worse still, the methods of our public life have allowed vain ignoramuses to float on the surface of that life, calling themselves political parties! Does there exist a band of audacious men able to save the country from the abyss into which it may at any moment tumble? One thing is certain: either a government must be found radically to transform all that has hitherto been effected in administration or finance, or the country will of its own accord effect a complete demolition of all that exists politically."

He examines the state of parties or the heterogeneous groups which style themselves parties; demonstrates their vacuity, vanity, nonentity; bears down on the preachers of class hatred and class war. He admits: "We can come to terms with socialist democratic evolutionists like Colajanni, who, while educating, preparing the masses for the realization of their ideal, claim and proclaim meanwhile that series of reforms, that sum of moral and material benefits, possible within the limits of our present social organization, which commence with the family and end in Parliament. Further than this we cannot go." Nor could any honest lover of Italy and humanity go further, to land in anarchy and anarchy's favorite theory of the *lotta di classe*. In the chapter on the State budgets the writer appalls one; the figures quietly put down take one's breath away. Nor does the budget of the nation restore one to hope; the State, the province, the commune, associations, individuals, have spent, squandered all that they had—all that they had not. Hence failures, bankruptcy, stoppage of banks, no credit, no reserve to fall back upon. And the remedy? Retrenchment in all quarters, in every department, in every item; in public, in private—or universal bankruptcy and irretrievable disgrace.

In the chapter on "Anarchy, Socialism, Revolution," Giampietro speaks bravely and well. While some madmen call for war as a solution, others demand a revolution, but he says: "I do not understand a revolution without an organic conception, a preparation, a precisely determined goal." When one is not inclined to do one's duty in dreary, drudging, distasteful daily life, it sounds fine to talk of "higher duties," "wider missions," "nobler aims." What each Italian has to do to-day is to cut his coat according to his cloth, not to spend all that he can beg, steal or borrow (the awful volumes just published on the bank scandals justify the phrase) on his own or his family's pleasures, luxury, and vanity. He must bring himself *not* to wring the last drop of blood from the starving peasant and the wretched artisan in the shape of usury, or the lowest possible wage and the highest possible taxation put upon the weakest shoulders. This is a point on which writers in general love not to dwell.

Giampietro is of those who believe that vast reductions might be made in the war budgets without reducing the strength of the army; and you remember that Ricotti, a great military authority, expressed his belief that this was feasible, and for that reason was not invited to enter the ministry. Next comes the question of the agricultural populations. They are starving, and the land is untilled, or so tilled as not to return the cost of labor and seed. But waste land there is and idle hands to till it. Now, however, agriculture is an industry; without capital, what use to give land to the peasant? But there *is* capital also in the charitable establishments, in the banks that have no shareholders; apply the capital to the land and set the peasants to work. Ah, but the tax-gatherer who pounces down and clears the peasant and his crops off the land! Here it is that Colajanni comes in with his figures, which are in some respects more terrible than Giampietro's. He dwells solely on Sicily, the causes of the late events. He writes:

"I told the ministry, the House, the public, more than a year ago, what would happen if some remedy was not found for the gaunt misery, the absolute destitution of our agricultural populations. I entreated them to act while there was yet time; I warned them that, in the midst of earnest and honest helpers of these sufferers, there were bad men and (I believe) provocative agents. What have you done? You have killed deliberately, you have ordered or allowed our soldiers to kill, 13 peasants at Caltavuturo, . . . 95 Italian citizens in all, shot down in cold blood. The people have killed but one soldier, one official. Some 300 were wounded; hundreds are in the prisons or sentenced to enormous punishments, varying from five to twenty-five years in the galleys; over a thousand are sent to *domicilio coatto;* numbers have escaped to the mountains, caves, and other hiding-places of innocent men, who must now either steal or starve."

Colajanni enumerates the causes which have intensified misery and led up inevitably to protest, to orderly and legitimate attempts at amelioration; finally to disorder and open rebellion. These causes I have already pointed to in the *Nation*—the huge *latifondi*, where all the meagre crops are produced by the tillers of the soil, who starve and die of inanition and disease while the proprietor, the *gabellotto*, the subrenter, the partitioner, divide the spoil. And if Colajanni's description of the state of the peasantry be called in question, we answer that the pictures drawn by the Marquis San Giuliano are still more harrowing:

"The campagnas [of the *latifondi*] are unhealthy, there is no drinkable water. The proprietors live in the great cities; the peasants are massed in large centres which are administered selfishly by the burgher class, who starve and despoil the peasants with taxes on the poorest food, the hearth tax, the tax on their animals, and, above all, by usury. They must walk miles to their work, sleep in wigwams or in the open. Such was their condition when Sonnino wrote, such it was till yesterday —*and now things have grown worse.* One can hardly imagine a 'worse,' all was so bad; but it has come to this, otherwise how is it that suddenly, from a state of supine and traditional resignation, we have seen the outburst of the powerful and organized movement of to-day? This cannot be attributed to the propaganda of agitators, which, even if ably conducted, could not, in an unprepared soil, have produced such a radical transformation without the powerful auxiliary of increased material suffering. This increasing misery has facilitated the propaganda, of course; has reawakened the class hatred latent among the toilers throughout the island, and is the offspring, not of socialistic doctrines and tendencies, but of the frequent abuses, spoliations, and oppression of the burgher class in the rural centres. The hatred of the masses extends not only to the great proprietors, but to burghers fat and lean —the so-called *civili*, *galantuomini*, or *cappelli*, of the rural communes. After long periods of calm, this hatred explodes from time to time with terrible ferocity, and one hour of bloodshed and destruction makes the guilty and innocent alike expiate the errors and abuses of an entire class."

Speaking of the crops of late years, San Giuliano says: "Often, when the moment comes for the division of the grain, the peasants, after the subtraction of the seed and succor with the usurious interest detained, go home with next to nothing—*sometimes without a single handful!*" After enumerating the disasters produced by foreign competition in the sulphur, green-fruit, and other agricultural industries, the diminution of the wine trade, both he and Colajanni show the effects of Italy's fiscal policy on the small proprietors. Colajanni gives a list of small proprietors who have been evicted by the *fisco* for inability to pay the tax on land or buildings during the last ten years. Province per province, in the single communes, he gives the figures as far as he has been able to verify them personally. They amount to 16,662 families.

When Crispi was summoned to the helm, hope reawoke. The state of siege was condoned because of the promises that accompanied it of immediate and efficacious redress. Three months have passed. The military tribunals sit and condemn. Some of their sentences are atrocious; one has been partly cancelled by the courts of cassation. It was affirmed that on the King's birthday a general amnesty would be proclaimed. Instead of this, the trials continue. Sicily and Massa Carrara are still in a stage of siege. The minister of finance put the deficit for the year at 170,000,000 lire; pledged himself, if plenipotentiary powers were conceded, to find 70,000,000 by economizing, but the remainder must be forthcoming from fresh taxation. The two war-tenths on land were to be reinforced, the income tax not to be progressive as was proposed previously, but raised from 13 to 20 per cent., and (this the unkindest cut of all) the tax on salt to be increased 8 per cent. Salt now costs, owing to the Government monopoly, thirty-five centimes per kilo; it is hereafter to cost forty centimes. This, in a country where salt is the only corrective, the only sauce, to *polenta*, which produces, when it forms the sole staple food of the poor, the horrible disease known as *pellagra*.

A commission of fifteen is sitting to examine these financial propositions. The commissioners say that the deficit is exaggerated; they reduce it to 100,000,000, demand that 20,000,000 be found by economies in the war budgets, and suggest other expedients. As the House has adjourned for the Easter holidays until April

2, nothing can be ascertained as to the result of the conferences between the minister and the commission. It is pretty positively asserted that Crispi, if the House refuse the plenipotentiary powers demanded, will appeal to the country. It was expected that a reduction in the civil list would be proposed. The King of Italy, with his fifteen millions and hundred palaces, has a far higher civil list than Queen Victoria. Sella, when he imposed fresh taxation on the nation, reduced the old King's civil list. The Left, on coming to power, increased it. We are quite aware that King Humbert paid off his father's debts, refusing the assistance of the nation, that he maintains the household of the heir apparent, and spends much in private and public charity. But the bare fact that a minister has dared, under the auspices of Crispi, to propose a further increase in the price of salt ought to mean that even the widow's mite is needful; hence the rich man's luxury ought to be curtailed.

We shall see what comes of the very excellent projects which have been concerted between the minister of agriculture and the Sicilian deputies for the sulphur mines and the agricultural contracts. If the present House, born of corruption more corrupt than any former one (and that is saying much), should vote these bills, it would be a sign of possible purification. Hope costs nothing, but when we read the proposals of the agricultural association which demands a tax on corn to amount to nine lire per quintal (the tax at present is five lire), we confess that hopes grow dim. J. W. M.

Correspondence.

OFFICIAL FEES AND APPOINTMENTS IN ONTARIO, CANADA.

To the Editor of The Nation:

Sir: The Government of Ontario has appointed commissioners to investigate and report upon facts concerning proposed changes in the system of appointing certain officials and the manner of paying them. At present, these appointments are made by the executive Government; it is proposed in some quarters to have these officers (whose functions are within counties) elected by the people, or, in the alternative, selected by county councils. At present they are paid by fees, or by a proportion of fees—the rest of the fees being applied to county or other purposes. It is proposed in some quarters to have these officers paid by fixed salaries. The officers are sheriffs, registrars (or recorders) of deeds, local masters (in chancery), county crown (or prosecuting) attorneys, registrars and other clerks of courts of superior, intermediate, and subordinate jurisdiction (*i. e.*, in the High Court, the County Court, and the Division Court) as organized in the different counties.

Information is now sought through your columns as to the sources from which authentic details can be obtained concerning the manner and amount of the remuneration of like local officials in the various States of the Union, and also as to the source and amount of remuneration of like officers appointed by the Federal Government of the United States—such as marshals, district attorneys, etc. A reference to books or official publications or the names of public officers or others from whom such information could be compendiously obtained is sought by the commissioners in order to expedite and benefit their investigations.

Believing that the mention of this need in your journal will lead to its being speedily satisfied, I am,

Respectfully yours,
One of the Commissioners.

Toronto, April 9, 1894.

THE SITUATION IN SOUTH CAROLINA.

To the Editor of The Nation:

Sir: South Carolina may be described as a one-city State. That city is Charleston. Columbia, although the capital on account of its central site, is comparatively a small place (12,000 inhabitants), has very few if any manufacturing interests, and does not possess any trade worth the name except that which is purely local. The other towns in the State are little more than country villages; the largest being Spartanburg (9,000), Beaufort (5,000), and Greenville (5,000).

Charleston is a very old and a very opulent city—one of the richest cities for its size in the United States. It has about 60,000 inhabitants, 30,000 of whom are negroes. It has a large trade with South Carolina and neighboring States, and ships its phosphates and cotton all over the United States and direct to England. The wholesale grocery business finds there a very important centre. There are also a number of wealthy cotton and rice factors. The business which has been extremely profitable in Charleston for years past, mainly as an adjunct of the corner-grocery stores, has been the liquor business with negroes. Most of the corner grocery-stores in Charleston had, up to the 1st of July last, a groggery annex. The negro, while he is an excellent and capable workman, is also a hopeless spendthrift. So it happened that a large proportion of his wages found their way every Saturday night into the hands of the corner grocer, who had been trusting him through the week for his groceries and liquors. This liquor trade was morally all wrong, encouraging as it did, in the most illiterate and unbridled element of the population, a taste for the unlimited consumption of strong drink. But the trade was carried on honestly and in an orderly manner, and open drunkenness was not any more noticeable in Charleston among the negroes than among the lower classes in Northern cities.

When the dispensary law went into effect on July 1, 1894, all this liquor business was wiped out in one day. All the corner groggeries became a thing of the past, and all the East Bay Street wholesale houses closed their doors. One East Bay firm of wholesale grocers and liquor-dealers disposed of some $100,000 worth of choice wines and liquors at public sale on the 29th and 30th of June, 1893. It was not possible that their means of livelihood should be thus swept away from so many of the citizens of Charleston and elsewhere throughout the State at one fell blow without creating bad blood between the liquor-dealers and the executive which had thus ruined their trade. Most of them, however, left Charleston and the State, and began business over again elsewhere.

But there were far more vital grounds of antagonism between the Governor and his Populist party and what he styles the "Bourbon" element, or prevalent "oligarchy," which means the wealthy, intellectual, and aristocratic classes. I am a Northern man by birth and instinct, but I have lived a great deal in the South of late years, and I am anxious that the intelligent classes here should understand exactly how the old, ante-bellum Southern element is now handicapped, and how it feels. It will be necessary to make very plain statements where so much misunderstanding exists, but I will try to explain the situation without hurting any one's sensibilities intentionally. The Populist party in South Carolina is largely composed of "Farmers' Alliance" men. This class as a whole is averse to hard work and keenly jealous of those who possess a larger share of this world's goods than do they. I have traversed the State of South Carolina again and again, on its trains, and have always been amazed to notice the great multitude of white men (mainly farmers from appearance) congregated at the depots. This concourse had, apparently, come together, not to board the train (for the bulk of patrons of Southern local trains are negroes), but simply to kill time and enjoy a better opportunity for the pleasant interchange of ideas. The Populists of South Carolina are famous talkers. They are unusually intelligent for their surroundings, are extremely clever at finance, and no doubt *able* to make themselves felt in almost any profession or branch of trade; *but they will not work.* Everything is done for them by the negro laborers.

These men are mainly descendants of the ante-bellum Southern planter (with some admixture of "carpet-bagging" stock); and, shorn of their property in the shape of negroes, and hence of their means, have never been able to readjust themselves to the changed condition of affairs. Prevented from providing themselves with the luxuries or accomplishments of life, they have preserved the pride, but lost the cultivation and well-to-do appearance, of their parents. They have certainly never been able to bring themselves, with any assiduity, to the day-in-and-day-out drudgery of work. Out of this class has Benjamin R. Tillman sprung. He and his fellow-Populists have developed a deep and enduring hatred of the rich and aristocratic class; and as this class is chiefly to be found in Charleston, Charleston is hated by the Populists of South Carolina. Gov. Tillman, before his election, threatened to make Charleston "whistle" if he got into power. And the minute he was elected he proceeded to put his threat into execution. The first descent of his constables was made upon Charleston. The circumstances attending their raid were such as to drive into fury even those who were "as patient as sheep." Private houses were entered in the pretended search for liquors, the contents of trunks and bureau-drawers strewn on the floor, and, in one case, the sheets and blankets torn off a bed in which a man's sick wife was lying.

The people of Charleston, though exasperated beyond all endurance, acted upon this occasion with firmness and great self-control. They acted just as one would *hope* that people of good repute, extensive cultivation, and great common sense would act. They protested firmly against the lawless employment of executive power, but did not allow themselves to be driven into the unthinking frenzy of bloodshed and retaliation which Tillman expected. Since then he has tried all expedients, but in vain, with the idea of getting the "Bourbon" classes to retaliate, and so throw themselves into his clutches. At the time when some negroes were lynched in the interior of the State, he endeavored to transfer St. Julien Jervey, the district attorney of Charleston, out of his own district and into that where the lynching had occurred (Edgefield, I think it was), that he might act as prosecuting attorney, and suffer the odium which the prosecution of the murderers would locally create. As the Popu-

list class is in the great majority, and can prolong the present crisis indefinitely, it may finally succeed in goading the long-suffering Bourbons into mad retaliation. The better class of the citizens of South Carolina thus stand in great need of sympathy and support from the orderly and intelligent portion of Northern communities. M. D.

PHILADELPHIA, April 9, 1894.

POSTAL-UNION CARDS AND STAMPS.

TO THE EDITOR OF THE NATION:

SIR: It would be of great advantage to travellers if the countries which form the Postal Union would, at their next convention, take up the subject of Postal-Union stamps and Postal-Union cards. What I mean is this: Supposing a person starts out from New York, he could provide himself with five-cent stamps, the rate of postage, or two-cent postal cards which have International Postal Union printed on them, so that they could be used everywhere. Or should you be in Germany, you would buy their Postal-Union stamps and cards which could be used in England or Norway, or anywhere else till you had exhausted the supply, and a new quantity would be bought. As it now is, when you land in Bremen, or Southampton, or elsewhere, you must first hunt up the post-office, perhaps you must have money exchanged before you can drop a letter or card home, or on leaving that country the stamps you have are of no value elsewhere.

Then another feature of great importance in having these Postal-Union stamps would be that it often happens that persons see books or little things advertised in foreign periodicals that cost perhaps a shilling, a mark, or even a franc. Now it does not pay to go and buy an international postal order for so small an amount, and it would be useless to send stamps to that amount of the country in which you live, because the party receiving them cannot use them or dispose of them. But had we the Postal-Union stamps, the recipient could use them in his foreign correspondence, or sell them to some one else who had such correspondence. Altogether the governments connected with the Postal Union will see of how much benefit to the public the proposed issue of stamps would be. H. T. FRUEAUFF.

EASTON, PA., April 13, 1894.

A CORRECTION.

TO THE EDITOR OF THE NATION:

SIR: In a very kindly review of my 'Essays on Rural Hygiene,' which appeared in your paper of March 9, there is a slight misrepresentation of my views, caused, I have little doubt, by a printer's error. The review says: "In the *presence* of cesspools and pipes, surface wells, carefully defended against lateral infection and properly covered, are the safest, even in the midst of ground fertilized with domestic refuse." If for the word "presence" (which I have italicized) the word "absence" be substituted, my views will be correctly stated.—Your obedient servant,

G. V. POORE, M.D.

30 WIMPOLE ST., W., LONDON, March 29, 1894.

[Dr. Poore's surmise is entirely correct. The slip was of the pen or of the type. Dr. Poore's own words (pp. 241-2) are: "How have they [the shallow wells] been contaminated? . . . They have always been contaminated by direct inflow of filth from the surface of the ground . . . or by the leakage of cesspools or sewers direct into the well." "The cause of the fouling of shallow wells is universally found in a neighboring cesspool or sewer." "If the subterranean collections of filth were abolished, and if our surface wells were properly constructed, we might drink of them with perfect safety." He then describes the construction of his own well, which is five feet deep with impermeable sides, and a parapet one foot above the surface, and a tightly fitting cover, so that the water enters only through the bottom. He adds (p. 244): "If there be sewers or cesspools in the neighborhood of a well, such well cannot be safe, be it shallow or deep." We regret the error leading to this correction, but are glad to explain the author's views in detail. For, notwithstanding we continue to think it is a doubtful doctrine, on account of the almost inevitable errors of construction or the accidents of decay, Dr. Poore writes so clearly and enthusiastically that he deserves the most accurate expression of his views. It is hard enough to be a reformer without being misrepresented even by accident. —ED. NATION.]

GREEN BAY.

TO THE EDITOR OF THE NATION:

SIR: If your reviewer of 'Historic Green Bay' (*Nation*, No. 1501, p. 259) be correct in his statement, "The truth is, that on the map above mentioned neither of the names Green Bay and Baye Verte is to be found at all," will he kindly explain what Mr. Justin Winsor means by "B. Verte" on the map of "Hennepin, 1697," on page 251, volume iv., of 'Narrative and Critical History of America'?

Very respectfully, D. S. KELLOGG.

PLATTSBURGH, N. Y., April 8, 1894.

[We had overlooked this smaller map of Hennepin's, which bears the same date as the larger one given on pp. 252, 253. However, we read "*R* Verte," and apply it to the adjacent river, while the name of what is now Green Bay is written across the shaded water and appears to be Baye des Puans.—ED. NATION.]

THE WIVES OF GERMAN PROFESSORS.

TO THE EDITOR OF THE NATION:

SIR: In your number for April 12 I find a sweeping denial from your correspondent "E. L. W." of a statement of mine in a previous issue of your paper, concerning the wives and daughters of German professors. As your correspondent writes from "intimate association with a very large circle of professors' families," I must conclude either that my own experience was phenomenally exceptional, or that your correspondent's standard and my own differ materially. As "E. L. W." remarks, German girls leave school at sixteen or seventeen—the age at which, in countries where it is to be had at all, the higher education for women *begins*; the age at which the German youth is still doing the preparatory work for *his* higher education, which goes on till he is twenty-three, twenty-five, or even thirty years of age. It was with the standard of this higher education that I measured them, and came to the conclusion which, with all due deference to your correspondent's opinion, I must still adhere to.

I should like to add, however, that I do not consider the German women responsible for these conditions, which are their misfortune rather than their fault. The higher education has been exclusively in the hands of the men, and only for the men, who have kept the women out and then stigmatized them as inferior because they did not possess it. To hear the average German professor or student speak of women and their intellectual capacity is as depressing to one of the unfortunate sex as a Mohammedan's view of heaven.

Your correspondent also scouts the idea that American women have done pioneer work in regard to the admission of women to the German universities. Yet Americans have been attending these universities for ten years, and the German women are only now beginning to do so. J. B. S.

NEW YORK, April 14, 1894.

THE VERTEBRÆ OF FISHES.

TO THE EDITOR OF THE NATION:

SIR: In a review of the 'Wilder Quarter-Century Book,' in your issue of March 29, among other pieces of off-hand theorizing, your reviewer says:

> "Taking a particular genus [of fishes], it is seen at once that the active species preying on the others have more vertebræ than the others that grope about the rocks and mud in the same waters."

In the whole class of fishes not a single illustration of this astonishing generalization has been found. There is no truth whatever in it.

The fact to be explained is, that as a rule members of the same group having different numbers of vertebræ *do not* inhabit the same waters. The resident shore fishes of the tropics have, in general, vertebræ in small numbers, and their allies in cold waters, in the deep seas, in the fresh waters, as well as the pelagic forms generally, show a progressive increase in the number of segments. This rule applies to carnivorous and herbivorous fishes alike, and it has no evident correlation with variations in habits, in food, or in degree of activity.

I recognize, of course, that a conceivable explanation of this, as of other cases of adaptation, is possible along "Lamarckian" as well as along "Darwinian" lines. Such an explanation is, however, not obvious unless it can be shown that a varied food-supply tends to accelerate skeletal evolution.

DAVID S. JORDAN.

LELAND STANFORD JUNIOR UNIVERSITY,
PALO ALTO, April 5, 1894.

[The above is characterized by emphasis rather than accuracy. Prof. Jordan may rest assured that the generalization which so astonished him *can* be illustrated, that there *is* truth in it, that members of the same group of fishes having different numbers of vertebræ *do* inhabit the same waters, and that correlation with habits *is* evident; his very positive assertions to the contrary notwithstanding. To answer his challenge

and induce a reasonable amount of caution in future, it is hereby suggested that he add to his knowledge of the fishes an acquaintance with "a single illustration of this astonishing generalization" that complies with the conditions required, viz., the genus *Orestias*, represented by a number of species in Lake Titicaca on the summits of the Peruvian Andes. *Orestias Pentlandii* has more vertebræ than *O. Cuvieri;* either has more than *O. Agassizii* or *O. Mulleri*, and the others have fewer. All are in the same water. The more active have the more vertebræ. Let him go farther and compare the fishes of this cold lake with an allied genus, *Anableps*, of still greater activity in its peculiar feeding habit, and he will find much larger numbers of vertebræ in its lively species down in the warmer waters under the equator. More numerous vertebræ in these fishes correlate with habit or activity, but are directly opposed to what is demanded by the temperature theory. These illustrations are sufficient for our present purpose.—Ed. Nation.]

DESCENDANTS OF CROMWELL.

To the Editor of The Nation:

Sir: The following extract is from a letter of Franklin, dated Philadelphia, 1736, addressed to his sister, Jane Franklin, residing in Boston. He is speaking of the number of deaths from smallpox:

"In one family in my neighborhood there appeared a great mortality. Mr. George Claypole (a descendant of Oliver Cromwell) had by industry acquired a great estate, and being in excellent business, a merchant, would probably have doubled it had he lived according to the common course of years. He died first, suddenly; within a short time died his best negro; then one of his children; then a negro woman; then two children more, buried at the same time, then two more; so that I saw two double buryings come out of his house in one week. None were left in the family but the mother and one child, and both of these lives till lately despaired of."

Can any of your readers answer the following questions: Was George Claypole, abovementioned, related to Cromwell? Are any descendants of the mother and child who escaped the smallpox in 1736, now living?

Very respectfully, S. T. A.

Washington, April 13, 1894.

Notes.

Funk & Wagnalls Co. promise for May 'Isabella of Castile,' by Maj.-Gen. O. O. Howard; and 'John Brown and his Men,' by Col. Richard J. Hinton—the final volume in the "American Reformers Series," in which the anti-slavery reform has certainly not been neglected. Col. Hinton has gathered together twenty portraits of John Brown's men which will illustrate his narrative, along with more than one of the crusader himself.

G. P. Putnam's Sons will follow up Miss Harraden's 'Ships that Pass in the Night' with a new novel by the same author, 'In Varying Moods.' They announce further 'The Upper Berth,' by F. Marion Crawford, and 'Red Cap and Blue Jacket,' by George Dunn.

The handy "Columbian Knowledge Series," edited by Prof. Todd of Amherst, and published by Roberts Bros., Boston, which has just begun with Mrs. Todd's 'Total Eclipses of the Sun,' proceeds with 'Public Libraries in America,' by William I. Fletcher, librarian of Amherst College, who will also have a volume apart from the series on 'Library Classification.' The same publishers have nearly ready 'Wayside Sketches,' by Eben J. Loomis.

A volume of anthropometric papers, consisting of such as were presented at the sessions of the International Statistical Institute in Chicago last September, and are shortly to appear in No. 24 of the Publications of the American Statistical Association, will be issued by this body in May. It will be enlarged by a paper on the growth of St. Louis children, by Dr. W. T. Porter, and by Dr. Henry P. Bowditch's well-known paper on the growth of Massachusetts children (1887). The secretary of the association is Davis R. Dewey, No. 497 Boylston Street, Boston.

Encouraged by the welcome given last year to her 'How to Know the Wild Flowers,' Mrs. William Starr Dana has prepared a second rambler's guide which she calls 'According to Season' (Scribners). The name indicates the book's plan, which is to group together the flowers that may be found in bloom about the same time, placing the groups in orderly succession so that a wayfaring man, if not a fool, may know not only what the flowers are which he has found, but also what he may hopefully look for from the time the swamp maple first crimsons the bleached branchage of the wood till the melancholy days when the witch-hazel's yellow tassels are the only visible reminiscence or prophecy of spring. As a companion to this little volume, which lacks illustrations, the same publishers issue a portfolio containing fifty plates from 'How to Know the Wild Flowers'—pictures so truthfully drawn that the plants they represent may be easily recognized even without the help of color.

That enthusiasm for flowers which prompted her as a child to worship like any Parsee the barbaric splendors of her marigolds, speaks from every page of Mrs. Celia Thaxter's 'An Island Garden' (Houghton, Mifflin & Co.). Its brilliant binding and pictures glowing with orange and vermilion from Childe Hassam's lavish palette are strictly in keeping with the text, where exclamation-points abound; written, evidently, for the delight of those who share the same midsummer madness, and not requiring the approval of one who looks without excitement upon a flaming poppy or a stately group of hollyhocks.

An extremely opportune book at the present day, when the mining of gold has received a fresh impetus from the temporary decline in value of its sister metal, silver, is the 'Handbook of Gold-milling,' by Henry Louis (Macmillan). It is a scientific discussion from a practical standpoint, by a competent mining engineer, of the various mechanical and chemical processes in use at the present day for extracting gold from such of its ores as are not capable of complete disintegration by the action of roasting. No such discussion devoted exclusively to gold-milling has, so far as we know, hitherto been made. Modern improvements in gold-milling are largely of American origin, especially the mechanical ones, but it seems rather an advantage than a disadvantage that their relative merits should be discussed by an Englishman, when, as in this case, he shows a thorough familiarity with American appliances and practice, for his opinions must be more impartial, and are derived from a broader experience, taking in as it does the important gold fields of Australia and South Africa. The opening chapters are devoted to the mineralogical and chemical properties of gold and its alloys and amalgams, but, singularly enough, omit all discussion of its combinations with tellurium. The author shows thorough familiarity with his subject, and expresses himself clearly and concisely in not too technical language. His book should be of great value not only to the mill superintendent, but also to the intelligent mine-owner.

The Century Company have published, under the title of 'Famous Adventures and Prison Escapes of the Civil War,' a collection of noteworthy papers which originally appeared in the *Magazine*. Among them are the "War Diary of a Union Woman," edited by Mr. Cable; "Morgan's Raiders," by Gen. Basil Duke; "A Hard Road out of Dixie," by Mr. Shelton; "General Breckinridge's Escape," by Col. Wood, and a number of other famous and to become famous stories of the war. What with the De Vinne presswork and the numerous admirable illustrations, this beautiful duodecimo would be hard to match among the war-books, whether for matter or for form. It is an attractive volume for readers of all ages, but it is safe to say it will be preëminently a classic "boy's book" and a favorite.

'Kleopatra,' Georg Ebers's latest production, which we have received from the Deutsche Verlagsanstalt, through B. Westermann & Co., and an English translation of which is announced by the Putnams, is perhaps the most academic of all the academic performances of this professorial novelist, without a trace of genuine poetic intuition and overloaded with wearisome and irrelevant detail. One cannot help wondering why English and American readers should, year after year, be afflicted with translations of such tedious and lifeless elaborations as this, while the truly representative men of modern German literature, such as Gottfried Keller, Konrad Ferdinand Meyer, Hamerling, Rosegger, Sudermann, remain almost unknown. The same firm sends us a volume of 'Gedichte' by Georg Scherer, the well-known editor of the 'Deutscher Dichterwald,' which betray a respectable talent and refinement of feeling, but very little originality. A number of translations from English and American poets may amuse the curious.

Littell & Co., Boston, send us the bound volume of their *Living Age*, for January-March, 1894, the 200th in the series which men in middle life can now look back upon as one which no gentleman's library should be without. It is worthy of remark that this veteran eclectic should have maintained itself for fifty years, in spite of direct competition, and through all the vicissitudes of ever-cheapening literature, piracy, and copyright.

The *Overland Monthly* for April is almost wholly given up to the Midwinter Fair at San Francisco, which is illustrated in a great variety of ways with text and cut. The chapter on the architecture of the buildings is unexpectedly laudatory, though it is obvious from the pictures that, considered in itself, the architecture stands much in need of an apologist. Indeed, the writer himself is "inclined to doubt the desirability of housing the Fine Arts in an Egyptian temple."

The illustrations in *Around the World* for April (Philadelphia: Contemporary Publishing Co.) continue to show great judgment in selection. Three recent books of travel are laid under contribution much in the way formerly pursued by *Harper's Magazine*.

The *Geographical Journal* for April opens with a pleasant description of a journey into the interior of Iceland by Dr. K. Grossmann, in which an account of the remarkable cave of Surtshellir is the most striking part. The paper is illustrated by a map and a number of pictures from the author's photographs, giving a very vivid representation of the peculiar scenery of the island. The sultanate of Johore, occupying the most southerly portion of the Malay peninsula, is the subject of the following article by Mr. H. Lake. At present it is mainly a pathless wilderness, but Chinese agriculturists are settling in it in large numbers, and, though twice as numerous as the Malays, they make very contented and peaceful subjects. They occupy themselves chiefly with cultivating pepper and gambier. This is a product, employed for tanning, obtained from boiling the leaves and twigs of a climbing shrub (*Uncaria gambir*). We have noticed several inconsistencies in the orthography of the place-names as given in the article and upon the accompanying map. Mr. H. N. Dickson treats of the recent contributions to oceanography made especially by the "Plankton Expedition" of 1889 in the Atlantic and by the Prince of Monaco. Baron F. von Richthofen contributes a rather technical review of the first volume of Count Széchenyi's travels in eastern Asia.

Miss Annie R. Taylor, who has recently made an adventurous journey in Tibet, in an interesting article in the *National Review* endeavors to correct a false impression in respect to the political condition of that country, which is treated in such standard books of reference as the 'Statesman's Year-Book' and 'Whitaker's Almanac' as an integral part of the Chinese Empire. Dr. Henry Lansdell, in his 'Chinese Central Asia,' just published, says that it is "under the viceroy of Szechuen." The Tibetans, however, "disclaim Chinese rule altogether," except in the two eastern provinces, where it is "more or less nominal." In the other provinces the resident mandarins have authority over their countrymen alone, and merely defend Chinese trade interests. One proof of this independence is shown in the rigid exclusion of Chinese women from Tibet, even the wives of officials being turned back at the border. The connection of the two countries consists mainly in the payment of a yearly tribute by the emperor to the dalai lama. This amounts to "about one hundred thousand ounces of silver, and some ten thousand yak loads of tea." For this the lamas, who form a third of the male population, give China a monopoly of their foreign trade, as well as the power of levying taxes in the two eastern provinces. Miss Taylor repeats, what other travellers have asserted, that the Tibetans are restive under this arrangement, and would much prefer to trade directly with India, the route being shorter and less dangerous. By the Sikkim-Tibet convention, which has just been signed, British subjects are to be allowed to trade, except in certain specified articles, at Yatung on the Tibetan side of the frontier for five years.

The official list of new publications in India is very significant of the great change in that country within the last half-century. While, forty years ago, in Madras the publications of a year were but a handful, now they number a thousand in twenty different languages. The total for the whole of India, according to the last report, was 7,045. Of these, 1,580 were on religion, 989 on language, 928 on poetry, and 336 on science; fiction, medicine, law, and the drama each numbering between two and three hundred. The smallest numbers were travel 17, and politics 14. The native librarians, in their quarterly reports to the Government, complain, however, that works of merit are very rare, although they do find evidences of improvement, both in the talent and the moral tone of the works submitted to them. Pandit Hara Prasád Shástri, after stating that he had received for registration in the Province of Bengal 2,177 publications in 1891, of which 1,813 were original works, 364 republications and translations, adds: "Of the original works, about two hundred are books possessing more or less merit; the rest are keys, schoolbooks, missionary leaflets, and street literature. The republications are generally of some value." At other times, says *Dawn in India*, from which we have taken these facts, "he, along with the other librarians, laments over the low morality of native works, pandering to the worst appetites of corrupt natures."

We have received from Dyrsen & Pfeiffer (F. W. Christern) No. 1 of the monthly *Bulletin de l'Office du Travail*, published under the auspices of the French Ministry of Commerce. It will certainly merit the attention of all those who are concerned in the amelioration of the lot of the working classes. Its scheme falls into three parts—the social movement (*a*) in France and (*b*) abroad, and official acts and documents. Four closely packed pages are devoted to the state of legislation (bills) relating to social and labor questions before the French Parliament on January 1, 1894. A table of strikes for 1893 shows a total of 607, out of which 112 succeeded, 193 only partly succeeded or were compromised, and 223 were defeated, with 79 unreported. The year witnessed twice as many strikes as occurred in any one of the three preceding years.

The new weekly edition of the *Journal des Débats* (New York: Westermann) is a quarto of thirty-two pages with no pretensions to typographical elegance, and without even the inducement of continuous pagination to preserve and bind it: successive issues are identified only by the date. All this implies that there will be no index, and therefore that those who might wish to preserve the numbers will be discouraged. We hope the editors may at the beginning of July put a higher estimate on the enduring worth of their convenient summary. The table of contents embraces general political articles by well-known writers; foreign intelligence in brief orderly array; reviews of the stage, of science, of literature; notes, of news and comment; reports of learned bodies, of the courts; sport and fashion items; necrology; list of books received, etc., etc. The price of this weekly is $5.75 per annum, or $3 for six months, subscriptions beginning with any issue.

The *Débats* for March 20 prints a correspondence between Talleyrand and Alexander I., which manifests the Emperor's distrust of the prince diplomat. On September 15, 1810, Talleyrand coolly requests that 1,500,000 francs be placed to his credit at Frankfort. Alexander excuses himself on the ground of appearances and of duty to his country. The documents were lately published, from copies believed to be authentic, in a respectable review, the *Ruskaya Starina*.

The fine Atlas of the German Empire edited by Dr. C. Vogel (Gotha: Perthes; New York: Westermann) has just been worthily completed by an index which fills 65 pages of seven columns each in fine type. Such a list is a great accession to the common gazetteer, and is by itself worth the price (3 marks). The same firm sends us the second instalment of the Spruner-Sieglin Ancient Atlas, and the fifth and sixth of Paul Langhans's German Colonial Atlas; these last accompanied by very valuable lists of the sources of the maps—186, for instance, in the case of the map of the New Guinea protectorate. The sheet showing German trade at home has curious side-maps with colored rings designating the kinds of industry in chosen districts, with comparisons.

From Dietrich Reimer, Berlin, comes the fifth part of Kiepert's Grand Atlas, with its customary apparatus of statistical tables and current indexes. Fine maps of Greece, Italy, and Switzerland are among the present series. The minuteness is almost up to the capacity of eyesight, as respects the names of places.

The Department of Library Economy of the Amherst (Mass.) Summer School is to open on July 2 and close on August 4, under the direction of Mr. William I. Fletcher, who will lecture daily as if to raw beginners. He should be addressed as above for particulars.

The Bibliographical Society (London) was founded in 1892 for the use by its members of works connected with Bibliography, and for the general promotion of bibliographical studies. The roll of the society, which now stands at 203, will be closed on May 20, after which candidates will be admitted only to fill vacancies and on payment of an entrance fee. Any one interested in bibliography before whom the objects of the society have not hitherto been brought, and who wishes to join it before the roll is closed, is invited to communicate with the Hon. Secretary, A. W. Pollard, No. 13 Cheniston Gardens, London, W. Public libraries and institutions are admitted to membership.

Mr. M. D. Conway writes in protest against our phrase "purely conjectural" applied to the early pieces in his first volume of Paine's Writings. "More or less conjectural" would have been nearer to our meaning, though this, too, is disputed by Mr. Conway, who says that Nos. 3, 4, 5, 6, 7 were collected by Paine's friends and contemporaries, and "have been circulated in American and English editions of Paine for seventy-five years." He adds:

> "I will only say, in conclusion, that the number of Paine's writings is so large that they can only with difficulty be compressed into the four volumes proposed. It is necessary to economize in the matter of prefaces and annotations, and I have assumed, perhaps too confidently, that those who desire more information than is given in my editorial notes would refer to my 'Life of Paine.' The public may rest assured that our space is too precious to be lightly conceded to articles of doubtful authorship, although in one instance, in vol. i., I have inserted as 'probably by Paine' a very brief essay published by Paine, 'Thoughts on Defensive War,' thinking there might be room for a hypercritical doubt."

—The New York Mathematical Society now embraces among its members every mathematician of note in the United States and Canada. A change in its style to the American Mathematical Society seems appropriate and may soon be made. Its monthly Bulletin is an extremely useful publication, filling a want which had previously been felt. At its recent meeting, Prof. Woolsey Johnson gave an account of Prof. Greenhill's latest proposed compromise between gravitational and absolute units. This brought on, quite inevitably, a lively discussion of the whole question, from which everybody carried away the same opinions they brought to it. Mr. C. S. Peirce exhibited an arithmetic of 1424 from the valuable collection of Mr. George A. Plimpton. It is the most extensive work upon the subject of the age to which it belongs. It displays greater

skill than the arithmeticians of those days were supposed to possess, and is a find of which we shall hear more in the future. The author was Rollandus, a Portuguese physician, known for a work upon surgery and another upon physiognomy. He was a minor canon of the Sainte-Chapelle, and a protégé of John of Lancaster, to whom the arithmetic now brought to light bears a flowery dedication.

—The report of the London School of Medicine for Women for the year ending January 8, 1894, is a record of good work and sturdy growth. This English woman's medical college is a teaching and not a degree conferring body, its students being examined and diplomaed by the University of London, the Society of Apothecaries, London, the Royal University of Ireland, and by the Colleges of Physicians and Surgeons in Edinburgh and Glasgow. The report states that last year the Court of the University of St. Andrews, Scotland, granted an application made to them that the lecturers of the London School of Medicine should "be appointed by that university for the instruction of women in medicine"; but the requisite regulations as to the courses of study that will be required for "the medical degree of St. Andrews" have not yet been issued. There are 162 regular and special students now attending the school who receive their practical instruction at the Royal Free Hospital, the school paying to the hospital some $5,700 annually for the privilege of clinical service. That English medical women do not shirk severe tests of the quality of their work is partly shown by the fact that last year thirty-three students of the school passed the primary examinations of the Society of Apothecaries—a much coveted opportunity, thrown open to women only in 1893. During the past year former students of the London School of Medicine for Women secured the following posts: Assistant anæsthetist, Royal Free Hospital; resident physician at New Hospital for Women; house surgeon, Clapham Maternity Hospital; clinical assistant, N. E. Fever Hospital—London; resident physician, Victoria Hospital for Children—Hull; medical officer in charge of Lady Dufferin's Zenana Hospital —Calcutta; and clinical assistant, Richmond Asylum—Dublin, this being the first public medical appointment in Ireland which has been held by a woman. Few as are the hospital posts open to women physicians in the United States, it appears from this report that English women practitioners are even more handicapped; at present there are in Great Britain only ten medical institutions for women and children which have women physicians on their staff. Of these five are in London, two in Birmingham, and one each in Bristol, Manchester, and in Edinburgh.

—At the conclusion of the thirty-second Congrès des Sociétés Savantes in Paris on March 31, M. Spuller, the Minister of Public Instruction, spoke to the theme, "The Scholar in a Republic," and his words seemed to have been inspired by President Cleveland's address at the Harvard anniversary celebration in 1886, at which M. Spuller was present. He paid a high compliment to Mr. Cleveland in saying that his manly appeal to the cultivated classes to enter bravely into the public life of their time, and not to content themselves with dilettante criticism, made one of the most impressive speeches he had ever heard in his life. M. Spuller's address was received as one of the long-expected elucidations of his vague phrase, "the new spirit," and was full of hearty words of promise and encouragement for all who will earnestly enter into the work of "pacification and reconciliation which the republican government has undertaken in our country." His reference to other days and other than republican feelings, in the following words, was much applauded: "No doubt regrets are permissible and certain memories are sacred; but, however attached we may be to the past, we do not live for the past. We can study it only in order to know it well, but we live in the present and we work for the future." The Minister at the close of his address distributed the prizes of the year, and made touching reference to the losses by death in the ranks of French scholarship.

—One of the most extraordinary phenomena in the literary history of Germany is the hostility which is still manifested towards Heine, almost forty years after his death—an enmity based in about equal proportions on chauvinism, anti-Semitism, and the wrath naturally felt by Philistines towards men of genius who have lashed them and their ways with scorn and satire. The project of erecting a monument to Heine in his native city of Düsseldorf, a few years ago, met with so much opposition that it was dropped. Soon thereafter the committee took up Mayence as a suitable place, but nothing definite has been done as yet. It is stated on excellent authority that the Empress of Austria, an ardent admirer of Heine, had promised to provide the needed funds from her private purse, but was dissuaded by Herbert Bismarck, acting as the agent of Emperor William. The *Frankfurter-Zeitung* recently secured the opinions of noted German authors on the desirability of erecting a monument to Heine. Among those opposed were Felix Dahn and Ludwig Büchner, while Paul Heyse, L. Brentano, and Spielhagen are among his most prominent champions. Spielhagen took occasion to write this bitter truth about his countrymen: "The German people as a whole have no respect, to say nothing of veneration, for intellectual culture. . . . A nation that has had Goethe and Schiller, and does not yet comprehend that one of the very greatest of our lyric poets deserves a proud monument —truly one might despair of such a nation." The cudgels for Heine have also been taken up in the Vienna *Neue Freie Presse* by that clever dialectician Ludwig Speidel. He turns the tables on Büchner and Dahn. Büchner had incautiously referred to Schopenhauer, and Speidel takes occasion to remind him that Schopenhauer called him a "barber's apprentice," and his famous 'Kraft und Stoff' a "worthless book." Concerning Dahn (who has written about ninety books, and who, in his recent autobiography, with somewhat unexpected modesty, classes himself as "a second-rate savant and a third-rate poet"), Speidel remarks that he is "the poet of German chauvinism. He has treated the most German of all subjects, but any one who would assert that he has treated them in a German way knows not what German is."

—Speidel's opinion of Heine is also worth translating:

"Heinrich Heine is not a stranger, he is a German. Heine had a deeper insight into the German heart than any of those Teutons who are to-day impugning his German national feeling. In proof of this, read his remarks on German folk-song and on Goethe's lyrics, in which the pulse of the German people beats more vigorously than in any other of his treatises; examine his writings, pervaded by our characteristic national sentiments, and note how understandingly and sympathetically he gossips about the German legends, how full his fancy is with the figures of our sagas. Of his songs, which affect us like newly revealed feelings, and impress us by their concise and apt expression of German sentiment, it is surely unnecessary to speak at this day, and it may be safely said that his 'Atta Troll' still remains the last great German poem. In the case of a poet like Heine it is self-evident that he enriched the German language, and created master-works in German prose whose thoroughness and brilliancy will defy time. By his rich comic vein, by his wit and ridicule, he exerted a liberating influence at the time when every spontaneous movement of the spirit was suppressed. That this could not be done without occasionally inflicting wounds, is a result inseparable from the nature of wit, which is often a demonic power that possesses him who possesses it."

—The *National Observer*, which, though now published in London, began its career as the *Scots Observer* in Edinburgh, has been in existence but five years and a half. It was in its fifth or sixth week, when, despite its first somewhat brilliant prospects, it was on the point of disappearing altogether, that Mr. Henley took it in hand, and at once gave it a distinct individuality. It has made many enemies, and has never been popular; probably under Mr. Henley it never could be popular in the wide sense of the term, for in all matters, political, literary, and artistic alike, its standard has been ultra-conservative, or perhaps it would be more accurate to say aristocratic. It has rendered direct services to literature by its publication of much of the best work of the younger generation of poets, novelists, and essayists. In its pages have appeared the 'London Voluntaries' and many of the choicest of Mr. Henley's own poems, as well as chapters, or separate episodes, from the books of Mr. Stevenson, Mr. Hardy, and Mr. Barrie. It was the first literary organ to recognize Mr. Rudyard Kipling, whose 'Barrack-Room Ballads' were first printed in its columns. It introduced to the public Mr. Marriott Watson, Mr. Gilbert Parker, and Mr. Murray Gilchrist, three masters of the short story. Nor would it be easy to count the London journalists it has helped to train. Mr. Henley now retires from the helm, and what may be the *National Observer's* future with a new editor, Mr. J. E. Vincent, time must show.

—Lecène, Oudin & Cie. (Paris) have added two more volumes to their excellent collection of "Classiques populaires." The first is devoted to Bossuet, and is the work of M. G. Lanson, who has made large use of the book he wrote on the great orator and historian three years ago. The present production is partly a summary, it is true, of the former, but it is also, in a sense, an appendix to it, the numerous illustrative extracts from Bossuet's works giving it a special value. It is fully as readable as the larger book, for M. Lanson is thoroughly imbued with his subject and clear in his statements. The woodcuts, as is generally the case in the volumes of this collection, are wretchedly poor. It would be an advantage to omit them. The second volume, written by M. J. de Crozals, is upon Guizot, whose personality is far from being as attractive as that of Louis XIV.'s favorite prelate. The rigidity of character, the somewhat repellent nature, in public at least, of Guizot, the uncompromising principles of the man, are set forth in not too captivating a manner. It is difficult to decide whether this is due to the subject or to inability on the part of M. de Crozals to seize and keep the attention of his reader as does M. Lanson. Guizot ended by being very unpopular; M. de Crozals despairs of reversing that verdict, and his tone is somewhat apologetic

throughout, which does not help him to convince and charm the modern reader, who is nevertheless free from the influences which turned the generation of 1848 against Guizot. He also has an exasperating way of printing his quotations from Guizot's work which gives to the larger portion of his book the aspect of a commentary. Harder still on the dead historian is the morose portrait of him, which is quite in keeping with the style of the book.

GENERAL POLK.

Leonidas Polk, Bishop and General. By William M. Polk, M.D., LL.D. Longmans, Green & Co. 2 vols., 12mo, pp. 349, 442.

We have here a valuable contribution to the history of the civil war. It has been understood that for some years Dr. Polk has had in hand his father's biography, and he has spared no pains to make it an adequate record of the ecclesiastical as well as the military history of Bishop Polk. The spirit and tone of the book are excellent. The story is told with fulness enough to explain itself and to be its own apology, without controversy and without bitterness. It presents the man as his conduct and his own words explained his motives, and these are such as to command the respect even of those who were in antagonism to him. The material gathered seems to have divided itself very conveniently into two equal parts, so that the first volume is wholly devoted to the youth and the clerical labors of Bishop Polk, the second to the military career of the general.

That the Protestant Episcopal Bishop of Louisiana should at the outbreak of the great rebellion accept a commission as a major-general in the Confederate Army was always more or less a stumbling-block to religious people. His brethren of the episcopate and of the ministry at the South accepted the judgment of the venerable Bishop Meade of Virginia when he said that he could not sanction it, but, as all rules have exceptions, he could not condemn it. The case was exceptional in the fact that Bishop Polk was a graduate of West Point, though he had never actually served in the army after graduating. During his cadetship such religious impressions had been made upon him through the preaching of Bishop McIlvaine, then chaplain of the Military Academy, that he had resolved to enter the ministry, and he went from the Academy to the Theological Seminary. Ill health and family affairs had interfered with his plans, so that he had, in fact, almost no experience as a rector of a parish when he was, in 1838, made missionary bishop of the Southwest. In 1841 he became Bishop of Louisiana.

It is fair to say that habits of command were thus more natural to his mind than those of ministration, and his position as a dignitary, united with the influence of a leading member of the prominent family of the Polks of North Carolina and Tennessee, gave a kind of local leadership which, in connection with his military education, made the offer of a military command easily take the guise of a duty. Casuistry on such a subject is pretty sure to involve itself in practical difficulties. Theoretically, there is no apparent reason why a pious bishop as well as a pious farmer or mechanic may not slaughter men in war. By similar reasoning one may argue that it is as right for a woman to enlist against a public enemy as for her husband or her son. But many centuries of experience have shown that the curiously complicated structure of human society suffers a damaging shock when certain hereditary conventions are violated. Among these are the rules that ministers of the Gospel shall be ministers of peace, and that amazons shall not be enlisted in the most righteous war. If there be exceptions, they only prove the rule, and a fighting parson may well continue as rare as a Jeanne Darc. There were examples on both sides of Mason and Dixon's line of the violation of both traditions; but the experience of the civil war has not weakened the authority of the general rule.

The sincerity and conscientiousness of Bishop Polk are sufficiently shown in the intimate history of his life and in his private correspondence; yet one who reads it will see that a curious struggle went on in his mind. When travelling in England as a comparatively young man, he was impressed with the advantages of a wholly free community. He recorded his conviction that it was greatly desirable that the South should be rid of slavery. Yet, in 1861, he was so militant in his support of secession based on the claim to a constitutional extension of slavery into the Territories, that he was popularly looked to as a leader who might be expected to exchange his robes for a gray uniform. He did so with some hesitation; and when the first excitement of the rebellion cooled a little, he twice tendered his resignation and sought to return to his episcopal duties, but President Davis evidently felt that this would be disadvantageous to the Confederate cause, and Gen. Polk yielded to Mr. Davis's wish.

The biography will give to Northern readers a higher opinion of Gen. Polk's quality as a soldier than the one which has been common among us. The official reports of Beauregard at Shiloh and of Bragg in the Tullahoma and Chickamauga compaign contained criticisms of Gen. Polk of a kind peculiarly likely to stick. He was represented as wilful if not insubordinate, taking liberties with military orders sent him, and obeying or not, as he pleased. Intimations were made that his love of personal comfort made him sleep too far from the bivouac of his troops on important occasions, and that he assumed, as an important personage, a personal freedom from the stricter rules of discipline. Out of this grew the idea, more or less prevalent, that his importance to the Confederate cause was rather as a social leader than as a military officer.

Without too distinctly recognizing the need of defending his father from these imputations, Dr. Polk has quite fully arrayed the evidence which shows that such opinions did an injustice to the general. His presence in the thick of battle and his bravery under fire are shown to be habitual. In the matter of his position and headquarters in the night after the first day's fighting at Chickamauga, which Bragg made the occasion of charges against him, the exoneration seems to be complete. He spent the night close to Alexander's bridge, where the most casual examination of the map fixes the appropriate position for the commander of the Confederate right wing, whether we consider the handling of his own troops or communication with army and corps headquarters during the night. Mr. Davis himself examined the grounds of this controversy, and settled it in his visit to the army by dismissing the charges and assigning Gen. Polk to the command of the Department of Alabama and Mississippi.

What at first blush seems to be a personal matter between Bragg and Polk turns out to be of greater consequence. It involves the question of Bragg's capacity for so large an independent command as was given him in 1862, and the whole conduct of the campaigns of that and the next year. The biography's greatest historical value is found in the light it throws on the operations of the Confederate campaigns in the West, down to the battle of Chickamauga. Bragg is represented to have been a man of much talent in administrative work and in organization and discipline; but one who "let down" when burdened with the supreme responsibility of a great campaign. His power of decision then seemed to leave him, and he became hesitant and vacillating. Thus, at Perryville, after a bold movement from Chattanooga into Kentucky had brought him within striking distance of Buell's army, his nerve is represented as failing him, and at the moment when decisive concentration and a strong initiative were all-important, he could decide nothing. let illusions outweigh positive information as to the movement and position of the national army, and lost at once by his own weakness all the advantage he had gained from his earlier strategy. A similar weakening is shown to have occurred at Tullahoma and at Chickamauga. In short, unless the evidence thus presented can be overridden, we must conclude that Bragg was a type of the class of second or third-rate men, so common in military history, whose intellect and will break down under the strain of responsible command, and who are consequently unfit for it. The splendid fighting of the troops in the engagements mentioned, and at Stone's River as well, is attributed to the leadership of the corps and division commanders, while the general-in-chief would seem to have been practically a cipher in the crises when a real general counts for most. This view is presented so calmly but so cogently that no one can question its capital importance in the discussion of these critical campaigns of the West.

Gen. Polk was not destined to see the end of the war. His influence was great in procuring the appointment of Gen. Johnston to supersede Bragg, but in the midst of the Atlanta campaign he was instantly killed by a cannonball while he was assisting Gen. Johnston in an examination of Sherman's position from the top of Pine Mountain. The author was an officer of artillery in his father's command at the beginning of the war, and a member of his staff later. His intimate personal knowledge of all that he relates is therefore complete, and his unusual fitness for his task is shown by the admirable temper and taste of the whole work. Writers on the National side will differ from him in matters of fact when testimony is conflicting, and the perennial question of relative numbers will be found to be treated with a Confederate bias often discussed by us; but everybody who is in earnest in studying the history of that time will appreciate the work of an honest and able interior view of the Confederacy and of many of the first among the able men who directed its destinies. There are pictures, too, of Southern home life in the *ante-bellum* days which are full of interest and instruction, and thus the book will, from many points of view, be found to justify the judgment first expressed, that it is a very valuable contribution to American history. The folding maps are reproductions in colors of those in the Government Atlas accompanying the official records of the war, and as they are by Bien & Co., the original engravers, they mark an important step in the illustration of historical memoirs.

KIDD'S SOCIAL EVOLUTION.

Social Evolution. By Benjamin Kidd. Macmillan & Co. 1894.

We have here a striking and original work, evidently the product of long study and careful thought, by a hitherto unknown author. Mr. Kidd bases his effort on the idea that while science has been actively engaged in studying the evolution of every form of life from the lowest to the highest, with fairly satisfactory results, she stands dumb in the presence of humanity. There is to-day no science of human society, properly so called, and no indication from those who speak in the name of science even as to the direction in which the path of future progress is to lie. The older political economy has been weighed in the balance and found wanting; the new economics gives only vague and shadowy intimations. Spencer, the greatest student of the subject, has thrown so little practical light on the problems of sociology that his conclusions are held up, by two opposing parties, in support of diametrically opposite views. Huxley and George have portrayed the imperfections of society as it exists, but have not even suggested a law of progress by which we may judge of the probable future. The former would willingly see some kindly comet sweep the race from the earth, unless there is to be an improvement; but his criticism on social efforts is so completely destructive that no inference respecting future conduct can be drawn from its conclusions. It is to this neglected subject of the law of progress in human society, and its probable form during the twentieth century, that Mr. Kidd devotes his work.

His treatment is everywhere of the broadest kind, his style a model of dignity and philosophic calmness, and his periods so stately that it is a pleasure to follow him. He rarely offends the reader by descending to the consideration of specific facts, or analyzing the proximate causes of the phenomena he discusses, but rather contents himself with basing his arguments on those general features of the situation which it is the province of the scientific investigator to bring out. The reader is carried through the air without any disagreeable approach to the asperities of the landscape, and shown a very pleasant succession of instructive views, extending from the beginning of the race well through the twentieth century. The author avows no creed, follows in the footsteps of no party, and writes and criticises all views with such impartiality that it may be hardly fair to class him with any school. But the general trend of his thought, at least in all but the earlier chapters, is unmistakably that of the so-called Christian socialist.

It is doubtless through a failure on our part to catch precisely the logical connection of his argument that we are unable to mould the earlier and later chapters into a congruous whole. In the former, the conditions of human progress are discussed in a way that looks so discouraging, the absence of any rational sanction for the conditions of progress is argued with such force, and the antagonism between the interests of the individual and those of the social organism are dwelt upon with such an apparent implication of the impossibility of improvement, that the reader might almost think himself listening to a demonstration of pessimism as regards the future. But when the discussion of modern socialism opens, and the forecast of the future begins, a brighter light shines upon the page. The want of a rational sanction for human progress is to be supplied by the ultra-rational sanction of religious belief, which is to lead the individual to subordinate his personal good to that of the social organism. The doctrine of non-interference of the State in social matters is to be abandoned, and the lower and weaker classes are to be equipped at the general expense against the higher and wealthier classes. Indeed, we are already far past the doctrine that the end of public endeavor is to secure political equality for all. During the twentieth century we shall see among the Western peoples a process of social development tending to bring all the people into the rivalry of life on conditions of social equality. Even now there is rising in England a school of political economists who are beginning to question whether poverty itself may not be abolished, and whether it is necessarily any more a permanent institution than was slavery.

The author's turn of thought is shown by his failure to perceive the logical difficulties in the interpretation of his scheme—a failure which seems as complete as that of socialists generally to appreciate the practical difficulties in the way of putting their plans into operation. He correctly points out that the great work of the progressive party during the nineteenth century has been to secure the recognition of the principle that all men are equal before the law. When he maintains that this party must now go further in the same direction, he brings to mind the Irishman who would have one man not only as good as another, but "a great deal better." What is poverty? And when we have defined it, what is to be done with the man who would rather suffer it as we define it than work hard for a living? If all men are equal before the law, he is to have his own way. If we are going to force him to earn a living, this is not a step forward beyond equality, nor is it in the direction of giving him equal social opportunities, but it is rather a step backward towards feudalism. We must decide for him how many of the good things of this life are needful to keep him out of poverty, and make him work until he earns them, much as the baron did with his serfs. If we are not to use force, but must still keep him out of poverty, every such man must be fed and clothed at the public expense. If this is what Mr. Kidd means by social equality, he should say so more explicitly. If the industrious part of the community is to support the idle, not merely by giving them the necessaries of existence, but by lifting them above poverty, the policy could hardly be called equality. In fact, our author is at one with all classes of socialists in ignoring the fact that great numbers of people, both of our own and of other races, do not want to be elevated above the condition of poverty, or, at least, do not want it earnestly enough to work continuously and industriously for it; and that any measures looking towards supporting them in any condition above that which they are willing to attain by their own exertions, will only produce demoralization.

When he divides mankind into the exploiting and the exploited classes, and gives an endorsement, even very qualified, to Karl Marx's view that the interests of the laborer and the capitalist under the present system are necessarily so antagonistic that those of the former must suffer, he betrays an intellectual bias which materially weakens our confidence in the soundness of his conclusions. He does, indeed, admit the great improvement which has taken place in the condition of the laboring classes during the present century; and if he believes that this improvement is the outcome of the great increase of capital which has taken place, and of the efforts of the capitalists to make money, he should frankly have said so and reconciled the conclusion with his theories of progress. If he does not believe it, he should have set forth what he considers the cause of the improvement. He does neither.

We must conclude that with all the praise that may be accorded to the work from a literary or philosophical standpoint, it is found wanting when regarded as an actual investigation of social evolution by scientific methods. That sublimated essence of facts on which sound philosophy must be based, can be distilled only from the concrete facts themselves; and while the writer correctly points out that this has not yet been done in a satisfactory way, he does not attempt to do it himself. As an illustration of what the scientific method is, and how far Mr. Kidd comes from applying it, let us take the case of the suffering poor in such a metropolis as London. Science would begin by looking up some poor Hodge, and questioning him as to his history and antecedents. It would find that Hodge had not been bred to habits of regular industry, unless in a very restricted field, and had not learned to do anything which millions of others could not do better than he could; that in fact he had grown up without any definite object in life. Now in middle age he is unable to do anything that anybody else wants done. Taking Hodge as a typical case, the conclusion reached would be that the principal cause of poverty is the absence in youth of that training necessary to enable a man to earn a living after he shall grow up. The question, Why so much poverty? would then resolve itself into, Why such an absence of training?

The consideration of this question would open up a further field of study. It would probably be found that at the present time a larger proportion of the youth of the land are growing up without any definite object in life than was the case in former generations. A hundred years ago every careful parent considered it his duty to train his boys to a trade, or to secure some opening for them in life. If they lived on a farm, they were to become farmers; if in the neighborhood of a castle, they might become servants or hunters; if in a town, tradesmen or mechanics. Why should this not be equally the case in the present generation? One answer is that the incentive is less now than it was then. Owing to the increase of wealth, it was never so easy for one who knew nothing and could do nothing to pick up the shreds of a living as it is now. A hundred years ago starvation stared such a man in the face; now nothing worse than *la misère*, and scarce even that in England or America. When the wages of fifteen minutes' work of the average laborer will buy a loaf of good bread, and an hour's labor a pound of meat, no one need suffer for food—a result the very knowledge of which removes a strong motive to the industrial education of the children of the poor.

With all its shortcomings, we consider Mr. Kidd's book well worthy the careful study of thinking men. The author is a socialist of the most moderate and sensible kind, and he outlines correctly the direction in which the world is trying to move; we might say the direction in which it is being impelled by the increasing pressure of a great mass of ill-disciplined and therefore generally unsound thought. His keen analysis, breadth of view, and fairness of statement will commend his

views to the reader even when they seem to lack a basis in the facts of life.

BARBER'S POTTERY AND PORCELAIN OF THE UNITED STATES.

The Pottery and Porcelain of the United States: An historical review of American ceramic art from the earliest times to the present day. By Edwin Atlee Barber, A. M. Ph. D., etc., etc. With 223 illustrations. G. P. Putnam's Sons. Small quarto, pp. xvii, 446.

THIS is an industrious and painstaking book on a somewhat thankless subject. Mr. Barber has brought together more facts in relation to the history of pottery in this country than will be found, we believe, in any other one book, he has stated these facts clearly and compactly and arrayed them in order, and he has put the future student of such matters under an obligation by the thorough way in which he has performed his task. If, after all his labor, the result of his studies must be pronounced not only dry, but depressing, that, certainly, is not his fault: pottery as a manufacture can be interesting only to potters, and pottery as an art has, as yet, produced in this country hardly any fruit worth mentioning. The pieces contained in our museums and private collections in which some glimmer of artistic feeling may be indulgently discerned, are either copies, always rude, made by our earliest potters, of models brought from the old country, or direct borrowings—never wholly successful because always balked by native ineptitude—from the better equipped manufactories of Europe.

The opening chapters of Mr. Barber's book relate to processes of manufacture, and to the materials employed, but we are not told as much as we might expect of the native sources of these materials. It is believed that we have in this country every kind of clay needed in the making of pottery, including large deposits of true kaolin, and these materials are said to be equal to the best found in other countries. It is a curious fact, recalled by Mr. Barber, that in 1766, Wedgwood, the famous English potter, "procured samples of the Carolina clays from the country of the Cherokees, some three hundred miles from Charleston, which, proving satisfactory after trial, were, for several years after, used by him in larger quantities. Subsequently, he imported clays from Florida, which he seems to have preferred to the former."

Mr. Barber's chapter on Aboriginal Pottery is well enough, though it has really no essential connection with the subject, and has nothing to tell us that was not already known. The aborigines of this continent were savages, and they gave to the things they made—their pottery, their textiles, their carving in stone or wood—no better form or ornamentation than we find in the work of savages everywhere. What interests us in these things—the only interest they can have for us—is their curious relationship to what is found in other countries, the work of peoples alien to our aborigines in race, so far as we know, and certainly separated from them by vast reaches of land and water, and perhaps of time.

Mr. Barber's subject properly begins with his chapter on Early Brick and Tile-making. It was at one time believed that all the bricks used in this country before the middle of the last century were brought from Holland or England. No doubt, this is true of many cases—instances are known to everybody who is interested in the matter; but Mr. Barber shows that "brick-making had become an established industry in America a few years after the arrival of the first white settlers." The same is true of roofing-tiles: the earliest that were used are believed to have been brought from Holland; but, as in the case of bricks, while this was well enough for people who lived on the seaboard, "the cost of importing these supplies and transporting them to the rural districts far removed from tide-water would have been prohibitory." Kilns for their manufacture were therefore set up at an early date; but even with regard to certain tiles that were dug up from the ruins of houses built on the Burlington Islands in the Delaware River in 1668, Prof. Edward S. Morse, whose competence in such matters is well known, is of opinion that, since there is no evidence to show that they were imported, they may have been made in this country. By the middle of the eighteenth century, the manufacture of roofing-tiles was well established in Pennsylvania—Mr. Barber tells us nothing of their making in any other part of the country; and though after a time they ceased to be used, yet of late they are coming into favor again, and are now made in many places on this side the water.

The chapters that follow on Early Potting in America are as entertaining as the subject allows, and Mr. Barber's industry in the collecting of facts does him great credit. Little that he reports has any relation to the artistic side of the general subject; such shadowy suggestion of art feeling as these early pieces show is too plainly reminiscent of Old-World models. Often, no doubt, the designs, if we may call them such, were directly copied from pieces as rude as themselves, brought over by immigrants, since the potters here would find it to their interest to supply their customers with wares associated with life in their old homes. Utility, and not beauty, was then the quest of these early workmen, and such ornamentation as they added to their wares was of little other value than as a relief to the bareness of the surface.

The greater part of Mr. Barber's book is taken up with the history of the manufacture of pottery in this country. Strictly speaking, there has not been, on the artistic side, much that can rightly be called development in pottery as an art among us. Even Mr. Barber, who is full of honest patriotic zeal in his advocacy of our home manufacture, and who does not stick, like the good Pennsylvanian that he is, at advocacy of the most drastic measures to advance its interests—as he understands them—is obliged to admit that, "thus far, our potters have been in a great measure imitators rather than inventors, and the result is that we have largely reproduced, though in a most creditable manner, patterns and designs, bodies, glazes, and decorations of foreign factories" (p. 428). We will grant that this copying of designs has been necessary up to the present time—it has been common in all countries and in all ages; but in almost every case there was some artistic instinct or feeling in the copyist that gave to the copy if not a charm, at least an impress of its own, and, the impulse from abroad once communicated, the new art went on, developing on lines of its own. But, with us, the love of copying seems persistent, and we are so far from being ashamed of it that we think it clever. We take pride, if Mr. Barber may be spokesman for us, in the fact that we have so successfully imitated a pretty and peculiar Irish manufacture as to drive the original from our market. One of our countrywomen, who no doubt could have done something original if she had given her mind to it, wasted her time and energy in a successful attempt to discover "the secret" of the Limoges faïence exhibited in 1876 at Philadelphia, and now, happily, as dead as the dodo. Another of us "directed his efforts towards solving the secret of the famous *sang de bœuf*, and, after four years of sacrifice and patient investigation, his labors were in a measure successful." And still another thinks it has been worth his while "to discover the method of making the *reflet métallique* of the old Persian tiles." What has been gained for art by all this copying? The expense of the manufacture puts the pieces produced beyond the reach of the public, and artists and connoisseurs care nothing for them. A copy is always a copy, and we are not surprised to read that, after all the labor put forth in making facsimiles of the *sang de bœuf* glaze, "the demand for works of this character being limited, some of the finest examples still rest on the dusty shelves in the Chelsea workshop."

Outside of the Rookwood pottery, of which the clays and glazes are alone to be admired—a love of the bizarre injuriously affecting the greater part of the forms, and the glazes themselves having, too often, a sweetness and slickness found cloying in the long run—we have seen nothing to warrant Mr. Barber's enthusiastic laudation of our national achievement in the potter's art. The pictures given in this book, illustrating the work of our factories or of particular persons, though highly praised by the author, are disheartening enough; but they fairly represent the jejune, tasteless, inartistic designs that crowd our magazines and meet the eye in our houses on every side. Mr. Barber's industry and thoroughness as a compiler are praiseworthy, but his qualifications as an *arbiter elegantiarum* are not so clear: the example of Mr. W. W. Gallimore's skill as a modeller in low-relief given as a frontispiece to the book furnishes ground for serious misgivings on the subject, which are not dispelled by the approval bestowed on such a monstrosity as Mr. Miller's design for a frieze obtained by the happy thought of cutting octagonal spittoons in half (p. 343). No one who had the artistic development of our pottery at heart would so much as mention such a performance, but the book abounds in proof of a want of perception. It is vain to hope that pottery will become an art in our country so long as those who direct its manufacture are incapacitated as teachers or guides, either by a want of natural instinct or because such instinct as they may have has not been developed by education. No doubt, too, the taste of our people at large is at fault: we have no inherited standard, and we are much too easily pleased. It is not encouraging to know that, to any one who has the artistic sense, a ten-cent Japanese bowl, even in these supposed degenerate Japanese days, is capable of giving more pleasure than all that Trenton, Cincinnati, and Chelsea put together have produced.

We believe there is a happy future for the art of pottery in our country, but its coming will surely be hindered rather than hastened by the protectionist devices of Mr. Barber and those who think with him; by the rigorous shutting-out of foreign examples from our exhibitions which he proposes (p. 427), or by the attempt at cutting off the importation of foreign wares by prohibitory duties. It ought to be seen by this time that wild horses cannot drag cultivated Americans to buy inferior articles solely because they are made at home.

"The fiend that man harries
Is love of the Best."

And long may he harry our American potters until we cease to do evil, learn to do well.

Studies of the Stage. By Brander Matthews. Harper & Brothers. 1894.

In these half-a-dozen essays Mr. Brander Matthews converses pleasantly, if not always originally, upon a variety of theatrical topics, displaying in every case that intimate acquaintance with the subject which comes of long personal experience and careful research. There are, indeed, very few persons who are more competent than he to speak of the French and English stages, both past and present, so long as he confines himself to fact and anecdote. During the last twenty years or more he has seen every play worth seeing and known every actor worth knowing, being as much at home on one side of the curtain as the other, and, moreover, he has read diligently, widely, and intelligently, acquiring indisputable authority upon all theatrical matters, historical, technical, and personal. He is able to keep his reader constantly entertained by his copious supply of incidents, comparisons, and quotations, and his skill in the introduction and management of old material.

Of the papers under present consideration not one is dull, although a good deal of the information contained in them is rather elementary, and some of the opinions expressed are more dogmatic than convincing. As a narrator, Mr. Matthews is interesting and trustworthy, but his conclusions are apt to be hasty and to rest upon a particular instance rather than upon a general rule. What he says about the difficulty of dramatizing a novel is all true enough, and he might have gone a good deal further without much fear of contradiction; but his closing assertions, that "the drama is really the noblest form of literature because it is the most direct," and that "it calls forth the highest of literary faculties in the highest degree," are somewhat violent. Accumulated superlatives of this sort are always dangerous. In discussing the dramatic conditions in England one hundred years ago, he says "that the sudden extension of journalism undoubtedly tended to decrease the public interest in the drama." This is an opinion which it would be difficult to support by proof. To the ordinary observer the newspaper appears to be a most potent supporter and advertiser of the theatre, and it would be scarcely too much to say that the two institutions have grown and flourished together. The effect of the newspaper upon the quality of contemporary drama is another question altogether. Again, Mr. Matthews says, "It is much easier to write a novel than it is to make a play," but that, clearly, depends upon the kind of novel and play that is meant. As a matter of fact the two things are essentially different, as Mr. Matthews himself points out, and cannot justly be compared.

Another curious remark for a critical writer to make occurs in the excellent paper on Francisque Sarcey. "Seen by the light of the lamps, a play has quite another complexion from that it bears in the library. Passages pale and dull, it may be, when read coldly by the eye, are lighted by the inner fire of passion when presented in the theatre." The first half of this paragraph is undoubtedly true, but the second half takes no account whatever of the power of the imagination of an intelligent reader. Of course, a great actor is a potent commentator and illustrator, and often reveals unsuspected beauties to the student, to say nothing of the ignoramus, but it is the tritest of truths that some of the choicest masterpieces of the poetical drama wholly defy the genius of the actor and the cunning of the stage manager. In another place Mr. Matthews says that "the dramatic critic does not see a new play—he sees only a performance," which can be true only where the critic is wholly incompetent, or, in other words, no critic at all. Other examples of such loose generalization might be quoted, but it would not be generous or fair to insist too strongly upon the occasional flaws in an attractive little volume which is full of entertainment, and offers a great variety of information in compact and agreeable form.

Cœurs Russes. Par le Vte. E. Melchior de Vogüé. Paris: Armand Colin & Cie.

In this volume M. de Vogüé has collected together five short sketches of Russian life, the most recent of which, he states, was published ten years ago. In an interesting introduction which describes Russian weather and habits, he represents four of the stories as having been narrated to him by a landed proprietor who was personally acquainted with the facts. However that may be, the stories are full of life and of the spirit of the land. The longest of them, "Varvara Afanasievna," is nothing more nor less than the history of the Medical Courses for Women in St. Petersburg cast in abbreviated narrative form, and its heartrending details might be verified in many cases of real life, without a doubt. "Le Fifre Petrouchka" is the stirring tale of a peasant hero who revived the courage of his starving comrades in a fortress of the Caucasus besieged by the Turks, and saved the place until reinforcements arrived by playing "God Save the Czar" on his fife. It is as characteristic as are the prefatory remarks about the Russian peasant in general and Petrouchka in particular. "L'Oncle Fédia" reminds one of a tale of L. N. Tolstoi's, where the innocent allows himself to be sent to Siberia to save the guilty, the truth being discovered too late to rescue the peasant hero from his undeserved punishment. The story is told with beautiful truth and simplicity. "Le Temps du Servage" presents a repulsive picture of pre-emancipation manners on some badly managed estates. But, as the author makes his Russian friend remark:

"The principle was detestable. The application of it was more gentle than that of the feudal code in many parts of Europe. The great mistake which we made (we, the civilized of yesterday) was to exhibit such manners to the Occident when the latter had become unused to them, when it had become prudish and prompt to feel scandalized. Its conscience reproached it with its own old sins; it consoled itself by belaboring our shoulders. But, having said thus much in exculpation, it must be confessed that there were some sad exceptions."

It is one of these sad exceptions which forms the subject of the sketch. "Le Manteau de Joseph Olenin" does not deal with peasant life, but it is equally characteristic of Russian temper. Joseph Olenin belongs to the learned class of society, to the upper classes to which the author's remark in this story especially applies: "You are Slav, consequently more or less of a spiritualist, a believer in metempsychosis and a lot of other similar things." Joseph Olenin is obliged to leave Petersburg, while engaged in scientific investigations concerning the sojourn of the Hebrews in Egypt, to visit his estate in Little Russia on business. On the way he loses his travelling-coat lined with fox-skin. He despatches his servant to the posting-station near the scene of the loss, and the postmaster sends him a cloak which has been found and brought in. On opening the parcel, Olenin finds a lady's cloak of blue velvet lined with valuable sables and cut in Polish fashion. He endues this cloak with a sort of soul, helps his delusion by stuffing it into shape with straw, and takes to wearing it because he fancies that the delicate spirit of its true owner penetrates him when he is in contact with it, as it affects the atmosphere of his room when it lies on his sofa. He becomes so absorbed in his fancies over this cloak that he neglects his business and his studies for vaporous musings. At last he meets the owner of the cloak at the posting-station. He is wearing her cloak, she is wearing his. She is a beautiful and witty Pole, married to an old Count on a distant estate. His reluctance to part with the cloak, at her demand for her property, leads her to invite him to come and call on the cloak at her house. It ends in Olenin passing most of his time there, faithfully devoted to worship of the cloak, to such a degree that he makes the Countess jealous, and she takes to wearing it all day in the house, in order that he may turn his attention to her. In vain; the romance never descends any nearer to the earthly and commonplace, and, naturally, the end of it is indefinite and rather feeble, through the impossibility of inventing a suitable catastrophe. Such a romance is quite possible and in the spirit of certain mystical Russians.

One of the most delightful parts of the volume is the introduction, where the author shows his delicate appreciation of Russian landscape, customs, and habits in phrases of the utmost precision, which deserve to be quoted. Nothing can be happier than this description of a winter landscape: "The morning was superb: ten degrees below zero, a brilliant sun in the blue sky, not a breath of air; vast horizons of plains, all of a crude white, with reflections of rose color and gleams of gold; a world as dead and as brilliant as a bit of old China porcelain." Here is a companion picture of in-door life: "But, for the purpose of combating the boredom of their winter, Providence has endowed the sons of Rurik with two faithful weapons, cards and tea; between the samovar and the card-table the Russian hours flow past as inoffensive and as useless as a depreciated coinage, so abundant that no one has ever dreamed of saving it." The following ranks high among foreign efforts to explain the mental workings of Russian brains. Turgeneff might have penned it:

"His intelligence took pleasure in this vapor of thought, as his body did in the vapor of the Russian bath, in that lukewarm atmosphere which is neither air nor water, but a soft mist. In order to preserve more liberty and amplitude for these abstract studies [the study of Kant], my friend sagely separated them from the petty realities of existence. Thus, Michail Dmitritch labored more particularly over the reform of the provincial administration, the amelioration of the lot of the peasants, the extinction of drunkenness and the assimilation of the Israelites; this did not prevent his living on excellent terms with the old abuses, gladly harboring the police officials of the district, who were notorious extortioners but jolly companions, and letting the communal dram-shop at a very high rental to a Jew whom he maltreated. . . . An excellent neighbor and a good master, nevertheless, obliging, sensible, vibrating with sympathy for the interests and greatness of his country, always ready to talk eloquently about it; speech having been conferred on the Russian to serve as an outlet for his mighty dreams, which would cause his head and his country to burst if, unhappily, he were born dumb."

There are plenty more phrases and descriptions which are equally felicitous and true. Without being a great book, 'Cœurs Russes'

is charming, and deserves to be read with serious attention for the side-lights which it throws on Russian hearts and characters.

Canada's Intellectual Strength and Weakness. By J. G. Bourinot, D.C.L. Montreal: Foster Brown & Co.

EVERY country is open to the imputation of unfamiliarity with the intellectual quality of other countries, and about the Canadian intellect which expresses itself in literary form the rest of the world may be said to revel in dense ignorance. A book devoted to the consideration of Canadian intellect, written by a Canadian with a national reputation in both law and letters, ought therefore to be of interest to all who are not complacently sure that in this case ignorance is bliss.

Dr. Bourinot's book is a reprint, with revision and addition, of an address delivered before the Royal Society of Canada in 1893. It includes a slightly critical résumé of the literary product of Canada from Lescarbot to the present time (nearly three centuries), a sketch of the foundation and subsequent work of the Royal Society, and some general reflections on obstacles which, more particularly in Canada than elsewhere, beset the intellect endeavoring to soar beyond the immediate and the practical. With allowance for the condensation necessary in order to cover so much ground in so little space, the book is agreeably written, and the subject is handled in a spirit neither of boastfulness nor of undue humility. It has indeed occasionally the air of a letter to be read to the family only—as, for instance, when the author reproves a gentleman, whom he calls "Principal Grant," for doubting whether the Transactions of the Royal Society should properly be called literature. He fires at this unlucky gentleman one of Matthew Arnold's numerous definitions of literature, "everything written in letters and printed in a book," while we feel that "Principal Grant" had no such definition in mind, but one which, though narrower in scope and vaguer in expression, is more widely accepted. He probably meant to imply that printed matter is literature only when its form excites admiration and pleasure, no matter what its subject may be. Such a definition rules out the transactions of most societies, and, on Dr. Bourinot's own showing, the greater part of the matter written and printed in Canada.

Excepting the work of the French clergy and gentlemen adventurers and of some scholarly Englishmen temporarily resident in the colony, he has little to offer that shall redeem from insignificance Canadian contributions to the literature of the English and French tongues, and of this fact he is perfectly cognizant. In science, the world has recognized Sir William Dawson and Dr. Sterry Hunt; in history, Garneau, Ferland, and, more recently, Kingsford; while in fiction the only sounding name is that of Judge Haliburton, author of 'The Clockmaker; or Sayings and Doings of Sam Slick,' and one of the pioneers of character sketch and dialect. The muse of poetry has been rather more successfully cultivated than her sisters. Octave Crémazie wrote songs that live on the lips of his countrymen, and Louis Fréchette's 'Fleurs Boréales' has been crowned by the French Academy. In English verse Mr. Charles Roberts and Mr. Archibald Lampman compare favorably with their contemporaries on both sides of the Atlantic.

Among the obstacles to literary development in the bilingual Dominion Dr. Bourinot omits to mention two which seem to us the most serious. For the English there is the proximity of a country whose political institutions naturally attract ardent and imaginative youth, and whose large cities and seats of learning afford a more congenial atmosphere for those who care for ideas and need the stimulus of the world's current. The list of men and women born and perhaps bred in Canada who to-day are conspicuous in the literary life of the United States, is long and far from discreditable. For the French there is the dead weight of ecclesiastical pressure, none the less oppressive because it assumes the rôle of a benevolent control of moral and spiritual welfare. The Church has, in a way and from the beginning, preserved among a very limited number of the French in Canada a love of letters and an appreciation of form and style, but it has been fatal to the progress of ideas; it has clipped the wings of thought and imagination, and not infrequently interfered with the truthful narration and just interpretation of facts.

In the bibliographical appendix to Dr. Bourinot's essay there is a short note on every Canadian writer of any importance except himself. Such modesty, in these notoriety-seeking days, is rare, and leaves to us the pleasure of describing his 'Cape Breton and its Memorials of the French Régime' as one of the most interesting and valuable contributions to the history of our continent.

Oxford and her Colleges: A View from the Radcliffe Library. By Goldwin Smith, D.C.L. Macmillan & Co. 1894.

MR. GOLDWIN SMITH'S miscellaneous writings are perhaps more interesting for the light they cast upon Mr. Smith than for the light they cast upon anything else. To say this is not to belittle them. The future historian of English thought will have a good deal to say about the doctrinaire Radicalism of fifty years ago—"doctrinaire" not necessarily in a bad sense, for it is an advantage as well as a disadvantage for men to be governed by a body of consistent principles; and one might wish that some of the political leaders of to-day realized with equal clearness the principles which guide their conduct. The future historian will also want to know how the men of that movement came to think in after years, when the causes had triumphed for which they had battled, and the world had moved on to a later stage in its history, a stage for which they were themselves in part responsible.

In Mr. Smith's literary career they will find the example of which they are in search. Academic Liberalism was a well-marked variety of the older Radicalism; and among academic Liberals, Mr. Smith, Secretary of the Royal Commission for the reform of the University of Oxford in 1854, was one of the most brilliant figures. A "Public School" man, among the most accomplished classical scholars of his generation, he combined very effectively the old learning with the new ideals; and it was natural that in 1858 he should become Regius Professor of Modern History, and the official prophet of the new era. One who heard him then is accustomed to say that when Mr. Smith lectured in the Sheldonian after his visits to this country—the land of freedom—his face shone like Moses coming down from the mount.

Since those days Mr. Smith has seen many men and cities; his prognostications of the future have ceased to be cheerful; his eyes have been opened to the good qualities of "the rectory and the hall," and the *Times* and Mr. Gathorne-Hardy have had occasion to rejoice. In his latter-day writings, dread of modern democracy, fear of socialism, idealization of English country life under the paternal sway of the squire, scorn of agnosticism, mingle in odd incongruity oftentimes with the fine old Radical hatred of kings and aristocracies and established churches which clings to him from an earlier period. The result is, like some sauces, "piquant," if not nourishing.

Mr. Smith has had the kindness lately to write a little book for the American visitor to Oxford. It is a brief historical sketch of the various colleges, bringing out the more significant facts in their story, and doing it on the whole sympathetically. Oxford is one of the old institutions to which Mr. Smith has become more tender of late years. But even this tiny little book is not free from the disfiguring traces of unhistorical prejudice. He describes the condition of Oxford in the eighteenth century in the darkest colors, as was easy enough. But that he should go on to say, "It is sad to think how different the history of England might have been had Oxford and Cambridge done their duty, like Harvard and Yale during the last century" (p. 79), can be explained only by the force of habit. He has been so fond of using, and properly using, American instances "for example of life and instruction of manners" in England that he falls into the trick unconsciously. Of course, if it is true that Harvard and Yale were last century bright and shining stars in the intellectual firmament while Oxford and Cambridge were obscure, let it be said. But is it true? Mr. Lowell's oration on the occasion of the Harvard Commemoration is a sufficient answer:

"During the eighteenth and first quarter of the nineteenth centuries, I fancy the condition of things here to have been very much what it was in the *smaller* English colleges of the period. . . . Young men who were willing mainly to teach themselves might get something to their advantage; while the rest were put here by their parents as into a comfortable quarantine, where they could wait till the gates of life were open to them, safe from any contagion of learning."

It would be hard to convince Mr. Smith that the Oxford of last century was less unmixedly evil than he supposes, for when he comes across a witness who says a word in its favor, he dismisses him as prejudiced. Thus, he says "Johnson's residence at Pembroke [College] was short, and his narrative shows that it was unprofitable"—rather a sweeping statement—"*though* his high-church principles afterwards made him a loyal son and eulogist of the University" (p. 78). May we not think that it was something besides his church principles—his knowledge both of himself and of human nature—which led Johnson to dwell on the good side rather than the evil of his college experiences?

For the seventeenth century we are sure, of course, to get from Mr. Smith the traditional Whig view. And yet we cannot repress a certain sense of surprise when we are told that the Royalist proscription after the Restoration was "more cruel and certainly more lawless" (p. 68) than that of the Puritans had been. Considering that it was the Puritans who set the example of evicting fellows and heads of colleges for their opinions, and that a good many of the later changes were but the restoration of evicted Royalists, that seems a hard saying even to those who admire the Puritans.

Mr. Smith writes pleasantly and easily—too easily for correctness. "Fifty years ago the wives of heads of houses, who generally married late in life, if they married at all, *constituted, with one or two officers of the Universi-*

ty, the whole female society of Oxford" (p. 89), will suggest that Oxford anticipated the university of "The Princess" in having "dowagers for deans"—which is not Mr. Smith's meaning. The "college founded *by* Keble" (p. 83) will lead the trusting reader astray historically; and "its professors form *the general* and superior staff of teachers" (p. 5) will be unintelligible. And perhaps it may be well to warn the reader that though Mr. Smith is a tolerably safe guide to the old colleges, he hardly knows the intellectual Oxford of to-day, and, indeed, does not attempt to describe it. There is one passage that is significant of much. Mr. Smith, after speaking of "Mansfield College for Congregationalists," tells us that by the side of it "rises Manchester College for *Independents*"! One cannot help thinking that here slips out that sheer ignorance of the life of the Nonconformist middle and lower classes of England which so often marks the doctrinaire reformer *de haut en bas*, and which sometimes strikes one as even more irritating than Conservative opposition.

The Ore Deposits of the United States. By James F. Kemp, Professor of Geology in the School of Mines, Columbia College. New York: Scientific Publishing Co. 1893.

THIS is the second important treatise upon American ore deposits that has ever been published, the first having been Whitney's 'Metallic Wealth of the United States,' which appeared in 1854. The most widely known general treatise, and the one which, even to the present day, is quoted in courts of law for definitions, is that of Von Cotta, published in German in 1859 and translated into English in 1870. Of the important treatises since that time two have been written by Germans, Grimm (1869) and Von Groddeck (1879), and one by an English mining engineer, Phillips (1884). From the meagreness of this list it would appear that this branch of geological research, in spite of its practical importance, had been relatively neglected. This was true up to within the last ten or fifteen years, when geologists possessing the necessary preliminary training in kindred sciences have generally become more abundant, and State and Government surveys have given more attention to the economic applications of geology, reluctantly overcoming the old prejudice which considered that when research led to practical results of absolute pecuniary value, it ceased to be pure science. In no other branch of geology, moreover, is so much hard and even dangerous physical labor required to arrive at conclusions of general theoretical value, nor are the conclusions so quickly subjected to the rigid test of practical experience.

When Whitney made the personal examinations upon which his work, in many respects the most able of all those above mentioned, was largely founded, mining in this country was still in its infancy, and the great mineral wealth of our Western mountains was practically unknown. His theoretical conclusions were therefore to a considerable extent drawn from European examples. Of the four other authors mentioned, three had never visited America, and none of them could adequately realize the advances that had been made by our economic geologists towards a rational theory of ore deposition, as distinguished from those based on the traditions and experience of a few European mining districts of half a century back.

The present writer, though too young a man to have personally examined a very large portion of the mining field of this country, has been obliged, in his position as instructor in economic geology at Cornell and Columbia, to keep himself thoroughly familiar with the literature of ore deposits, and is thus enabled to give a most complete statement of modern views on the subject as derived from American examples. From a literary point of view his style has suffered from the abundance and necessary condensation of material, and his work bears evidence, at times, of undue haste and want of mature consideration, possibly due to pressure for copy by his publishers. His presentation, in the introductory or theoretical part of the work, of the various views now entertained upon the geological structure, origin, and manner of formation of ore deposits in general is by far the most complete that has yet been given. For the first time, in a treatise upon ore deposits, has due recognition been given to the agency of replacement or substitution in the formation of ore bodies, which was first practically demonstrated on a large scale in the case of the deposits of Leadville, and has since been found applicable to almost all metallic deposits occurring in limestones. According to the old traditions, based upon what are now known to have been rather exceptional occurrences, a preëxisting open cavity of the general form and size of the deposit, as now found in nature, was considered to be an indispensable prerequisite; under the modern view a natural water channel that will admit the mineral-bearing solutions is all that is absolutely necessary. The chapter on the classification of ore deposits is in itself a compendium of the progress made in late years towards a genetic discrimination in making subdivisions, as distinguished from the methods formerly in vogue, which based their distinctions largely on the outward and more or less accidental form, and which were often, as the author remarks, "geologically considered, only convenient admissions of ignorance as to origin." The classification finally adopted by Prof. Kemp himself seems, however, open to the criticism of being rather too complicated for practical use.

Of the descriptions of typical and important deposits of the ores of the various metals, which occupy the greater part of the book, the quality is of less even excellence. Where the author has some personal knowledge of the occurrences, or where they have been thoroughly studied and described by trained geologists, his brief descriptions are in general admirably clear and concise. On the other hand, when he depends, as in the case of many of the Western deposits, on occasional descriptions given by persons of varying degrees of scientific ability, his want of personal familiarity with the ground is apt to lead him into the error, unfortunately too common among writers on geology, of giving equal weight to all printed opinions without due regard to the competency or relative ability of those who hold them. For the technical reader this want of discrimination is in a measure offset by the completeness of the references, which enable him to consult the originals and discriminate for himself, but the general public has a right to expect that this should be done by the author. The value of the work is much enhanced by the admirable arrangement and completeness of its bibliography, and, taken as a whole, though not claiming to be a great work of original research, it is a most exhaustive statement of the present condition of knowledge of the subject treated, and constitutes a much-needed and very reliable book of reference.

The mechanical execution of the cuts and photographic reproductions, which form an important part of a work of this kind, is not up to the best standard of the day.

Landmarks of a Literary Life, 1820–1892. By Mrs. Newton Crosland (Camilla Toulmin). Charles Scribner's Sons.

THE reminiscences of a woman eighty years old, most of whose life has been spent in London in intimate association with authors and artists, could hardly be shorn of interest by the worst manner conceivable; needless to say that they gain immensely by the development of so agreeable a personality as Mrs. Crosland's. The old-fashioned portrait of the author, engraved from a miniature, shows a very pretty and pensive young lady, and the book reveals a very gentle, kind, and sincere old lady. In her early youth, family misfortune constrained Miss Toulmin to cast about for means of self-support, and she instinctively took to the pen—a bold venture in the days when it was deemed improper for a woman to wield that implement except for the purpose of writing a polite note or signing the marriage register. If she had many difficulties in thus providing herself with comforts, she does not dwell on them. She was taken up by the Chambers Brothers, the editors of the Annuals and of several journals long extinct and forgotten, and she maintained pleasant and profitable relations with all. Though she must have met most of the brilliant stars of a great literary period, her friendships were with the lesser lights, and hence most of her book is given to people whom we know only a little about and of whom we are well satisfied to hear more. Among her near friends the Brownings were perhaps the only great people. Miss Mulock was her bridesmaid, and at Gore House she formed an intimacy with Lady Blessington's niece, Margaret Power. There, too, she met some famous people, among them Louis Napoleon, whom, she says,

"I certainly thought one of the ugliest men I had ever seen. His nose seemed enormous and his eyes sunken and small. His complexion was so darkly sallow that he reminded one of Carlyle's description of the 'Sea-Green Robespierre.' Nevertheless I admired his simple manners, which were more like those of an English gentleman than what we used to associate with a Frenchman."

The scandals that hang about Gore House are mentioned only to be brushed aside with characteristic charity; so is the historical gossip about Lord Nelson and Lady Hamilton. Queen Caroline is not exonerated, but she is felt to have been far more sinned against than sinning. Sympathy with her own sex leads to an unexpected criticism of 'Vanity Fair,' which, in Mrs. Crosland's opinion, "is marred by the unchivalrous act of choosing a struggling, penniless girl for the villain of the story." Perhaps so, but how could that story have been written with a born duchess for the villain? The effect of 'Vanity Fair' was certainly very sad if, "for years after its publication, it was enough for a struggling woman to show shrewdness and a little more than ordinary prudence for her to be sneered at as a Becky Sharp."

Mrs. Crosland met a good many Americans, whom she speaks of with caution, as of a wild variety of the species not to be measured fairly by civilized standards. One anecdote which she tells at second-hand, would, but that it is clearly apocryphal, justify this attitude. A distinguished writer being entertained at dinner "at one of the ducal residences," shocked decorum by exclaiming, "in a voice that every

one could hear, 'Duchess, how ever do you fix your hair?'" Another is a personal experience. She had obtained invitations to the Mansion House for a Southern gentleman and his daughter.

"Rarely," she says, "have I felt so humiliated as I was by the deportment of this sometime Governor of a State—this haughty, self-sufficient slave-owner, who thought himself the equal of any peer in the room, but who, from time to time, relieved his cough in that American mode which Mrs. Trollope characterized as disgusting."

The "vice of slavery" is ingeniously held accountable for that sometime Governor's bad manners, but we feel that he should bear the whole blame of causing a nice young lady an anguish which is keenly remembered for forty years. Mrs. Crosland forgave him more easily than she could forgive Miss Mitford, whose selfishness on a certain occasion put her to great discomfort, and to whom she devotes several pages that show a perfectly righteous asperity.

The reminiscences end in the early sixties, and we regret that they have not been carried further. Though they cannot be described as brilliant or exciting, they are full of amiability and good sense, and make a most readable addition to pictures of life and manners in the early Victorian era.

An Elementary Treatise on Fourier's Series and Spherical and Ellipsoidal Harmonics. By William Elwood Byerly. Boston: Ginn & Co. 1893.

Lectures on Mathematics, delivered in August and September, 1893, at Evanston, Ill. By Felix Klein. Reported by Alex. Ziwet. Macmillan & Co. 1894.

NOTWITHSTANDING its name, so redolent of Helicon, there is mighty little poetry in Spherical Harmonics. The blessed, after a thousand years' performance on harps, may possibly betake themselves to setting one another problems in modern geometry; but to spherical harmonics we may confidently assert they will not resort. This subject might be called the conveyancing of mathematics, since it teaches how to express facts in a form which, though it affords no insight into causes or essences, but on the contrary is blind and bewildering, is for all that quite indispensable for making the mathematician master of his data. The usual problem is this: A certain quantity has a value at every point of some surface—most usually, that of the earth. This value—it may be elevation above or depression below the sea level, or the distance of the sea level from the centre, or the force of gravity, or a magnetical constant, and so on—has been ascertained at many points, and is assumed to vary continuously. (Most experts will say no such assumption is made.) Then, spherical harmonics shows us what we may presume to be the approximate values at points where the quantity has not been observed. Moreover, it affords a general expression for the value; still further, it shows how to cut up the quantity into parts, each of which is susceptible of further mathematical treatment. It is, thus, a theory (for so mathematicians use the word theory) of great utility; and, like other utility-mathematics, is tedious, difficult, disagreeable, and unbeautiful. This is a circumstance which breeds many loathers of mathematics, because these disagreeable branches are taught first.

The present treatise is undoubtedly the best in our language upon this subject. Its only rival, that of Todhunter, always an unnecessarily dry book, is now pretty antiquated likewise. Mr. Byerly adheres to one point of view pretty consistently, exhibits the doctrine under its best aspect, and leads us into it by the easiest road. It is a branch which nobody but a practical mathematician will care for, and which every practical mathematician has to master.

When we turn from this book to Klein's lectures, we seem to be passing out from a tremendous, rattling factory, with its grimly earnest, unlovely economy, into the pure meadows with the really vastly greater, but infinitely calm, agencies of sunshine, breeze, and river. Here, in only a hundred pages, the moving impulses of modern mathematics are set forth in a way in the highest degree instructive and interesting to every mathematician, without any tax upon his energies. Felix Klein, we need hardly say, is generally considered as the most interesting, if not the greatest (certainly *not* in all respects), of living mathematicians. For such a hundred pages as these the mathematician may search in vain. The small compass renders the process of mathematical cogitation all the clearer, and strips it of details which in other books obscure it; and particularly of details of demonstration that are often wrongly taken to be the soul of mathematical thinking. Such a lesson as this book affords of the conduct of mathematical research the younger student (it is not for beginners) will not easily find. Those who know Klein need hardly be informed that the lectures range over a large part of recent mathematics. The following passage (in which we take the liberty twice to put *experience* in place of "conception") is interesting:

"We are forced to the opinion that our geometrical demonstrations have no absolute objective truth, but are true only for the present state of our knowledge. These demonstrations are always confined within the range of space experiences that are familiar to us; and we can never tell whether an enlarged experience may not lead to further possibilities that would have to be taken into account. From this point of view, we are led in geometry to a certain modesty, such as is always in place in the physical sciences."

Appended to the lectures are ten pages on the history of modern mathematics in Germany.

The English Church in the Nineteenth Century, 1800–1833. By John H. Overton, D.D., Canon of Lincoln and Rector of Epworth. Longmans, Green & Co. 1894.

DR. OVERTON'S studies for 'The English Church in the Eighteenth Century' brought him to the threshold of his present task. In the former case he was collaborating with another; this work is all his own. It is well done, and the first four chapters are particularly interesting, dealing as they do with the more personal aspects of the matter. The chapters on "The Church and Education" and "Church Societies" may be even more valuable to English churchmen, but their appeal to the general reader is but faint and far away. It is evident that, stopping short at 1833, the very year in which the Oxford movement began, Dr. Overton has denied himself the climax of his history. But he has done this advisedly. The history of the Oxford movement has been written many times, and the light that has been thrown upon it has done much to darken the preceding period. By way of introduction to his 'Oxford Movement,' Dean Church wrote a few pages on that period, but in the manner common to the historians of the movement—to paint-in a background dark as possible, so that the virtues of the movement might be brought out in sharp relief. Dr. Overton has not gone to work deliberately to convey a different impression, but he has only had to tell the story of the time and of its work to show that there were men before Newman and his set who had "a work to do in England" and did it tolerably well.

It is Dr. Overton's impression that the Church had reached its low-water mark before the close of the eighteenth century, yet she continued to lose favor while she steadily improved. This was because her failure had been gross and patent to all eyes, while the improvement was within narrow limits and less obvious to the assailant seeking for grounds to justify the energy of his attack. Dr. Overton's catholicity is remarkable. He is so good a churchman that he has a good word for men of the most opposite tendencies and conclusions. He has three chapters, "The Orthodox," "The Evangelicals," and "The Liberals," and we cannot imagine that the inheritors from either of these branches will fancy they have any reason for complaint. It is, however, to the Orthodox, by whom the High Churchmen before the High Churchism of Newman are intended, and the Evangelicals, that he attributes the most of the improvement from 1800 to 1833. The former are less dwelt upon than the latter, as they should be, for the reason that they have had more than a fair share of attention heretofore. The inveterate toryism of the old High Churchmen has perhaps led to an exaggeration of their attachment to "the happy constitution of our Church and State" of which we have heard so much. But Dr. Overton is himself obliged to admit that practically their attachment to this constitution was something very different from the indifference to it, or contempt for it, of the Tractarians. These, too, would have had the Church and State one, but that one would have been the Church. The fact is, the temper of the old High Churchmen was political and that of the new High Churchmen was ecclesiastical. Keble belonged to both parties in succession, and it was only his attachment to the old order, his intense toryism, that kept him in the English Church, as such, when others went to Rome.

Keble's 'Christian Year' was published in 1827, and though Walter Bagehot called it a dilution of the weaker part of Wordsworth, it is the only religious book of the period that has now any general circulation. Moreover, Keble's ability was almost singular among a feeble folk. It is like passing from death to life to pass from Dr. Overton's second chapter to his third. The Evangelicals had life in themselves, if they had little scholarship or taste or intellectual ability. One of their own party said, "There are persons who secretly, if not avowedly, associate the ideas of piety and imbecility, and who do not hesitate to decide that he who professes to be governed by Christian principles must be deficient in natural understanding." One of the saints "cut his violin strings and never afterwards replaced them," nor went to a picture exhibition; another regretted her time spent with Shakspere as a robbery of God, and excluded from her shelves "all the furniture of a worldly library." These sentiments and actions were characteristic of the Evangelical party, but to the same party we owe preeminently the abolition of the slave trade in 1807 and the abolition of slavery in 1833, though we must not forget that Granville Sharp and Thomas Clarkson led the way. The chapter on the Liberals is enlivened by the name of Sydney Smith and a few characteris-

tic passages from his writings; but the greatest names upon the Liberal list are those of Whately and Arnold. The latter is more dwelt upon than any other, and with that admiration which his character has compelled from those who have hated his opinions. Hampden and his significant book of 1832 are passed over much too lightly; and Blanco White, whom Liddon credits with the paternity of the Liberal church party, has but a single line.

The chapter on "Church Services and Fabrics" proves conclusively that, however it may be with religion, sacramental worship is much more cultivated now than it was formerly. There are some instructive pages on the preaching of the time. Sydney Smith wrote that "decent debility" was its most frequent note; that it "called in paralysis to the aid of piety," as if sin could be taken from men "as Eve was from Adam by casting them into a deep slumber." He was opposed to written sermons, but another high authority denounced extempore preaching as immoral. It was generally considered possible only by the special grace of God, and hence it gave the preacher an unwarrantable spiritual authority. The High Churchmen cultivated a dull and lifeless manner by way of criticism on the pulpit methods of the Methodistic churchmen. A chapter reviewing the literature of the period gets its main interest from the secular writers, Coleridge, Wordsworth, and Sir Walter Scott. It is generally agreed that Scott's mediævalism did much to inspire the Oxford Movement, and the influence of Coleridge on the Liberals was not less conspicuous. His "Letters upon Inspiration" would now meet with general acceptance. High Churchmen of the 'Lux Mundi' school have got a good deal further on; but in 1834 those who were able to receive them were a meagre band.

The Revival of Irish Literature: Addresses by Sir Charles G. Duffy, Dr. Sigerson, and Dr. Hyde. London: T. Fisher Unwin. 1894.

GAVAN DUFFY, the repealer of O'Connell's agitation, the rebel of 1848, the Sir Charles G. Duffy, Knight Commander of the order of St. Michael and St. George, first Minister of the Crown in Victoria, of later days, is giving some of the best energies of his advanced years to the furtherance of Irish literature. He has been mainly instrumental in establishing an Irish Literary Society, with headquarters in London. This society has published several interesting little volumes, of which that now before us is one. There is a certain strain of *laudatio temporis acti* about the movemen — the looking back from a degenerate present to the golden and purely patriotic days of the forties. We whose memory carries us back to those times fail to recognize that there is more of the earth earthy about the present than about any previous phase of Irish thought; or perhaps we should rather say the thought of those times partook no less of the earthy than the thought of the present. This movement and these publications will do good in so far as they tend to stimulate a greater interest among Irishmen regarding their ancient language, literature, and music, regarding the material that exists in the Ireland of to-day for the production of wholesome and lasting literary work, such as that given to us by Miss Lawless and Miss Barlow. We cannot see how the study of Irish history, overspread as every page of it is with a sense of failure and disappointment, or Irish history as a background for the true poet or the novelist, can become popular until a satisfied present is reached, whence the trials of the past can be calmly reviewed. Scott wrote at a time when Scotland generally was satisfied with her present; and it would be impossible for any writer, however great his genius, in this better informed and more critical age, to throw the glamour which he was enabled to throw over the state of society with which he dealt.

The intention of these addresses is good, but we doubt the wisdom of the spirit which animates them or the possibility of the realization of their ideals. A certain degree of national political life is doubtless necessary for the growth and expansion of Ireland. That she should seek to shut herself off from such communion in the literature of the English tongue appears to us neither wise nor possible of attainment. Even after reading these addresses we are still in the dark as to what are those "Irish lines" upon which, as Dr. Hyde tells us, the Irish race can alone best develop. Ireland cannot hold herself aloof from competition with the rest of the world. Even if the statement were true, we doubt the bracing effect upon a people of calling upon them to revert to old ways which once constituted them "the most original, artistic, literary, and charming people of Europe." Ireland has contributed, and will doubtless contribute, much to that literature which is the common heritage of the English-speaking race all over the globe. But it appears to us she will best cultivate whatever may be peculiar in her genius by keeping abreast with the main stream rather than by shutting herself off in a side eddy.

The Theory and Practice of Modern Framed Structures. Designed for the use of Schools, and for Engineers in Professional Practice, by J. B. Johnson, C.E., Professor of Civil Engineering in Washington University, etc., C. W. Bryan, C.E., and F. E. Turneaure, Professor of Bridge and Hydraulic Engineering, University of Wisconsin. John Wiley & Sons. 1893.

THIS is an ample treatise, and represents the latest American practice of to-day. It consists of a series of essays, practically limited to iron construction, by a number of skilled engineers, of whom the three mentioned in the title are the chief contributors. The essays cover all kinds of framed structures—roofs; girders, plate and trussed; cantilevers; arched, swing, and suspension bridges; standpipes; tower and mill-framing. They are grouped into two parts, the first chiefly theoretical, treating of analysis of loads, stress, and flexure; the second, chiefly practical, of detailed construction, though each impinges a little upon the other, and so leads to some repetition. The theoretical discussions are adequate to their purpose, and as complete and instructive as they ever are—more so than we are apt to find them—in works whose first aim is direct practice. The practical discussions are very thorough, the examples worked out in all essential details with great care, and with due attention to the actual conditions of material and manufacture; the two systems of riveting and pin connection, for instance, being given due examination and consideration of their respective advantages.

The chapter on æsthetic design of bridges is a new thing in such a treatise, and offers sensible counsel which we are glad to see urged. Design in bridge-building, even more imperatively than in other building, calls for fineness of line and proportion, because line and proportion are more self-asserting in bridges than in any other structures. These, however, are qualities that good sense and good precept can never supply, and the command of which we can hardly expect engineers to gain, for they call for long training of a kind that engineers do not get. Some of the examples which Mr. Molitor cites with praise in this essay, *e. g.*, the viaduct over the Truyère in plate xiv., seem to us signal illustrations of awkward line and misproportion, and wholesome antidotes to the superstition that true and direct construction will in itself lead to beauty.

The book is, so far as we know, the most complete and serviceable treatise of the kind that has been published in this country. It is winning its way at once in the schools of engineering—indeed, the first part has been printed before and used with approval in tentative form.

Biology of Ferns by the Collodion Method. By Prof. G. F. Atkinson. Macmillan.

THIS work is carefully prepared, and gives evidence of being based on original and very thorough study. The life-history of ferns is traced with sufficient, but not excessive, detail, from the spore, through the prothallium and its gametic organs, to the mature plant and its production of spores. Usually our native species are taken for study, though a few of the drawings are from varieties of common hothouse cultivation. The statement that in *Schizæaceæ* "the form of the spores approaches that of a quadrant of a sphere," is hardly correct, for though *Schizæa* has ovoid spores, the spores of *Aneimia* are rather pyramidal from a convex base, or even tetrahedral, and usually beautifully sculptured on the surface with lines parallel to the edges of the facets. The spores of *Mohria* are very similar, and those of the principal remaining genus of the suborder, *Lygodium*, are anything but bilateral or quadrant-like.

Under "dimorphism" of the fronds the examples cited are mostly of native species, though certain foreign genera have species in which this dimorphism is more conspicuous than in any of the North American ferns. The remark quoted from Underwood, about the probable cause of the cases when the fronds of *Onoclea* have an intermediate character between the usual sterile and fertile conditions, is one of those sage observations which it is easy to make, but which observed facts hardly or not at all sustain. The discussion of the "dehiscence of sporangia and dispersion of spores" is interesting; but the drawings which serve as illustrations are rather too sketchy, and some of them recall pictures of the great meteoric display of 1833.

Part ii., on "Methods," bears evidence of being written to describe processes which the author has actually employed. A good picture or two of the dehydrating apparatus would have made its structure clearer than the description which is given. Every laboratory has its own methods, and it may be that some other processes are quite as convenient as those which are here described.

BOOKS OF THE WEEK.

Adventures in Algiers of Mathew Dudgeon, Gentleman. Longmans, Green & Co. $1.25.
A Marriage above Zero. G. W. Dillingham. 50 cents.
A Yellow Aster. M. J. Ivers & Co. 25 cents.

New Edition of

Wallenstein.

With introduction and notes by W. H. CARRUTH, Prof in the University of Kansas. With four portraits map, etc. 16mo. Teachers' price $1.00 by mail.

Thiers's Expedition de Bonaparte in Egypte.

Edited with notes by A. H. EDGREN. Prof. in University of Nebraska. 16mo.

THE USE OF GOVERNMENTAL MAPS IN SCHOOLS.

By W. M. DAVIS of Harvard, C. F. KING of Dearborn Grammar School, Boston, and G. L. COLLIE of Beloit College. 12mo. Teachers' price 80 cts. By mail 84 cents.

HENRY HOLT & CO., N. Y.

Abandoned Farms.

FOR SALE.—In Berkshire County, Mass. Several of the cheapest farms in New England, varying in area from 150 to 1,200 acres. Prices from $1.75 to $4.50 per acre. These lands are all within 20 miles of Lenox or Stockbridge. All have good natural soils, very high elevations, fine climate, beautiful scenery, grass land and pastures as well as large areas of timber, trout brooks and ponds. They are not near to railroad stations or large villages, and the farm buildings are of little value. Address

J. MURRAY HOWE & BRADLEE,
28 State Street, Boston.

Maine Coast.

FOR SALE or TO LET for a term of years.—A modern cottage of 16 rooms—new and in perfect order, in one of the most beautiful positions on Frenchman's Bay, directly facing and near to Mount Desert. Elevated situation close to water. Superb views in every direction. Perfect harbor and directly on Pullman-Car route to Bar Harbor. Rent $600, or will be sold at a great sacrifice and on easy terms.

J. MURRAY HOWE & BRADLEE,
28 State Street, Boston.

HATCHARDS.

This is the favorite BOOKSTORE, and for 100 years the resort of the smartest people in London. It is visited and patronized by all who love books. London is the great market for books, and all the best as well as the cheapest editions can be had by writing to us. Special collections formed, and fuller information supplied than from any other house. Books both old and new, and relating to any subject, can readily be supplied at very moderate prices.

Agents for Clubs, Libraries, and all private Collectors.

187 PICCADILLY, LONDON, W.

MAINE COAST.

LANDS at and around CAPE ROSIER and Castine, Me., on this boldest and most beautiful section of Penobscot Bay, 50 miles nearer Boston and the West than Mt. Desert—southwesterly exposures, fine harbor fronts, bold rocks, beaches, and fine trees, broad views of mountains and islands, extended drives along the shore and among the hills, new wharves, and good daily connection by boat and rail. These lands are offered at low prices to persons intending to build and occupy. A very few hundred dollars will buy a fine high shore lot of several acres. Several tracts of from 20 to 50 acres are offered at low prices. Send for descriptive pamphlet and further details to

Volume I. now ready.

Prof. Weizsäcker's work is the first issue in the new series of the Theological Translation Library, edited by the Rev. T. K. Cheyne, M.A., D.D., Oriel Professor of Interpretation, Oxford, and the Rev. A. B. Bruce, D.D., Professor of Apologetics and the New Testament Exegesis, Free Church College, Glasgow.

The Church in the Roman Empire, A.D. 64-170.

With Chapters of Later Christian History in Asia Minor. By Prof. W. H. RAMSAY. 8vo, with maps, $3.00.

"It is not too much to say that this volume will prove indispensable to students who wish the latest information concerning the field of Paul's labors. To the wide acquaintance with the literature of the subject which the author shows, he has added a most careful study of the ground. . . . Unquestionably it adds much to our knowledge of the subject, and lays students under great obligation to the author." —*The Bibliotheca Sacra.*

Descriptive prospectuses of the "Story of the Nations" and the "Heroes of the Nations," and quarterly "Notes," giving full descriptions of the season's publications, sent on application.

COPELAND AND DAY'S NEW BOOKS.

Crane (Walter), A Series of Eight Designs Illustrating Shakespeare's Tempest. *Printed on Japanese silk paper, mounted on cardboard and issued in a portfolio, each set signed by Mr. Crane. Two hundred copies only are made for America. Quarto, $6.00.*

Davidson (John), A Random Itinerary With a Ballad. *A volume of essays with frontispiece and titlepage designed by Lawrence Housman. Octavo, $1.50.*

Poems by Richard Garnett, LL.D., *with title and false title by Illingsworth May. Octavo, $1.50.*

"Dr. Garnett is one of the few literary Englishmen friendly to our dear and crude republic. . . . It is a sort of miracle when from a philosophic mind comes the direct quintessence of poetry, the draught from Aganippe never to be mistaken, and never to be forgotten."—Boston Transcript.

Cuckoo Songs by Katherine Tynan Hinkson, *with titlepage and cover designed by Lawrence Housman. Octavo, $1.50.*

English Poems by Richard Le Gallienne. *Third edition. Octavo, $1.50.*

Rossetti (Dante Gabriel.) The House of Life: Being now for the First Time Given in its Full Text. *With three ornamental borders and one hundred and fourteen initial letters designed by Bertram Grosvenor Goodhue. Issued in an edition of five hundred copies on hand-made P. L. B. paper, square octavo, bound in limp Japanese silk paper boards, square octavo, $2.50; and fifty copies on thick hand-made Michallet paper, with rubricated initials, advanced to $10.00.*

Poems by John B. Tabb, *with cover and ornaments designed by George Edward Barton. Square duodecimo, cloth and gold, $1.00. In the press.*

Poems by Francis Thompson, *with cover and frontispiece by Lawrence Housman. Third edition. Square octavo, $1.50.*

"The verse is indeed remarkable. . . ."—Robert Browning.

"That minority who can recognize the essentials under the accidents of poetry, will agree that alike in wealth and dignity of imagination, in depth and subtilty of thought, and in magic and mastery of language, a new poet of the first rank is to be welcomed in the author of this volume."—H. D. Traill, Nineteenth Century.

Salome, A Drama in One Act, by Oscar Wilde. *Newly translated from the author's French version, containing ten full-page designs by Aubrey Beardsley. Two hundred copies issued for America. Small quarto, $3.75.*

Joseph Pennell writes: "Whether Mr Beardsley's work is appreciated or despised, the drawing shows decisively the presence among us of an artist, and an artist whose work is quite as remarkable in its execution as in its invention . . . Most interesting is his use of the single line, with which he weaves his drawings into a harmonious whole, leading you to properly regard the concentration of his motives. . . . Mr. Beardsley has managed to appeal to artists—and what more could he wish?"

COPELAND AND DAY, PUBLISHERS, 69 CORNHILL, BOSTON.

DAINTY GIFT BOOKS

PUBLISHED BY

JOSEPH KNIGHT COMPANY,

BOSTON.

Cap and Gown. Some College Verse. Chosen by Joseph LeRoy Harrison. 1 vol. square 16mo, white and gold ornamental binding, gilt top or gilt edges, $1.25.

The above book, although one of the daintiest and most artistic publications which has yet been issued, is something more than an ornament. It has a distinct literary flavor and includes the best verse which has appeared in the leading college journals.

"A relief to the reader weary with distilling tears from the alembic of the contemporaneous muse will be furnished by 'Cap and Gown.' Happy, careless, witty, everything but artificial or doleful are its moods."—*The Chautauquan.*

"A volume which is full of happy and exuberant youth."—*Christian Register.*

Out of the Heart. Poems for Lovers, Young and Old. Selected by John White Chadwick and Annie Hathaway Chadwick. $1.25.

From Queens' Garden. Selected poems of Mrs. Browning, Jean Ingelow, Adelaide Proctor, and others. Edited by Rose Porter. $1.25.

The Two Voices. Poems of the mountains and the sea. Edited by John White Chadwick. $1.25.

All in white cloth binding, with fancy paper sides, gilt edges.

Robert Browning. Selected poems made with his sanction and approval. With eight exquisite photogravure illustrations. $1.50.

Mrs. Browning. Selected poems made by her husband, Robert Browning. With eight exquisite photogravure illustrations. $1.50.

Sesame and Lilies. Three lectures by John Ruskin, with four photogravure portraits. $1.50.

The Sketch Book. By Washington Irving. With eight photogravure illustrations, including a portrait of the author. 1 vol., 16mo, white and gold ornamental binding, gilt top. $1.50.

For sale by all booksellers, or will be sent post-paid by the publishers on receipt of the price.

THE ENGLISHMAN AT HOME:

His Responsibilities and Privileges.

By EDWARD PORRITT, formerly London Editor of the Manchester *Examiner.*

The author's aim has been to make the book not only of use and interest to students of civics and of English history and contemporary politics, but also of value to American visitors to England and to readers of English news in the American press. His accuracy and carefulness of statement may be subjected to the most critical test. The style is good and entertaining. The book cannot fail to be a welcome addition to every library. One volume. Cloth, 12mo, xiv+379 pp. Appendices, Index. $1.75.

"No adequate book has been easily procurable which briefly and simply has told how the Englishman is governed and what are his responsibilities and privileges. Mr Porritt has endeavored to supply this sort of book, and has succeeded admirably. He has told about everything an American needs to know, and has told it according to a method which leaves hardly anything to be desired."—*New York Times.*

"A valuable book, and one that ought to be read by all who seek to be well informed."—*Chicago Times.*

"A highly welcome volume."—*Philadelphia Press.*

"Of rare interest and great value."—*Boston Advertiser.*

"A better account of the working institutions of England than is elsewhere accessible to American readers."—*Boston Herald.*

"A very useful and instructive book."—*The Beacon.*

For sale by all booksellers, or sent, postpaid, by the publishers, on receipt of price.

The Nation.

NEW YORK, THURSDAY, APRIL 26, 1894.

The Week.

A PENNSYLVANIA "idee" of the way to settle the tariff and the currency at one stroke is clearly a-hatching. Senator Cameron rather muddily outlined it in his speech on Wednesday week, in which he insisted that "the tariff and silver are two sides of the same issue," and declared that it was "easier for Republicans to take this ground than their opponents, who have destroyed silver." But it is in the April *Textile Record*, published in Philadelphia, that we find the grand scheme clearly described. Says this precious journal:

"Why should not all American interests stand together and make common cause against the common enemy? No sane man in this country desires silver monometallism; but if the choice were given to manufacturers, of gold monometallism with the Wilson tariff bill or silver monometallism with the McKinley tariff, who can doubt that the latter alternative would be preferred by an overwhelming majority? The gold monometallism which is impoverishing our Western farmers has the same British origin as the free-trade policy which menaces our manufacturers with deadly hurt. The two evils belong together and work to a similar end, namely, destruction of American interests for the advantage of British interests. Surely there is some ground upon which the protectionists can meet the friends of silver remonetization and can arrange to work together for the defeat of the assault now made upon its industries."

We invite the attention of New York Republican editors to this reckless and incendiary talk. The truth is, that our greatest financial peril just now lies in the surprising way in which Eastern Republicans are falling over each other in their haste to encourage and inflame the silverites. What with Lodge and Cameron and Gallinger and Walker going out of their way to stir up the silver agitation afresh, we shall soon be able to wrest the palm for financial lunacy from the South and West. The present attitude of these Republicans is a striking confirmation of the view that the whole silver folly got its life as a branch of protection, while their willingness to wreck the finances of the country in order to save the protective system shows what desperate and unscrupulous men that system begets.

The *Quarterly Journal of Economics* has done well to get an article from President Andrews explaining the motives and morals of his new silver crusade. Nothing could be more timely or needed, for nothing has been more stupefying and incomprehensible than the starting up at such a time of such a movement in such a place, backed by such men. But unfortunately President Andrews's explanation only makes the whole thing even more stupefying and incomprehensible. The great object which he and his friends are working for, it seems, is to prevent the "silver craze" from being "intensified." There was great danger, he writes, after the repeal of the Sherman law, that the silver-men of the West and the South would go wildly ahead and land us in silver monometallism. This even President Andrews thinks would be "unsafe," though in almost all other respects "our Western friends" have "the facts, the logic, the ethics of the situation with them." So he pictures himself and his bimetallic committee as coming to the help of the country against silver monometallism. As a consequence, he says, "the power of the extreme silverites is broken." He knows this through "numerous communications received from the West." If "the gold papers" will now turn in and help the Boston committee do a little placating of the currency cranks, all will be well, and we shall escape the silver basis and land safely in the Elysian Fields of international bimetallism.

Now, what could be a more grotesque misreading of the facts? The power of the extreme silverites did, indeed, appear to be broken at one time, but that was last October, when they were routed in their last stand on the Sherman law. It did look then as if the silver craze were at an end, and business men breathed easier than they had since 1878. The silver-men themselves could nowhere see a ray of hope, and had not even spirit enough left in them to prophesy what would happen "when the people rose in their might," etc. But what has changed all this, and put the breath of life under the ribs of death? Ask Senator Wolcott, who rises in the Senate to say that the bimetallic leagues in the East are doing "an infinite amount of good" and hastening on the time when we shall go to the silver basis without any ridiculous waiting for other countries to go there too. Read for an answer the rabid silver journals of the South and West, which are filled with exultant references to the Boston bimetallists as a living and irrefutable proof that the silverites were right all along. "The committee does not propose to make use of any political agency," says the innocent Andrews, not seeing that he is doing all in his power to prolong the terrible evil of keeping our standard of value at the mercy of politicians for another indefinite period of uncertainty and alarm. And the crowning fatuity of the whole is to suppose that this is the way to check the "silver craze"! When you tell a crazy man that "the facts, the logic, the ethics of the situation" are all with him, except in one or two unimportant particulars, unless you are crazy yourself you cannot expect him to do anything but tell you that you are altogether wrong about those particulars, and that you yourself had better get into the asylum, too, without loss of time.

A week ago Saturday the export of gold from this country to Europe, which had been going on spasmodically since the middle of December, began again, and it was continued by further shipments on Saturday last. All told, the fortnight's export of specie amounts to $7,500,000, of which approximately $3,000,000 was furnished from the gold holdings of city banks, while $4,400,000 was taken in exchange for United States notes from the federal treasury. Each of our recent brief gold-export movements has been occasioned by a temporarily sharp demand for capital in some foreign financial centre. In December, and early in the present year, the completion of the Austrian Government's resumption plans called for supplies of gold, most of which were drawn from Berlin, but part of which came indirectly from New York. This month the demand for capital has arisen in Paris, where a $40,000,000 municipal lottery loan has just been opened for public subscription. This loan is offered at the unusually low interest rate, for a European city, of 2½ per cent.; but such is the demand for high-grade investments, and such the supply of idle capital, that the advance subscription for this loan, which it had been expected would be covered almost wholly in France, came very largely from London. The London capitalists thus subscribing found that, of all the world's great money markets, our own showed the largest surplus of unemployed capital subject to their orders. During and after last year's acute financial strain, a very large amount in loans was negotiated in London by our bankers and corporations. Upwards of $48,000,000 gold was shipped to us on this account. When panic had subsided, and hoarded money flowed back into our banks, the local money market became again exceptionally easy, and last summer's loans from European bankers, as they matured, were paid off and renewed with local institutions. This left the foreign bankers with a large supply of absolutely idle capital on their hands in New York city. So long as the foreign markets continued equally flat, the credits were left in New York city. But that these funds, which now in large measure draw no interest whatever, and which are at present useless here, should have been transferred through shipment of gold to Paris, as soon as a new invest-

ment field had opened there, was surely no matter for either agitation or surprise.

Senator Smith's speech against the income tax last week was both weighty in substance and admirable in manner. It was, in fact, the most effective assault on that measure which has been made in Congress. Particularly telling was the New Jersey Senator's demonstration of the needlessness of the tax as a revenue measure, and of its sectional and socialistic animus and form. We wish we could believe that the arguments of the speech would have any practical effect; but unfortunately the question appears to be already settled without argument, so that close observers at Washington consider the income tax certain to become a law. That it will be odious and ineffective in operation is clear, but that the outlook for its early repeal on that ground may be said to be good, he would be a rash prophet who should assert. What assurance have we that the Republicans, if they control the next Congress, would dare offend the Western members of their party who are strong for the income tax? Any one who recalls how they have knuckled under to their silver allies would be slow to say that they would surely take a higher tone with their Populist allies. If the tax proves as "popular" in the West as now seems likely, no party as such can be depended upon to oppose it.

It is reported that an effort will be made in the Senate to amend the income tax so as to minimize its socialistic aspect—that is to say, to bring down the limit of exemption to $1,500 or less. That is the only honest way to levy an income tax. All the economic writers who speak of such a tax as the most equitable of all in theory, mean the tax in a form which does, indeed, distribute its burdens among all classes in society having an income more than adequate to the bare necessaries of life. No country that has such a tax thinks of letting off the smaller incomes for the sake of hitting the large ones alone. The honest income tax goes on the theory that there are necessary public expenditures which can be met in no other way, and which therefore rest fairly upon all the people, and are to be met by taxing all impartially. But the income tax now before the Senate is confessedly unnecessary as a revenue measure, and is defended exactly because it does not tax the people equitably. The movement to amend it into some semblance of fairness should be pressed. It will doubtless fail, but it will at least accomplish the unmasking of the champions of the socialistic form of the tax. During the war, when the income tax was regarded as a burden which should be patriotically borne, and which was, in fact, laid upon all classes in proportion to their ability to bear it, the tax was paid cheerfully and brought in large returns. But as soon as it became clearly unnecessary, and, after 1870, an undisguised attack on the rich, it became so odious and fruitless that its repeal followed speedily.

There could hardly be a better illustration of the audacity, we were going to say depravity, of Senator Lodge's demagogy, than the phrase, "when not in contravention of any existing treaty," in his resolution in favor of putting discriminating duties on British products to compel England to change her standard of value. It would not be surprising if Peffer, or Simpson, or Coxey introduced such a resolution, because they probably know nothing about existing treaties or about the obligation of treaties. But Lodge knows perfectly well that we are bound by the treaties of 1794 and of 1815 not to impose on British goods any duties which we do not impose on those of other nations. It was to learn such things that he was sent to Harvard College, and he is presumed to know them by everybody who reads his reform articles in the magazines. Consequently his resolution is a simple appeal to the most ignorant Anglophobia and silverism, very probably in the belief, which he shares with Hill, that the Presidency can be won by trickery and knavery. Moreover, even if British commerce were not protected by existing treaties, it would be protected by England's power of retaliation. Any one who supposes that an attempt by foreigners to coerce a great nation into a change in her own currency, would not cause the people to rise as one man into passionate resistance, must be as great a fool as Lodge pretends to be. Our exports to Great Britain last year amounted to $361,000,000, the breadstuffs alone to $70,000,000. There is hardly an item in them in which other countries do not compete with us. The smallest duty on them would therefore drive us out of that market and make the Western and Southern silverites howl worse than ever. The contributions of Massachusetts and Harvard College to federal politics during the past two years in the persons of Lodge and Quincy really seem like a freak of nature, and we respectfully call the attention of the Board of Overseers to the phenomenon.

The debate in the House on the diplomatic and consular appropriation bill has been a dreary and disappointing affair, degenerating into personalities and the usual vindication of party virtue by asserting that "we are as good as you are, anyhow." Mr. Hitt made a slashing attack on Quincy, but "made no criticism as a Republican." That is to say, he assented to the doctrine that the consuls should be turned out ruthlessly and the business and honor of the country let go to the dogs to make places for political hangers-on, and only objected to somebody else having the dirty work to do instead of himself. In so far, Mr. McCreary's retort on Mr. Hitt, referring to his own experience and record as an assistant secretary in the State Department, was a fair enough *tu quoque*. But his own defence of Mr. Quincy was received with such marked coolness by the House that he was glad to drop that and resort to the time-honored method of arousing applause by confessing his belief "that the party in power, whether it be the Democratic or Republican party, should be represented in all the offices by the men who reflect the views of the dominant party." After this we know what weight to attach to his belated admission that the whole system needs "revising." In neither party is there any indication of a serious purpose to do anything to remove the crying disgrace and outrage of our consular system.

The decision of the South Carolina Supreme Court that the dispensary law is unconstitutional cannot surprise anybody who has followed the controversy over the statute. The decision is based upon the principle that the law gives the State a monopoly of the liquor traffic, and that the Constitution gives the State no right to assume such a monopoly of any business. Furthermore, the court holds that the act cannot be regarded as a police regulation, and, even if it could be, such police power does not include the power on the part of the State to engage in carrying on such business. The court consists of three judges—two anti-Tillmanites and one Tillmanite, for such is the only way of defining the political attitude of men in South Carolina at present. Although its decision was not unexpected, Gov. Tillman seems not to have been prepared for it—or, at least, not ready to announce his programme for the future. As a change in the membership of the court will occur in July, when the majority will shift to Tillman's side, a rehearing of the matter may be asked, with a view to securing a decision then sustaining the law. There is also talk of an extra session of the Legislature, though it seems questionable whether that body could pass any law which would meet the fundamental objection of a majority of the judges to the statute just annulled. In any event, there must be a period of doubt and uncertainty, with an apparent likelikood that "free rum" will for a while be the rule.

The attorney-general of New Jersey decided last week that the "referendum" cannot be adopted in that State without an amendment to the Constitu-

tion. This is in line with the similar decision of the Massachusetts Supreme Court. It seems obvious enough that no State constitution ever contemplated direct legislation by the people, and that such legislation could be had only by a dangerous stretching or evasion of the constitutional provisions. Attorney-General Stockton also intimated that the Constitution of the United States might possibly be interpreted so as to prohibit such legislation in any State. When we consider the almost insuperable difficulties in the way of amending a State, and particularly the federal, Constitution, it seems clear that the champions of the referendum in American politics have a hard road to travel.

For the second time within six months, a negro has been lynched by a white mob in Ohio. Gov. McKinley expresses deep regret, but says that he can do nothing about it. In the previous case he wrote letters to those whose business it was to investigate the matter, and the judge gave sharp instructions to the jury, "but nothing came of it." One thing, however, has come. The Republican newspapers of Ohio have read fewer lectures to the South on the proper treatment of the negro during the past six months than used to be their habit.

The fight between Bragg and Naftel in Alabama, in a private room, in which Bragg was killed and Naftel dangerously wounded, arose out of Naftel's saying that Bragg at a meeting had not acted like a gentleman, by, in some manner, obstructing his view. It is unfortunate that Bragg should have thought it necessary to kill Naftel for this statement. But the criminal code of gentlemen at the South is one of appalling severity. Draco could not hold a candle to them. They constantly inflict capital punishment, without trial, for mere trifles, a hasty word or an inadvertent push. The duel, or regular fight before witnesses, has now gone out of fashion, some of the papers say, but the "difficulty" continues. On the whole, however, the duel was better than the "difficulty." For a duel "friends" were needed, who, if adepts in their art, always tried to arrange matters without a fight, and the condemned man always had time to settle his affairs and bid good-bye to his family. The "difficulty," on the contrary, may come to the most peaceable man at any moment, and there is no earthly mode of escape. A has some slight dispute or trouble with B, and perhaps thinks no more about it. But he suddenly hears that B has condemned him to death, or, in Southern parlance, said "he would kill him on sight." There is then no alternative. A must go armed and open fire on B whenever he sees him coming. The best of it is that the news that the "difficulty" exists soon gets about the town, and the whole population is then on the *qui vive* to see what will happen when the men meet, and the newspapers keep the press waiting and the reporters on the alert. Sometimes, as in the Bragg-Naftel case, the combatants simply visit each other in a private room and blaze away there. What civilized man would not sooner fight a duel than go through this agony of expectation?

Naftel's recovery is doubtful, but even if he does recover, he will not suffer. Southern society forgives everything to a man who has had a "difficulty," even if he is a minister, elder, or a churchwarden. But this fighting in a private room recalls the case of Maj. Campbell, the English army officer, who had a "difficulty" with Capt. Boyd of his own regiment in 1807 at the mess-table. They differed about a certain word of command given by Campbell, which Boyd said was not correct. Campbell felt that he must kill Boyd for taking this view, so he got him to fight him with pistols twenty minutes later, in a small room, and shot him through the body. Before his death Boyd declared that he wanted to wait for friends, but Campbell would not. Campbell was tried for murder, convicted, and hanged one week later, in spite of the agonized entreaties of his wife, addressed to the King in person and all the royal family.

Secretary Gresham's despatch to Minister Willis, stating that "an American citizen who voluntarily takes an oath to support and bear true allegiance to a foreign power, contemplating participation in its affairs, probably abandons his right to claim protection from the United States," is held by the *Tribune's* Washington correspondent to spring from a "sinister motive." Its effect will be, he says, "to prevent a number of Americans from taking part in the coming election to select delegates to the Hawaiian Constitutional Convention." But most people will say that it is high time to put an end to the monstrous farce of American citizens overturning a foreign government and setting up another in its place, and going throughout on the principle that, if they are successful and get all the offices and the spoils, they are Hawaiians, but if they fail and are in danger of hanging as rebels, they are Americans. As to the international law of the case, the Secretary is guarded, as he should be in a matter not clearly settled. The doctrine of perpetual allegiance would be a curious one for us to set up now after our long disputes over it with England and her final abandonment of it and coming over to our own view. The question is whether renunciation of American citizenship is implied in the oath to support the Hawaiian Government and bear arms against its enemies. It may be a nice point to decide, legally, and Mr. Gresham's "probably" shows that he is fully aware of this. But on grounds of common sense and decency there cannot be two opinions. If Americans set about running the public affairs of another country, they ought to be compelled to do it without the coward's shield of allegiance to another government to use in case of danger.

Several times during the last two years we have had occasion to indicate the municipality of St Denis as a happy spot where the social revolution was having free course and glorifying itself in the eyes of mankind. Its course, in fact, has been of almost exactly two years' duration, dating from the elections of 1892. The socialists set out at that time with a programme that promised marvels. Taxes were to be lowered, the octroi suppressed, public works undertaken and pushed to completion, and everybody was to have more butter than bread. The municipality was to enter upon a state of bliss far above that of the Earthly Paradise, and the Happy Hunting-Grounds, and Lubberland, rolled into one. They elected their mayor, as all the world has had some reason to know, and he has just come to the end of his term of office, with results which are not exactly those that were predicted to the Dyonisian voters.

Imposts have not been lowered, but raised; some of them, doubled. The market people pay twice as much for a license as they did before. The octroi is not suppressed; five new bureaus for its collection have been created. Taxes have been augmented, and the good work of increasing them is still going on, as a new project, just submitted to the Municipal Council, shows. Wine is to pay 50 centimes more the hectolitre; cider, 25; beer, 55; alcohol, 3 francs. Rabbits (which are largely consumed by the poorer classes) are to pay a tax increased by 2 francs the hundred kilos; *charcuterie* is to pay 1 franc more; the tax on oysters is doubled; charcoal is to pay 8 centimes more, hay 20, straw 15, oats 15. All materials of construction—brick, plaster, tiles, window-glass—have been treated as if by our own McKinley. But Tammany rather than McKinley seems to have been in the minds of the socialists when they were laying out their public works. The construction of these was given out by chance or favor, without advertising; some of them have needed repairs before they were finished, and all of them have cost twice what they should. Such is the pretty balance-sheet that the outgoing Mayor of St. Denis and his party have to show.

THE ORGANIZED TRAMP.

EX-PRESIDENT HARRISON still keeps thinking deeply about public questions. He has not lost, he says, "his convictions on public affairs." He has been much impressed, in particular, by Coxey's army. He observes:

"We are witnessing now a spectacle that our country has never witnessed before—a so-called industrial army gathering from all quarters of the country and hurrying to Washington to endeavor to impress by their presence upon the members of Congress certain political views—men who go to tell our Representatives that the workm n of the country are in distress and need relief. It is a new spectacle. I believe that if the Republican policies of administration had not been threatened, we should not have witnessed this sad, almost appalling manifestation. But I did not intend to discuss political matters."

To the eye of the general public, the "industrial army" is a collection of tramps and criminals, who deliberately refuse work every day of their lives, and enjoy marching through the country in mobs and living on the farmers and villagers. To the more perspicacious gaze of the ex-President, they are citizens hurrying to Washington "to impress on members of Congress certain political views." To differ with a thoughtful ex-President seems a serious matter, and yet we will hazard the assertion that there is not a "view" in the whole army. What the army wants is bacon, whiskey, hominy, pie and the like, without working for them, and we warrant that they are perfectly indifferent whether these blessings come to them under the McKinley bill or under the Wilson bill. Moreover, they will, we are sure, exempt any Representative from the necessity of listening to their opinions on the present financial situation for a silver dime, or any Senator for a quarter.

To our minds this talk of the ex-President, coupled with the impunity which has attended "the army" on its march, is characteristic of the weakness and irresolution which seem to have overtaken all public bodies, from Congress down, and a great many public men in all parts of the country. They all seem too feeble and vacillating to deal with any social or political problem of the slightest moment. At this season every year the tramps in all parts of the country start out on their summer rambles. They are always more numerous than usual after any social or financial convulsion. They were very numerous after the war, and are always numerous after a panic, for the simple reason that there is always a large number of men in the community who will work if jobs are thrust upon them, as they are apt to be in prosperous times, but will not work at all if they have to seek them. This class of strolling beggars, with the tastes and manners of savages, has been increasing for years. They lodge in the almshouses in winter and rove through the country in summer. Hitherto they have done this singly, or in twos or threes, and were thus exposed to contumely at the hands of the police or the farmers, and to the bites of dogs. Coxey's discovery that they could be got together and made to march in large bodies which could overawe the neighborhoods through which they pass, and probably secure respectful treatment from the local authorities, was the most valuable one ever made for the vagabond population. In fact, it has done what nobody would have believed two months ago could be done by any human agency, raised the profession of tramp into a certain respectability. For instance, no tramp ever dreamed that he had "views" on the tariff until he heard of it from Gen. Harrison, or that when meandering through the country robbing orchards and henroosts and frightening women, he was really acting as a deputation to Congress to oppose the Wilson bill. Consider what a delightful prospect this opens up to this whilom lonely wanderer.

Now let us say in all seriousness that if this "army" business be not now somehow put an end to, nothing is more certain than that it will become a regular part of the summer programme in the whole tramp world. "Armies" will be formed South, East, West, and North every year in April or May, to "march on" Washington or some other city, in numbers large enough to enable them to seize trains, overawe the local police, and levy contributions on the farming population. For it must not be imagined that the provisions Coxey's men get from the people on the way are charitable donations. They are blackmail paid by the frightened people to induce the army to leave their neighborhood. The submissiveness of some of the railroads, combined with the inability of the authorities to know what to do, has, of course, aggravated the evil every day. If there be no Federal legislation to put a stop to it, there should be, and would be if Congress had not fallen into "innocuous desuetude." The march of large bodies of men, with no regular occupations and no lawful object in view, through the country to the terror of the inhabitants, ought to be peremptorily prohibited. Coxey would be in jail by this time and his followers dispersed if we really had a government.

Senator Hawley made some excellent remarks in the Senate, on Friday, on Peffer's proposal to give the various "armies" which are marching on the capital a cordial official reception. It is pleasant to read such talk at a time of great froth, foam, and wind, "ethical" and other. We hope it will awaken some reflection in the minds of ethical, bimetallist, silverite, socialistic, and communistic philosophers touching the paths in which they are now trying to induce this nation to travel. But even in Gen. Hawley's speech there was a little "politics." He confined himself rigidly, apparently, to the impropriety of trying to overawe Congress by a display of physical force at the capital. But he fell in with the assumption that these armies are composed of the genuine "unemployed"—that is, of men who desire work, have vainly tried to get it, and are real citizens of a thinking turn, who have "views" to which it is desirable that legislators should listen. Yet all accounts agree that both the districts from which these men come and those through which they are passing are suffering seriously from want of labor for which good pay can be had. There is also strong evidence that the "armies" are mainly composed of tramps—that is, of men who never work at all or seek work, but live by begging and stealing, and who are simply following their usual manner of life under more favorable circumstances. They are doing *en masse* what they ordinarily do individually. In "armies" they do not fear arrest or dogs, and, instead of stealing a ride on the trains, they are able to seize the trains. We are sorry that no one in the Senate had the courage to utter these notorious truths.

THE QUORUM TROUBLE.

THOSE who are rejoicing so much over the fact that Speaker Crisp has had to adopt the methods of Speaker Reed in the matter of securing a quorum of the House for the transaction of business, would do much better to weep over the fact that it is now demonstrated that neither party can be depended on to discharge its legislative duties under the Constitution. We are having at Washington precisely the experience we have been having at Albany. The theory of parliamentary government is, that when one party offends the public in any particular, either of conduct or of policy, the other party may be relied on to correct its errors, and that, by the simple process of a transfer of power, the machinery of state may be kept in good working order. This theory has broken down to some extent both at Albany and in Washington. When we elected a Republican Legislature in this State, we thought we were putting in power the Opposition which disapproved of the Democrats and would reverse their policy and correct their abuses. But we found, when the Legislature met, that it apparently agreed with the Democrats, and saw no abuses to correct. The past three months have been spent in denouncing the Republicans for this way of looking at themselves, and trying to remind them that their mission is to upset what the Democrats have set up. It is only now, on the very eve of the adjournment, that this abuse has had any effect on them. If let alone by the press, they would apparently have gone home with

their salaries in their pockets without any attempt at legislation worth mention. In fact, when they met, they were apparently "in with" the Democrats, and were joining them in mocking the constituencies which elected them.

Very much the same state of things exists in Washington. The Democrats were elected to undo what the Republicans had done, by repealing the Sherman act and reforming the tariff. When they met in Congress, it was found that they did not desire to do either the one or the other. They were, on their side, so to speak, "in with" the Republicans. It was with the greatest difficulty that they were induced to repeal the Sherman act, and they are still holding over the reform of the tariff, and have stuck into the bill framed for that purpose, the income tax, which was never mentioned in the canvass, and which nobody who voted for them in this part of the world ever thought of as part and parcel of the Democratic programme. When Speaker Reed was trying to make a quorum by the use of very arbitrary methods four years ago for the benefit of the McKinley bill, the provisions of the bill were so atrocious that there was some sympathy with the minority which refused to help the majority to pass it. At that time the Republican majority held well together in support of their measures. People therefore supposed that when the Democrats came into power, they would hold well together in defence of *their* measures. Nothing of the kind. The Democrats refuse to make a quorum in order either to embody their own ideas in legislation or to reverse the policy of the Republicans. A large number of them hardly seem to think attendance in Congress necessary at all. They draw their salaries and attend to their private affairs in various parts of the country. In other words, they refuse to discharge their duties under the Constitution. Consequently, at Washington as well as at Albany, the parliamentary remedy for abuses of power seems to have failed.

For twenty years after the war, the Democrats were so completely discredited by that event that there was no possibility of putting them in power on any of the actual issues of the day. The Republicans had everything their own way. There was, therefore, practically no remedy for their misconduct, and this immunity thoroughly debauched them. The country at last got tired of one-party government, and resolved, sink or swim, to try the Democrats. Well, they have tried them, and we see the result. We have little doubt the experiment of one-party government will now be tried again, and will be tried for a long time, but it must end in the same way. No party can long bear the possession of power which they feel sure will not be taken away from them.

Those who think they see the decline of representative institutions all over the world will take a good deal of comfort in the spectacle we now present. One hundred years may be said to have made an end of real parliamentary government, for the English Parliament, before the Reform Bill, cannot be considered a representative body. The tendency is, everywhere in Europe, to break parties up into little groups, armed with "fads," who give no steady support to any ministry, and therefore make the carrying out of any consistent policy impossible. Our plan is simply to stay away from the legislative halls, and leave the Speaker to hammer and search for legislators; or else to join the Opposition in refraining from legislation. Both systems bring representative government into contempt. A good deal of pity has, during the last fifty years, been expended on the Romans for not having discovered the plan of representation. But we fancy it will now be more and more a question whether, if they had discovered it, they could ever have founded and maintained their empire. They were governed through the Senate for 700 years by their fittest men, who were always "in their places" when important business was done. If Cato or Cicero were to come back to earth, we doubt much whether his imagination would be fired by the spectacle which either Congress or the New York Legislature just now presents.

CONCERNING "GOING TO EUROPE."

MRS. STEVENSON, a Philadelphia lady, the president of the Civic Club in that city, delivered an address to the club some weeks ago on its work of reform, in which we find the following passage:

> "There seems to exist a mysterious, unwritten law governing the social organism, which causes a natural and wholesome reaction to take place whenever tendencies, perhaps inherent in certain classes, threaten to become general and thereby dangerous to the community. A few years ago, for instance, with the increasing facilities for foreign travel and the corresponding increase of international intercourse, Anglomania had become so much in vogue as to form an incipient danger to the true democratic American spirit that constitutes the real strength of our nation. It was fast becoming a national habit to extol everything European—from monarchy and its aristocratic institutions down to the humblest article of dress or of household use—to the detriment of everything American; and from the upper 'four hundred' this habit was fast extending to the upper forty thousand. But just as our wealthy classes were beginning to make themselves positively ridiculous abroad, and almost intolerable at home, a reaction set in, and upon all sides there sprang up patriotic associations of a social order—'Sons and Daughters of the Revolution,' 'Colonial Dames,' etc.—which revived proper American self-respect among our people by teaching us to rest our pride, if pride we *must* have, where it legitimately should rest—upon good service rendered to our own country."

This seems to be a shaft aimed at the practice of "going to Europe," for the decline of "the true American spirit" and the growth of Anglomania are ascribed to the "increasing facilities for foreign travel," and "the corresponding increase of international intercourse." If the charge be true, it is one of the most afflicting ever made, because it shows that "the true democratic American spirit" suffers from what the world has hitherto considered one of the greatest triumphs of modern science, and one of the greatest blessings conferred on the race—the enormous improvement in oceanic steam navigation; that, in fact, American patriotism is very much like the Catholic faith in the Middle Ages—something naturally hostile to progress in the arts.

If, too, the practice of going to Europe be dangerous to American faith and morals, the number of those who go makes it of immense importance. There is probably no American, who has risen above very narrow circumstances, who does not go to Europe at least once in his life. There is hardly a village in the country in which the man who has succeeded in trade or commerce does not announce his success to his neighbors by a trip to Europe for himself and his family. There is hardly a professor, or teacher, or clergyman, or artist, or author, who does not save out of a salary, however small, in order to make the voyage. Tired professional or business men make it constantly, under the pretence that it is the only way they can get "a real holiday." Journalists make it as the only way of getting out of their heads such disgusting topics as Croker and Gilroy, and Hill and Murphy. Rich people make it every year or oftener through mere restlessness. We are now leaving out of account, of course, immigrants born in the Old World, who go back to see their friends. We are talking of native Americans. Of course, all native Americans cannot go, because, even when they can afford it, they cannot always get the time. But we venture on the proposition that there is hardly any American "in this broad land," as members of Congress say, who, having both time and money, has not gone to Europe or does not mean to go some day or other. So that if Mrs. Stevenson's account of the moral effects of the voyage were true, it would show that the very best portion of our population, the most moral, the most religious, and the most educated, were constantly exposing themselves by tens of thousands to most debasing influences.

But is it true? We think not. Americans who go to Europe with some knowledge of history, of the fine arts, and of literature, all recognize the fact that they could not have completed their education without going. To such people, travel in Europe is one of the purest and most elevating of pleasures, for Europe contains the experience of mankind in nearly every field of human endeavor. They often, it is true, come back discontented

with America, but out of this discontent have grown some of our most valuable improvements—libraries, museums, art galleries, colleges. What they have seen in Europe has opened their eyes to the possibilities and shortcomings of their own country. To take a familiar example, it is travel in Europe which has done most to stimulate the movement for municipal reform. It is seeing London and Paris and Berlin and Birmingham which has done most to wake people up to the horrors of the Croker-Gilroy rule, and inflame the determination to end it as a national disgrace. The class of Americans who do not come back discontented are usually those who had no education to start with.

——"Knowledge to their eyes her ample page,
Rich with the spoils of time, did ne'er unroll!"

So, even when standing on the Acropolis at Athens or in the Tribuna at Florence, they feel themselves sadly "out of it." They think longingly of Billy or Jimmy, and the coffee and cakes of their far Missouri or Arkansas home, and come back cursing Europe and its contents. No damage is ever done by foreign travel to the "true democratic American spirit" of this class.

And now as to "Anglomania," a subject to be handled with as much delicacy as an anarchist bomb. Anglomania in one form or other is to be met with in all countries, especially France and Germany, and has shown itself here and there all over the Continent ever since the peace of 1815. The things in which it most imitates the English are riding, driving, men's clothes, sports in general, and domestic comfort. The reason is that the English have for two centuries given more attention to these things than any other people. No other has so cultivated the horse for pleasure purposes. No other has devoted so much thought and money to suitability in dress and to field sports. No other has brought to such perfection the art of living in country houses. In all these things people who can afford it try to imitate them. We say, with a full consciousness of the responsibility which the avowal entails on us, that they do right. It is well in any art to watch and imitate the man who has best succeeded in it. The sluggard has been exhorted even to imitate the ant, and we say boldly that any one who wishes to ride or drive well, or dress appropriately, or entertain in a country house, ought to study the way the English do these things, and follow their example, for anything worth doing is worth doing well. It is mostly in these things that Anglomania consists.

Mrs. Stevenson, we fear, exaggerates greatly the number of Anglomaniacs. A few dozen are as many as are to be found in any country, and any government or polity which their presence puts in peril ought to be overthrown, for assuredly it is rotten to the core. There is nothing, in fact, better calculated to make Americans hang their heads for shame than the list of small things which, one hears from "good Americans," put our institutions in danger. We remember a good old publisher in the days before international copyright who thought we could not much longer stand the circulation of British novels. Their ideas, he said, were dangerous to a republic. An Anglomaniac can hardly turn up his trousers on Fifth Avenue without eliciting shrieks of alarm from the American patriot. And yet a more harmless creature really does not exist.

These matters are worth notice because we are the only great nation in the world whom people try to preach into patriotism. The natives of other countries love their country simply, naturally, and for the most part silently, as they love their mothers and their wives. But to get an American to do so, he has, one would think, to be followed around by a preacher with a big stick exhorting him to be a "good American," or he will catch it. But nobody was ever preached into love of country. He may be preached into sacrifices in its behalf, but the springs of love cannot be got at by any system of persuasion. No man will love his country unless he feels it to be lovable; and it is to making it lovable that the exertions of those who have American patriotism in charge should be devoted.

For this purpose we should advise the examination of the Bad Americans on the wharf after their arrival from Europe as to the things which shock or disappoint them when they land on their native shores. Their answers will, we think, as a general rule, reveal the fact that, though Bad Americans, they are good citizens. They will tell you that the American newspaper, after mortifying them abroad, has disgusted them utterly on reaching home; that they are pained by the dirt and shabbiness of the New York streets; by the sight of the scum of the population figuring as mayors, magistrates, and commissioners; by the brutal manners of the expressmen, hackmen, *et hoc genus omne;* by the seedy appearance of the men of the country in their shoddy McKinley clothing, and so on. These, to some people, may seem trifles, but they are what really make two-thirds of the Bad Americans who come back from Europe. Every Good American may take comfort in the fact that very few people indeed of any social or political value who have once lived in America ever want again to live in Europe, unless they go for purposes of study or education. For there is no question that there is no country in the world in which the atmosphere is so friendly, and in which one is so sure of sympathy in misfortune, of acceptance on his own merits independently of birth or money, and has so many opportunities of escape from the slings and arrows of outrageous fortune, as America. These are the things which, after all, in the vast majority of cases, win and hold the human heart; and a country which has them can well afford to let its citizens travel, and even let some of them "be early English if they can."

PROFESSOR WILLIAM ROBERTSON SMITH.

London, April 17, 1894.

We have lost in William Robertson Smith, who died at the age of forty-seven on the 31st of March, the most learned and perhaps the most remarkable man that either Cambridge or Oxford could show. To the English public generally his name was little known, or remembered chiefly in connection with the episode of the theological controversy and ecclesiastical trial of which he was the central figure in Scotland fifteen years ago. But on the Continent of Europe and by Orientalists here he was looked upon as the foremost Semitic scholar of Britain, and in Cambridge the appreciation of his brilliant abilities was universal.

He was born in the quiet pastoral valley of the Don, in Aberdeenshire, where his father was a minister of the Scottish Free Church, and received his education at the University of Aberdeen, whence he went to spend a semester or two at Göttingen and Bonn. When only twenty-four, he became professor of Oriental languages in the College or Divinity School of the Free Church at Aberdeen, and two years later was chosen one of the revisers of the Old Testament, a striking honor for so young a man. A little later he became, first, assistant editor and then editor-in-chief of the ninth edition of the 'Encyclopædia Britannica.' For some years this great undertaking occupied most of his time. He was exceptionally qualified for it by the range of his attainments (whereof more anon) and by the extreme quickness of his mind, which rapidly acquired knowledge on any subject. He took infinite pains to find the most competent writers, and was able to exercise a real practical supervision over a very large proportion of the articles. The high level of excellence reached in this latest edition is chiefly due to his industry and discernment. Not a few of the articles on subjects connected with the Old Testament were from his own pen; and they were among the best in the work.

The appearance of one of them—that entitled "Bible," which contained a general view of the history of the canonical books, their dates, authorship, and reception by the church—became a turning-point in his life. The propositions it laid down regarding the origin of parts of the Old Testament, particularly the Pentateuch, excited alarm and displeasure among those who in Scotland had failed to keep abreast of the progress of modern criticism. The article was able, clear, and perfectly fearless—plainly the work of a master hand. The views it advanced would not now be thought extreme; they are, in fact, accepted to-day by many writers of unquestioned orthodoxy in Britain and a (perhaps smaller) number in the United States. In 1876, however, they were new and startling to those who had not studied in Germany or paid special attention to the writings of such men as Ewald, Kuenen, and Wellhausen. The Scottish Free Church had

prided itself upon the rigidity of its orthodoxy; and while among the younger ministers there were a good many able and learned scholars of what may be called "advanced views," the mass of the elder and middle-aged clergy had gone on in the old-fashioned traditions of verbal inspiration, and took every word in the five books to have been written down by Moses. It was only natural that their anger should be kindled against the young professor, whose ideas seemed to them to cut away the ground from under their feet. A prosecution was instituted before the Presbytery of Aberdeen, which found its way thence to the Synod of Aberdeen, and ultimately to the General Assembly, and which, in one form or another (for the flame was lit anew by other articles), lingered on for five years. So far from yielding to the storm, Robertson Smith defied it, maintaining not only the truth of his views, but their compatibility with the Presbyterian standards as contained in the Confession of Faith and the Longer and Shorter Catechisms. In this latter contention he was successful, proving that the divines of the sixteenth and seventeenth centuries had not committed themselves to any specific doctrine of inspiration, still less to any dogmatic deliverance as to the authorship of particular books. In the end, finding it impossible to convict him of any deviation from the standards, and thereby to deal with him as a minister of the church, his adversaries were obliged to deprive him, by an arbitrary vote, not of his clerical status, but of his professorship, on the ground of the alleged unsettling character of his teaching.

Meanwhile, however, there had been an immense rally to him of the younger clergy and of the more enlightened laity. The main current of Scotch popular thought and life since the Reformation has flowed in an ecclesiastical channel; and even now a theological or ecclesiastical question excites a far wider and keener interest in Scotland than a similar question would do in England. So in Scotland for four years "the Robertson Smith case" was the chief topic of discussion outside as well as inside the Free Church. The sympathy felt for him was heightened by the energy and courage with which he defended his position, showing a power of argument and repartee which made it plain that, in any assembly whatever, he would have held a distinguished place. If his debating had a fault, it was that of being almost too dialectically cogent, so that his antagonists felt that they were being foiled on the form of the argument before they could get to the issues they sought to raise. But while he was an accomplished lawyer in matters of form, he was no less an accomplished theologian in matters of substance. Although the party of repression triumphed so far as to deprive him of his chair, the victory virtually remained with him, not only because he had shown that the Presbyterian standards did not condemn the views he held, but also because his defence had recommended those views to the great majority of thoughtful laymen. The trial has been a turning-point for the Scottish churches. Opinions formerly proscribed are now freely expressed. The doctrinal prosecutions that have been subsequently attempted have, with scarcely an exception, failed; and the failure of one or two of the latest has led the rigidly orthodox section of the Free Church, which is now almost confined to the Highlands, to think of seceding from the main body.

Having no longer any tie to Scotland, as he had never desired a pastoral charge there, since he felt that his vocation lay in study and teaching, he was hesitating which way to turn, when the vacancy of the Lord Almoner's Readership in Arabic, which was offered to him in 1883, determined him to settle in Cambridge. He had travelled in Arabia a few years earlier, and added a colloquial to his grammatical mastery of the language, in whose literature he took a very keen interest. His spirits had not been affected by the attacks made upon him, and he had resisted the temptation, to which strong controversialists are prone, of going further than they originally meant and thereby damaging the position of their friends. But he was a little weary of controversy and pleased to see before him a prospect of learned quiet and labor, although the salary of the Readership was less than £100 a year. Fortunately he had come to a place where gifts like his were sure to be appreciated. The Master and Fellows of Christ's College elected him to a fellowship with no duties of tuition attached to it—a wise and graceful recognition of his merits which did them the more credit because they had very little personal knowledge of him, while he had possessed no prior bond with the University. Christ's is a small college, but has almost always had men of distinction among its fellows, and has maintained a high standard of teaching. In the list of its alumni stand the names of John Milton, Isaac Barrow, and Charles Darwin. Robertson Smith lived in it for the rest of his days, entering into the social life with great zest, for he was of an extremely sociable turn, and the College became proud of him. In 1889, on the death of his friend, William Wright, he became full professor of Arabic. His efforts to build up a school of Oriental studies on the foundations laid by Wright, and with the help of an eminent Syriac scholar, Bensley, were proving successful, and a considerable number of zealous and able young men were gathering round him, when the hand of disease fell upon him, obliging him first to curtail and during the last few months to intermit his lectures. Bensley also is now gone, and it may be feared that the best days of the school are over.

What with work on the 'Encyclopædia Britannica,' with the years occupied by his trial, with the time spent in oral teaching, and with the physical weakness of his last few years, Smith's leisure available for literary production was not large, and the books he has left do not adequately represent either his accumulated knowledge or his faculty of investigation. The earlier books—'The Old Testament in the Jewish Church' and 'The Prophets of Israel' (the latter a series of lectures delivered at Glasgow)—are comparatively popular in handling. The two later—'Marriage and Kinship in Early Arabia' and 'The Religion of the Semites'—are more abstruse and technical, and also more original, dealing with topics in which their author was a pioneer. Of the last named only the first volume has appeared, but this volume is a striking and permanently important contribution to a very obscure subject, and has excited the admiration of the few Oriental scholars whose knowledge entitles them to speak with authority. What struck one most in his writing was the easy command wherewith he handled his materials. With perfect lucidity and a natural unstrained vigor, there was a sense of abounding and overflowing knowledge which inspired confidence in the reader, making him feel he was in the hands of a master. On all that pertained to the Semitic races, ancient and modern, he was the highest authority in Britain, not only as respects the width of his knowledge, but also its accuracy and thoroughness, and he often did good service in exposing the uncritical assumptions and loose hypotheses of less careful though more pretentious students. But Oriental lore was only one of many subjects in which the highest distinction was open to him. His mathematical talents were remarkable, and for a short time he taught with conspicuous success the class of Natural Philosophy in the University of Edinburgh as assistant professor. He had a competent acquaintance with not a few other practical arts, including navigation, and once, when the compasses of the vessel on which he was sailing in the Red Sea got out of order, he turned out to be the only person on board who could set them right. In metaphysics and theology, in ancient history and many departments of modern history, he was thoroughly at home. Few, indeed, were the subjects that came up in the course of conversation on which he was not able to throw light, for the range of his acquirements was not more striking than the swiftness and precision with which he could bring knowledge to bear wherever it was wanted.

One is always apt to think of men of learning as oppressed by their learning, and therefore likely to be dull, heavy, pedantic. With Robertson Smith the effect seemed to be exactly the opposite. Because he knew so much, he was interested in everything, and threw himself with a joyous freshness and keenness into talk alike upon the most serious and the lightest topics. He was somewhat combative, apt to traverse a proposition when first advanced, even though he might come round to it afterwards; and a discussion with him taxed the defensive acumen of his companions. Yet this tendency did not make his society less agreeable, because he never seemed to seek to overthrow an adversary, but only to get at the truth of the case, and his manner, though sometimes positive, had about it nothing either acrid or conceited. His stature was small, almost diminutive; his eyes singularly bright and keen; his speech rapid; his laugh gay and ready, for he had a strong sense of humor and a great power of enjoying life. Such an unusual combination of qualities as has been described made him a very marked personality, whom all his friends thought of as being quite unlike any one else, and who, therefore, held a conspicuous place in their interest. Such men as he, if they are likeable, have many friends, because we all find pleasure in what is exceptional. Smith was eminently likeable. The geniality, purity, and simplicity of his character gave him a great hold on those who had come to know him well. Few men, leading an equally quiet and studious life, have inspired so much regard and affection in so large a number of persons; few teachers have had an equal power of stimulating and attracting their pupils. He loved teaching hardly less than he loved the investigation of truth, and he was the most faithful and sympathetic of friends—one of those whom their friends feel to be unique while they live and irreplaceable when they have departed.

The courage he had shown in confronting his antagonists in the ecclesiastical courts did not fail him in the severer trials of his last illness. The nature of the disease of which he died was disclosed to him by his physician in September, 1892, while the Congress of Orientalists, in which he presided over the Semitic section, was holding its meetings. A great dinner was being given in honor of the Congress the same afternoon. Robertson Smith simply remarked, "This means my brother's death"

—one of his brothers having died of the same disease a few years before. He went straight to the dinner, and was the gayest and brightest of the guests throughout the evening.

BARANTE'S MEMOIRS.

PARIS, April 10, 1894.

THE fourth volume of the 'Souvenirs' of Baron de Barante begins with the formation of the first cabinet of the July monarchy, whose principal members were the Duc de Broglie, M. Guizot, Baron Louis (Treasury), Marshal Gérard (War), Count Molé (Foreign Affairs), Sébastiani, MM. Lafitte, Casimir Perier, Dupin. The ministry divided at once into two factions, the party of resistance and the party of movement—such was the phraseology of the time, and it requires little explanation. The press, the clubs, were very troublesome; there were constant manifestations in the streets in Paris and in the provinces. The foreign cabinets were all more or less adverse to the July Revolution, and entertained for a moment the idea of forming anew the Holy Alliance. A revolution broke out in Belgium, and the Belgians established a provisional government and proclaimed their independence. The King of Holland asked for the intervention of his allies, in the name of the treaties of 1815; the French Government proclaimed the principle of non-intervention, and M. de Werther, the Prussian Ambassador, was notified by M. Molé that if a Prussian army entered Holland, a French army would occupy Belgium. At the same time, M. de Talleyrand, who had been sent by Louis Philippe to London, declared to the English Government that France had no idea of annexing Belgium or even of establishing a French prince there. The solution of the Belgian question was submitted to a conference of the great Powers, which was to take place in London.

The Duchesse de Dino had accompanied Talleyrand to London, and writes interesting letters to Barante. She remarks on the absence of any sign of revolution in England, but sees ample material for one in the social conditions about her, on the eve of the introduction of the Reform Bill. M. de Barante was sent in October, 1830, as ambassador to the King of Sardinia; at Turin, he kept up a correspondence with the Duchesse de Dino, Pasquier, Molé, Decazes, with the Duchesse de Broglie. Barante found himself at Turin in the most reactionary court in Europe. The King of Sardinia was the brother-in-law of Louis Philippe, being married to Marie-Christine, a daughter, like Marie-Amélie, of Ferdinand I., King of the Two Sicilies. "The King," writes Barante to Count Sébastiani, "is surrounded by men who have all the pride of aristocracy and are odious to the people; he is impervious to all advice, he hates business and the smallest cares of government. . . . The ministers are sometimes two months without seeing the King." On the occasion of a marriage of the King's daughter with the King of Hungary, Barante sees the four chamberlains, who came to Turin: Count Borromeo, Count Oppizoni, Marquis d'Adda, Count Greppi. He says of them: "They seem to me much more Italian than Austrian. Without seeking conversation with them, I have not avoided it, and I have found them taking great interest in the affairs of France, with which they connect the future of Italy, reading habitually our papers, and filled, as are all the Milanese, with the memories of the kingdom of Napoleon. However, their talk was very guarded."

Barante was much preoccupied with the preponderance of Austria in Italy and with the influence exercised by the Austrian Government at Turin, at Parma, at Modena. He did not much like his post, but he observed everything with great care. He saw clearly that in Turin there was already in 1831 an Italian sentiment, but it was almost hidden. One day Colobiano, the King's secretary, was talking to him about the pressure of Austria. Colobiano told him that to some demands of the Austrians he had answered; "Do you take us for the porters of Italy? We are ourselves; we have our own interests and our own affairs." Cavour could not have spoken better, but the Court was very Austrian in sentiment, and considered Austria as the defender of conservatism against France, which was a centre of revolution. On the 15th of February Barante does not hesitate to write to Count Sébastiani: "I think the time has come to concentrate troops at the frontier as an indispensable precaution in case of war. The passage of the Alps may depend on it; in case of peace, the influence of France needs this support." He said to M. de la Tour at Turin: "We consider the state of Sardinia an independent state," and objected to an Austrian intervention in Italy; La Tour ended by saying: "Intervention is a question of fact; people intervene when they think it indispensable, when they are strong enough to do so, when they are required to do so. Better a war than a revolution." It is clear that the Austrian Government was pressing Sardinia very hard; the King said that he could dispense with Austria's help, but he was obliged in return to promise that he would make no popular or constitutional concessions.

Barante made a little journey to Milan, and writes:

"Milan offers a striking aspect, and, if I had not gone there, no account would have given me an idea of such a situation. It is the most complete separation that could be imagined. I have seen Paris occupied by foreign troops; it was a striking spectacle; it was less so than what is seen in Milan. It is not only among the lower middle classes that this repugnance is manifested; one could not find in Milan a man whose hatred for Austria has been diminished, whatever may have been the marks of favor or honor conferred upon him or his family. The high aristocracy, which has been humored, which has been decorated with ribbons and chamberlains' coats, is as national in its sentiments as the popular opinion."

In Turin the friends of Austria took advantage of every incident which tended to represent France as being in the hands of the revolutionary party. In February, 1831, the Church of Saint-Germain-l'Auxerrois was attacked by a Parisian mob, and the building in which the Archbishop resided was sacked and destroyed. Barante wrote to Pasquier that such incidents were very detrimental to French policy. He complained of the language in which the French Government had spoken of these incidents. The Minister of Foreign Affairs, in an official despatch addressed to the agents of France, had thrown all the responsibility for the event on the Legitimist party.

"The disorders have all been directed against a clergy which is considered by the people to be an enemy of existing institutions and of the new dynasty, not against religion. . . . No personal outrage has to be deplored. . . . The people has destroyed, it has not plundered; if it has been led away by anger, it has not abandoned itself to any shameful or cruel passion. The Revolution has preserved the character of generosity and humanity which honors it even in the eyes of its enemies. . . . France alone, perhaps, could have given this new example of moderation."

This extraordinary despatch was written, says M. Claude de Barante, the editor of his grandfather's memoirs, by M. Mignet under the inspiration of M. Thiers. Gen. Sébastiani has always been credited with having contrived to make it disappear from the archives of the Ministry of Foreign Affairs and of almost all the embassies and legations.

Casimir Perier formed a new cabinet in March, 1831; he represented chiefly the party of order and of resistance to the revolutionary elements. He proclaimed also a pacific policy. War was almost imminent when he took the administration in hand. "He will be eminently pacific," writes Pasquier to Barante on the 15th of March. "Adopt that as your rule, and it must be so, for, I declare to you, with war, everything here will go to the devil!" Casimir Perier crushed the party of disorder in Paris; and the King, in order to avoid a European war, supported the candidacy of Leopold of Saxe-Coburg to the new throne of Belgium. His policy was a mixture of moderation and of strength. He obtained from the great Powers who had proclaimed the neutrality of Belgium the demolition of the fortresses of the north which had been built along our frontier. Dom Miguel in Portugal resisted some just reclamations of France; a French squadron entered the Tagus and Dom Miguel had to submit. The Austrians occupied Bologna; at the request of France they had to evacuate that city.

In Turin, Charles Felix died on the 27th of April, and the Prince of Carignano became King, under the name of Charles Albert. During the restoration, Charles Albert had spent several years in France, in exile; he had served in the French army, and had taken part, in the uniform of a grenadier, at the storming of the Trocadero, during the Spanish expedition. "It is a memory," he said to Barante, presenting his credentials, "which is dear to me." Charles Albert was, at heart, an Italian patriot, but he was condemned by his position to a policy of subserviency to Austria, which was then omnipotent in Italy. He had all the instincts and ambitions of his race, but he was obliged to temporize, and his powers of concealment were so great that his friends as well as his enemies could never quite understand him or fathom his intentions. Public opinion expected much from him, "but," says Barante, "this public opinion is here an occult force. There is no kind of publicity. Even conversations are incredibly prudent. So the King receives little support, little impulse from without. He makes the mistake, a very grave one in my opinion, of maintaining all the etiquette of the Sardinian court. This isolates him. He knows nothing of a familiar life, of easy conversation. . . . He has no relations except with the servants of his court and his ministers."

The whole of this fourth volume of Barante's Memoirs is given up to the affairs of Italy, and it is very interesting to see how, in his post at Turin, in a sphere entirely new to him, Barante rapidly became master of all the details of a very intricate and in many points even mysterious situation. He clearly perceived that the domination of Austria was becoming insupportable to the people, that the temporal power of the Pope had its chief support in the Austrians; he understood that the House of Savoy, though its authority was exercised only in a narrow territory, had a great potential force, and was looked upon by Italian patriots all over the peninsula as the possible saviour and liberator. Count Sébastiani was stricken with an attack of apoplexy, and Casimir Perier assumed for a moment the portfolio

of foreign affairs. The Austrians once more invaded the Pontifical States, under pretext of protecting their possessions in the north of Italy against the revolutionist propaganda. They were occupying Parma and Modena. In his despatch of January 31, 1832, Barante recommended as a counter-demonstration against Austria the occupation of Ancona by French troops. "To see again the French flag in Italy would make a vivid impression." Casimir Perier, who was a man of great energy, adopted the idea, and orders were sent to the French squadron of the Mediterranean. The French troops were landed on the 23d of February, and Ancona was taken by force. This demonstration had great importance. It did not provoke a war between Austria and France, but it showed clearly that France was becoming tired of Austrian preponderance in Italy. The occupation of pontifical provinces and towns on one side by the Austrians, on the other by France, showed that the Papal troops were incapable of defending the Papal dominions. "At the present moment," wrote Barante, "we disturb as little as we can the European equilibrium, for fear of seeing everything fall; but later, if the occasion arises, we may force the Austrians backwards and enlarge the Sardinian states, which, for a hundred and fifty years, has always been the object of a sound policy." Barante's correspondence is truly prophetic, and we find in it the germs of Magenta and Solferino.

Correspondence.

A WARNING FROM RUSSIA.

To the Editor of The Nation:

Sir: The experience of the United States in giving full legal-tender power to both silver and gold, when the silver dollar is worth intrinsically about one-half of its nominal value, with the result of inducing counterfeiters to issue silver dollars at full weight and fineness, and yet making a large profit, is paralleled by the experience of Russia, where an attempt was made by the Imperial Government, in the last century, to establish a bimetallic system of copper and silver, giving full legal-tender power to both metals; silver being at that time the standard of value throughout Europe. Ample details of that disastrous experiment are given by Henri Storch in his 'Cours d'Économie Politique,' published at St. Petersburg in 1815, vol. vi , pp. 91–103.

"As long as the copper money kept its nominal value, the circulation was inundated with counterfeit money made in neighboring countries. According to the Memoirs of Count Münnich, in addition to the four millions of copper money coined in the empire there were also more than six millions of that kind of money imported from abroad."

N. N. T.

Cambridge, April 16, 1894.

FICTION FUNNIER THAN TRUTH.

To the Editor of The Nation:

Sir: Mrs. Alice Morse Earle has produced, under the title of 'The Sabbath in Puritan New England,' a very entertaining volume, made up very largely of authentic materials; so largely, indeed, that the whole book must inevitably pass for authentic with many readers. The book being so nearly and so apparently historical, it seems a duty to challenge as absolutely untrue this scandalous and injurious statement on pages 270 to 271:

"As late as 1825, at the installation of Dr. Leonard Bacon over the First Congregational Church in New Haven, free drinks were furnished at an adjacent bar to all who chose to order them, and were all 'settled for' by the generous and hospitable society."

I pass the incidental error of naming an institution which never existed. "The First Church of Christ" in New Haven never accepted a sectarian title. It is an institution absolutely coeval with the town and holding itself of not less dignity, and superior to the nomenclature of sectaries. A careful exploration of all sources of information within reach completely negatives a reproach which would almost be resented if brought against a candidate for the Legislature in Idaho. A negative, undoubtedly, is hard to prove, but it is less difficult when, as in the present case, a most courteous inquiry for the authority upon which the accusation is based receives no answer whatever. It is undoubtedly true that the council of clerical and lay delegates from churches of the same order, near and distant, was, according to custom, liberally entertained by the society upon whose business they were come, and that, as in the case of any dinner of gentlemen at that time, there was an ample supply, not only of food but of wine. Until, however, some authority is produced for the utterly different and grossly dishonoring statement which I have quoted, it is submitted that the volume containing it had better be looked upon as a means rather of entertainment than of instruction.

There are other passages in the same volume equally unauthentic, and into which the author has apparently been misled by taking for antique some recent imitations of antiquity. There are students of archæology who are capable of being misled by the ingenious device of simply spelling the definite article with a "y"; and if besides that there is now and then an irregular spelling, the genuineness of the document becomes beyond question. The clownish story, at pages 276-8, of the dedication dinner at Lynn could never have deceived an investigator of less generous credulity.

Is it not a pity that a book containing so much that is both entertaining and true should be disfigured, with apparently no regard for historical verity, by an intermixture of what is neither true nor truthful? T. B.

Rochester, April 18, 1894.

WOMEN AND THE JURY-BOX.

To the Editor of The Nation:

Sir: The letter of Mr. Stille in the *Nation* of April 12 brings up an argument for the double standard of morals in men and women which is often urged, with a great appearance of justice, namely, that when a married woman introduces her child by adultery into her husband's family, "the wrong done to the husband is immensely greater than that done to the wife" by the husband's adultery. In Anglo-Saxon times the father, by symbolic forms, could acknowledge his natural child, and give him a place and protection within his household; to-day the husband may, and often does, support a separate establishment out of his property (which justly belongs to his lawful family as much as to himself), and thus wrong his legal wife fully as much as she can wrong him, except as to inheritance—and even as to that, as the husband is sole master of the property, under the laws of most States, he can make gifts to his unlawful family during his lifetime amounting to as much as or more than the estate he leaves at death to his lawful wife and her children. Only in the case of entailed property and titles is there any justice whatever in this argument. But even if sound logically, it rests on an outworn financial conception of the family and of the reasons for sexual morality.

These reasons are the same for both sexes—self-respect, and a refined ideal of love and of the self-controlled life, and, perhaps most important from a sociological standpoint, the pernicious effect of social indulgence in either parent upon the offspring. It is because women are becoming aware of the right of every child to be well born that books like Helen Gardiner's and Mme. Sarah Grand's, exaggerated as they may be, have met such a heartfelt response of welcome.

As to the breach-of-promise case, if there had been women on the jury, would Col. Phil Thompson have made his infamous appeal to low masculine prejudices?

Florence Griswold Buckstoff.

Oshkosh, Wisconsin.

GREEN BAY.

To the Editor of The Nation:

Sir: Prof. Butler of Madison, Wis., only the other day drew my attention to the name "B. Verte" as appearing on the Hennepin map of 1697 (in *Nation*, *ante*, p. 289) as facsimiled in vol. iv., p. 251, of my "America." I had never noticed it before, and find, by referring to the original map from which the facsimile was made, that the words "B. Verte," "Michigan," "ou Pepin," and some other minor changes are made in old manuscript in the map, which came from Paris to Harvard College Library over fifty years ago; and I should say that the writing had then been on the map a long time. It would have been well if my note to the map had called attention to these additions. As it happens, the "B. Verte" is the only addition in the facsimile that does not carry its own evidence of being done with the pen. Justin Winsor.

CLAYPOLE AND CROMWELL.

To the Editor of The Nation:

Sir: Your correspondent S. T. A., quoting from a letter of Benjamin Franklin's, in which Franklin announces the death of George Claypole, and states that he was "a descendant of Oliver Cromwell," asks whether any reader can say if the George Claypole referred to was a descendant of the Protector.

He was not. Mark Noble, author of the great book 'Memoirs of the Protectoral House of Cromwell' (1787), which is, some few errors excepted, final authority on the birth and death records of the Cromwell family, and James Waylen, author of 'The House of Cromwell' (1891), a good book, though badly arranged, enable me to give the facts as follows: Elizabeth Cromwell, the Protector's daughter, born 1629, was married to John Claypole in 1646. Three sons and one daughter were born to them: I. Cromwell Claypole, born about 1647. He died unmarried in 1678. His possessions were left to his cousin, as there was no surviving brother or sister, but only a half-sister, from Claypole. II. Henry, died unmarried. III. Oliver, died in childhood. IV. Martha, died young and unmarried.

It will be seen that this branch of the Protector's family became extinct with the death of Cromwell Claypole in 1678. Waylen says: "True it is that ever and anon persons of the name of Claypoole or Claypole are found cropping up to claim descent through that channel,

But descent from John Claypoole is not enough, since he married a second time. Claypooles inheriting the blood of Cromwell through the Lady Elizabeth are no longer in existence."

Very respectfully, S. H. C.

PITTSBURGH, PA., April 21, 1894.

Notes.

THE title of Mr. Andrew Lang's new book which Longmans, Green & Co. will publish shortly is 'The Cock-Lane Ghost and Common Sense.' In it the author applies to the ghost stories of the past the method which gave value to his study of folk-lore and myth.

Macmillan & Co. have in press 'Architect, Owner, and Builder before the Law,' by T. M. Clark, Fellow of the American Institute of Architects.

Count L. N. Tolstoi, in a recent interview with a Russian journalist, gave some information as to a new book which he has in hand. It will treat of, or at least is based upon, the late Franco-Russian fêtes at Paris and Toulon. Tolstoi will develop in it his well-known views of the incompatibility of Christianity with patriotism, and will point out, not for the first time, how "the peoples, in spite of frontiers and of diversity of manners and intelligence and language, draw towards each other, moved by an instinctive love." Hence his hope, and even his sure belief, in the speedy coming of a new era of peace and love, which is predestined to succeed our age of hatred and war. One cannot help regretting that he has no firmer basis for his visions than is afforded by the hollow-sounding demonstrations at Paris and Toulon.

The thirty-eighth volume of Sidney Lee's 'Dictionary of National Biography' (Macmillan) carries the great work on from Milman to More. General Monck, Simon of Montfort, Sir Thomas More, and Milton are among the longer articles, the last from the pen of Leslie Stephen, whose literary criticism is incidental and avoids a summing up. To Mr. Stephen's temperate hand fall also Lady Mary Wortley Montagu and Hannah More; the sketch of Tom Moore is by another writer. One has often to admire in this Dictionary the frank dealing allowed, and we may cite an example in the present volume, where, under Lord Houghton (Richard Monckton Milnes), it is faithfully but moderately recorded that "he had many fine tastes and some coarse ones." John Mitchel's pro-slavery career in this country is not blinked, though the unctuousness he gave to his devotion to the peculiar institution goes unexpressed. He paid for it in the sacrifice of two of his sons and the maiming of a third as Confederate soldiers. The Rev. Jonathan Mitchel, a new England worthy, and Gen. Montgomery are the chief American names in this volume.

A recent noteworthy addition to the "Ex-Libris" series, printed at the Chiswick Press, London, for George Bell & Sons, is "The Little Passion" of Albert Dürer. Of this masterly sequence of thirty-seven woodcuts, 5 inches by 3⅞, executed in the years 1509–1510 in the famous house by the Thiergärtner Thor at Nuremberg, there have been several English editions, but all have been incomplete in some particular. The present edition is printed from stereotypes of the original blocks, the majority of which have, after many vicissitudes, found a resting-place in the British Museum. It repeats, as nearly as possible, Dürer's own edition of 1511, which was dedicated to his friend Pirckheimer, and sold to his fortunate contemporaries for the modest sum of a quarter of a florin. The metrical Latin commentary, written at Dürer's request by a Benedictine monk named Chelidonius, for the edition of 1511, accompanies the cuts here also. The latter, however, tell their story to the eye without need of aid from the letter-press. The volume is preceded by an introduction from Mr. Austin Dobson, and is uniform with another interesting reprint in the same series, Holbein's "Dance of Death," also with an introduction from the same indefatigable pen.

With neither pretence nor attainment of literary skill, Mrs. Ellen M. Firebaugh represents in 'The Physician's Wife' (Philadelphia: F. A. Davis Co.) the life of one in an Illinois village. There the physician himself is habitually addressed by his patients and fellow-citizens as "Doc."; the social atmosphere is leaden and the social scenery gloomy. The practice of medicine under the conditions described is not attractive; the woman who watches and waits as is here told, deserves the sympathy she does not ask for, and, were there any doubt of all this, the forty-odd sketches from life that illustrate the narrative would make it plain.

The persistence of the scarlet-fever cause and its power for evil is not sufficiently recognized. Houses, particularly in cities, once infected, are liable to give the disease to successive tenants, and to be infected by them in turn. Clothing stored for thirty-five years has spread infection at the end of that time. Infection is carried by letters, and it may be borne at least a mile by a steady wind. Since scarlet fever is very dangerous to life, frequently inflicts grave disabilities short of death, and is distinctly an unnecessary disease, it would appear that our health boards might lay more stress upon sanitary education regarding it. As the scourge of childhood particularly, it is brought to mind by the great volume of 'The American Text-Book of Diseases of Children,' edited by Dr. Louis Starr (Philadelphia: W. B. Saunders), whose 1,200 pages are appalling in their display of the pitfalls that beset the beginnings of the path of life. The book is a serious professional, not popular, work, wherein sixty-odd contributors present the current practice of advanced teachers and practitioners.

After Shelley and after Burns the least likely British author to have a French biographer is surely the writer of the Peter Plymley letters, yet M. A. Chevrillon has just published 'Sydney Smith et la renaissance des idées libérales en Angleterre au xix^{e} siècle' (Paris: Hachette; New York: Dyrsen & Pfeiffer). It is true that the book is a study rather of the development of British institutions during the middle of this century than a critical study of Sydney Smith as a man of letters; still, its publication is significant of the awakening interest of the French in other nationalities—an interest which has obviously expanded tenfold in the past twenty years.

The Hubbard Publishing Co., Philadelphia, send us several parts ("portfolios") of 'Picturesque Hawaii,' of which there will be eight in all. Ex-Minister Stevens and Prof. W. B. Oleson of Honolulu are responsible for the text, which makes no literary pretensions, though it has an undisguised political aim, viz., to further annexation. The best feature of this publication is the plates of scenery and population, with portraits of the senior editor, of the late Capt. Wiltse, of the ex-Queen, of President Dole, etc. These should interest anybody.

A firm which contributed from its own list a full tenth of the model library of 5,000 volumes exhibited by the American Library Association at Chicago last summer, might well think it worth while to publish a special catalogue apart from that issued under the auspices of the Bureau of Education. This is what Houghton, Mifflin & Co. have done in their 'Descriptive List, etc.,' a neatly printed pamphlet of 78 pages, in which the 548 titles are classified and supplied with brief critical notices or descriptive annotations which will be helpful to purchasers.

The Academy of Inscriptions and Belles-lettres has just instituted a new publication, entitled "Monuments et Mémoires publiés par l'Académie des Inscriptions et Belles-lettres." It will consist of a series of fascicules of irregular periodicity in which will appear interesting documents and plates, hitherto unpublished, relating to antiquity and the Middle Age. The funds for this publication are supplied, at least in part, by a legacy which the Academy received from the estate of M. Eugène Piot, who died in 1889. This falls in very luckily, as France, since the disappearance of the *Gazette Archéologique*, has been rather behind her neighbors in the development of archæological studies. In the list of contributors to the first number of the "Monuments" the names of MM. Heuzey, Maspero, Héron de Villefosse, and other scholars of high repute are to be noted. The plates accompanying the text are also noteworthy.

An important announcement comes from Germany that after October next the well-known *Philosophische Monatshefte*, now edited by Prof. Natorp of Marburg, will become a quarterly with the title, *Archiv für Systematische Philosophie*. The new *Archiv* and the existing *Archiv für die Geschichte der Philosophie*, edited by Prof. Stein of Berne, will be under one management, and together will be known as *Archiv für Philosophie*. The newly named journal will devote particular attention to the systematic review of new philosophical literature. How well this important work will be done may be judged from the following list of names: Theory of knowledge, Prof. Natorp; metaphysics, Prof. Eucken of Jena; psychology, Prof. Benno Erdmann of Halle; logic, Prof. Riehl of Freiburg i. B.; ethics, Prof. Jodl of Prague; sociology, Prof. Tönnies of Kiel; philosophy of law, Prof. Stammler of Halle; æsthetics, Prof. Lipps of Munich; philosophy of religion, Prof. Baur of Münsingen; pedagogics, Prof. Ziegler of Strassburg.

The *Virginia Magazine of History and Biography* concludes with the April number its first volume, which is provided with an index. The frontispiece shows the war residence of Gen. Lee, now the home of the Virginia Historical Society, whose activity is highly to be commended. The *Magazine* has established itself in the front rank of similar periodicals in this country.

The second number of the Bulletin of the Geographical Club of Philadelphia contains an account of a journey to the Grand Falls of Labrador by Henry G. Bryant. These are situated about two hundred and twenty miles from the mouth of the Grand River on the southern edge of the great central plateau. Few incidents marked the ascent of the river, and the falls were reached on September 2, 1891, a month after the departure from the coast. Accurate measurements were taken showing them to be 316 feet high by 150 broad. The country about was exceedingly desolate, and the explorers sought in vain for "some sign of the presence of bird or animal." Occa-

sionally dwarf firs or stunted pines were to be seen, but the great table-land seemed to be nearly treeless, its scant soil being covered with "caribou moss, Labrador tea plants, blueberry bushes, and thousands of boulders." The travellers were agreeably disappointed in the temperature, which "during the day was found to be delightful—just cool enough to be stimulating; while the average minimum temperature registered during the forty-one nights of the journey was ascertained to be but forty-two degrees Fahrenheit." There are several interesting illustrations and two maps, and in an appendix some of the scientific results of the expedition are given. We may add that Mr. Bryant's narrative of the places passed on August 8 and 9 does not tally exactly either with the map of the river or the table of meteorological notes.

The article on Australia, with which the *Scottish Geographical Magazine* for April opens, is by Miss Flora L. Shaw, the special correspondent of the London *Times*. It is chiefly devoted to discussing, in her characteristically clear and incisive way, the fundamental questions of land and labor. The great lesson which the Australian workman has learned from the labor struggle that preceded the financial crisis is the necessity of substituting coöperation for competition under the guidance of their leaders, who now say, "Strikes are useless; we must take up land on our own account and enjoy the fruit of our own labor." The men who have hitherto crowded the labor market and lowered wages by competition with each other, "now propose to coöperate, and, by putting their labor together upon land of their own, look forward to securing for themselves the whole profit of their exertions." The Government, aware that the wealth of the country is in its land, are enabled, by recent acts, to aid actual settlers by money loans secured by mortgages on the land. An interesting account is given of the manner in which the mallee country of Victoria, consisting of some eleven millions of acres, is being rapidly converted into wheat fields. This is done principally by means of the "mallee-roller," which, drawn by twelve or sixteen oxen, rolls down the low-growing scrub and snaps the slight trunks off at the roots, and the "stump-jumping plough," which ploughs without the necessity of removing the stumps from the ground. An encouraging sign, both in the grain country in the south and in the sugar districts of the north, is that the demand is "for the multiplication of small holdings rather than for the maintenance of large estates." Mr. A. S. White describes, mainly by statistics, the situation in Algeria, illustrating his paper by a series of beautiful maps, historical and physical. He emphasizes the fact that, notwithstanding the length of time since the supposed pacification of the country, "a profound gulf separates the natives from the Europeans," and that the former "still hate the European intruder as much as they dare."

We have received a prospectus of the Summer Parliament of Religions to be held for the first time at Long Beach, L. I., by the Long Beach Association, which has acquired the well-known hotel and outlying cottages, and proposes to make a resort "combining many of the best features of Ocean Grove and Chautauqua." The first week, July 8-14, will be one of "literary and musical entertainment."

—The new British quarterly, *Bibliographica* (New York: Charles Scribner's Sons), begins bravely, and its first number is most appetizing. In choice of paper, in size and proportion of page, in selection of type, in appropriate initials and tail-pieces, in ink and press-work, the new review is all that a magazine should be that appeals to those who love books as books and for their mechanical merits quite as much as their spiritual virtues. One of the papers is printed in French, namely, that on "La Bibliophilie Moderne," by M. Octave Uzanne, who again sets forth his views on the forthcoming revolution in bookmaking for the little knot of book-lovers. Mr. Andrew Lang contributes a carelessly readable essay on "Names and Notes in Books," written in his characteristic rambling and piquant manner. And, for the rest, the contributions are largely technical, although revealing a higher average of literary merit than merely technical bibliophilistic writing usually has. There are papers on "A Copy of Celsus from the Library of Grolier" (with a reproduction in colors of the cover), on "Christina of Sweden and her Books," on "The Accipies Woodcut," and on "The Books of Hours of Geoffroy Tory" (from the competent pen of Mr. A. W. Pollard). Add to these an acute review of M. Thoinan's recent "Relieurs Français," by Miss S. T. Prideaux—who does not, however, seem to have fallen in with M. Bosquet's adverse criticism of M. Thoinan's labors. As has already been noted, *Bibliographica* is self-limited to three years of life, during which period it will publish papers by Mr. Austin Dobson, Mr. William Morris, Dr. Garnett, M. Béraldi, and Mr. Tedder—all experts in different departments of book-craft.

—Miss Claypole's paper on the "Action of Leucocytes towards Foreign Substances," which received the first prize of the American Microscopical Society for original work in histology, is reprinted in part in the *American Naturalist* for April. The experiments described go to show that the function of the white corpuscles of the blood as devourers of injurious foreign substances, which they eliminate by becoming themselves thrown off from the organism as waste products, has not been exaggerated by Metshnikoff and his adherents. These experiments were made upon healthy animals which were kept in purely normal conditions. The mud-puppy and the hell-bender were the animals chosen, on account of the large size of their white corpuscles; and lamp-black mixed with a solution of gum arabic was introduced into the abdominal cavity. In the mud-puppy, which breathes by gills, the progress of the taking up of the carbon grains by the leucocytes could be watched from day to day by examining with the microscope the blood as it passed through the gill filaments. At the end of about ten days, when the animal was killed and its different organs carefully examined, it was found that no free carbon remained in any part of the body; the only cells which contained carbon were the leucocytes, except in the spleen, where the true splenic cells also contained it. The carbon-laden leucocytes were found in large numbers on the surface of the stomach, the lungs, and the skin, and in the excretory organs, as well as in the blood-vessels. This last result throws light on the vexed problem of what becomes of the white corpuscles which are constantly being poured into the blood from the lymphatics; it would seem to be beyond question that they act as true scavengers, and sacrifice themselves in the interest of the organism as a whole.

—No so intimate a revelation of the inmost soul of Balzac has ever been made as is shown in the letters of his which have been recently appearing in the *Revue de Paris*. They were written to Mme. Hanska, with whom (as hardly needs to be said) he was long in love, and whom, years afterwards, he married. All the letters of his that we have had before, those to his sister and to his friends, are, in comparison with these, perfunctory and distant. In these he simply pours his whole self out—not only his state of soul, which makes a precious "document humain," but also multitudinous details of his daily life and work, which, mingled as they are with many critical appreciations of his own books, combine to make a most valuable historical and literary document also. New light is thrown on several points in Balzac's life which have hitherto been obscure. For instance, it has never been known, until now, under what circumstances he first became acquainted with Mme. Hanska. It has been supposed that they met by chance in Switzerland in the fall of 1833. But now it appears that, at that time, they had been in correspondence for almost two years. Mme. Hanska, a clever and sympathetic young woman, who had been moved to enthusiasm by the 'Scènes de la Vie Privée,' was much disturbed by the turn which the mind of the author took in the 'Peau de Chagrin,' and addressed a letter to him through his publisher, which he received on February 28, 1832. Other letters followed, all with the signature "L'Étrangère," and for a while he was asked merely to acknowledge their receipt by a newspaper advertisement. By January, 1833, the two were in full correspondence. Balzac's first letter shows plainly that the *Étrangère* had made an impression upon his fancy, at the least, and also, probably, upon his feelings. It happened to be a favorable moment—an opportunity to catch his heart on the rebound, perhaps—and in a very brief space of time he was as simply and romantically in love, though he was then thirty-three, as any youngster ever was. The fact of this romantic attachment appears, at least to one critic, to be proof positive that Balzac must no longer be classed, as an artist, among the realists. It is not quite positive proof, and Mr. Frederick Wedmore seems somewhat hasty in his exulting. Writers cannot be so definitely classed and labelled as fossils are in a museum, and, even if they could be, it would seem to be a very odd conclusion to come to, that, because an author preferred a somewhat dry and literal artistic method, he could not in actual life ever have seen visions or dreamed dreams.

—As in the run of kindred works, there is no little surplusage in Mr. Jesse Salisbury's 'Glossary of Words and Phrases used in S. E. Worcestershire.' Still, it will be found to contribute materials not to be overlooked when that shall be done for dialectal English which Dr. Murray and Mr. Bradley are doing for the English of general literature. Interesting are such survivals as those now instanced in *acold*, 'cold,' *agate*, 'going on,' *anant*, 'opposite,' *bottom* (of yarn), *brim*, 'a boar,' *bursten-bellied*, 'ruptured,' *disgest*, 'digest,' *dout* (do out), 'extinguish,' *flannin*, 'flannel,' *gawn*, 'a gallon-measure,' *inchmeal* (like *piecemeal*), *most an end*, 'almost,' *opiniated*, 'opinionated,' *pun*, 'to pound,' *starven*, 'starved,' *stomachful*, 'obstinate,' *tind*, 'to kindle,' *trusten*, 'to trust,' *unked*, 'lonely,' *urchin*, 'a hedgehog,' and *yat*, 'a gate,' with the archaic pronunciations *faut*, 'fault,' and *goold*, 'gold.' Noteworthy, too, are the abstract forms *feelth*, *swelth*, and *warmship*. In *naight* (*ait* or *eyot*), *naint* (aunt), *nalls*,

'belongings,' *noaf*, *noration*, and *nuncle*, the *n* of the indefinite article *an* is prefixed; in *score*, 'core,' and *scrawl*, 'crawl,' as in the Suffolk *snotch*, 'notch,' the initial *s* is unetymological; while, with a letter dropped, *anointed*, becomes *nineted*, 'notoriously bad,' and *elections* becomes *lections*, 'probabilities.' Quaintness is seen in *book of hard names*, 'an account-book,' *oos-bird* (whose bird?), 'an illegitimate child,' *two folks*, 'at variance,' *scowl o' brow*, 'judgment by the eye, not by actual measurement'; heartlessly perverted humor, in saying that a man has *shut his knife*, or *stuck his spoon in the wall*, for 'died'; and what is equally detestable, in *louse-kiver*, 'hat,' 'cap,' and *louse-pasture*, 'scalp.' As in East Anglia, to go no further, so in S. E. Worcestershire, we meet with *to pass the bell for*, 'to toll the passing-bell for,' *skep*, 'a basket,' *tempest*, 'a thunderstorm,' *terrify*, 'to torment,' and *whinnock*, 'to whine.' Among provincialisms current in the same quarter with these, which have been more or less naturalized in the United States, are *biddy*, 'a fowl,' *I'll be darned*, *heft*, 'weight,' *nation*, 'very,' 'very much,' *as odd as Dick's hatband*, *peart*, *get shut of*, *sliver*, *to play tag*, and *yarb*, 'herb.' There remains to mention, in this connexion, but certainly as a mere accidental coincidence, the substantive *nast*, a back formation from *nasty*, like the Scotchy *greed* from *greedy*, Dr. Thomas Fuller's verb *pillor* from *pillory*, our housewives' *jell* from *jelly*, and the new-fangled *burgle*, from *burglar*. The 'Glossary' here noticed is published by T. Salisbury, 48 Fleet Lane, London.

—Wiltshire is not very remote from Worcestershire, but in the glossary of 'Wiltshire Words' just issued by the English Dialect Society (London: Henry Frowde) only one of the peculiar locutions above cited is to be found, viz., *unked*. This word is, perhaps generally, aspirated in Wilts, and gives the editors occasion to remark that the cockney misplacing of *h* is a recent and acquired habit, due to "the spread of education and the increased facilities of communication" with the source of corruption—what in Surrey they call "in the smoke," *i. e.*, London. *Sinful-ordinary* is applied in Wilts to a homely person; a lover goes "a *rumsy-voosing* down the lane to meet his sweetheart" by French appointment; a laborer absents himself from church because he has nothing but his *dishabille*, or working clothes, to wear, whereas, in the more poetic dialect of Surrey, a neglected churchyard is "all in *dishbill*." In Wilts, again, a woman in confinement "bin an' fell about laas' night"; in Surrey, her labor pains are called "increasement"; and in Northumberland (for we have a third glossary from the Dialect Society) the lying-in is called a "groanin" or a "cryin-oot." Surrey should be the native country of Mrs. Malaprop, as appears from Mr. Leveson Gower's amusing instances, "*domesticate* [masticate] his food," "*putrefied* [petrified] with cold," *dispensaria* for dyspepsia, "warming *apparition* [apparatus]." And parallel with these is *comical*, 'capricious,' 'uncertain,' applied to the weather. A *harmless* price between buyer and seller is one fair to both parties. A "*one-eyed* place" is an out-of the way, neglected spot. "Too big for my fireplace" is 'beyond my means.' In Surrey, as on the Sea Islands of Carolina and Georgia, to inform is to "make sensible" (*sensibble*, as stressed by the blacks). The Northumberland glossary takes us to Bewick's country, shows us the *hippin-stones* across a stream he was so fond of depicting in his vignettes, and teaches us to pronounce the Eltringham and Ovingham of his Memoirs with a soft *g*, and the Chillingham associated with his masterpiece of the Bull with a hard *g*.

—Of the prospects of the Dialect Dictionary to which we have alluded, something may be learned in the seventeenth report (for 1890-'92) of the Dialect Society prefixed to the 'Northumberland Words.' To begin with the Society itself, it had prepared its euthanasia in 1892, but was convinced that its work was by no means at an end, and concluded to remove its headquarters from Manchester to Oxford, thus bringing it in contact with the great Dictionary of the Philological Society, already well advanced. A natural change of officers makes the Rev. A. L. Mayhew, one of the soundest philologers, honorary secretary and literary director. The Society's library, however, numbering nearly a thousand volumes, remains at Manchester, and the librarian "reports that the volumes have been well used by the readers for the projected English Dialect Dictionary." At the Society's annual meeting on June 12, 1893, the last to be held at Manchester, Mr. Crofton "hoped at Oxford a crown would be put upon their work by the publication of the Dialect Dictionary, which was the principal object in starting the Society, and which was proceeding slowly but satisfactorily." "Few printing clubs," we read, "have received more loyal and generous support," under difficulties and disappointments. In twenty years the Society has spent £4,029 in printing sixty-seven books, two catalogues, and sixteen annual reports, and something more than £1,000 for carriage, postage, and commissions. "The whole of the remaining expenses of management have been covered by an expenditure of about £10 a year." Sales to outsiders have furnished a considerable income.

LANG'S HOMER AND THE EPIC.

Homer and the Epic. By Andrew Lang, M.A. Longmans, Green & Co. 1893.

Mr. Lang's book is a real and important contribution to the Homeric question. The poets, from Goethe to Matthew Arnold, have often already pronounced their verdict in favor of one Homer as against a group or series of casual minstrels; but they have not given a reason for the faith that is in them. Mr. Lang takes the side of the poets, and furnishes them thoroughly with the reasons which they have never condescended to give. He offers here, in fact, the most complete and masterly discussion of the literary evidence in the case that has yet been presented; he does this, moreover, with a thorough understanding of the arguments commonly urged by scholars of the Wolfian school. The outcome of his work, although not decisive for the "unitarians," is an illumination of the whole question, and a satisfactory brushing aside of many cobwebs spun in the brains of learned criticasters. Of these Mr. Lang says, with an irreverence which is partly justified:

"It has been said that no man can criticise a novel fairly who has read it, not for pleasure, but with the set purpose of reviewing it. Much more is this true in Homeric criticism. They who pry into the inconsistencies of this or that passage, they who actually have a professional motive, and a name among the learned to win by discovering a slip or blunder, are as remote as mortals can be from the position of Homer's original hearers. For them, for warriors, he sang; not for spectacled young German critics on their promotion."

To the ordinary unsuspecting reader the 'Odyssey' is a delightful romance of adventure and fairy legend designed, woven, and completed by the same master mind. Its episodes as well as its continuous narrative, its story of Telemachus, its wheel within wheel of adventure, he finds equally agreeable, consistent, and artistically wrought to a thrilling climax. This was remarked by Grote, and this impression of the reader is rather confirmed by the slight results of the criticism of Kirchoff and of Wilamowitz, who profess to disengage the 'Odyssey' into its elements, and to ascribe it to various authors of various dates. They show you that if you take out the mortar and strike out the joints, the structure falls to pieces. Mr. Lang replies that all large poems, such as 'Paradise Lost' or 'Marmion' or 'Don Juan,' must have mortar and joints. They are not the results, like a lyric poem, of a single breath of inspiration. The vice of the Kirchoff-Wilamowitz criticism of the 'Odyssey' is that it presupposes a more rigid plan, more rigidly carried out, than we find in modern long poems, or even in modern novels. It assumes, too, a modern critical audience, and allows nothing for slight developments and alterations of the plan as it works out in the author's mind. It allows nothing for mortar and fitting and joints. These critics are ready to dislodge and dislocate and transpose large portions of the narrative, and to assume various poets and redactors, because of discrepancies so slight as the following. In book 16, Odysseus plots with Telemachus to remove the armor from the palace hall out of reach of the suitors, but to reserve for their own use two swords, two spears, and two shields of oxhide to be used when need comes. He expects, also, that the suitors will inquire for the armor, and he places an answer in his son's mouth. As a matter of fact, in the 22d book, this scheme is fully carried out, except that the suitors ask no questions, and that the shields for the use of Odysseus and his son are not reserved. But what are such trifles compared with the real defects of plan which Scott himself confesses and explains in the 'Lady of the Lake'? The German criticism could be used to prove that 'Marmion' was composed of a number of lays by the help of various botchers, imitators, and redactors; moreover, both the critics we have mentioned are quite ready to ascribe to the "botcher" or "redactor" some of the sublimest touches, and to assume that these various hands equally commanded the grand style.

Another canon of this school of criticism is that the recurrence of lines, either identically or with slight modifications, gives ground for suspecting that one of the passages is the original and the other borrowed by a later imitator or botcher. The work of the so-called botcher may be beautiful, may be in the grand style; but, just the same, he is assumed to have stolen from the older master. To this Mr. Lang replies that repetition is a note of all the earlier poetry—of the 'Kalewala,' of the 'Song of Roland,' of the Celtic Sagas. The minstrel in each of these has a formula for all recurring events, as, mooring ships, setting banquets, retiring to bed, etc., which he repeats verbatim; he repeats also textually all messages and speeches. This economy of expression is used by Homer as by his brethren of the craft; it goes so far that he hardly ever uses a fresh mode of stating a fact if he can repeat a formula. It is a habit peculiar to this period in the development of the epic—a habit as restful to the minstrel as it is fascinating to his simple-minded audience.

In matters of this kind, demonstration, as Mr. Lang says, is impossible. The literary

critics of the nicest and surest taste are satisfied of the unity of the 'Odyssey'; certain others, microscopically examining, see in it a patchwork of various hands and dates. With them "organic unity, general harmony of design, leading up to a predetermined conclusion," do not weigh—are apparently not perceived. Such critics could certainly, on their own principles, analyze and resolve 'Ivanhoe' into an earlier "kernel," with later accretions and transformations wrought by various hands, "the group of Rebecca and Isaac of York being interwoven with the older story, as late as the end of the nineteenth century, when the sufferings of the Jews in Russia were notorious." It would not be difficult to try one's fancy and ingenuity in like manner in assigning the 'Paradise Lost' to a great poet with a gift for the sublime and for expressing the charm of "bowery loveliness," redacted by a theologian and a domestic prig.

Such critics assume that the Greek epic is not the creation of a poet, but is an accretion of short preëxisting lays, so loosely thrown together that they can detect the joinings. Against this theory Comparetti, the Italian editor of the 'Kalewala,' declares himself in an opinion which ought to have great force because of his sane literary judgment, his breadth of view, his learning, and his special experience. Comparetti edited the 'Kalewala,' which is known to have been strung together by a "redactor" in precisely the method which the German critics claim for the 'Iliad' and 'Odyssey.' The redactor in this case was Lönnrot, an enthusiastic poet and scholar, who in 1830 set himself to the task of collecting and dovetailing the Finnish songs in the manner which Wolf ascribes to Pisistratus. The result is the 'Kalewala,' a very different congeries from the 'Iliad' or the 'Odyssey.' The details of these differences Mr. Lang sums up; the important distinction between the poems is that emphasized by Comparetti. The 'Kalewala' has no organic unity; although it contains beautiful poetry, it is marked by the ballad style. Comparetti therefore declares that the mark of the 'Iliad' and 'Odyssey' is the fusion of popular tales and poems into a higher unity by the creative action of a master poetic mind. It is not a synthesis—it is a new creation, with a new and loftier style of its own. This is the conclusion of an editor who sums up the result of minute editorial labors, while retaining a sound literary judgment. Let any one glance at the 'Mahâbhârata,' and see what formless chaos, what a wilderness and a jungle, can arise from a nucleus surrounded by an accretion of floating popular poems.

There is no doubt, to the mind of any sensitive literary critic, of the value of this canon of Comparetti's. The 'Odyssey,' on the whole, stands this test admirably. Can the 'Iliad' do the same? There is a great difference between inconsistencies which are invisible to the naked eye and inconsistencies that fly in one's face. Those of the 'Odyssey' are microscopic or imaginary; those of the 'Iliad' strike any reflective reader at once. Mr. Lang himself abandons the small Æneid in the twentieth book, and a portion of the funeral games in the twenty-third; he makes only a half-hearted defence for the adventures of Dolon and Odysseus in the tenth, and he is willing to admit that the books on fighting from the eleventh to the sixteenth "have not improbably suffered somewhat in the course of the ages." He admits the Odyssean style and phrase of the last two books, but finds them so fitted to close the poem that he includes them with the rest in the 'Iliad' as one epic by one hand. He makes a bold and perhaps successful stand for the Embassy and the Speech of Achilles (book ninth), which, in connection with book sixteenth, Grote and Mr. Leaf and the German critics generally find a stumbling-block of the first magnitude. The obduracy of Achilles, his inexorableness, which will not be appeased, which insists upon revenge for a single woman, "though many a man has accepted ransom for his brother or his father slain," Mr. Lang defends as consonant with his character, as necessary to the evolution of the catastrophe. It is his point of honor, which, in fact, brings on his Nemesis. Prof. Jebb, in his recently published lectures, has a strange remark on this behavior of Achilles: "That his feelings are, in themselves, violent and excessive, results from the effort of poetry, in a simple and vigorous age, to express human nature in its highest intensity: Achilles must be peerless in action; he must be unique also in vehemence of emotion—of anger and of love." This seems to us metaphysical and improbable. We should say rather that this trait results from the fidelity of the poet in painting a character which he had carefully observed and fully conceived in his mind. "We must take Achilles," says Mr. Lang, "as we find him—that is, with the passions of an early age. He is not a Christian. He has a touch of the Maori or the Iroquois. He does not hesitate to break the bruised reed." Yet even here Mr. Lang has misgivings about the presence of Phœnix, with his meandering speech. In general, though he makes very good sport of the detailed attempts of scholars to explain the interpolation and precise relations of the books between the first and the sixteenth, he himself fails to establish the organic consistency of this larger portion of the poem. It remains, as Mr. Leaf remarks, an unexampled digression, admirable in many of its details, but marring the unity of the narrative.

As to the personality of Homer, Mr. Lang favors the hypothesis of "one great peerless original poet"; yet he is too good a scholar not to have waverings on this point. He is willing, at times, to concede the 'Odyssey' to another hand, and he admits that a considerable part of the 'Iliad,' as well as the conclusion of the 'Odyssey,' show signs of the intrusion of still other workmanship and other hands. This is a large concession from a "unitarian." We are naturally led to the supposition of a separate poet for the 'Odyssey,' and one for the bulk of the 'Iliad,' plus some others. This is a position different from the heresy of those hewers and hackers who serenely imagine that any "redactor" is capable of deviating into the grand style. Mr. Lang's faith in one "great peerless original poet" seems to us improbable and unwarranted by the facts of history in the epochs which we know. It is very unlikely that an age which produced the 'Iliad' should not have produced more than one remarkable poet. It is not reasonable to imagine for the heroic period and the art of Mycenæ a dark background illuminated by one sole preternatural minstrel. At no period that we know of has genius flowered singly. To confine ourselves to Greece alone, Archilochus is followed within a century by Sappho and Alcæus, Simonides is not badly matched with Pindar, and then we have, in rapid succession, Aeschylus and Sophocles and Euripides. Is it likely that there were no such groups or successions among the minstrels of the heroic period? Suppose the three great dramatic poets of Athens born out of due time and relegated to some century which produced the Vapheio cups or the art of Mycenæ. They would all have written epic poetry—each would have been capable of the grand style; Euripides might at any rate have deviated into it. We might thus provide for our nucleus of the 'Iliad,' for the 'Odyssey,' and for any additions to the 'Iliad' which the popularity of an Achilleid and of the tale of Troy might demand.

Mr. Lang thinks the love of fame and the natural jealousy of the "genus irritabile vatum" would secure the title and the property of each bard against usurpation and confusion. But at this early date, how is the bard, even supposing his poem is written, to protect himself and his property after his death? How is any successor to protect his own individual name and rights—particularly when we reflect that it was the fashion to call upon the minstrel for separate lays or episodes, such as the tale of the wooden horse? Is it probable that a poem written in the eleventh century A. C., and enlarged by a minstrel living within a hundred years of that date—a poem known only from recitation and sometimes recited in portions—could preserve securely the tradition of its joint authorship and the record of the precise original ownership and partitions in the property? The Brahmins could accomplish such a feat of transmission by the continuity of their order, and by the aid of anathemas and religious sanctions; but the so-called Homeridæ and the rhapsodes were more likely to be innovating than conservative, and, indeed, Mr. Lang puts very little faith in the legend of their existence.

Again, as to style. It is quite true that one poetic star differs from another in glory; that we do not easily confound Shakspere with Marlowe, nor the manner of the "Agamemnon" with that of the "Antigone" or the "Medea." Yet there is the "Rhesus," which has been assigned by various critics to Euripides, to Sophocles, or again to an imitator of Sophocles and Æschylus. How easy would it be for a similar mystification to insinuate itself into the loose-jointed 'Iliad,' which does, in fact, present some decided inequalities of style.

In closing, we should remark that although Mr. Lang disclaims the attitude of a philologian or a profound Grecian, yet there are some fields in which he is more at home than the most learned philologists. In questions of folk-lore and early myths and customs, he writes with the familiarity of an expert, and sheds an unexpected light on many controverted points. His introductory chapter on "Homer's place in literature" is a delightful piece of enthusiasm, which makes one ashamed to confess any infidel scruples as to the one supreme and indivisible poet. It warms one's heart, in these utilitarian days, to hear Mr. Lang chant his pæan in praise of Homer. He is a devotee who knows whereof he sings. If any one asks—if some president of one of our universities, for instance, should ask—what is Homer to us that we should read him, or read about him and the obsolete questions of his age? Mr. Lang, replying, takes fearlessly the highest ground, from which it will be an awkward matter to dislodge him. "To forget Homer, to cease to be concerned and even curious about Homer, is to make a fatal step towards a new barbarism. Mankind exists, or should exist, not to live only, but, as Aristotle defines it, to live nobly. A noble and enjoyable life demands an imaginative participation in all that the human race has done, or said, or thought, which is excellent." There is something inspiring in the sound of these words; they ought to be repeated again

and again to that new type of person we are developing in our technical schools—that strange creature which, like the weasel, trains its eye to follow steadily and unweariedly, looking neither to the right nor to the left, the narrow gilded track that leads to wealth, or at any rate to bread and butter.

CAJORI'S HISTORY OF MATHEMATICS.

A History of Mathematics. By Florian Cajori. Macmillan & Co. 1894.

A BRIEF sketch of the course of human activity in a way that has been of more avail than many a more showy trade in moulding men's daily lives and sentiments into what they are to-day, this book will attract the attention of every youthful student of any mathematical science or of engineering. For any man in such a line, who has the ambition to be more than the merest specialist, needs to be familiar with as much of the history of mathematics as can be crammed into one moderate volume. Others, students of humanity, to whom nothing can be more interesting and even entertaining than mathematical history, will find profit in this work unless it is too small for their purposes. We noticed a few years ago a volume on the same subject by Walter W. Rouse Ball, entertaining enough, but not a careful nor competent work. That contained perhaps 900,000 words; and the present compendium has, we estimate, about two-thirds of that number. It is too brief, but economizes space pretty severely.

The mathematics of the nineteenth century was treated by Ball not too seriously. His chapter on the subject, sooth to say, had an old-fashioned English flavor, and about as much thoroughness as one would expect in a collection of Lives of Eccentric Personages. Prof. Cajori, on the other hand, treats recent mathematics worthily, giving to it, as was proper, a quarter of his whole space. In this part at least his work is distinctly of a higher grade than Ball's and has evidently cost him original labor. While excessively condensed, as the fair proportions of his whole history required, it fulfils well enough the needs of students before the fascination of a deeper study of the history of thought has drawn them further into its vortex. We will not say an extraordinary, but a satisfactory, degree of discrimination and accuracy marks this section of the work.

Room could be made for this expanded account of the achievements of this century only by an extra turn somewhere upon the hydraulic press with which the rest has been baled. The part which seems to have been chosen to undergo the extremest compression is the period from Descartes to Euler. One cannot but regret this, for in some respects it is the most important period of all; and no other, certainly, calls more for those elucidations of the historian which show the inexperienced student in what the extraordinary advance of different steps in the progress of thought consisted. The main facts are given by Cajori, and often more correctly than by Ball; but there is no room to suggest reflections, and reflections make the worth of history. Take, for example, that truly gigantic reasoner, Fermat. One of his exploits was a method of ascertaining that value of a variable that renders the value of a given function the greatest or least in that vicinity—a method which, in the opinion of some of the greatest judges, constitutes Fermat the author of the differential calculus. Cajori states the matter so very briefly that the young reader will fail to perceive that the method is almost exactly the same as that pursued in the best modern treatises. The following are the steps of the process: (1) to the variable is given an increment which is assumed to be such that the value of the function before the variable is thus increased can be equated to the value after the increase; (2) by development and transposition, the increment is shown to be a factor of the whole equation; (3) the equation is divided by this increment, which will, in general, leave some parts of it independent of the value of the increment and some parts not so; (4) the increment is put equal to zero, and the value of the variable is then deduced. This is open to the objection that if the increment equals zero, we have no right to divide the equation by it. This objection is flanked in modern works by supposing the increment *is not* zero, but diminishes so as to have zero for its limit.

How very clever Fermat's method was is a thing the beginner needs to have pointed out. It was an idea sufficiently clever to change the whole face of the globe, with our daily mode of living and of philosophizing, to such an extent that the Egyptian under Khufu lived and thought more like a sixteenth-century man than the latter like us. For that all modern science has grown out of the germinal idea of the differential calculus we hold to be most surely true. The ἀγεωμέτρητος, as Plato used, it appears, to call the twaddler in thought, may laugh, not seeing how a prolific conception can assume a guise so humble. He would have a great idea essentially warm, picturesque, colored. He refuses to take seriously a pure intellect, whose forms are as applicable to a game of dominoes as to the struggles of world forces. We instance these as examples of the sort of reflection which, whether finally accepted or rejected, a good history of any wide branch of human thought ought to suggest, if not to discuss.

The above was not Fermat's greatest contribution to the art of reasoning. The greatest was the Fermatian inference, characterized by Prof. Cajori as "an inductive method," but that is quite to miss its essential peculiarity. We find Fermat's not publishing his work ascribed to an "uncommunicative disposition"; but this is thoroughly unjust.

We meet reiterated here for the thousandth time that tasteless objection to Pope's monumental couplet on Newton, to the effect that the important steps of discovery do not take the world by surprise, but were led up to so gradually as to be made almost unawares. It is the worst of German taste to criticise such a couplet because it does not accord with profound historical researches, so long as it expressed what seemed to ninety-nine out of a hundred of Newton's contemporaries to be the truth. Moreover, the theory of intellectual development on which the objection proceeds is in silliest conflict with psychology and with history. No doubt a very large part of the progress of science is accomplished by industrious hammering away at plain jobs. But there is a part which cannot so be accomplished. To say no great strides are ever taken is in flat contradiction to the record. It is by no means as yet proved that even biological evolution always advances by almost imperceptible differences. It is a recognized principle of modern biology that the nature of the history of the evolution of the race may be judged from that of the evolution of the individual. Now, besides the daily growth of individuals, we see them passing through wondrous and sudden transformations. Of course, there is no absolute breach of continuity, but for that no man contends.

Be the matter as it may in the natural world, the development of thought being open to study, from both outside and inside, from the world's history and from the individual's experience, men of sense and observation ought by this time to have reached some settlement of opinion on this point; and so, perhaps, they have. Doubtless there are men who are never surprised, but whether the wise count them among their number is not so clear. At any rate, he who attempts to expound the history of science, and à fortiori the history of mathematics, without recognizing that great, startling, and revolutionary discoveries from time to time get made, will have but a wrenched, unjointed, and enfeebled account of it to offer to his readers. We sometimes hear such facts as the knowledge of the intoxicating property of ether before Morton, of a few observations of spectra before Bunsen and Kirchhoff, and the like, put forward to show that no great discoveries are startling. But these instances, if they prove anything, prove just the reverse. They show that, as Whewell said, observations are nothing to a mind unstored with appropriate ideas, and thus emphasize the importance of originality of mind, of which novelty is the product.

Prof. Cajori furnishes a list of one hundred works on the history of mathematics that will be very welcome. These are the works of which he has made use. We notice he has not had the advantage of using Boncampagni's *Bulletino*, nor the *Bibliotheca Mathematica*, as he would have done if he had worked in New York, where it is for the interest of the public that men devoted to the history of mathematics should be stationed. The Astor Library is particularly rich in this direction. We do not find on his list Weissenborn's book on the introduction of the Arabic numerals by Gerbert (1892). We remark, by the way, that one class of events to which some attention might well have been paid is that of the establishment of the several journals of mathematics.

Prof. Cajori's transliteration of Arabic is irregular and puzzling. Speaking of the celebrated algebra of Muhammed ibn Mūsā, the Khivan, he says: "The name of the author, *Hovarezmi*, has passed into *Algoritmi*, from which comes our modern word *algorithm*." The appellation he refers to as the "name of the author" is *al-Khwarizmy*, meaning 'the native of Chorasmia, or Khiva.' He writes *al-jebr* (algebra) in the form "aldshebr," putting *dsh* for the letter *jīm*; but for the native of Khojend, or the Khojendy, he writes *Al Hogendi*, using a soft *g* for the same purpose; and in writing *Abul Gud* and *Abu Gafar Al Hazin* (where "Gafar" is the Ja'afer so familiar in the Arabian Nights) he makes a hard *g* serve. He also writes *Ulug beg* where the English *g* stands in place of a second and a third letter of the Arabic alphabet (the last being the Persian gāf). This cognomen of Muhammed Tarāghāy is best written Ulugh Beyg. It means "the great lord." We read: "Creditable work was done by *Fahri des Al Karhi*, who lived at the beginning of the eleventh century." Now, there was an Abū Ghālib at that time, who was surnamed Fakhr al mulk, "glory of the realm." After this high personage, the mathematician Abū-Bekr-Muhammed-ibn-alhusain, called Al-Karkhy, named a book 'Al-Fakhry,' where the final *y* is equivalent to our termination *-ian*. It amounted to a dedication. As for Cajori's "*des*," we can see in it nothing but the German genitive article.

But these are trifling faults. What we have

a right to expect in such a handbook is an agreeable narrative of the most material events in the history of mathematics, and this Prof. Cajori incontestably supplies. The book was much wanted.

Religion. By G. de Molinari, correspondant de l'Institut, rédacteur en chef du *Journal des Économistes.* From the second (enlarged) edition. London: Sonnenschein; New York: Macmillan. 1894.

THE "Philosophy at Home" series, to which this book belongs, appears to be a series without an editor and without any definite sympathies. The volume now in hand gets an amusing interest from its translation by a devout English churchman and by its dedication to a Canon of St. Paul's. It is nothing strange to find a churchman sympathizing with an author who is hot for disestablishment, seeing that state control has been abominable to the High Church party from the Oxford Movement until now, but when a churchman can welcome such a Danaan as M. Molinari bringing gifts to the imperilled church, it would seem that either he must consider the situation desperate, or have faint appreciation of the actual contents of the casket he so gratefully receives.

It is true that M. Molinari affirms the reality of religion, and also its necessity to the social order, while for God and immortality he has words of generous appreciation and belief. But it is also true that the general contents of religious systems, ancient and modern, are for him purely fanciful. Generated by popular needs, they are good for their perennial satisfaction, subject to the law of universal change, which must not be too rigorously abetted by the men of light and leading who understand the hollowness of the given cult and dogma. Now there is something inexpressibly funny in the circumstance of a devout churchman assisting at a function of this sort, in the naïve unconsciousness of incongruity with which he sometimes opposes a clerical dictum to M. Molinari's free-and easy rationalistic vein. This sort of thing reaches its climax where the translator explains in a note that he has taken the liberty of writing M. Molinari's sacred names and pronouns referring to the Deity with capital letters, and hopes that he has not by so doing impaired the scientific character of the author's work.

M. Molinari is a political economist, and he is subject to the temptation proper to the enthusiast in any line of work. The geologist who endeavored to explain the pyramids as geological formations was one of many who believe in their own nostrum as a universal panacea. M. Molinari's temptation is to treat religion as a branch of economics, and to account for its origin and changes mainly by economic forces. His book is not therefore valueless. It will be useful as a corrective of other theories, each insisting too much on a particular cause as if it were exclusive of all others. Economic considerations have, no doubt, played an important part in the development of religion, especially in the earlier stages. But the full-grown phenomenon is exceedingly complex, and is to be accounted for only by the operation of many causes. M. Molinari always has "the good of the consumer" in his eye, and he does not think that a cheap religion implies cheap men. The expensiveness of religion has been, he thinks, one of its greatest evils. The cheapness of Christianity, as compared with paganism, did much to recommend it when it was first on trial. That disestablished religion would be much cheaper, is one of many things that recommend it to him; not one of the least.

Such broad and rapid generalizations as M. Molinari's must have many doubtful features, but his have more because of his confidence, so characteristic of the scientific man, in fields where he is least at home. In treating Judaism and Christianity he continually throws back the developed theory upon the initial stages. Those who know how slightly Satan figures in the Old Testament, and that he is nowhere in it identified with the tempting serpent of Eden, will read M. Molinari's pages on the theology of the Old Testament with blank astonishment, nor with less his fastening on the New Testament of dogmas which had no existence before the eleventh century, when Anselm was their begetter. But if M. Molinari knows little of theology, he knows even less of the sceptical temper of the time, if he imagines it will be seriously affected by his arguments for religion, God, and immortality. He has written for the ignorant and the cowardly, and not for men of honest and athletic minds. His terminology is a shifting scale, and while he opposes those who, denying the reality of religion, would maintain it for its police effect, he is practically one of them, seeing that the religion on which he relies as the sanction of morality is not religion in its reality, but religion in its panoply of dogma and superstition which have no reality. He has much to say about the progress of religion, and yet

"The old religions, it may be, are founded on legends, but new ones can but be founded only on guesses, and legends are at least authenticated by tradition and lapse of time. Moreover, the religions and the sects of the world are to be counted by millions [*sic*]. Would it not be but a meagre progress to invent one more?"

From such arguments for the *status quo* religion has, perhaps, much more to fear than from either the dogmatists or iconoclasts. These frequently are both able and sincere, and M. Molinari's book, though not without some soundness and suggestiveness, is neither able nor sincere. Clericalism — the habit of the priestly politician—he cannot abide, and the practical outcome of his book is clericalism pure and simple.

A Year among the Persians. By Edward G. Browne. Macmillan. 1893.

AFTER Curzon's encyclopædic volumes, one wonders at first at the boldness of a new author who so soon offers us nearly six hundred more pages on the same subject. At the end of fifty of them we are not favorably impressed. The introduction strikes us as unnecessary and rather foolish; then we discover that our writer is not only generally diffuse, but also badly addicted to the particular sin of inexperienced travellers, that of telling us each time he was generous to a beggar, or found it hard to sleep, or had melons for lunch. He also mentions the names of his native acquaintances in such profusion that we are totally unable to remember them apart.

However, in spite of these faults, which, after all, are venial, the book has more value than many a more readable one of its sort. The writer knew Persian before he started on his journey, and he consorted with the natives from the beginning. If some of the conversations he repeats are trivial and wearisome, they show far better the real character of the Persians than can the French speeches of a few partly Europeanized officials at the capital or polite messages through an interpreter, which is all that the ordinary traveller can report in the way of intercourse with the inhabitants of an Eastern country. Mr. Browne was not only interested in the people, but evidently willing to meet them on a footing of equality, with little of the reserve and superiority usually maintained by Europeans in their dealings with Orientals. He even went so far in becoming one of them that he came near growing into a confirmed opium-smoker, and, but for his servant, he might never have mustered the energy to leave the country. To be sure, he put up with much familiarity, not to say impertinence, but what he gained was worth it. His Persian friends seem to have talked truthfully and freely and to have been really attached to him—witness their readiness to lend him money. Their sorrow when he departed appears to have been genuine as well as openly expressed:

"'O thou who art buried in this land, . . . why should you leave this place, since you like it so well?'

"'Because,' I replied, 'I must be back at the University of Cambridge early in the autumn. My leave of absence is nearly at an end, and they have summoned me to return.'

"'I spit on the University of Gímbrij' (so he pronounced it), answered the Sheykh; and to such revilings he continued at intervals to give vent throughout the evening."

The book is of particular value to those who, like the author, are interested in religious questions. He devoted himself especially to the sect of the Babis, with many of whose members he had repeated and earnest theological discussions, and about whom he has written in previous works. The splendid courage with which the disciples of this remarkable movement have undergone the severest persecution, and the purity of life of many of them, fill one with admiration. It is possible that they may play an important part some day, as their numbers are said to be increasing (they have been estimated at one-fifth of the population). Curzon in his book has referred to their remarkable success in converting Jews. They represent a reaction against the degeneracy of Persian Mohammedanism, admitting Mohammed as the Mohammedans do Christ, but claiming that he has been superseded by the latest and greatest prophet. Curiously enough, the great majority of them regard the Bab himself (put to death in 1850) as only a John the Baptist, while they accept as their real lord his disciple Beha, who lives at Acre in Syria. The more metaphysical and mystic parts of the creed are by no means easy to get at or understand, so that the great mass of the believers have little or no idea of them. We also catch a glimpse of the Zoroastrians, a feeble, oppressed remnant clinging to a faith that for centuries was that of the whole country, and we note a curious belief among them that Zoroaster was identical with Abraham.

Although 'A Year among the Persians' is but little concerned with political matters, it contains some conclusions on social and economic questions, besides enabling us to draw more for ourselves. The author judges the natives with less severity than most people do who have seen anything of them, and he brings out a number of their good traits. Certainly all virtue cannot be gone out of a land that produces such men as some of the Babis. He has little sympathy with the schemes for introducing Western civilization into the country:

"I think that the jealousy with which the Persian people are prone to regard these railways, tramways, monopolies, concessions, and companies, of which much has been heard lately, is both natural and reasonable. These

things, so far as they are sources of wealth at all, are so, not to the Persian people, but to the Shah and his ministers on the one hand, and to the European promoters of the scheme on the other. People who reason about them in Europe too often suppose that the interests of the Shah and his subjects are identical, when, in fact, generally they are diametrically opposed."

And again: "It is more irrigation, not railways and factories, that Persia needs to increase her prosperity."

Whatever may or may not be the degeneracy of these people, they are still a highly-gifted race. It is pleasing to learn from a competent judge that, "as far as my experience goes, there is no country where knowledge commands such universal respect as in Persia"; also, "It is the fashion with some scholars to talk as if literary and poetical talent were a thing of the past in Persia. No mistake could possibly be greater. . . . It may confidently be asserted that the present century has presented a group of most distinguished poets, whose works will undoubtedly, when duly transfigured by the touch of antiquity, go to make up 'parcels and portions' of the 'glorious past.'"

If nothing else, these subjects of the Shah are at least eminently quick-witted:

"One is amazed at the ready repartees, brilliant sallies of wit, bon-mots, and 'chaff' which fly about on all sides in a convivial gathering of Persian literary men. . . . Their contempt for the duller Turks is well shown by the following story. 'It is related . . . that once the ass complained to God, saying, "Why hast Thou created me, seeing that Thou hast already created the Turk?" Answer came, "Verily, We have created the Turk in order that the excellency of thine understanding might be apparent."'"

Leadwork, Old and Ornamental, and for the most part English. By W. R. Lethaby. With illustrations. Macmillan & Co. 1893.

It is a little singular that a substance so facile as lead, and so receptive of the refinements of decorative form, should need an advocate in our labor-saving and much decorated day. Yet Viollet-Le-Duc, we believe, had much difficulty in working out the ornamental use of it in France, and Mr. Lethaby's clever book has the air of a special plea. Doubtless its very facility, and the fact that it is such a ready servant of all work, has tended to bring it into contempt, besides that wear quickly robs it of the delicacy of form of which it is peculiarly susceptible. But inasmuch as it is so susceptible, and at once finer and stronger than plaster, freer in working than iron or bronze, and practically imperishable when it is not exposed to wear, one might think that, artists' attention once recalled to it, they would be tempted often to put their own handwork into it. In past times there has been an enormous use of it in every kind of decorative work, from the lucarnes and spires of cathedrals to the equestrian statue of George I. and the figures on Louis XI.'s hatband. England, the great producer of lead, was conspicuous for her use of it, and Mr. Lethaby has accumulated in a small volume a great deal of interesting information about this use. It would be still more interesting but for a resolute division into small categories, that robs the story of some of the attractiveness which is the due of Mr. Lethaby's direct and animated style. The abundant illustrations are serviceable as diagrams, though they often fail to suggest the charm that he finds in the originals.

BOOKS OF THE WEEK.

Addyman, F. T. Agricultural Analysis. Longmans, Green & Co. $1.75.
Astor, J. J. A Journey in Other Worlds: A Romance of the Future. Appletons.
Barrett, Frank. Found Guilty. Lovell, Coryell & Co.
Clark, W. L., jr. Hand-Book of Criminal Law. St. Paul: West Publishing Co.
Dumas, A. Chicot the Jester. M. J. Ivers & Co. 25 cents.
Examination Questions in Drawing. Syracuse: C. W. Bardeen. 25 cents.
Francis, H. R. 'Junius' Revealed. Longmans, Green & Co. $1.75.
Green, Ralph. Green's Receipt Book. Portsmouth, N. H.: The Author. $1.25.
Harrison, J. E. Greek Vase Paintings. London: T. Fisher Unwin; New York: Century Co. $10.
Iverach, Prof. James. Christianity and Evolution. Whittaker. 75 cents.
Jesse, J. H. Memoirs of King Richard the Third. 2 vols. Francis P. Harper. $2.50.
Kanazin, N. N. The Two-Legged Wolf. Rand, McNally & Co. $1.
Larned, J. N. History for Ready Reference. Vol. I. A to Elba. Springfield, Mass.: C. A. Nichols & Co.
Lytton, Earl of. Lucile. New ed. Longmans, Green & Co. $3.
Marryat, Florence. How Like a Woman. Lovell, Coryell & Co.
Milman, H. D. Mr. Lake of Chicago. Street & Smith. 50 cents.

Zimmermann's Botanical Microtechnique.

Translated by James Ellis Humphrey, xii+296 pp. 8vo. Teachers' price $2 50; postage 15 cents.

A hand-book of methods for the preparation, staining, and microscopical investigation of vegetable tissues and products.

"As a work for reference in botanical laboratories of the higher class it will prove exceedingly useful."—*The Nation.*

"It is rare that such a wealth of detailed information is condensed into so small space."—*Botanical Gazette.*

"It is alike valuable for the student and investigator. The translation has been well done."—*J. C. Arthur, Professor in Purdue University.*

Crozier's Dictionary of Botanical Terms.

By A. A. Crozier, Secretary of the American Pomological Society. 8vo, 202 pp. Price $3 00.

This work attempts to define in alphabetical order all terms, both technical and popular, that are applied to plants, and to indicate those obsolete or obsolescent, and of several synonyms the one most approved.

Baltimore, Md.

MAINE COAST.

LANDS at and around CAPE ROSIER and Castine, Me., on this boldest and most beautiful section of Penobscot Bay, 50 miles nearer Boston and the West than Mt. Desert—southwesterly exposures, fine harbor fronts, bold rocks, beaches, and fine trees, broad views of mountains and islands, extended drives along the shore and among the hills, new wharves, and good daily connection by boat and rail. These lands are offered at low prices to persons intending to build and occupy. A very few hundred dollars will buy a fine high shore lot of several acres. Several tracts of from 20 to 50 acres are offered at low prices. Send for descriptive pamphlet and further details to

Beware of Substitutes and Imitations.

The Nation.

NEW YORK, THURSDAY, MAY 3, 1894.

The Week.

SENATOR HOAR has written a—for him—remarkably sensible letter to one Swift, a Massachusetts Coxeyite leader in the march of the "armies" to Washington. This passage in his letter we particularly like:

"The persons who belong to your company or to the company of Mr. Coxey, so far as they are decent and well-intentioned American citizens, are entitled to all the privileges of American citizenship. But I cannot recognize their title to speak for the American people. Five or ten thousand men have no right to dictate to the other 65,000,000, or to dictate to the Government which the other 65,000,000 have established. I hold a commission from the Commonwealth of Massachusetts, as do my colleagues in the Senate and the House of Representatives, and we have the sole title to express the will of the people of Massachusetts in national legislation until, in the exercise of their constitutional rights, they select others to supply our places. We can recognize no master except the Commonwealth itself. Certainly no body of men less than a majority of the entire people can call upon us to act otherwise than in accord with our own judgments."

The only criticism we can make on this is, that it is a pity Senator Hoar did not find out sooner that he acted for a majority of the entire people, and not for 5,000 or 10,000 men. Since 1861, there have been twenty-six changes made in the tariff, all increases. Now nearly every one of these changes was made, not at the request of 65,000,000 people, but of small parties of men, sometimes solitary individuals, sometimes of little delegations representing one industry. Every one of them Senator Hoar approved of, either in the House or Senate, although he knew well at whose instance the tinkering took place. They were also approved of by all the Republican organs.

The talk about further changes and compromises in the tariff bill, particularly in the income-tax clauses, doubtless has some foundation, but mainly foreshadows what will be done in the conference to which the bill will ultimately be sent, and in which the final form will be given it. These minor details do not greatly matter at present. In any conceivable form the bill will have valuable features and be a great improvement over the McKinley bill. It will doubtless be thickly scarred also with weak "concessions" and absurdities. But the passage of even a sadly imperfect bill will have the effect of breaking down the hideous superstition to which the Republican party has enslaved itself, and tried to enslave the country, for the past dozen years. Manufactories will not be hermetically closed. Farmers will continue to cultivate the soil and merchants to buy and sell, and railroads and steamships to go on with the business of transportation. After a brief experience of the fact that the industry of man and the national resources of the country can produce prosperity and happiness independently of the all-wise fiats of a McKinley or a Harrison, it will be possible to discuss questions of taxation and settle its details like rational beings, and not like frightened savages cutting themselves with flints before an ugly idol. It is because tariff-reformers look confidently forward to such a time that they are comparatively indifferent to the imperfections of the bill that will usher it in.

The dignified Senate gave another exhibition of horse-play on Friday, when the two parties took to applying the methods and phraseology of gamblers to each other. It is idle to inquire which side got the best of the ignoble contest, as it was discreditable to both alike. The only conclusion to be drawn from the schoolboy defiances and taunts hurled back and forth between the venerable leaders of debate is, that neither party is ready to go about the work confided to them in a businesslike manner. Not a single paragraph of the tariff bill has yet been brought to a vote, though, under pretence of discussing the first clause, Senator Higgins was allowed on Thursday to work off a long and belated speech on the Hawaiian question. No one called him to order or insisted that he should speak to the question. Such a stultification of itself by a body elected to transact the country's business it would be hard to parallel. Happily, there is a good prospect now that the instinct of self-preservation will do for the Democratic Senators what reason and a sense of duty should have done long ago, and that they will soon flounder out of their slough of despond. Soult used to complain that he could not whip the English, in spite of the efforts of their generals to help him do it, and the Republicans will soon have to admit that they could not beat the tariff bill, even with the aid of the Democratic leaders in the Senate.

That was an excellent protest against the gerrymander which ex-President Harrison made in his speech before the Indiana Republican State Convention on April 25. There ought to be, as he said, "equality of men at the ballot-box, the abolition of all legislation that tends to enhance the power of one man by abstracting from the just power of another," which is the effect of the last redistricting of the State by the Democrats. But it is greatly to be feared that Republican indignation against gerrymandering tactics in Indiana will cool if the party carries the State next fall and gets a chance to pass a redistricting bill of its own. Such has been the experience of the Ohio Republicans. They could not express their horror at the injustice shown by the Democrats when the latter gerrymandered the congressional districts four years ago, but they are now carrying through the Legislature a bill redividing the State into judicial districts, which is so framed as to give their party tremendous advantages. At the last election the Republican vote was only 10 per cent. larger than the Democratic, but under this bill the Democrats could secure only thirteen out of the seventy-seven judges, the counties being so arranged that it would require 31,700 Democratic votes to elect a judge, and only 6,500 Republican.

The Indiana Republicans patriotically denounced the "hauling down the American flag at Hawaii," despite the fact that the good Republican President who "disavowed" the action of his minister in raising it, was present in the convention. Apropos of this, the Honolulu correspondent of the Boston *Transcript* gives the following account of an incident which took place in connection with the hauling down:

"Mr. Blount served one of them just right when the Hawaiian-born white citizen called on him and, after other inappropriate and disrespectful language, said, 'But you have hauled down our flag.'

"'I never have touched your flag; there it is,' pointing to the ensign of Hawaii; 'that is the flag under which you were born; you are an old man now; that is the flag under which you have always lived; and there is the door.'"

We wish to make an appeal for American sympathy for the heroic band of patriots in Hawaii. They need it now far more than they did when the flag which was not theirs was hauled down. Stevens said that incident produced the most intense feeling among them, but when asked to specify manifestations of the feeling, said that it was "intense silence." That silence is broken by our old friend, the Rev. Sereno E. Bishop, who tells a moving tale in last week's *Independent* about the "stormy outlook" before the Oligarchs. They have arranged a nice little constitutional convention, to which eighteen elected delegates will be admitted, over against nineteen of themselves who are to sit without any election. As an added safeguard, no one can vote for delegates, and no delegate can take his seat, unless he makes oath to do whatever the Oligarchs order. This is a fine stroke of constructive statesmanship, but the real difficulties lie elsewhere, the Rev. Sereno tells us. The sugar planters are insisting that there must be no anti-Chinese laws, and "sugar dominates." On the other

hand, all the young imported patriots are insisting that the Chinese must go, and so also are the Portuguese, who naturally hate all foreigners. Then there is a "strong third party" making trouble—the Japanese. They insist upon their right to vote under their treaty, but "their contention is strongly opposed." How to draw up a constitution to suit all these fighting factions is no slight problem, nor is it easy to get such a constitution accepted by popular vote. All this leads the Rev. Sereno to say: "It is easily seen why we have so earnestly desired to become at once a Territory of the United States, which would apparently have obviated the present difficulties."

The Populist Governor of Kansas is now in trouble with "Labor," notwithstanding all his demagogism. There is a bureau of labor statistics, and the commissioner has just issued his annual report. He seems to have regarded it as his duty to be a "calamity shrieker," and he has devoted most of his space to an attempt at showing that farming in Kansas does not pay. The State Federation of Labor is disgusted with his course. It has issued an address "arraigning" Gov. Lewelling for not keeping his promise to appoint as commissioner the "candidate having the preponderance of endorsement of the organized workingmen of the State," and instead turning the bureau over to "a mere political striker"; and condemning this striker for having totally disregarded the true purpose of the bureau, and issued a report which tries to make out that the chief industry is a failure, and which is consequently calculated to repel immigration and discourage the investment of capital in the State. Worst of all, no member of a labor organization has a place in the bureau, and it is "strictly a non-union establishment." For all of which reasons the Federation calls upon workingmen to "do their duty by themselves by endeavoring by their votes and influence to prevent the renomination and election of L. D. Lewelling."

The Governor of Indiana has made a humiliating exhibition of himself. Indiana has laws under which the leaders of the Coxeyites could have been arrested on entering the State, and the band could have been broken up. Yet Gov. Matthews publicly announced that the proper policy was to treat the army "in a manner that will hurry it out of the State as soon as possible," and leave some other State to deal with the gang of loafers and thieves. Naturally enough, the Coxeyites grow more overbearing as the authorities grow more truckling. "General" Aubrey said to an Indianapolis reporter: "We're getting along all right. The people are giving us what we need now, some of them just for the fun of the thing, and by and by they'll give to us because they have to."

The Gospel was preached to the people of Davenport, Ia., on Sunday week by the Rev. A. M. Judy, a Unitarian clergyman, in a way to open the eyes of the careless and indifferent. A division of Coxey's army was approaching the city, and Mr. Judy seems to have considered that the highest obligation of Christianity was the proper treatment of these men. He pointed out that this organization was levying forced tribute on the country, raising means by a menace, and that everybody who contributed to their support was guilty of promoting anarchy. He insisted that whatever help was to be given to them must be given to them as private individuals, when they were ready to break ranks and go to work—not while they remain massed as an army. He denounced Council Bluffs and Des Moines as having been "disloyal to the flag of their country, and so selfishly truculent that they helped on a mischief which they knew to be a mischief," and expressed the hope that the city of Davenport would not "stain her fair name by following in their contemptible footsteps." He enforced the lesson by appealing to the example of Christ, who "did not complacently help on what he believed to be wrong, but hurled at it his terrible anathema." Altogether Mr. Judy gave the timid politicians a good deal to think about.

The Indian Rights Association has addressed a strong protest to the House committee on Indian affairs against the proposal to abolish the office of superintendent of Indian schools, and to cut down the force of inspectors and special agents charged with making reports to the secretary of the interior on the condition of the Indian service. The proposal is understood to have sprung out of Congressman Holman's perverse habit of economizing in the wrong place for the sake of wasting elsewhere. It is peculiarly absurd at the present moment, coming so soon after the President's admirable appointment of a superintendent, Dr. W. N. Hailmann. He has already gone to work with the energy and ability that his former career as an educator gave promise of, and it is the Association's belief that, if he is continued in office, the Indian schools will soon compare favorably with the "best public-school systems of the country." It would certainly be the height of stupidity, if we are to continue the Indian schools at all, to cripple if not destroy their efficiency by taking away their competent superintendent.

It is seriously to be hoped that the bill now before the Senate of the United States "to set apart certain lands, now known as the Pacific Forest Preserve, as a public park, to be known as the Washington National Park," will become a law. It is hardly too much to say that this proposed park will in course of time be even more famous and more frequented as a resort for pleasure and health than those other two great national parks, the Yellowstone and the Yosemite. For the new park will have for its centre of attraction Mt. Tacoma, presenting in its isolated grandeur a more imposing spectacle than any group of Swiss mountains. The Appalachian Club of Boston and the American Geographical Society of New York have promised their coöperation, and the San Francisco Sierra Club has drawn up a memorial in which the attractions of the proposed park are well summed up. The time to save this region in all its beauty and grandeur is now, before vandals and speculators have marred any part of it; for although Mt. Tacoma is only sixty miles away from the cities of Tacoma and Seattle, there are as yet no hotels or roads or even trails, and a trip to the park involves a camping outfit and "roughing it." A proposed new railway will, however, bring the park within two hours' ride of these cities. The proposed park will be about forty miles by thirty-eight, including about a million acres, making it somewhat larger than Rhode Island.

Judge Nott's recent decision that the President may lawfully sign a bill after Congress has adjourned, provided he does so within the ten days allowed him by the Constitution for consideration, has recalled the fact that the original Constitution of New York contained a provision on this subject almost identical with that of the federal Constitution, and that the court of last resort ruled that the Governor could exercise the power after the adjournment of the Legislature. Indeed, it was held in this State that he could give his approval not only within the period of ten days, but up to the end of the term for which the Legislature had been elected. The Buffalo *Courier* finds that bills were thus approved by the executive and became laws several months after adjournment. This license gave the Governor a great power, which was obviously open to abuse, particularly when he was a candidate for reëlection; and the power of approval was, therefore, restricted by one of the constitutional amendments of 1874, which contains the provision that no bill shall become a law after the final adjournment of the Legislature unless approved by the Governor within thirty days after such adjournment.

The *World* is doing almost the most valuable work that any newspaper can

now do for this city in publishing biographies of leading Tammany men. It had one of "Barney" Martin on Sunday, filling a page, which we advise everybody to tear off and stick up in his office or in his workshop. It contains also pictures not only of "Barney," but of persons with whom he is said to have associated at one part or other of his checkered career, such as "Red" Leary, "Billy" Porter, "Jack" Irving, "Red" Kate, "Bill" Vosburgh, "Shang" Draper, and John Walsh, the portraits having come mainly from Superintendent Byrnes's collection. Nothing is so necessary for the city at this crisis as Tammany biographies. Nothing does the gang fear so much, for most of them sprang into public life from the gutter or the jail. Impunity has caused them to throw off restraint. Both Grant and Gilroy, thinking the public did not care, laid aside all disguise, called the riffraff around them, and made judges and commissioners and what not, of the worst of them, and snapped their fingers in the faces of the people. They are beginning to run away now, and, as Dr. Parkhurst has well remarked, the fleeing "wicked make better time when some one is after them." The *World* biographies, if kept up with the fulness, accuracy, and pictorial embellishment displayed in this last one, will develop, we solemnly believe, a "two-forty gait" in the whole crowd.

Gen. Swayne is credited, in an interview in the *Times* on Thursday, with the following remark:

> "Mayor Gilroy is probably as good a man as any one could find in Tammany Hall. He is an honest man personally, and has done as well in the mayoral chair as any man could do who was trying to serve two masters."

We were very sorry to see this, for probably nothing could better promote the rascality and general wickedness from which this city is suffering than a definition of dishonesty which would confine it to the actual stealing of money out of the treasury. It is only in abstaining from simple theft—that is, embezzlement or petty or grand larceny—that Mayor Gilroy can be called "an honest man personally." Is not the abuse of a great trust for the basest purposes one of the lowest forms of dishonesty? What kind of dishonesty is it which is not "personal"? Was not the appointment of a man like Barney Martin to the place of deputy commissioner of public works just as dishonest as to steal Barney's salary and hand it over to him? Was not the appointment of Mike Daly to be commissioner of public works, in all probability with an understanding that he would divide his salary with some one, a fraud on the public treasury? Was not the placing of Martin on the judicial bench a fraud of the grossest kind on the public, and especially the poor of this city? Was not the reward of Scannell, the murderer, with a fire commissionership a swindle on every decent man in the community? Can a man live for years in close intimacy with Croker, knowing his character, knowing the sources of his income, and doing his bidding, and be called "an honest man personally"? Can any man live on the inside of Tammany Hall and form part of its management without daily winking at crimes against God and man of the most shocking character? Nothing does more for our degradation than the readiness of men like Gen. Swayne to condone the lives of these deplorables when they call themselves mayors and commissioners. Politeness towards them is, however, an offence against the State.

Lord Rosebery has again been expressing himself on the Irish question in a way to alarm the anti-Parnellites and to delight the suspicious and implacable Parnellites. To speak of England's being "weary" of the long discussion and struggle, and to hold out a bait to the Liberal Unionists, is to fly in the face of Irish tactics and the policy of Mr. Gladstone. The Irish and Mr. Gladstone have contended that England would have to keep on being wearied with the Irish question until it was settled in a way to still the Irish agitation and obstruction, and have dwelt upon English weariness and rage over the Irish difficulty as the great argument why some comprehensive settlement must speedily be sought. Lord Rosebery appears to be feeling around for some stirring English issue which will give him back the Birmingham Liberals and, if possible, a majority independent of the Irish. That he is counting upon substantial help from the Radicals and Socialists seems clear, but he will find aid from that quarter most illusory. Sir Charles Dilke, in the course of his rather patronizing comments on Lord Rosebery's Government, in the May *North American*, has a truer eye for the probable future when he says: "The Independent Labor party are no doubt destined to weaken the Liberal party at the moment, and to upset it in the long run."

The disestablishment of the Welsh Church has for some time been a fixed article in the Liberal programme, but this did not prevent violent attacks on the bill for that purpose introduced on Thursday by Mr. Asquith. To describe the bill, as it was described by one outraged Tory, as a bill for "the legalization of sacrilege and plunder," speaks more for dread of the bill as the entering wedge of total disestablishment than for its immediate effects. Even the partial "church census" of Wales could not make out that the Established Church had more than a ludicrously small hold on the people of Wales. Mr. Asquith stated the exact truth when he said that the vast majority of Welshmen looked upon the Church of England in Wales as an "aggressive and sectarian power." Its disestablishment is sure to come before long, as its disestablishment in England seems certain to come in the long run, when the new English democracy takes the bit in its teeth; but whether it can pass the Lords in the present Parliament is pretty doubtful.

The worst charge against protectionism is not that it forces people to buy goods which they do not want, and raises prices on the poor, but that, as Burns said of licentiousness, "it hardens a' within, an' petrifies the feelin's." It makes men unscrupulous and audacious, and unblushing in confessions of their helplessness and dependence. We have seen within a few days the readiness of some of the Philadelphian protectionists to make common cause with the silvermen and Populists, in return for help in defeating the Wilson bill; which is probably the lowest depth to which they have yet gone. But another curious illustration of the same thing has just occurred in Paris. The failure of the State to protect authors and painters is a grievance which the manufacturers have never taken up. America is, in fact, the only country which has sought to protect its authors and artists against foreign competition, but it has done so in a very feeble and halting way. In France nothing has been done, and the authors have at last begun to bestir themselves. The Authors' League have just addressed a long letter to the Minister of Public Instruction, setting forth the oppression under which they labor at the hands of publishers, and calling attention to the enormous number of admirable things in literature and in science which have probably been lost to the world for want of a publisher, or the means of doing without a publisher. They therefore ask that the Government shall take sole charge of the *Bulletin de la Bibliographie de la France*, a sort of trade journal containing the publishers' announcements, and shall print and publish it at the public expense, and insert therein gratuitously all announcements of books which the authors may send, and shall require the insertion of its contents, also, in all the journals of the country once a week. The *Temps* suggests that if this gratuitous advertising be furnished to authors, it should also be furnished to vine-growers and all persons doing a poor business, and asks why the authors do not demand the printing and publishing of the works themselves by the Government—which would, in fact, be a very effective mode of protection, provided the proceeds of the sales went to the authors.

THE REPUBLICAN TWEEDLEDUM AND THE DEMOCRATIC TWEEDLEDEE.

THE old-fashioned remedy for abuses or mistakes — turning one party out and putting the other in—is no longer open to the American people. In whatever direction we look, we seem to find both parties advocating or promoting the same things. When we gave the Democrats a majority in Congress, we thought we were securing a considerable reduction of the tariff and putting a stop to silver purchases, and generally to the silver craze. As soon as Congress met, we got for our pains a small reduction of the tariff and a heavy income tax, or, in other words, a continuation of our burdens in a new shape. We thought, too, we had, with the repeal of the Sherman law, got rid of the silver craze, but hardly had this been done when the Republicans, who were supposed to be our main reliance against the craze, revived the agitation for it under the name of a demand for bimetallism. Nothing is more necessary to-day for the revival of our prosperity than the restoration of foreign confidence in our securities, and the return of foreign capital to our shores. Nevertheless, both parties seem to be engaged in a neck-and-neck race to see which shall do most to shake the confidence of the civilized world in the stability of our institutions and the strength of our government.

Nothing crazier or more anarchical has probably ever been produced in a civilized legislature by a responsible, educated man than Senator Lodge's proposal to discriminate against English imports, in order to coerce England into changing the standard of value under which she has done business, and almost carried on the commerce of the globe, for one hundred years. It sounds like some of the decrees of the French Convention directed against "Peett and Cobourg." This might have passed, however, as the trick of a solitary demagogue casting around for votes in troublous times. But the Republican convention of Indiana has actually caught Lodge's idea and improved on it. "We believe," say these sages,

> "in a currency composed of gold, silver, and paper, readily convertible at a fixed standard of value and entirely under national control; and we favor the imposition of increased tariff duties upon the imports from all countries which oppose the coinage of silver upon a basis to be determined by an international congress for such purpose."

This, of course, is pure wind, but abroad it will pass as the well-considered resolve of influential thinkers, because it was preceded by a speech from no less a personage than ex-President Harrison, in which he again calls for an international agreement to assure the "continued equality" of silver with gold, and assures his audience that he sees signs that England and Germany are coming over to his view. No wonder the delegates thought that, under these circumstances, it would be a good thing to apply custom-house pressure to England and all others like-minded. President Harrison boldly avows his continued belief in the anthropomorphic view of silver, for he wants to restore it to "a place of honor among the money metals of the world." Every intelligent man knows what mischief this view has done. It is impossible to make a good standard of value of anything which, besides being used as a measure, has to receive "honor" and "justice" like a sentient being. To have an elderly lawyer who has filled our chief magistracy producing it, of course makes every man all over the globe who knows anything of trade or finance shake in his boots, if he has money invested in America. If the world heard that the worship of the yardstick, as a fetish, was common among American legislators, who would send goods here to be sold by measure?

There is every sign, in fact, that the Republicans are now bent on making friends with the Western and Southern silver-men, in return for support of the tariff, and are ready for any absurdity which may seem necessary for this purpose. They are all for bimetallism, they say, and are as good "friends of silver" as the silver-men themselves. There is a good deal of alarm through the country to-day over the Coxey movement. That movement means that the enemies of property and order are learning to make organized attacks on both, and they will be encouraged by finding that they have to deal with two parties, too eager for their votes to offer them any serious resistance, and with governors and sheriffs who think they have a political future. To those who "view with alarm" this state of things, let us say distinctly that bimetallism differs in no respect as a maker of mischief and a promoter of anarchy from pure silverism or pure greenbackism. Coxeyism has been produced by thirty years of protectionism. The workingmen of America have been taught in eight Presidential canvasses that their wages depended on their vote, that their prosperity depended on legislation to raise prices.

This was bad enough, but what causes these "armies" to march on Washington and seize trains to help them on their way, is the belief that Congress can make money, or, in other words, can give value, for purposes of exchange, to things which have no value, and raise the value of things which have some value. This is what greenbackism and silverism and Populism and Coxeyism mean. These tramps are going to Washington to make Congress issue paper money or silver money. Those who think they can be appeased by offering bimetallism, and demanding European coöperation in making bimetallism, are singularly ignorant of delusions which their own preaching has begotten. The poison which produces all these financial fallacies—the belief that the Government can give value to valueless things, and keep things of small value on an equality with things of large value—is to be found in the bimetallic cup in just as large quantities as in the greenback and silver cup. Once you convince a Coxeyite or a Populist of that, your proposals to wait for foreign coöperation, and your doubts about the effect on foreign exchange of any lowering of our standard, become in his eyes so much vapor. Hardly any of these inland statesmen know anything about foreign exchange, or about the laws which regulate the movements of specie. It is not many years since a man, afterwards a judge of the United States Supreme Court, asked, talking of this very matter, "What have we to do with abroad?" We doubt very much if ex-President Harrison to-day sees, any more than Coxey, what foreigners have to do with our money, and why we should not have truly American money for our own people.

Now that our currency has got firmly into politics, and that the great delusion is spreading over the world that the standard of value can be settled by the popular vote, and 50 per cent. be added to the value of any commodity by international convention, there is only one thing for the friends of civilization to do, and that is to oppose Government meddling with the metallic currency in any shape or form, except to stamp and weigh. We shall probably come to this eventually through great hardships and convulsions. But this is the way in which democracy learns its lessons about nearly everything as well as currency.

WHO IS RESPONSIBLE FOR COXEY?

A CONTROVERSY was sure to arise as to which of the two parties was responsible for the "industrial armies" now in the field, and it has arisen. According to the Republicans, the "armies" are distressed and thoughtful citizens who have been thrown out of work by the Wilson bill, and are coming to Washington to lay before Congress their "views" on the existing financial situation. This way of looking at them has been prominently produced by ex-President Harrison, and was really endorsed by the thirteen Republicans, including Hawley, who voted with the four Populists last week in favor of a motion that a committee of nine be appointed to meet the Coxeyites on their arrival, as a number of citizens in an organized body coming to Washington "for the purpose of personally presenting to Congress their views with respect to pending and prospective measures of legislation." Stronger encouragement to tramps to march on Washington in armies could not be given, short of appropriating money to feed them on the way.

The Democratic view, on the other hand, is that the Coxeyites are bands either of lazy men or of men unavoidably

out of work, who march to Washington because they have been taught by the Republicans that the Government ought to take care of them, and that there can be no prosperity in this country without Government aid. The *Tribune* naturally resents this theory bitterly, and stigmatizes Secretary Morton as a "reckless demagogue" for calling the Coxey army a "large kindergarten class in protection." It says "the Republican party is not responsible for the present outbreak of lawlessness, social restlessness, and socialistic discontent in nearly every State in the Union." Now, if the large-minded editor of that paper would allow it to answer questions, its responses to the following would, we are sure, bring out the truth, and the truth would be as clear a case against the Republican party as was ever laid before a jury:

(1.) Have you not, ever since 1865, been telling the workingmen all over the country that the amount of their wages depended on the result of the Presidential election, and that, in voting for your man, they would be putting money in their pockets?

(2.) Have you not, through every form of human expression, also taught them that it was the most solemn duty of Congress to lay such taxes and to pay such bounties as would enable all sorts of business to make good profits; and have you not represented to them that, in default of such Government aid, no business could prosper; that, in short, the chief function of Government was to enable industrial enterprises to employ plenty of men at good wages?

(3.) Have you not, since the present crisis began, ascribed it wholly to the belief that Congress would modify the McKinley bill, thus making it appear that without the McKinley bill the country would go to the dogs?

(4.) Has not your chief, ex-President Harrison, declared within a few weeks, in one of his thoughtful speeches, that it was the duty of the Government to find work for the unemployed?

(5.) Have you not also maintained for thirty years that when a manufacture did not flourish in America, it was because it did not get enough help from Congress, and have you not always advised the owners of such enterprises to go to Washington, see the committee, and get the prices raised?

Were we allowed to go before a jury in support of these charges, we would produce such overwhelming proof from *Tribune* articles and from Congressional speeches that conviction would be certain. Is it not, therefore, absurd to blame the workingmen or the tramps for going to the place, and to the body, from which only, you have always assured them, comfort and prosperity could come? It must not be forgotten, too, that this tendency of everybody who is "down on his luck" to go to Washington for relief is not an American tendency at all. It never showed itself before the period of high tariffs. From 1789 to 1860 we had a large population of pioneers along our Western border undergoing extraordinary hardships, but the last thing they thought of was asking anything from the Government except a good title to their farms. When they found their toil inadequately requited, or a fit of restlessness came over them, far from marching on Washington, they plunged deeper into the Western wilderness, without other dependence than their rifles and their axes. In truth, the strong individual courage and independence of the American was the most famous trait of the national character. Thirty years of protection have made him an irrational, whimpering nursling of Congress and the Department of the Interior.

We ought not to conclude without reminding our readers that they will find, in nearly all the tariff-reform publications since 1865, warnings of the change which the protective system would work in the popular attitude towards the Government, and of the intensely socialistic tendency of protectionist teachings. What we are now witnessing, both in the Populist movement and in the Coxey marches, has been predicted with more or less clearness in them all. If the people could have listened to the protectionist orators and editors for two generations, and have believed them, without concluding that the Government owed them a living, it would show that the human mind in America had undergone a great change. But it has undergone no change. The protectionist gospel has worked its natural and legitimate results. If it is a true gospel, we ought to be all in Washington to-day loading up the Republicans with our "views."

SOCIALISM AND THE CLERGY.

A GREAT many clergymen have been preaching and writing about socialism of late. This is only natural and indeed commendable. Nothing more clearly marks the pulpit of the day than its humanitarian spirit, and it would be truly strange if all the current talk about a diseased society and social wrongs should not have greatly affected the clergy, in whom sympathy with all forms of suffering and misfortune has become so highly developed. No one can object to their discussing these questions in sermons and magazine articles and books, but we think the public has a right to expect that they observe the fitness of things in such discussion, and not go about it in a way to do more harm than good.

We think one trusty guide for them which the fitness of things suggests, is the rule that they should address themselves to the audience whose ear they have, and not to an audience whose ear they have not. Their customary hearers know how to take them, how to allow for their rhetoric and how to interpret their phraseology; while others may be puzzled or alarmed or inflamed by the same observations that leave their regular congregations indifferent. Now it seems to us of great importance for the Protestant clergy to remember that the classes whose ear they have are the well-to-do classes. They themselves admit and lament that they have lost the ear of the working classes as a whole. On their own showing, therefore, they ought not to take positions and endorse opinions before the rich which, when filtered down second-hand to the poor, shall serve to arouse the anti-social passions of the latter.

To take a specific case, by way of example, what we mean can be understood by turning the pages of the little book called 'The Christian Society,' lately published by the Rev. Prof. George D. Herron. He appears to be a man of most estimable character and intentions, but he has often fallen into the mistake, we think, of forgetting what his real audience is, and what it needs to be told. When he says, for instance, that "civilization has no power within itself to secure justice," that "it is built upon falsehood," has "a more dangerous foundation than dynamite," and "carries in it the elements of anarchy," he ought to see what the effect of such language will be on his immediate hearers, and also what it will be upon those far-away auditors to whom it afterwards goes. What the former will say is: "How earnest Mr. Herron is!" or "He gave us a very eloquent discourse," or "He means well, but he doesn't know what he is talking about." They will express these or similar opinions, and go about their business as before. But when these sentiments of his make their way down to the classes in whom envy and social unrest and wild theorizings about "justice" and the social order are all in a ferment, what will their effect be—what but to confirm them in the view already urged upon them by reckless socialist agitators, and which they will now say is admitted by one of the rich themselves, that the distribution of wealth is all wrong, and that the rich are robbers who come by their wealth dishonestly and should be made to disgorge on the spot?

The mistake is analogous to the one which Messrs. Andrews and Walker are making in their silver propaganda. They think to educate the East, but they are only inflaming the West. The East is a hardened old parishioner of theirs, and has learned to shed their silver gospel as a duck does water. But the West pricks up its ears at the sound of their sensational preaching, and calls out unctuously "Amen!" "Praise the Lord!" at their comforting doctrine.

Then it goes off on its week-day business of buzzing about Washington with schemes of cheap currency, each more preposterous than the last, and all the while points to Brown University and the Massachusetts Institute of Technology as the homes of its "thinkers."

The corresponding error of the socialistic preachers is all the more lamentable inasmuch as they have a real and great opportunity of doing good to their immediate audience, instead of doing harm to their remote audience. If they would address themselves to the task of rebuking the ostentation and barbaric luxury of the class whose ear they have, they would do more towards healing social discontent than all their theorizings about "justice" and "the ethical functions of the State" will ever accomplish. Bishop Potter had some excellent remarks, not long ago, on the evils of the senseless profusion and elaborated elegance of our wealthy classes. These are the things which excite the cupidity of the discontented. They do not want the rich to divide up books and paintings and music with them, but the things they fix an envious eye upon are the fine clothes and the luxurious equipages and the lavish banquets, and all the silly show which wealth can make when it gives its mind to it, as, it must be confessed, it does pretty steadily. But the preachers have access to one hundred such social offenders to one working man they can reach. Let them speak to their audience. Let them insist more than they do upon the duty of simplicity, and the sin of over-elaboration, of life; let them rebuke, by precept and by practice, the profuse display of wealth, and fearlessly declare it, as it is, a crime against the social order, and they will find the strength and time needed to keep up a fight of that kind so great that they will have to leave disquisitions on "justice" and the "scientific basis of society" to other, if less competent, hands.

PAUPER IDLERS.

"THE wealthy idler we already know well," said Victor Hugo in the National Assembly; "you have created a person a hundred times more dangerous both to himself and others—the pauper idler." He was referring to the national workshops established by the provisional government of 1848, and which, he declared, had proved a "fatal experiment." The decrees ordering the opening of these *Ateliers Nationaux* went upon the most approved doctrines of our modern collectivists. The provisional government solemnly announced on February 25, 1848, that it bound itself "to guarantee the existence of the workman by means of work," and "to guarantee work to every citizen." On February 28 it declared, in terms which Bellamy and Coit and Coxey could not improve upon, that "it is time to put an end to the long and iniquitous sufferings of the workers"; that "the question of work is of supreme importance," and that "means must be at once devised to guarantee to the people the legitimate fruits of their toil."

As the surest way to make good all these "guarantees," the national workshops were established. All the conditions were as favorable for the success of the experiment as could be asked. The officials in charge of it were convinced and enthusiastic socialists. The workingmen engaged in it were intoxicated with the hopes of a new era which the new system was to bring about. Yet the whole thing proved a miserable and disastrous failure. An impartial account of this classical experiment in state socialism has great pertinence at this period, when the Fabians are abroad in England and the nationalizers are flourishing like green bay trees in the Old Bay State; and such an account may be found in the essay which Mr. St. Loe Strachey has contributed to the book called 'A Policy of Free Exchange,' which the Appletons have just brought out in this country. From contemporary documents and witnesses he shows in the clearest light what was the method and what were the results of this famous attempt of the State to guarantee work, and gives us a sure indication of the pit into which our latter-day Louis Blancs would cast us if allowed to solve the problem of poverty in their delightfully easy fashion.

The system, as described by Émile Thomas, who was himself president and director of the national workshops, and a firm believer in them until the hard fact made shipwreck of his faith, was for all those who wished to accept the Government's offer of work to make proper declarations before the officials of their *arrondissement*. Thereupon orders of admission to a national workshop were granted them. If they found work in any of them, well and good; if not, well and good also, as thirty sous a day could be drawn while waiting for a vacancy or for some work to turn up that the applicants were able to do. Thirty sous a day, as Mr. Strachey remarks, is not high pay, but it was to be had for doing nothing. And besides, bread was distributed to the families of the workingmen in proportion to the number of children. On these terms the Government found no lack of workingmen. In the Faubourg St. Antoine alone they were enrolled and certificated at the rate of a thousand a day. By the middle of June, 125,000 were enrolled in the whole of Paris, representing, at four to a family, 600,000 persons, or more than half the population of the city. Never was poverty abolished at such a rate.

But profits and industry and self-respect were abolished too, and even at thirty sous a day the Government found that it was paying too dear for the millennium. The correspondent of the London *Economist*, then in Paris, gave an edifying description of the way the thing was working in one typical case. This was the national tailor-shop set up in the Hôtel Clichy, transformed with great propriety from a debtors' prison into this happy home of the State's workingmen. The Government furnished the building rent free, and also provided the capital. It at once placed also an order for twenty-five thousand uniforms for the National Guard, with more for the Garde Mobile and the regular troops in the background. Then inquiry was made of the contractors who had formerly done the work, and it was found that they had been paid eleven francs a uniform. Out of this they had paid rent and interest and made a profit. What a fine thing it would be to give to the tailors the "legitimate fruits of their toil," when the Government would pay the rent and furnish the capital and give to the workingmen all the profits. The thing was entered upon amid enthusiasm on all hands. A "living wage" was paid the men pending the completion of the contract and the division among them of the magnificent profits. But, alas! when the day came for figuring up, it was found that each uniform had cost sixteen francs instead of eleven, and the only problem was how to divide a minus quantity.

The reason is not far to seek. As Senior said, with his eye on this very phenomenon, "All eleemosynary employment, all relief work, all parish work, is in fact nominal." The report of the commission appointed by the French Government to inquire into the operation of the national workshops was explicit on this point. At the very moment of recommending the appropriation of enormous sums to go on with the experiment, it had to admit that "the Revolution, which found the workmen of Paris contented in their proper sphere, has been, by treating them like spoiled children, the cause of that change in their character which makes every one now dread the excesses of which they may be guilty." What those excesses presently ran into every one knows. To avoid bankruptcy the National Assembly was forced to close the workshops. The workmen rose in fierce insurrection, and the blessed socialistic experiment came to a close with the killing of 12,000 men to restore order and sanity.

We know that it is a waste of breath to cite historical experience in the presence of Coxey or the creators of Coxey, Harrison and McKinley, and the thirty years of Republican paternalism. They are making history, not studying it. But Mr. Strachey has done well in giving his story of the way in which so-

cialism cured all the ills of society in the year 1848 in France. He will convert no Coxeyite, but he will lead many to agree with him in his "plain reasons why plain men should not be Socialists. It is not because Socialists are innovators or agitators, or preach things contrary to the Book of Daniel, or are this, that, or the other, but simply and solely because socialism is nonsense."

CASTELAR AND REPUBLICANISM.

THERE is nothing particularly novel about Castelar's recent declaration in favor of continuing the Spanish monarchy as promising the best government for Spain now attainable. This is little more than a reiteration of his purpose to support Sagasta and the Liberal party, made known at the last general election, and is perfectly in line with what he has pretty consistently said ever since 1873. Yet a storm of vituperation has broken on his head for this last utterance. When he has said before that he did not see his way clear to a republic in Spain under existing conditions, he has been forgiven by all but the handful of furious Spanish republicans. But now he has gone further and actually spoken a good word for the monarchy, and instantly the press of this country has let loose on him the epithets of recreant and traitor, while the Radicals of France are black in the face with execrating him.

This outburst is a curious exhibition of what we may call divine-right republicanism. It is, in fact, the superstition of republicanism, comparable to the old superstition of monarchy, which says that it matters not how a government works, how well it secures or how far it is from securing at all the great ends of all government, but insists on one form of it as of itself inherently and necessarily better than all others. This is nothing more nor less than the application to a republic of the doctrine of divine right, and a revival of the intolerance with which kings, ordained of God as they complacently believed, looked upon the beginnings of representative government.

All this strangely omits to inquire what are the actual facts in regard to government and its operations in Spain. When Castelar says he favors a continuation of the monarchy, does he mean absolutism? Nothing of the kind. He means the present representative government of Spain, with universal suffrage, trial by jury, the freedom of the press and of religion. It is hard, in fact, to see what particular blessings a republic would bring to Spain. She already has the political boss in his most offensive development. Mr. Lowell, when minister in Madrid, was struck with the flourishing state of the spoils politician in Spain, and affirmed then that we had nothing to teach the effete monarchy in that particular. The crown is practically shorn of all powers except those of ceremonial. If the monarch does not behave himself, he will be bundled off his throne, as Isabella was in 1868, or have it made so uncomfortable for him that he will gladly resign it, as Amadeus did in 1873. How the country would be better off merely from having a President, it is hard to see. Indeed, those whose memories go back to the succession of factional and helpless presidents of the short-lived republic of 1873 will be slow to say that there was any saving grace in those officers as such. The United States gave a speedy and effusive recognition to the new sister republic, but she was a very weak sister, who needed something more than recognition to save her, and soon expired of inanition.

As far as Castelar's personality is concerned, there is undoubtedly a peculiar significance in the chilling of a republican enthusiasm so ardent as his was for many years. Upon no prominent European, probably, did the movement of 1848 make a deeper impression, and in no one's breast did it awaken brighter hopes and inspire sterner resolution. With incessant and daring activity and self-sacrifice he labored with voice and pen to apply to Spain that panacea for all the ills of government which he, and the other young patriots of the time in Germany and France and Italy, thought they had surely found in the idea of a republic. He had the exuberance of a meridional nature, and his oratory and writing always seemed more fitted to the windy plains of Troy than to the modern world. Yet he was a brilliant figure in all those years, and of late has come to be the type and chief representative of those in monarchical Europe to whom the republicans of America, North and South, could look as proof that the republican tradition was not dead in the Old World. His defection, as they now esteem it, is naturally something of a blow.

Yet there can be no doubt that his personal experience is typical, not only of the cooling which in like manner has come over many of his contemporaries, but also of the general scepticism, now pretty widespread in the world, in regard to the necessary and automatic virtues and blessings of a republican form of government. A great many things have happened since 1848 to make the old, simple faith hard if not impossible. The terrible failure of the South American republics, with the farcical Brazilian republic coming last of all to point the moral anew, has done a good deal in this part of the world to dissipate the fond theory that social virtue, regard for law, official integrity, are the product of particular institutions of government, instead of being the inheritance of race which shows itself under any institution of government. In short, the republican panacea has gone the way of other panaceas. Emerson says that every new theory appears to the eager young soul like a thunderbolt which will pierce the earth to its centre; but he soon discovers that it has made scarcely a scratch on the surface. It is a tough old world, and human society is obdurate material, which goes on much the same in spite of the attempts of the theorists to twist it this way or that, or to remodel it by giving it a new name.

JAPANESE POLITICS.—I.

TOKYO, April 2, 1894.

THE dominant note of Japanese politics is the popular feeling of hostility toward the present Sat-Cho government, or, as it is often called, clan government. Of this feeling of hostility, of its widespread character, of its essential justice, there can be no doubt whatever. Yet so curiously are the elements mixed in politics that just at the present moment the more judicious portion of the Japanese hesitate to oppose the Government because of the ungovernable and unreasonable temper of a large part of the Opposition, and also of the common belief that the most violent of the popular parties (the Progressionists, or *Kaishinto*) is interested less in overthrowing the power of the Sat-Cho than in securing the power for their own purposes. As the feud between the *Kaishinto* and the other popular party (the Radicals, or *Jiyuto*) has not been healed, but has grown more bitter than ever, the sober part of the public are all the more indisposed to turn against the present Government.

When Parliament opened in November, it was certain that there would be an interesting session. Hoshi Toru, President of the lower House, one of the most powerful men in the Radical party, and one of the political leaders of Japan, had succeeded in rousing the bitter enmity of the *Kaishinto*. In a series of campaign speeches he had denounced the motives and the policy of the Progressionists. The newspapers of the latter party retorted, in answer to his attacks, that he had been bribed to give his support to the Government, and that he had become a mere tool of the Sat-Cho. He promptly took the matter to the courts, and, after a long trial, he completely won his case against the newspapers. His resolute course of action and his success did not diminish the determination of his enemies to crush him if possible. As soon as Parliament met, the leaders of the *Kaishinto* very cleverly secured a member of a neutral party to bring various unsubstantial charges against Hoshi Toru, and pressure was brought upon him to resign the chair. But this he stoutly refused to do, not only on the ground that the charges were false, but that he held his position by appointment of the Emperor. Various tactics were tried to force him to resign, and finally he was handed over to a disciplinary committee, who suspended him for a week, not on the original charge of bribery, about which they were discreetly silent, but on the extraordinary charge that he had disobeyed the evident wishes of the House. At the end of the week's suspension he stubbornly resumed the chair, but this fairly infuriated his enemies, who now, having a sufficient majority, with little ceremony carried a vote of expulsion. In this disgraceful fashion Hoshi Toru, who but a year before had been generally praised for his impartial decisions and excellent discipline, was forced to leave the House.

Two motives which had great influence on the subsequent action of the House underlay these arbitrary proceedings against its former President. The first of these motives has already been hinted at, and concerns the feud between the *Jiyuto* and *Kaishinto*. Hoshi Toru, as leader of the former party in the House, was the first party man in Japan to announce that the time for mere obstruction to the Government had gone by, and that the Radicals must adopt a constructive programme, either with or without the consent of the Government. This announcement was particularly offensive to Count Okuma, the leader of the *Kaishinto*, because he would no longer be able to rely upon the Radicals to oppose the Government. With a little political manœuvring the *Kaishinto* managed to join their forces with their former enemies, the National Unionists (*Kokumin Kyokai*), an alliance on a par with that of Blifil and Black George, as the *Kaishinto* stand in favor of the extremest form of party government, while the *Kokumin Kyokai* are in principle opposed to government by party and were supporters of the autocratic military cabinet of Count Matsukata. The *Jiyuto* was now dubbed the "official party" in order to discredit it before the country—a title wholly unmerited, and coming with peculiarly bad grace from the National Unionists.

Having accomplished this alliance, the *Kaishinto* found it necessary to make a strong attack upon the Government. For some years there had been a number of reactionaries who, believing that the Japanese were not ready to enter into competition with foreigners, were opposed to the opening up of the country to foreigners in the event of treaty revision, and had inveighed against the Government for not constructing the present treaties more strictly against foreigners. These agitators had a certain following in the country districts, and the *Kaishinto* and *Kokumin Kyokai* united with these minor parties in a grand movement against the Government. A long address to the throne was drawn up in which the various wrongs under which Japan had suffered from foreigners were mentioned. It specified that foreigners had purchased land outside of treaty ports, in the name of Japanese, for the purpose of residence and missions; that passports to travel in the interior, though by treaty granted only for health or scientific research, were freely given to applicants for purposes of pleasure or religious propagandism. It also specified that some foreigners still more boldly carried on business outside of treaty ports with the aid of recreant Japanese. These and other infringements of the treaties were cited as proofs that the Government had betrayed the true interests of the country.

Count Ito, the Premier, met the House more than half way, and warned it that this address would not be suffered to pass. He declared justly that such an address would irretrievably prejudice the cause of treaty revision. The treaties, he confessed, were obsolete, and not at all suitable to the present circumstances of the country, and a policy of mutual give-and-take between the Japanese and foreigners had been established, from which it would be impossible to recede until the treaties had been revised. Above all, the belief that foreign nations could be coerced into making new treaties by strictly enforcing the old ones, he emphatically declared, was preposterous, and the cabinet could not allow the address to pass. The Premier's warning, however, was not heeded. The House proceeded to debate the address, and as the only party opposed to it were the Radicals, who were now in a minority against the combined parties, it was clear that the address would pass. Before this consummation was reached, the Government prorogued the Parliament, and finally, on the 31st of December, dissolved it.

It will be seen from what has been said that the Hoshi incident, the alliance of the *Kaishinto* and *Kokumin Kyokai* against the *Jiyuto*, and the strict treaty enforcement measures, were all parts of a single programme. We may further say that they had but one purpose, and were, in all essential matters, directed by a single mind. This purpose was to embarrass the present Government in its most vital part (*i. e.*, foreign relations), and the arch director of the movement was Count Okuma, the leader of the *Kaishinto*. How all this bears on what has been called the revival of the anti-foreign feeling in Japan, and what real foundation there is for this feeling, will have to be left to another letter. G. D.

GREECE REVISITED.

ATHENS, April 9, 1894.

NINE years ago the only lines of railway in operation in Greece were those between Athens and the Piræus, and between Athens and the Corinthian isthmus—a little more than sixty miles in all. There may have been some lines in use in Thessaly, but of this I am not sure, never having had occasion to use them. The new Baedeker of this year informs us that Greece now possesses over 560 miles, and the result is that places which formerly were accessible only to the most ardent Philhellenes are now visited as easily and frequently as any of the towns between Rome and Florence. Olympia, which used to be a real pilgrimage, is now a pleasant excursion, and it is difficult to realize, as one sits in the comfortable little restaurant there, that only a few years ago the barest necessities of life were not to be had. From Patras it used to be a two days' journey; and one had the choice of driving over the hot, low plain, and sleeping at night either in his carriage or in a wretched little khan at the roadside, or taking the steamer to Zante, and crossing thence by boat to Katakolon, the port of Pyrgos, proceeding by carriage from that town. Those who tried either route have good reason to remember it. The only accommodation which Olympia itself had to offer was in the poor village of Drouva, perched upon the top of a neighboring hill, so steep that we left our house in the morning to return only at night: one climb a day was sufficient. The sum of luxury which Drouva was able to offer was in the shape of boards laid across two wooden horses and covered with a rough mattress by way of a bed. On one visit a friend and myself divided a hen between us as our only meat for three days; and we were more fortunate than a Frenchman whom we met returning, who had lived upon black olives, bread, and cigarettes for a week.

This is what one used to have to do in order to see the Hermes, and there certainly was a satisfaction in having thus earned the right. And how did one see him after this pilgrimage? For several years after its discovery, the statue stood in the wooden shed erected by the Germans as a storehouse for the sculptures which were brought to light; and here it was crucified, leaning against a stout post with a crosspiece on top, a rope being passed around the breast of the figure to fasten it to its support. The knees rested on a piece of bagging, the only thing which protected it from the dampness of the ground on which it stood. Later the statue was moved into a stone house near by, where it was set up in the same manner. Now this is all a matter of the legendary past. One goes by railway from Patras to within a few rods of the temple of Zeus in less than six hours. The trains are timed most conveniently, so that the visitor may arrive either in the morning or at noon, as he pleases, and he may leave either early in the afternoon or towards sunset. Whichever he does, he will probably find it convenient to spend one night at Pyrgos, and there he will now find a comfortable hotel with a really good table. (Old travellers will punctuate this last statement with a double exclamation-point, but it is true.) At Olympia itself the railway company has just finished a large hotel, which has every external indication of being first-class. I grieve to say that we had no opportunity of testing its merits more closely, because, owing to some difficulty in arranging about its lease, it is not yet opened, and the traveller of next season is likely to be the first to enjoy its benefits. In the meantime there are two more modest hostelries near the station, in one of which we had an excellent table-d'hôte luncheon, actually served in courses! I thought of little Drouva and the hen as I was eating this, and, looking up there, the poor little place seemed more forlorn than ever. Most travellers of nowadays are not even aware of its existence.

But to turn to what one goes to Olympia to see: the excavations still remain as they were when the Germans left them in 1881. The Greeks have been busy in other sites since then, and no new work has been undertaken here. Grass has been allowed to grow on the excavated soil, so that at this time of the year the Altis is covered with a rich green turf, much more agreeable to the eye than the old dirt, under the sun which even in April strikes hot upon the little valley. It is a pleasure to notice the success with which the growth of underbrush has been checked, and in general the care which is taken of the place. Here and there a young pine has been allowed to grow, and in a few years there will be plenty of shady spots among the ruins. Perhaps the time will come when the Government or some patriotic individual will set up a section of the temple, even two or three columns with the epistyle blocks upon them, in order to give some idea of the scale of height. That is the great desideratum at present. One sees clearly the plan of every building, and the relation of one to another, but it is all so flat that none but experts can restore the elevation in imagination. Even if you know the facts and figures, it is difficult to picture their effect, and one portion of the central temple restored to its original height would at once give scale to the whole. It is merely a question of effort, and of expense which could not be great, as the original materials are there in abundance.

The museum is an old story to many, but to me it was new, and, beyond the fact of its existence, a bitter disappointment. Those who designed it had an opportunity the rarest of all in museum construction, that of making the most perfect setting for a definite collection of sculptures—a collection which, from its nature, was not likely to grow, which was in itself so small that the position and surroundings of every piece might well have been considered, and which included the two most complete pedimental groups and the most beautiful single statue which our generation has inherited from Greece. Certainly few architects have had such inspiring problems set before them, and we might well have expected results in proportion. But it seems as though

every æsthetic principle of lighting or arrangement with a view to the best effect had been wilfully disregarded. The principal room in the building is the hall, in which the groups from the two pediments of the temple of Zeus are set up. The length of this hall is that of the pediments, so that each group occupies a side wall. So far, so good. The figures, however, are placed upon a shelf or pedestal along the wall, not more than three feet high, so that they are seen at a level, not, as they should be, from below. Indeed, one looks down upon the reclining figures at the ends, and thus we lose entirely the effect of the modelling of the under surfaces, which was most carefully considered by the sculptor, and the only part of his work which he thought would be seen. The reason given for placing the groups thus low would probably be that they can be best studied there, and that if they were placed high, details would be lost; but a slight elevation would have sufficed. Every one who has had experience in the arrangement of sculptures knows that, in compositions of this kind, if the eye be forced to look upward, the amount of the height is of very little consequence. Had the pedestals of these groups been five feet high, so as to bring the plinths of the figures at the average height of the eye, the effect would have been ten times as impressive as it is, and the statues would have been just as accessible for purposes of investigation as they are at present. Possibly, however, the reason for keeping them down is to accommodate the narrow gallery that surrounds the hall above the groups, the object of which is difficult to conceive. There is nothing up there, and certainly the view of the sculptures from that point cannot be either interesting or important. As to the metopes, they are huddled together on the two end walls of this hall so closely that a layman might suppose them to be all fragments of one composition. The lighting of this room is quite as faulty as the arrangement. With unlimited opportunities for roof-lighting, whether vertical or diagonal, in fact with every facility for having his light just where he wished it, the architect has run a line of small windows along the top of each side wall, so that they are directly over the heads of one group and diagonally opposite those of the other. The sculptures have, therefore, neither the light which they originally had upon the temple, nor the best concentrated light which a museum might have given them.

All this might have been pardoned had the Hermes been worthily placed. As one thinks what might have been done with this statue, there comes the vision of the Venus of Melos in her beautiful setting—the long vista of the approach, the rich background of curtains, the carefully considered lighting, by which no detail of the modelling is lost, no shadow made too prominent. How much more wonderful than she would the Hermes appear if he were set in the same surroundings. Yet here, with an excellent opportunity for one, there is no vista: the statue stands—alone, to be sure—in a room opening from the hall just described, and at right angles with it. Consequently the first view one has of the figure is of its profile, sharply silhouetted against a strong side light, which comes from three large windows directly opposite the visitor as he enters. He must get under these before he can really see the statue, and thus the effect of a first impression is lost altogether. And the same perversity which placed the temple-sculptures too low placed this too high. If there is in the world one statue which invites the closest possible inspection, it is the Hermes, every modulation in the surface of which is like a line of poetry; yet it has been placed nearly if not quite five feet above the floor. The excuse this time is that the pedestal on which it stands is a restoration of the original one; but this, in view of the sacrifice involved in the effect, is by no means valid. The same people who made the original pedestal placed the statue in a niche on the side wall of a long low temple, where the only natural light it could have had came through an open door, and we have plenty of other evidence that the Greeks were more indifferent about the placing and lighting of their statues than we are. Be that as it may, the Hermes now stands upon its high pedestal in a room that is nearly square, the three windows of which I have spoken being so low that the strongest light is thrown upon the lower part of the figure, and strikes upward into the face instead of coming down upon it. The result anybody can judge who has the opportunity of comparing a photograph of the statue as it now stands with one of the old ones taken for the German publications. It is now impossible to appreciate the exquisiteness of the modelling of either face or body. The statue cannot be turned, because, instead of the old cross, its present support is an iron bar—to accommodate which a hole has been cut into the back, between the shoulders—and this bar runs horizontally to the wall behind the statue, where it is firmly braced on both sides. The figure is, therefore, really suspended, although it appears to be resting on its feet, the missing parts of the legs being supplied from a German pattern, in plaster.

Even its cruel treatment cannot rob the figure of the wonderful, pathetic quality of its beauty, or make it any less the statue of statues; but those who saw it as it used to stand in the old house, deprived of every aid and artifice for the display of its perfection, will wonder what is missing from it now that its position seems to have been so much improved. Those who set it up could not have appreciated its finest qualities, else they would not have come so near to obliterating them. It is something of a consolation to turn from the Hermes to the Niké of Paionios, which is the only statue in the Museum placed with good effect. She stands at one end of the hall in which are the pediment sculptures, her pedestal being composed of several blocks of the three-cornered shaft on which she originally stood, sufficiently high to bring out the lightness and grace of the figure, and to show how much finer the statue itself is than any cast of it.

If in the Museum of Olympia there is surely cause for grumbling, the fault is not with the Greeks. The building was the gift of a Greek gentleman to his country, but the plans and the arrangement are the work of "strangers in the land," and strangers from whom we had reason to expect better things. Let us be thankful at least that, after years of delay, the sculptures are now safely and permanently housed, and so return in good spirits to our comfortable train, which is waiting at the station. Here, where a few years ago a solitary carriage would have been standing in the shade of a tree, there is now all the bustle and paraphernalia of a railway—guards, porters, onlookers, bells, and horns. As the train moves out, the shrill whistle of departure awakens the unaccustomed echoes of the Alpheios valley. Olympia has slept its sleep, and henceforth its repose is to be disturbed daily, save in the hot months, when there is fever in the plain.

EDWARD ROBINSON.

A WHITE CITY IN THE MEDITERRANEAN.

ALGIERS, March 24, 1894.

ALGIERS is a city in transition, perhaps in its most interesting phase. Enough has been done in the sixty-odd years of the French occupation to give it in part a thoroughly European appearance, yet enough has been left absolutely intact to make it, in some respects, almost as distinctly Oriental as it could ever have been in the time of its misgovernment by the Deys. Between the two extremes the line is, of course, not tightly drawn, and there are stages in which the old and the new exist side by side; some amalgamation, besides, of the two modes of life has been naturally inevitable, but there is much less of it than would at first be imagined.

In reality, there is here a French town and an Arab town, and an admixture of both. The French element as a whole plainly predominates. The original limits of the old Arab town not only have been greatly restricted by its absorption into the French city, but new quarters have sprung up which are wholly French. In its present condition the whole lower part of the city along the Mediterranean is European; and outside the fortifications which originally surrounded it, the town has been extended in compactly built streets into the new suburb of Bab el-Oued on the one side and Mustapha on the other. The Arab city, driven back from the water, rises directly in the centre, behind the modern town.

Viewed from the middle of new Algiers, it is difficult to realize, considering the part of the world in which it is, that sixty years covers the entire period of the French possession. From the Place Bresson, for instance, one side of which is formed by the Municipal Theatre, extend, on either hand, solidly built streets of stone and stucco with smooth wooden pavements and abundant gaslights. Except for the unmistakable garb of a part of the passing people, there is nothing whatsoever that locates the scene in the East. The same is true of the adjoining streets and particularly of the Boulevard de la République along the sea. This superb street, constructed in the sixties with £300,000 of English capital, gives Algiers architecturally as fine a water-front as any along the Mediterranean. To counteract the steep slope of the land, a massive wall, honeycombed with storage-vaults and warehouses, extends some forty feet up above the quays, which are approached by zigzag driveways and flights of steps. The street at the top is built up only on the further side away from the sea, over which there is an uninterrupted view out across the harbor and the long sweep of the bay to the mountains of Kabylia beyond. If I have said that there is little of the Orient in it, I must, nevertheless, except the outer side, which, on sunshiny days, is thronged with a nondescript crowd of Arabs and negroes, people of infinite leisure, who lean over the stone balustrade idly watching the bustle of the seaport below. Curiously enough, it is not this street, with its Parisian buildings, its fresh air, and its charming prospect, which is chosen as the fashionable promenade of Algiers, although in it are the best of the hotels and the largest cafés. The honor of popularity is accorded to the dark little Rue Bab-Azoun, a narrow street, arcaded on both sides, where are situated the principal shops. Here, and not where they might be seen to better advantage, the ladies of the colony and the officers of the garrison exhibit their toilets to the jostling crowd, which is almost wholly European.

The Place du Gouvernement at one end of this busy thoroughfare illustrates much more accurately the real character of new Algiers as only, after all, a graft of Western civilization. It is here that the life of the West and the East most intimately meet each other to the exclusion of neither. The Place du Gouvernement is really an epitome of Algeria as a French colony. In its centre stands a bronze equestrian statue of the Duc d'Orléans, once Governor of Algeria, made of cannon captured at the conquest. In front of it a full military band plays twice a week to a crowd more composite than even New York could turn out to a public concert in Central Park. At the back are the dazzling white walls and dome of the mosque Djamäa el-Djedid. At the sides are European cafés on the one hand, and, under a most stately group of date palms, on the other, the Arab flower market. Visible through a narrow street in front, out of which comes pouring an unceasing stream of Moors, Arabs, Kabyles, Jews, and all the other elements, Oriental and European, that make up this heterogeneous population, is the Catholic cathedral, once a Mohammedan mosque, and back of it, tier upon tier, pure white in the sunshine, rise the flat-roofed houses of the native town in a wedge until they too are overtopped by the Casbah, the dismantled stronghold of the Deys, whose harem has now been made by the conquerors into barracks and its mosque into a Christian church. The Place is the centre of the life of the town, native and European alike, and the people hurrying or lounging across it are as often one as the other. From the square minaret of the mosque the mueddin calls the faithful to prayer, knowing that a good half of those who hear him should rightfully be mindful of his admonitions. Just now, during the Ramadan, the Mohammedan Lent, the Place is thronged towards evening with hollow-eyed men who have worked and starved all day, and are now waiting for the firing of the sunset gun to announce that for the time their long fast may be broken.

If this part of Algiers is strikingly Oriental in some of its features, there is, nevertheless, more than enough on every side to remind you that it is still but an element. The boulevard cafés, the newspaper kiosks, and the trams are still felt to be congruous characteristics, even if the burnoused men and the white-shrouded women may, at times, form the principal part of the passers-by. The most interesting feature, however, of Algiers is the thoroughness of the transition that it is possible to make. A few blocks away, in the old town, the whole condition of affairs is changed, and if you are successful in penetrating the labyrinth of crooked streets, without fetching up ignominiously in an *impasse*, as far as the Rue Kléber in the heart of the Arab city, there is absolutely nothing to remind you of Western civilization. Were it not for the gas-lamps that project here and there from the houses, and the names of the streets carefully displayed in Latin letters at necessary corners, it would be quite impossible to detect a trace of European contact at all.

The whitewashed houses of the old town extend straight up the hill without a break—at least it seems so, for the streets that wander off through its compact mass have no effect to destroy the continuity. Even when looking directly down upon it from the ramparts of the Casbah, it is impossible to follow the line of a single street or to realize that there are ways across it. Once within it the reason for this becomes apparent, for many of the streets, particularly in the upper part, are in places built completely over, while in others, although the space is not absolutely filled up, it is impossible to see the sky through the opening on account of the overhanging walls. Many streets are so narrow that one must step into a convenient doorway to let an approaching person pass. They are all fearfully steep, and impassable to any beast of burden except a donkey. Through the whole length and breadth of the town, as at present constituted, it is safe to assume that no wheeled vehicle of any sort has ever been. It is bad enough for pedestrians, for, although the streets are all paved with stone blocks, these have been worn so smooth by swarms of feet that some degree of caution is required to avoid a fall, which, for many reasons, would not be pleasant. Most of the pavements, besides the incline of the hill, slope from both sides to the middle, which serves as the necessary gutter. The steepness and smoothness of these streets is doubtless a saving clause in the economy of the place, due whether to natural selection or to direct intention I cannot say. It is noticeably cleaner after a heavy rain, and if its odors now are not absolutely those which one is apt to associate with "Araby the blest," it is easy to imagine that they might have been worse under less favorable physical conditions.

The life of the Arab town is apparently as unchanged as are its streets, and as uninfluenced by French domination. The people who throng this labyrinth—the ants, rather, who live in this ant-hill—are all our old friends of the Arabian Nights. The same poor shoemaker works in his little hole in the wall, which is scarcely more than large enough for himself and the shoes he is mending; the tailor sits with his fellow-workmen on the floor of his shop at work with bared feet as well as with hands on the same garments, or others precisely like them; there are the same blind men and hunchbacks, the water-carriers with their copper jars, and the porters stooping under their heavy burdens—Ali Baba, well clad and prosperous, after he had helped himself out of the hoard of the forty thieves, and Sindbad the Sailor with benevolent face, back from the last of his voyages. They live a life here absolutely sufficient to themselves, if they choose, in its supplies and demands, and there is no necessity to go outside of their own precincts for anything touching their material or their spiritual needs. They have their own shops of all kinds whatsoever, their own cafés and their own schools; their bakers bake their own bread and their confectioners make their own sweets, which do not look particularly tempting. Most of these outside accessories of life, however, are poor. The glamour which the city doubtless had in the old day has departed long ago. There are few rich Arabs left, and there were apparently never many fine Arab houses within the present limits of the old town. A glance through an open doorway reveals, now and then, a court with twisted columns and old tiles, and bespeaks potentialities if they could only be come at; but the exterior goes for something, and it is hardly possible that it often conceals much Oriental or any other kind of magnificence. The native shops, too, of the old town are small affairs, though they often contain treasures of silk and embroidery for both masculine and feminine wear, which is unpacked from unsuspected places. There are everywhere possibilities. With its other characteristics the old city has also kept its Eastern impenetrability.

If there is a question as to what there is below the surface unseen, there can be no question as to the interest of the part which is apparent. Its picturesqueness is undoubted. As has already been said, almost nothing has forced itself into the old town to remind one nearly or remotely of the conquest, and you may even traverse it from top to bottom without seeing a European garb other than your own. It is not, however, to be supposed that the French authorities have allowed it, without let or hindrance, to follow its own devices. They evidently, on the contrary, have it well in hand, for once or twice I have seen a French policeman with a carefully made plan of streets and houses looking up somebody or something. Wisely they have left the Arab city in its densest part to all intents and purposes as it was. All around they have made serious inroads upon its edges. Below, by the sea, as I have intimated, it has, except for scattered houses, entirely disappeared, and its place has been taken by the new French town. Above, not only has the old Casbah been pierced by a public highway, but a broad street has been cut in between it and the compact houses of the city down from which the little lanes dive like dark tunnels. It is not difficult to discern their policy in regard to it: its limits are being constantly contracted. Upwards of three hundred of the old houses were demolished last year alone, and at this rate ten or twelve years will more than suffice to make it, as a town, absolutely a thing of the past. The modern stucco tenements that will replace it will, no doubt, be vastly superior in convenience and sanitation, but Algiers to the traveller will have lost its most characteristic charm.

In the process of replacement, elsewhere in the city, a number of the best of the Moorish houses have been carefully preserved and are now used by the French either as Government offices or as public buildings. The finest of all of these old buildings is the archbishop's palace opposite the cathedral, itself once a mosque. Other notable instances are the house now occupied by the "Conseil Général," and the old residence of Mustapha Pasha, which is now the library and museum. The Casbah, too, at the top of the town, although parts have been demolished and parts ignobly turned over as barracks to the French artillery who mess under an arcade with marble columns, has still retained much of its ancient architectural beauty intact. From among its many separate buildings rises a beautiful minaret, and the tiles above the sculptured arches of its doorways are as bright as though laid yesterday.

Perhaps even more interesting, in some respects, for what it has kept of the past is the mole of the Peñon, which formed the ancient harbor. Some of the details of its many structures are most interesting. A doorway in what is now the Bureau de la Marine has above it, under a long Arabic inscription, two leopards in mosaic supporting a crown and crescent, and is unique in Arab art. Close by, in the house of the Turkish Raïs, now the residence of the naval commandant, is a fountain with inscriptions which is almost the best of the kind left in Algiers. More interesting still for its associations is the Peñon itself and the lighthouse at its extremity. Originally a Spanish fort against the Moors, it was finally captured, in 1530, by the Algerian Dey who set 30,000 Christian slaves at work to connect it to the mainland by a mole. On one of the old bastions, the entrance to which still bears the coat of arms of Spain, the present lighthouse, twelve-sided and tiled in a broad stripe of many colors about the top, was built a little more than a decade later. It has since stood unchanged, through all the vicissitudes that

have overtaken Algiers, the most prominent object in view from sea or shore. It has been a familiar sight to Americans under far less pleasant conditions of hospitality than are accustomed to be meted out to those of the present generation. In 1793 it is estimated that there were more than a hundred American citizens held here in slavery who had been captured by Algerian pirates on the high seas. It is utterly impossible, at this time, to realize that twice, in 1783 and again in 1812, Algiers declared war on the United States; that in 1795 we actually paid in ransom and tribute no less a sum than $721,000, and that for many years after we were forced to pay an annual tribute of $22,000 in stores and munitions, until 1812, when this sum was demanded in money! The little English church has many memorials, in the form of tablets on its walls, of the time when Algiers was "the scourge of the seas." One I copied, the other day, into my note-book: "1584. Lawrence, Master of Oliphant, the Master of Morton and other banished Scottish gentlemen enslaved at Algiers, whence they were probably never released." Cervantes was brought here a captive in 1555, and was not released until more than five years later.

The European population of Algeria has all come in since the French conquest in 1830. In Algiers and its immediate suburbs the natives, including together Mohammedans and Jews, are now outnumbered nearly three to one; that is, a little less than two-thirds of the 86,000 inhabitants are Europeans. The latter are of various nationalities. After the French the most numerous are Spaniards and Maltese. There are also a number of English residents who live in Moorish villas, old and new, on the green slopes of the amphitheatre formed by the Mustapha hills, or back a little way on their summit, and there are some few Americans. During the winter the many hotels of Mustapha Supérieur contribute their quota, as the years go by a continually increasing one, from nearly every country of Europe, to the general fund. The journalism of the town shows its cosmopolitan character. Besides the native journals printed in Arabic, there are a round half-dozen French dailies, good, bad, and indifferent, and two English papers which appear weekly.

This cosmopolitanism is carried, too, into the amusements of the place, which offer a most astonishing range. Your tastes may be gratified in almost any direction. If you are interested in native manners and customs, as the French who live in the midst of them affect not to be, the open space above the old town almost always offers, in the motley crowd of men, veiled women of the better and unveiled of the baser sort, and half-naked children of all sorts, an opportunity to indulge your curiosity. They themselves are possibly more interesting than what they have come to see. If you can make your way through so as to overlook the inner ranks sitting on the ground, it proves to be a serpent-charmer playing his reed flute to his charge, who listens with head erect. Sometimes it is an Arab rhapsodist, with a swarthy but clean-cut face, and an unmistakable look of divine afflatus, who chants as he paces to and fro in front of an orchestra consisting of three or four men beating noisily on tambours as large as grain sieves, himself now and then touching his own tambour by way of additional accompaniment; or it may be a professional story-teller, who stands as he recites, or a number of blind men with tambours, sitting on the ground, who all join, with apparently an eager interest, in the chorus to the verses which one of them chants in the minor singsong that is their Oriental characteristic. If you still desire something more, in the same direction, it is possible at night, with proper guidance, to see the native dancing-girls among their own surroundings, or to be present at an *aïssaoua*, where the actors, among other brutalities of the same sort, gouge out their eyes with iron spikes so that they project on their cheeks, drive nails into their heads, sear their flesh with hot iron, eat live scorpions, and thrust swords into their naked bodies where they are left to hang. To accord more nearly with the tastes of the European part of the population, which has turned out in full force, bull-fights have several times been given of a Sunday afternoon during the winter, with bull-fighters from Spain and genuine Andalusian bulls. If all this is unsatisfactory, there is the large and well-appointed Municipal Theatre, where a series of operas has been produced, among them such a recent work as Reyer's "Sigurd."

The best entertainment, however, that Algiers offers to the stranger who dwells within (or, as most do by preference, without) its gates, is the moving panorama of the streets, and one does not easily tire of its always shifting scenes. Nor is one restricted, as is the case in many parts of the East, to the town and its immediate surroundings. The French have constructed everywhere through this part of the colony *chaussées* that are the equal of any in Europe, and it is possible to drive in any direction through a country teeming with a perennial verdure, with carefully cultivated fields on every side, orchards yellow with oranges and mandarins, and hills covered with vineyards. This part of Algeria is a veritable "garden of the gods." Many regions of old France are fertile, but there is nothing at all like this. If you are a pedestrian, there is everything here to tempt you abroad. Back across the hills, where the fields all winter have been full of flowers, runs a perfect network of lanes and byways, so deep, frequently, in green that they are almost covered over and are cool on the hottest days. Although there is an abundance of rain in the winter months, this year an unusual amount, the climate is not too capricious and the air is dry and tonic. Add to this a temperature neither too cold for comfort after you become acclimated, nor too warm to be enervating, and singularly free from sudden fluctuations, and you have a picture of Algiers not too enthusiastically presented.

W. H. C.

Correspondence.

THE PARTHENON FRIEZE.

To the Editor of The Nation:

Sir: About ten years ago Mr. A. H. Smith, now of the British Museum, London, then Worts travelling scholar of the University of Cambridge, searched, at my request, the museums of Rome for terracottas corresponding to the plaque reproducing figures from the frieze of the Parthenon which I had found in the Louvre Museum in Paris. He had the good fortune to discover one of these in the Museo Kircheriano, which immediately joined on to the plaque of the Louvre. At the same time the correspondence between these terracottas and some reduced casts of the Parthenon frieze which I saw at Rome was so complete that I was forced to consider the possibility of all these terracottas being forgeries. As the preceding chapters relating to the plaques in my book, 'Essays on the Art of Pheidias,' were already in print, I embodied Mr. A. H. Smith's discovery, together with the causes of doubt as to their authenticity, in the Note F of my book.

When my book had appeared, M. Salomon Reinach of Paris made a thoroughly unjustifiable attack upon another chapter of my book, and at the same time stated in decided terms that these terracottas were not genuine. His statement rested entirely upon his own opinion. At the time, authorities in ancient terracottas like M. Heuzey of the Louvre Museum (though with more scientific modesty) maintained their genuineness. For my own part I believed that the only scientific method of dealing with such questions was to give all the facts before us, and to refrain from final judgment until further light could be thrown upon the subject, not by opinion, but by new facts. My own experience of ancient terracottas leads me to believe that, unless we are guided by the design itself, there is not an archæologist, or even a dealer, who may not be deceived when guided alone by the consistency and manufacture of the terracotta itself. I remember the late Alessandro Castellani, than whom there has been no more experienced dealer in antiquities, showed me three terracottas by which he had been deceived.

The point which I wished to illustrate in my book was the fruitful results arising out of a conscientious comparative study of style in ancient Greek art, and not the manufacture of terracottas. If these plaques are forged reproductions of the Parthenon frieze itself, the recognition of their Pheidiac character, even in their mutilated condition, strongly proves the correctness of this method of observation.

Quite recently Prof. Furtwängler of Berlin, in his book 'Meisterwerke der Griechischen Plastik,' reverts to the question of these terracottas, and, with the violent assurance which he has in common with his French counterpart, M. Reinach, he considers the Copenhagen fragment, "as well as the other Waldstein'sche fragments," as decidedly genuine. He bases this statement upon the examination of the fragment at Copenhagen, which was taken out of the wall for him. He believes that these terracottas were made in the time of Augustus, and that they were to be traced back to a common original along with the Roman casts which are derived from the casts originally made for Choiseul-Gouffier.

It is a singular coincidence that, just ten years after he made his first discovery at Rome, Mr. A. H. Smith has now found another larger piece of the same terracottas in a shop at Rome, which he purchased for the sum of three francs. It represents a horse and a horseman standing, whose chiton is being adjusted by a boy, from the northwest corner of the frieze. As far as the terracotta itself goes, it bears every trace of genuineness, nor can we understand how it could have repaid a forger to make so skilful a forgery—in fact, all the arguments in favor of their genuineness which I have given in my book hold good.

Before I left for Greece, Mr. A. H. Smith kindly brought his Roman terracotta to the British Museum, and I was then enabled to confront it with the original portion in the frieze of the Parthenon. I noted all the discrepancies between the plaque and the frieze. Since then two of my pupils (Mr. Earpe of King's College and Mr. Carr Bosanquet of Trinity College, Cambridge) have compared the plaque with the Roman reduced casts which I have collected in the Archæological

Museum at Cambridge. I have just heard from them that, in every instance, the discrepancies from the original frieze are the same in both the terracotta and the reduced casts. This appears to me one of the strongest arguments against the genuineness, and one which is not based upon opinion only. But before maintaining absolutely that they are forgeries, I should prefer to wait until some further facts of the nature of this recent discovery be forthcoming.

I cannot write from this place, while directing the excavations of the American School on this interesting site, without also referring to Prof. Furtwängler's hasty remarks recently made upon the sculptures from our first year's digging, published in my report. He maintains that the beautiful female head is "certainly not that of Hera, probably Hebe, and that all the sculptures from the Heraion have nothing whatever to do with Polykleitos or his school." In spite of this emphatic statement, it still remains more likely that the head is that of Hera than of any other divinity. If not Hera, it probably represents some human character, such as a priestess—but it is least likely to represent Hebe. It would *a priori* be a very curious, almost unique circumstance, if, the great temple statue of Hera having been intrusted to Polykleitos, the greatest living sculptor of the time, the chief of the Argive school, the sculptured decoration of the temple were intrusted to some foreign school. But the sculptures themselves, which Prof. Furtwängler could not wait to study before venturing to express an opinion, bear all characteristics of the Polykleitan school. The beautifully preserved head from the metopes which we found a few days ago, is a purely Greek representative of the type of head in the well-known reproductions of the Doryphoros of Polykleitos.

CHARLES WALDSTEIN.

HERAION, ARGOS, April 7, 1894.

MORE ABOUT SOUTH CAROLINA.

TO THE EDITOR OF THE NATION:

SIR: Every fair-minded man who knows the situation in this little State, with its Celtic temperament, will sympathize with "M. D." in the main purpose of his letter which appeared in the *Nation* of April 19. But if the moral support of good citizens outside of South Carolina is to be secured permanently for the benefit of our unhappy minority, it must be attracted by a fairly accurate understanding of the controlling conditions.

"M. D." calls South Carolina a "one-city State," which in a sense it is; but one might easily get the impression from his letter that Charleston bears a political relation to the rest of the State such as Paris, for instance, has borne to France. It is safe to guess that "M. D.'s" personal knowledge of South Carolina is confined to Charleston. He has made a very bad lot of guesses at the population of the leading cities, and he certainly is not acquainted with the countrymen—the "wool-hat, one-gallus boys," whose votes have twice made Mr. Tillman Governor. Columbia, the second city in the State, has over 15,000 inhabitants, instead of 12,000, and Greenville is next with 10,000, instead of 5,000; Spartanburg, "M.D.'s" third city, has 7,500 instead of 9,000, and Beaufort, which he puts in the fourth place, is eighth or ninth; Anderson, Sumter, and Florence are all larger, while Orangeburg is about the same in size as Beaufort.

There are something less than 500,000 white people in the State, of whom only about 20 per cent live in the cities and towns. These figures are interesting in connection with the following statement: The negroes did not vote in the last two State elections. Tillman is therefore the choice of the majority of white South Carolinians. The cities and towns, I believe without an exception, roll up heavy majorities against Tillman, and the country districts are equally pronounced the other way. The vote for Tillman in 1892 was 50,000, with 30,000 for the opposing candidate. The vote of 1890 was far more favorable for Tillman, as there was then practically no organized opposition to him. We see, therefore, that the more intelligent townspeople are in a hopeless minority as against the country people.

To return to "M. D.'s" letter, the rank and file of the Tillmanites are neither exceptionally lazy nor "unusually intelligent for their surroundings," and, above all, they are not "extremely clever at finance." If "M. D." meant to be funny in his description, I beg pardon; I will send him several wise saws and modern instances illustrating the unusual intelligence and marked financial talent of the South Carolina planter. No lazy man can "make" a cotton crop. It requires careful preparation of the soil, and clean culture, and is somewhat jocosely said to take fourteen months to bring to market. A Massachusetts farmer said to me lately that farming in the South was comparatively easy, because there were no weeds to fight! A higher compliment could not be paid to the thorough cultivation of the cotton fields. Nor do the white planters leave their farms for the negroes to work. The small planters do their own work, and the larger ones, with few exceptions, personally supervise, first, the ploughing, then the hoeing, and, later, the picking. The Southern planter has nature in a milder mood to contend with than his Northern brother, and does less hard work, the year around. But he knows equally well how to put in full time, when the "season is in the ground," and "M. D." does him great injustice when he employs italics to emphasize his statement that he "will not work." However, even those of our "unusually intelligent" planters and extremely clever financiers who can read rarely see the *Nation*, so they will not feel "M. D.'s" sharp digs. But it is well worth while to call attention to the bottom fact of the situation in this State, which is the sad lack of general intelligence and common information, and the extremely limited outlook of the South Carolina yeomanry. These are what have made possible the ascendency of such an uncouth and brutal character as Governor Tillman.

A very similar thing happened in Virginia, when Mahone captured and held for several years precisely the same class of voters, though, to the credit of the Virginia white people be it said, he was obliged to call in the colored vote to help him. Mahone and Tillman appealed to the class which has arisen since the war—men who had no chance to get ahead before the war, half-educated, or not educated at all, full of prejudices, and jealous of the late slaveholding class, and easily persuaded that they had been ground down and overtaxed by the old aristocracy. Such a proportion of ignorant and easily led voters is bad enough, to be sure, but the situation is incomparably more hopeful than if we were burdened with an equal number of the sort of smart loafer described by "M. D." The "one-gallus boys" have shown bad feeling and worse judgment, but they are men capable of right enthusiasms as well as wrong ones. A few years ago they were shouting as loudly and earnestly for Hampton as ever they have for Tillman, and when the elements of the unholy alliance now in power dissolve, as they surely will in the not distant future, these deluded voters will return to their senses, and to the leadership of the class which gave the State a creditable and honorable government from 1876 to 1890. Let those who despair remember Virginia, and how short a term in the history of that State the Mahone episode occupies. It is a practical and serious question for those who have any moral support to spare for the education of South Carolina, how they can effectively introduce it. If the Tillmanites could be reached through their leaders, or otherwise, with large and frequent doses of ridicule from the outside world, it would be the cheapest, speediest, and most effective cure for their present lunacy.

Like "M. D.," I am a Northern man by birth and education. I have spent nearly ten years in Virginia and this State, and have travelled on horseback for weeks at a time through parts of South Carolina, stopping for meals and lodging wherever the dinner-hour or nightfall found me. My impressions of the people, from this experience, are on the whole distinctly favorable, and I believe there is plenty of raw material here for the making of a self-reliant, industrious, and progressive body-politic. E. B. L. T.

GREENVILLE, S. C., April 23, 1894.

POSTAL-UNION STAMPS AND CARDS.

TO THE EDITOR OF THE NATION:

SIR: Another advantage of the Postal-Union stamps suggested in the last *Nation* is that of being able to enclose a stamp for reply in writing to strangers residing in Europe. It is often a source of embarrassment not to be able to conform to the business courtesy requiring the enclosure of a stamp (or card), and it is also true that one sometimes incurs the risk of receiving no reply through the omission of this enclosure.

This difficulty applies equally in Canadian correspondence. The absurd arrangement by which at the present time we pay two cents on letters to Canada, and three cents return postage somewhat complicates the matter, but it would seem possible to have some compromise made.—Respectfully, M.

POUGHKEEPSIE, N. Y.

Notes.

THE Gounod family has decided to publish a memorial volume, which will consist of the fragmentary manuscripts left by the composer, some of them being of an autobiographical nature, and of numerous letters to and from him. Gounod's son Jean, the artist, and his son-in-law, Baron de Lassus Saint-Geniès, are aiding Mme. Gounod in collecting the materials and preparing the volume for the press. But it is not expected that it will appear for some time to come.

'Fra Paolo Sarpi, the greatest of the Venetians,' by Alexander Robertson, for many years a resident of Venice, is announced by Thomas Whittaker.

The 'Annual American Catalogue for 1893,' the fourth in the series supplementary to the 'American Catalogue 1884-90,' has just been issued from the office of the *Publishers' Weekly* in this city. It contains a directory of American publishers for the year in question; an author-catalogue of books recorded in 1893, with full titles and descriptive notes; an author,

title, and subject-index to the same; summary lists of their publications for 1893 advertised by a certain number of houses; and finally, the abbreviated English catalogue for 1893. It is needless to praise so indispensable a work of reference.

An 'Attempt at a Catalogue of the Library of the late Prince Louis-Lucien Bonaparte' is what Mr. Victor Collins modestly styles the guinea volume issued by Henry Sotheran & Co., 140 Strand, London, as the basis of a bid for this unparalleled collection *en bloc*. It fills 718 pages, and embraces 13,699 items, beginning with 'Élémens de la grammaire chinoise,' and ending with Sprague's 'Handbook of Volapük.' The contents are divided into three divisions, China and Tibet representing the monosyllabic languages, and needing only half a page; the agglutinative languages (embracing Prince Bonaparte's favorite *crux*, the Basque, and our Indian languages) filling 71 pages; and the inflectional languages forming the great bulk of the work. One wishes such a collection might attract the eye of our Peffers and Gormans and so make its way to the Library of Congress; but these are not the spoils they are after.

The valuable 'Catalogue of Books Printed at or relating to the University, Town, or County of Cambridge [Eng.],' issued by Macmillan & Bowes, is concluded in Parts C and D (one volume) and a thinner pamphlet containing Mr. Robert Bowes's preface describing the inception of the task, together with a title-page for the entire work and ninety-eight illustrations of head and tail-pieces, initial letters, etc. The catalogue is not a bibliography, but represents a collection actually possessed by the compiler; the minute descriptions of the books printed to 1700, however, will serve a bibliographical end.

We have to welcome another fiction catalogue, cheaply printed on Manila paper and sold for ten cents by the Los Angeles (Cal.) Public Library. It is a 'List of Novels and Tales in the English, French, German, and Spanish Languages,' under one author-alphabet, with occasional annotations. This is supplemented by a subject-index to the nearly 12,500 volumes, and by a "Short list of books of criticism on [some part of] the foregoing novels and tales." This is a very useful idea, and nothing could be better for the cultivation of *taste*. As a practical guide, however, for inexperienced readers of current fiction, one book has been overlooked which is worth all the others: we mean Mr. W. M. Griswold's 'Descriptive Lists of Novels,' classified by nationality and locality and kind, with carefully selected criticisms from contemporary journals. If this is not chained to the fiction-desk of the Los Angeles Library (which, by the way, as to its circulating department, exists one-half for novel-readers alone), it ought to be. On p. 45 "Boyessen," and on p. 115 "Fennimore," have escaped the proof-reader's vigilance.

The library just named has in circulation five sets of Howells's complete works and twenty-five copies of 'Ramona.' In the Cleveland (O.) Public Library, as we learn from its enticing little monthly bulletin, the *Open Shelf*, there are eighty-eight copies of 'Little Women,' ninety-seven of 'The Boys of '76,' and eighty-one of 'Little Lord Fauntleroy,' while there are seventy of 'Ben Hur' and seventy-seven of 'Uncle Tom's Cabin.' Apart from fiction, it is gratifying to find that of John Fiske's 'Discovery of America' sixteen copies are needed to supply the demand.

The librarian of the Biblioteca Nazionale Centrale of Florence pays in his *Bollettino* for March 31 a tribute to the late William Frederick Poole, "one of the most illustrious librarians of our time," laying especial stress on his monumental 'Index to Periodical Literature,' and on his labors in connection with those of Cutter and Winsor, in so uniting the forces of the library fraternity of this country as to make them an "ever increasingly powerful and indispensable element in the progress of national culture and of civilization."

'Redgauntlet' and (bracketed) 'The Betrothed' and 'The Highland Widow' add two more volumes to the Black-Macmillan Dryburgh edition of the Waverley Novels. With these we may properly mention the charming Dent-Scribner volume of 'The Lyrics and Ballads of Sir Walter Scott,' with an introduction by Andrew Lang, and with very serviceable notes prefatory and explanatory. An etching after Landseer's portrait faces the rubricated title-page; there is another of Abbotsford, and a third giving an archway glimpse of Scott's tomb in Dryburgh Abbey.

From Messrs. Longman come three uniform volumes of reprint of the Earl of Lytton's works in wine-colored cloth binding—his 'Selected Poems,' 'Lucile,' and 'The Wanderer.' Lytton's daughter, Mrs. Balfour, furnishes a preface to the first-named, in which the arrangement is chronological, and the selections from the first volume of "Owen Meredith's" verse are printed as they then appeared and not as subsequently revised. Her filial appreciation of the poet is temperate, and will propitiate while it informs the reader with many interesting personal details. The typography is handsome.

'Art for America,' by William Ordway Partridge (Boston: Roberts Bros.) is well printed and prettily bound. Here our praise must end, for the matter seems to us to be like the reading of *Hamlet*, "words, words, words."

Two more books of the kind that attempt to teach painting by written precept are before us: 'Portrait and Figure Painting,' by Frank Fowler (Cassell), and 'Sketching from Nature,' written and published by Daniel Burleigh Parkhurst at Orange, N. J. They are better than the average of such books, for they are by painters of practical experience and professional standing, and both disclaim and to some extent avoid mere recipe. The effort to teach painting in this way is, however, quite hopeless.

'A Field Book for Civil Engineers,' by Daniel Carhart (Boston: Ginn & Co.), contains nothing about drainage, water-works, canals, etc., but is exclusively confined to railway engineering. Though very far from being an ideal field-book, it no doubt will be useful to men in that business. There are some tables not ill-selected as to their matter, but their arrangement is bad, and the type of most of them terrible. One can but commiserate the wretch who has to use such tables after his eyesight begins to fail. The fault of the printing of the text of the book, on the other hand, is that it is too expanded.

G. A. T. Middleton's 'Surveying and Surveying Instruments' (Macmillan) is a brief but tolerably good account of the way surveying is done in England, and the instruments described are not unsuited to that way of working. It is not likely that many Americans will be deluded into this fashion, which, bad enough even for England, would be ridiculous in this country. The plane-table is not used at all; and the methods with the other instruments are laborious and awkward.

'The Dynamo,' by C. C. Hawkins and F. Wallis (Whittaker & Co.), is a valuable and laborious treatise on the theory and design of the important machine to which it relates. Although only a few months old, it is already obsolescent in regard to special matters. It will, however, be of great service to the class of engineers for whom it is intended.

'Edwards's Catechism of Hygiene,' written for school-children to commit to memory, is, on that account and from what it contains and omits, a very absurd compilation. It is published at Philadelphia by the author, Joseph F. Edwards, M.D.

The autopsy yields curious and occasionally unexpected answers to questions in clinical medicine and in medical jurisprudence. As exactness and completeness of observation are cultivated, these replies are more valuable, and in criminal law conviction sometimes fails because all possibilities by which death might have occurred have not been excluded. 'The Technique of Post-Mortem Examinations,' by Ludvig Hektoen, M.D. (Chicago: The W. T. Keener Co.), is thorough and clear, and is evidently the work of an experienced pathologist. It is minute without being trivial, and complete without diffuseness. Where required it is well illustrated.

A few months ago we noticed with approbation the first volume of 'An American Text-Book of the Theory and Practice of Medicine,' edited by Dr. William Pepper (Philadelphia: W. B. Saunders). The second and concluding volume, of a thousand royal octavo pages, has just been published, and, if anything, it is superior to the first. It has an advantage over the former in that all its papers are contributed not only by teachers, but by teachers whose acquaintance with their subjects is practical and clinical. An exceedingly interesting section by the learned and most lucid Prof. Welch of Johns Hopkins, upon the biology of bacteria, infection and immunity, will repay study by all whom the science of life attracts. Even laymen, who may not care to own these two great volumes, will be glad to read this essay in the public libraries, should it not, as it deserves, be reprinted as an extract. The bacteriological matter is of the most recent date, and there is nothing in English newer than its discussion of the latest phase of hereditary tuberculosis, including Gärtner's work of 1893, a subject of the greatest theoretical interest and practical moment. Prof. Welch discusses with impartiality and with more intelligence than we have elsewhere seen the mutability of bacterial species. He admits variation in existing species, and that new species may be evolved, but he is not disposed to believe that one distinct species may be transformed into another already existing and well established, as, for example, B. subtilis into B. tuberculosis. It assists in the interpretation of some morbid phenomena to recognize that at least variations may occur; and it does not seem impossible, although as yet the bacteriological experts are unanimously in the negative, that the so-called spontaneous origin of such diseases as typhoid and yellow fevers and even cholera may occasionally occur by innocent micro-organisms developing virulence in those directions. But this is rank heresy in the high scientific world that is content to accept conditions as it thinks it finds them. Both volumes are freely illustrated by plates and cuts, but it is a grave defect that the most of the microscopical figures do not show the degree to which they are magnified. Each volume is indexed copiously and separately.

The second volume of the Harvard 'Studies and Notes in Philology and Literature' (Ginn & Co.) is more than half occupied with "Ob-

servations on the Language of Chaucer's Legend of Good Women," by John M. Manley. This is only for the specialist. A literary interest attaches to Prof. Kuno Francke's brief paper, "Did the Hypnerotomachia Poliphili influence the Second Part of Faust?" in which a very good case is made out for the affirmative with the aid of some of the woodcuts from the elder work, to which Goethe was actually referred (for the sake of the cuts) by his correspondent Göttling. Another German theme is elaborately carried out by W. H. Carruth, who masses the "Expressions of German National Feeling in historical and poetical literature from the middle of the tenth century to the time of Walther von der Vogelweide." W. Henry Schofield studies the source and history of the seventh novel of the seventh day in the 'Decameron,' and there is much else that is instructive in this creditable collection.

The *Psychological Review* for May maintains its university character, including as it does contributions from fifteen universities. It is worth remark that two of the contributors are women. If we may judge from the number of women who are now attending courses in psychology in the English and American universities, they will play an important part in this the newest of the sciences.

No. 4 of the *Portfolio* in its new form (Macmillan) is devoted to Bastien-Lepage, and is written by Julia Cartwright (Mrs. Henry Ady). She gives the well-known facts of the artist's life, and a not unfair if somewhat enthusiastic appreciation of his art. The arrangement is rather confusing, and the dates are sparse, so that one not in possession of the facts might easily fail to understand the order of production of his principal works. We must protest against the constant introduction of Marie Bashkirtseff, and the grave quoting of her girlish "gush" as if it were serious criticism, and against the frenchifying of our own Saint-Gaudens, whose Christian name appears as "Auguste." The editor should have known better than this if the writer did not, and the English inscription on the bas-relief of Bastien should, one may think, have put even the latter upon the right track.

It appears from a document extracted by the *Débats* (April 6) from the forthcoming *Bulletin* of the Société des Sciences Morales de Seine-et-Oise, that M. de Bacourt, who became Talleyrand's testamentary executor, accepted the post of secretary of legation at London under that ambassador with much reluctance, not wishing to "rentrer sous le joug de la mauvaise humeur de M. de Talleyrand." Thus he writes to his faithful correspondent, the Duchesse de Dino, on Nov. 10, 1833. He assures her that he is determined to hold himself amenable to the ambassador only in respect to his conduct as secretary. Five years later Talleyrand's memoirs were confided to him, and curiosity is still unsatisfied as to the liberties he took with them in preparing them for eventual publication.

—We take pleasure in noticing the appearance of the first volume of a 'History of the Scandinavians, and Successful Scandinavians in the United States,' compiled, edited, and published by O. N. Nelson of Minneapolis. It is a neatly printed and bound book of 643 pages, divided into two parts, the first containing "historical articles," by Mr. Nelson and various collaborators, "on the greater events of Scandinavian-American history from the year 1000 to 1893"; the second giving "historical articles and biographies of Scandinavians in Minnesota." There are chapters on the "characteristics of the Scandinavians," on the Scandinavian immigration, on the Icelandic discoveries of America, on the first Swedish settlement on the Delaware in the middle of the seventeenth century, on the first Norwegian immigration, on the Swedish colony at Bishopshill, Ill., on the Fifteenth Wisconsin or Scandinavian Regiment in the war of the rebellion, and on the various religious organizations, containing more than 10,000 communicants. The second part begins with a well-written review of the Scandinavian settlements in Minnesota, and ends with about 700 biographical sketches after the plan of a modern cyclopædia, illustrated by about seventy-five portraits. The biographies are of the ordinary kind found in similar works, but we are pleased to note the absence of fulsome praise by which such sketches are usually marred. Finally, we must mention a number of very elaborate statistical tables. Other volumes are to follow on the Scandinavians in Wisconsin, Iowa, Illinois, the Dakotas, etc., and thus the work, when completed, will contain a reasonably complete account of the Scandinavian group of our population. It obviously deserves a place in our public libraries.

—It appears from the facts gathered by Mr. Nelson that Scandinavians have been emigrating to this country ever since it began to be colonized. Thus Hans Hanson Bergen of Bergen, Norway, came with the Dutch immigrants to what is now New York as early as 1633, and became the ancestor of a large American family. In the Dutch colonial and church records he was variously called Hans Hanson von Bergen, Hans Hanson de Noorman, etc. The well-known Swedish colony was founded on the banks of the Delaware River in 1638, and a Swedish clergyman preached in his native tongue in Philadelphia as late as 1823. The member of the Continental Congress who gave the casting vote of Pennsylvania in favor of the Declaration of Independence was a Swede of the old Delaware stock—John Morton. In 1820 the United States began to record the number of immigrants, and in that year twenty are registered from Denmark and three from Sweden and Norway. From that time there has been a tolerably steady increase, the largest immigration from the Scandinavian countries being recorded in 1882, when 105,326 landed on our shores. In 1892 the number was only 68,302. According to the census of 1870 and 1880, 25 per cent. of the Scandinavian population in the United States were engaged in agriculture, and 50 per cent. labored at what is called "all classes of work." It is a notable fact that one out of four of the Scandinavians engages in agriculture, while only one out of six of the native Americans, one out of seven of the Germans, and one out of twelve of the Irish follow the same profession. A reasonable number of Scandinavian-Americans have become more or less prominent in the world of politics, in literature, and in the various professions that require college training. It is generally admitted that the Scandinavians are among the best immigrants that this country receives.

—The rarity of international benefactions lends peculiar interest to the work accomplished by the gift of the late George Peabody for the erection of model dwellings in the poorer parts of London. The twenty-ninth annual report of the Peabody Donation Fund shows the same careful management that has distinguished this work from its inception, with a net gain for the year 1893 of about $150,000. While strictly adhering to a conservative policy which has increased the original £500,000 given by Mr. Peabody to the generous sum of $5,550,000 in round numbers, the trustees have been able to provide for the service of the artisan and laboring poor of London 11,273 rooms, besides bathrooms, laundries, and wash-houses. This aggregate of accommodations comprises 5,070 separate "dwellings," which are occupied by nearly 20,000 people, although the report explains a temporary decrease in numbers as being due to temporary removals of tenants during extensive alterations now in progress at the Spitalsfields Buildings; two new blocks of dwellings are also in course of erection. The detailed statistics presented shed valuable light on the domestic economy and physical conditions of life in London tenements, both of the better and the baser sort. It has been stated, somewhat captiously, that the Peabody and other model tenements in London tended to be occupied by a class of tenants whose earnings did not justify the assistance rendered by these sanitary flats at abnormally low rental. It appears that the average weekly wage of the heads of families in the Peabody houses is only £1 3s. 7½d., or a trifle over $1 a day; the average weekly rent of each dwelling is 4s. 9¼d., and of each room 2s. 1¾d. Rent in all cases includes the free use of water, of laundries, sculleries, and bathrooms, and it is impossible to overestimate the value of such privileges in the close quarters inseparable from any form of tenement life. Certain figures demonstrate the close relation between sanitation and mortality statistics. The birth-rate for 1893 in these Peabody Buildings was 35.1 per 1,000, or 4.1 per 1,000 ahead of the rate for all London during the same period; the death-rate (including 65 deaths of residents who had been removed to hospitals) was 17.6 per 1,000, or 3.7 per 1,000 below the average death-rate for all London; infant mortality, that inexorable test of sanitary and moral conditions, was only 126.4 in each 1,000, or 37.9 below that of London as a whole, and enormously below the rate in improperly arranged and overcrowded tenements in any great modern city.

—England, which has done little to improve the principle of the refracting telescope for a century and a half, the ordinary double object-glass being generally recognized as the original device of Dollond in that country in 1758, now claims the discovery of a method of making a perfectly achromatic telescope; and Mr. H. Dennis Taylor, at the meeting of the Royal Astronomical Society last month, gave a full description of his invention. Finding it impossible to secure the entire elimination of color with two glasses, he has added a third, the chief disadvantage of which will probably be the greater absorption of light. Coming from a star, then, the light falls upon, first, a baryta flint glass, with refractive index of 1.564, a white glass as hard as ordinary crown, and ground to a double convex figure; second, a new boro-silicate flint, double concave in form, with refractive index somewhat less than the first, and slightly absorbent of the violet rays; and third, a concavo-convex lens of light silicate crown glass, exceedingly transparent, and not differing very much from the hard crown glass ordinarily employed in telescope construction. All these glasses in the lump, however, are not of English but of German production, by a Jena firm now about ten years old. Three lenses of large size, should they eventually be obtainable, would of course

increase the present engineering complications in the machinery of the telescope, on account of the necessarily greater length; but a very considerable advantage would arise from the coincidence of the optical focus with the photographic one, so that no necessity would then exist, as heretofore, for varying the combination of the lenses in any particular, when the character of the work to be done with the telescope is changed. Messrs. Cooke & Sons of York, an English optical firm of excellent standing, have already undertaken the manufacture of the new object-glasses, of all diameters up to twelve inches, and they announce that they hope soon to be in a position to construct telescopes of double that diameter from the new and perfectly achromatic glass. The immense disadvantage of the blue light of the secondary spectrum in the ordinary form of great telescope is well recognized by practical astronomers, and interesting discoveries may be expected from a large telescope of the novel type in which this troublesome imperfection has been wholly removed. It is, however, problematical whether this new triple object-glass will, all things considered, prove any more effective than Dr. Hastings's double objective, also of Jena glass, described in the *American Journal of Science* five years ago.

—Official information has been received from the University of Göttingen to the effect that the Faculty sees no reason why, in suitable cases, the degree of doctor of philosophy should not be conferred upon women. This is the most important event, in the series of changes that are taking place in the world in the status of women, that has happened for a long time. There is no reason why the other German universities should not quickly follow in the lead of Göttingen, and then England and America will be the only civilized countries in which the highest attainable education, with proper recognition, is inaccessible to women. It is an open secret that it is owing to the generous activity of the great mathematician Prof. Klein, a man of thoroughly chivalrous mould, that this great boon has been gained for women. The Göttingen faculty does not explain how, if the matter is so simple now, it has not been able to see, during all the former years of its existence, that there is "no reason" why the women who were willing to work for it should not always have received the doctor's degree upon the same terms as men.

—The issue of the China *Mail* (Hong Kong) for January 17, 1894, devotes two columns to the Medical Missionary Society's fifty-fifth annual meeting. This association founded and supports the Peter Parker Hospital in a corner of Canton, with four branch establishments. The hospital, dating from 1839, claims to be the oldest of its kind outside of Christendom, and is named after one of the earliest American missionary physicians. Its medical staff are supported by American Christians, while its running expenses are mainly paid by local contributions, partly foreign but still more largely Chinese. The current expenses, besides drugs, were $2,947, and the contributions $2,141. Of these $1,151 was given by Chinese and $890 by foreigners. This fraternizing in a humanitarian work is "irrespective of nationalities and creeds," and it is astonishing that so much good can be done with so slight an outlay. The out-patients attended to in 1893 were 57,179, the in-patients 1,717, the surgical operations 2,553. During the last thirty-four years 1,483 cases of vesical calculi were operated upon, with a mortality of only 97. Tropical fevers of late prevalent have tasked the resources of the institution to the utmost. The thanks of the society were voted to Dr. Rennie and the woman physicians in Canton for coöperation, and also to the American consul, Charles Seymour, for obtaining subscriptions from Chinese officials. Its local habitation, substantial but of the rudest architecture, stands at Kuk-fow among missionary schools, dwellings, and a chapel, near the river bank, where house-boats in many ranks crowd the shore, and are filled with families too poor to secure a foot of land.

A COMPILER'S RUSSIA.

Russia and Turkey in the Nineteenth Century. By Elizabeth Wormeley Latimer. Chicago: A. C. McClurg & Co.

It is plain that Mrs. Latimer possesses no knowledge of her subject beyond what she has laboriously collected for this book. She has not allowed herself time for comparison and reflection, and she lacks also that accuracy of statement which is essential to place facts in their true light. On page 1 she says:

"In the days of the Vikings Russia had been more or less connected with the Norsemen. Its chief kingdom, whose seat of empire was at Novgorod, was a settlement of Northmen, whence Harold Hardrada (killed in England, 1066, three weeks before the battle of Hastings) brought home to Norway Elizabeth, its King's daughter, as his bride. The kingdom of Novgorod was overturned by invading Tartars, and little more was heard in Europe of Muscovy until in the sixteenth century."

The only government which in the least resembled a "kingdom" was situated at Kieff, not at Novgorod, and it was the daughter of the Grand Prince of Kieff, sister to the wife of King Henry I. of France and to the wife of Andrew I., King of Hungary, whom Harold married. Novgorod was not a "settlement of Northmen," or a kingdom. The Slavs had been settled there and had raised up a powerful mercantile city hundreds of years before they invited the Varangian Prince to come and rule over them because of their internal quarrels. Oriental coins dated two hundred years previous to this invitation have been found buried at Novgorod. The Varangian Prince, Rurik, was in no sense a king. Novgorod was an independent republic until it was conquered by Ivan III. in 1471. It was ruled by its Town Council, and the prince had no power even to cut the grass on the plot of land assigned to him until the council appointed the day. These appanage princes were allowed to reign—not to rule—during good behavior only. "If the prince is bad, into the mud with him," was the haughty motto of these Russian republics, and they lived up to it so conscientiously that this very "Lord Novgorod the Great" once had five changes of prince in the course of seven years; one prince was thrice expelled, and thrice he returned on invitation in his anxiety for the ticklish job. The "seat of empire" in Russia was always at Kieff until Moscow became the legal and actual capital, about 1425, after Kieff had been deposed from that position and the site of the capital had been in question for about one hundred years. There was no such thing as "Muscovy" at the time referred to by Mrs. Latimer, nor for several hundred years afterwards.

She strays equally far from the facts when she states, a little further on, that Ivan I. was the prince who first assumed the titles of "Emperor and Autocrat of all the Russias." Simeon the Haughty first took the title of "Grand Prince of all the Russias." Ivan IV. (the Terrible) was the first to assume the title of "Tzar," in 1547, and Peter the Great adopted the title "Emperor" (*imperator*), the one which is used almost exclusively at the present day.

Descending to more modern times, in her introduction to the present century the author states that Peter the Great's eldest son, Alexis, "led probably an irregular life; at any rate he drew down upon himself the displeasure of his father," and she explains Peter I.'s condemnation of him and his execution on those grounds. She is evidently ignorant of the fact that Alexis was conspiring, with his mother and religious fanatics and retrogressionists, against Peter and all the reforms which the latter had spent his life in introducing into Russia. From her assertion about Alexander I., that "the allied powers would not further his ambition in that direction [Constantinople]. They compensated him by the acquisition of Finland, and permitted him to do what he would in Poland," the reader would be led to suppose that he acquired Finland by the action of the Congress of Vienna; whereas he had conquered it six years before, in 1808.

Passing over such inaccuracies as Wiekinghoff for Vietinghoff (the maiden name of the celebrated Baroness von Krüdener), and of Empaytar for Empaytaz, the Baroness's evangelical friend, Shirvan and Karabaugh for Erivan and Kabarda, Mezenzel for Mezenzeff, Keof for Kief, Dreuteln for Drenteln, Koratzakof for Karakozof, Leooffa for Lvovna, Weid for Wied, Kankoff for Zankoff, zemstovos and zarosta for zemstvos, verlost for starosta (the deliberate statement is made that "the head man of a Mir is called a verlost"), and similar errors which are not permissible in what pretends to be an authoritative work on a serious subject, let us turn to errors of another kind. The author asserts that "all the imperial family lie buried in the chapel of the St. Alexander Nevsky monastery," in St. Petersburg. All of them, beginning with Peter the Great, are buried in the Cathedral of the Peter-Paul fortress; the sovereigns previous to that date are buried in Moscow. Paul I. did not paint his new palace a bright red color; its gray, green, and pink marbles are uninjured to the present day. The document by which the Grand Duke Constantine resigned all his rights to the throne in favor of Nicholas I. was kept in Moscow, not in St. Petersburg, and it was this fact and the delay thus entailed in deciding that Constantine was not to be Emperor on the death of Alexander I., which gave the opportunity for the Decembrists, and, in great measure, caused the riots among the soldiers in 1825. The author's statements on this point are ambiguous and misleading.

On p. 86 she says: "As the wife of every Russian sovereign *must* adopt the Orthodox faith, of which her husband is the head, it seems to be the custom of these ladies on their baptism to take the name of Marie Fedorovna, a practice which makes it somewhat hard to distinguish them." Unhappily for Mrs Latimer's accuracy, this remark is made in connection with the wife of Nicholas I., whose Russian name was Alexandra Feodorovna. In view of the thoroughly Oriental character of the dress, accoutrements, and languages of the inhabitants of the Caucasus, it is hardly justifiable to assert that they may be descendants of the Crusaders. The mob which Nicholas I. faced accused the doctors, not the Jews, of being the "authors of the cholera" in 1831. In

one place the author states that Peter the Great conquered Livonia and founded St. Petersburg on its soil, in another she calls the country Esthland. It was, in fact, Ingria, or Ingermanland, inhabited by a cognate race, but by neither Livonians nor Esthonians.

The author makes no discrimination between good and indifferent authorities. An instance of the results is presented by her copying an article from the *Cosmopolitan* magazine by an ignorant writer who states that Sophie Perovsky was a "countess," and that the mine under the Nevsky Prospekt at the Sadovaya would have blown up the Anitchkoff Palace. From some other equally ill-informed person she accepts the assertion that "the Orthodox Russian Church has added an additional sacrament to those in the early church or in its Latin sister," viz.: "Coronation." We contradict this on the authority of the longer catechism of the Russian Church, published by and printed at the establishment of the Holy Synod. The seven sacraments are those known in the Roman Catholic Church. This being the case, the further assertion that the Emperor regards this "sacramental rite" as making "his person sacred" falls to the ground. And here we may inquire what the author really intended the scope of her book to be? The title would seem to indicate that the international relations and wars between Russia and Turkey are meant. But we soon find that she is professing to give us, especially in the case of Russia, an account of agriculture, village and state government, court ceremonies which have no connection with diplomatic relations, and even of the accident to the imperial train at Borki in 1888. This last is interjected, by the way, in the very middle of a description of the trans-Siberian railway, with which it could not possibly have any connection, both because of its locality and because the Siberian railway was not in existence at the time. This furnishes a good specimen of the incoherent method, if method it can be called, which is pursued in the book.

There is a long account of the coronation of the present Emperor, in which detail is carried to the extreme of describing his clothing and that of the imperial choir, the coronation canopy, and so forth. Any one who has been in Moscow will recognize the inaccuracy of these and other descriptions. The coronation clothing, down to the gloves, stockings, and slippers of the Empress, are preserved in the museum there, and furnish the proof that the Emperor wore a dark green, not a "red" uniform, on that occasion; that the canopy was not "composed almost entirely of yellow feathers," and so on. The imperial choir is not easily to be seen by foreigners, and we may therefore remark that its members are clad in crimson and gold, not in "purple." "Ivan the Great's Tower" has nothing to do with Ivan the Terrible, as the author asserts, for its date is subsequent to that of his reign, or with Ivan the Great, who was Ivan the Terrible's grandfather. Iván Velíky, the name of the great belfry in the Kremlin, literally translated "Ivan the Great," is supposed to be a corruption of the architect's name (John) Ivan Villiers. This looseness of statement is observable throughout the volume, and must detract seriously from its value. Description of well-known objects seems, in fact, to be a fatal trap for the author. Reference to any picture of the Kremlin would have convinced her that each of the cathedrals has five golden domes, not one. A very slight study of the map and of Russian history would have shown her that "Nizhni-Novgorod, the capital of the Norsemen who founded the first civilized empire in Russia," is situated at least six hundred miles, as the crow flies, from Novgorod the Great, with which she has confounded it; that the Norsemen did not found either Novgorod or an empire (as we have already shown), and that Nizhni has never been a Russian capital. As only common criminals, and no political prisoners, are sent to the Island of Saghalien, Mrs. Latimer's remarks on page 305 lose their point. Her descriptions of the village Mir and other rural assemblies are far from clear, and her assertion that the Mir "pays an annual sum to the old proprietor" is misleading, to say the least. On page 325, she says: "So terrible was the destruction wrought by the Russian invasion that to this day Livland (or Livonia) has never recovered the prosperity she enjoyed up to the close of the sixteenth century." In the next paragraph but one, she says that "it was restored to prosperity and civilization" under Swedish rule, the destruction being attributed in equal measure to Poland, in the second paragraph; while in the fourth paragraph, the Livonian nobles, "oppressed beyond endurance" by Sweden, are shown to have sought protection from Russia, under Peter the Great, from which time forward its increase in knowledge and civilization is acknowledged. What is the reader who seeks trustworthy information to make of all these ill-digested excerpts from different sources thus placed side by side in contradiction? or of such a statement as that John Couza was elected hospodar of Moldavia in 1858, "reigned three years," and was forced to abdicate in 1866?

In her anxiety to leave no bit of information for others to supply, the author has attempted to give personal data in regard to the family of "the Russian Emperor" (who is not that, but the Emperor of Russia), and has succeeded in telling both too much and too little. She seems not to be aware that the wife of the Grand Duke Michael Nikolaevitch has been dead for some time; that it was the Grand Duke Nikolai Nikolaevitch, not his brother Constantine, who "was commander-in-chief at one time in the Turkish war"; that "Countess Zenaida Beauharnais, of the family of Gen. Skobeleff," is Skobeleff's sister, married to the Duke of Leuchtenberg, and now in possession of the title of Duchess of Leuchtenberg. As this lady has nothing to do with Russia and Turkey, or the imperial family, legitimately, the allusion to her and to a notorious affair had better have been omitted altogether; but, if mentioned, the facts should have been given accurately. Definitively announcing the betrothal of the Tzesarevitch, in the face of conflicting and long-continued reports, was certainly unwise. In short, too much has been attempted, without due study or comprehension of the matter. The book deals with all the rulers of Russia and Turkey and with all the wars connected with them during the present century, much space being given to the Crimean war, including character sketches of the prominent generals, and to the Russo-Turkish war, including an inordinate amount of glorification of Gen. Skobeleff, sufficient to form a complete biography of the man, or to render the war a secondary matter in comparison with his personality.

Althea: A volume of dialogues on Aspirations and Duties. By Vernon Lee. London: Osgood & McIlvaine.

Social inequality, the gulf apparently ever widening and deepening between the rich and the poor, is the principal theme of discussion by "Althea" and her friends. The book is pleasingly different from most of its class, because no one advocates a specific remedy for evils which, beginning with civilization, have kept pace with its growth, but each contents himself with indicating a path that may possibly lead to a more general distribution of pleasure and a diminution of pain. The characters are only names used for the easier expression of the author's fluctuating thought, yet each preserves a fairly consistent individuality. By using this form the author gains latitude and escapes that necessity, supposed to be imperative in speculative writing, the formulation of positive conclusions. She also escapes that defeat of her object which is so often the fate of the social reformer by pretty rigidly limiting her discussion to abstractions. She believes heartily in the essential unity of mankind, in the identity of the best interest of one with the best interest of all, in the responsibility handed down through the ages and imposed on each successive generation to conserve the good of its predecessors and to transmit it unimpaired and increased to its successors. The *Weltschmerz*, she argues, cannot be cured by legislation or by revolution that wrenches wealth and privilege from one group temporarily to bestow them upon another. She sees equality of good as the far-off, slow-coming result of the acute realization by those to whom accident has given material advantage, that this accident carries with it an obligation to cultivate high thought and fine feeling, and to apply both to the benefit of those who are by sordid care prohibited from the luxury of thinking and feeling, and who hence go blundering on from birth to death, always standing in their own light and inevitably tumbling from bad to worse. Let the mind and the spirit, she urges, be properly tended by those who have time and capacity: the expression in conduct cannot fail to be just, effective, right.

So brief an indication of the drift of an unusually thoughtful and enlightened work is necessarily very imperfect, but it suffices to suggest how ideal is the author, and how open to the scorn of those learned in economics and, before all things, practical. Her plea is, after all, for the most radical reform, that of which the desirability is as constantly obvious as its accomplishment seems hopeless—the regeneration of the human heart. If the practical would only consent to take counsel with those whom they most need for their perfecting, the idealists, the problem would not appear so hopeless; yet should the choice for a beginning fall on Vernon Lee, we fear they might misunderstand and distort to wrong uses her idea that no duty to others can be intelligently and worthily done by one who does not clearly see and persist in his duty to himself. Hers is not the Christian altruism which, as she puts it, insists upon "an absurd, nay, pernicious, self-mutilation for the greater expansion of other folks' selfishness," but that modern development of ancient ethics which recognizes in each mortal a high standard of virtue, and commands him to reach constantly towards it even at the cost of transient disappointment or pain to a group of fellow-mortals. This gospel of duty to one's own mind is, of course, a dangerous one, especially for the practical who deal not in subtleties and have a profound aversion for hair-splitting.

It cannot be hoped that 'Althea' will be widely read. At least a rudimentary thinking apparatus is needed for its understanding, and even its classic form of dialogue is rather

hateful to the multitude. But if only the mentally and spiritually privileged should read and assimilate, the result might be a perceptible hastening of the destruction of that inequality which, in Matthew Arnold's famous words, applicable to more countries than England, "materializes our upper classes, vulgarizes our middle classes, brutalizes our lower classes."

Total Eclipses of the Sun. [Columbia Knowledge Series.] By Mabel Loomis Todd. Boston: Roberts Bros. 1894.

Joy is hardly too strong a word to express the surprised state of mind of the reviewer who finds a work upon a subject sharply cut treated thoroughly upon a plan sharply cut. True, an easy subject has been selected. Professor Ranyard some years ago digested in a thick quarto all that had up to that time been observed in relation to solar eclipses, and those astronomers whose attention has been turned that way have kept subsequent observations under continued comparison with those recorded by Ranyard. That, therefore, facilitated Mrs. Todd's task. Yet it was not easy to boil Ranyard's huge volume (together with all that has been observed since) into a couple of hundred pages of duodecimo. This has been effected with such skill that the most learned astronomer may profit by reading these pages, though any novice can profit by them.

Of all the phenomena of nature, a total solar eclipse is incomparably the most sublime. The greatest ocean storm is as nothing to it; and as for an annular eclipse, however close it may come to totality, it approaches a complete eclipse not half so near as a hurdy-gurdy a cathedral organ. Few people who do not make journeys on purpose ever see a total eclipse; consequently, it is difficult to imagine how such events could ever have been predicted before the theory of them was understood. The Babylonian bricks have shown that the most scientific people of antiquity often made mistakes in their predictions that solar eclipses would occur; and they never seem to have attempted to predict their totality. It is true that in the period of fifty-four years eclipses come round with some approximation to their former conditions. It may possibly have been that Thales, who is said to have predicted an eclipse 585 B. C., made use of this period; but several considerations cast great doubt on the prediction. It is a curious fact that the records of ancient eclipses, solar and lunar, do not gibe with modern observations. To account for the discrepancy, Oppolzer and other European astronomers suppose a gradual change of the motion of the moon; but our American authority, Newcomb, finds evidence of a sudden change such as might have resulted from some cataclasm within the interior of the earth, which should have altered the length of the day by a minute amount that might become appreciable in the course of many centuries.

Mrs. Todd gives full information about the observations of the sun's corona and about the various theories of it, all of them unsatisfactory. She seems to regard it as certain that the light of it is largely ultra-violet. If this be the case, fluorescent spectacles ought to assist the observation of it. Mrs. Todd makes the curious if not very probable suggestion that the wings of the winged sun-disk which the Egyptians imported along with the god Ra represent the sun's corona. They are certainly similar to some appearances of the corona. At the end of the book is a valuable chart of the eclipse-tracks of the next fifty years. It would have been better if the quincuncial projection had been employed for this purpose, as recommended by Oppolzer. But the book is so pretty and so interesting that we need say no more of it; our readers will find it out for themselves.

The Epicurean: A Franco-American Culinary Encyclopedia. By Charles Ranhofer. Illustrated with 800 plates. New York, 682 West End Avenue: Charles Ranhofer.

It is affirmed by gastronomic connoisseurs that within the past thirty years the degeneracy of the once famous men cooks of Paris has been making rapid progress, and that the true *cordons bleus* of France are now women, recruited from the Provinces, whose services are confined exclusively to private families, where and under whose auspices the traditions of classical cookery are alone maintained. That there is a certain measure of truth in this assertion is confirmed by the sarcastic allusions of French writers to the bad quality and indifferent preparation of the food now served at the Parisian restaurants, and the unqualified praise which they bestow upon the female *cordons bleus*. Théodore de Banville touches on this subject in the following words:

"Ils trouvaient chez elle . . . des plats accommodés avec des jus savants par une vieille cuisinière de Moulins, que Madame Silz cachait comme un proscrit, car le chef du café anglais et celui du baron de Rothschild avaient organisé en vain des fourberies et des tours de Scapin, pour arriver à lui parler et à savoir ses recettes."

What is true in this description of female cooks applies equally to two women writers upon culinary subjects. Madame Rosalie Blanquet, in her 'Cuisinière des ménages,' and Mrs. Beeton have both produced veritable classics relating to cookery in private families. Francatelli has done as much for the *grande cuisine*, but it has remained for Mr. Charles Ranhofer, in his 'Epicurean,' to combine under one cover all of the merits of the other three. In the great accumulation of facts relating to the preparation of food contained in the 'Epicurean,' there is no single instance where the recipes are not given with a lucidity and clearness in marked contrast to the involved and exasperating confusion of words so common in the formulas usually found in similar works. Moreover, of the 3,715 recipes recorded, while many are calculated for a kitchen organization of the most complete and elaborate character, there are many more which are easily within the compass of the most modest household equipment. This being so, Mr. Ranhofer might well have trusted to the admirable accomplishment of his performance to secure him the full recognition of its merits, without the unnecessary accentuation of his occupancy of the post of chef of a conspicuous restaurant of the town as indisputable proof of his superior capacity. While this may have an effect upon certain classes of people—those who eat but do not dine, and those who blindly follow the fad of the moment—among gastronomic connoisseurs it will have no value or consideration whatsoever; quite the contrary. Moreover, it is among this fastidious and discriminating group that Mr. Ranhofer must look for the larger sale of his work, inasmuch as the price of it will naturally restrict its general distribution.

There is another feature of Mr. Ranhofer's book which is open to criticism. He has copiously padded it with reproductions of the menus of private and public dinners which have been served in the restaurant in question during the past thirty years. These have considerably increased the bulk of the work, already large, without adding a corresponding interest. These menus are of no possible value, except possibly to betray to commentators of the future the depth of gastronomic savagery which prevailed among us during the latter portion of the nineteenth century. We allude not to the culinary merits of the dishes, but to their barbaric profusion, with the reckless waste of food products as a natural sequence. In France, where the price of comestibles is so high and the quantity, as compared to ours, is so limited, effort is constantly being directed towards superlative merit in cookery as a counterpoise to profusion. The following menu of an exceptional dinner of twelve covers recently served in Paris will more clearly emphasize the contrast between the foolish prodigality which characterizes the menus recorded by Mr. Ranhofer, and the restraint which is exercised in such matters abroad:

Potage à la royale.
Truite saumonée, sauce Rachel.
Selle d'agneau à la renaissance.
Langouste à la Bragation.
Dinde truffée.
Salade.
Pâté de foie gras de Nancy.
Fonds d'artichaut au parmesan.
Bombe Walkyrie.

Even this menu might have been curtailed to advantage by omitting the selle d'agneau and the pâté de foie gras.

In the copious index which accompanies the 'Epicurean,' there is one omission which should be supplied. While under the heading of beef, veal, eggs, etc., the various methods of preparation are recorded in sequence, in the case of fishes they are omitted. To learn the various modes of cooking these, it is necessary to refer to the individual species. Finally, in the choice of a binding, neither taste nor fitness has been consulted.

Elementary Meteorology. By William Morris Davis. Boston: Ginn & Co. Pp. 355. Illustrated.

The slow development of the study of meteorology, even in our larger universities, is responsible, perhaps, for the lack of adequate textbooks. That of Loomis is antiquated, Buchan's is out of date and out of print. Waldo's 'Modern Meteorology' seems better calculated to make weather-observers than scientific men well grounded in the principles underlying their specialty, while the German works of recent date, excellent as they may be, have had no translators to adapt them to the needs of our schools. This work by Prof. Davis is, therefore, most timely, and any such would have received cordial welcome even had it been from a less skilful master of the subject. The sole criticism which suggests itself is that, in its departure from previous models, the arrangement of the book may fail to commend itself at sight to teachers having occasion to use it. This, however, is essentially true of all ventures into comparatively new fields, and the instructor who is competent to make such criticism will find the abundant material here given readily adaptable to the needs of any reasonable preëxisting method.

The book discusses first the origin, nature, uses, and extent of the atmosphere, and, next, temperature and its distribution, upon which factors the winds are dependent. This leads naturally to a consideration of the winds themselves and the moisture which they carry and distribute. The later portion of the book is devoted to the relation of atmospheric phenomena to each other, with some account of the practical matter of weather prediction, and to

a consideration of those recurrent conditions which we term climate. The book is the outgrowth of the experience of the author in the teaching of his classes at Harvard, and seems to be practical in its methods, rational in its progression, and fully abreast of the times in the information which it affords. While it is especially adapted to the student, it will probably find an equally wide field among our general scientific readers of the higher order.

BOOKS OF THE WEEK.

Allingham, William. Varieties in Prose. 3 vols. Longmans, Green & Co. $6.
Bliss, F. J. A Mound of Many Cities; or, Tell el Hesy Excavated. Macmillan. $2.25.

NO. 59 WALL STREET, NEW YORK.

HATCHARDS.

This is the favorite BOOKSTORE, and for 100 years the resort of the smartest people in London. It is visited and patronized by all who love books. London is the great market for books, and all the best as well as the cheapest editions can be had by writing to us. Special collections formed, and fuller information supplied than from any other house. Books both old and new, and relating to any subject, can readily be supplied at very moderate prices.

Agents for Clubs, Libraries, and all private Collectors.

187 PICCADILLY, LONDON, W.

MAINE COAST.

LANDS at and around CAPE ROSIER and Castine, Me., on this boldest and most beautiful section of Penobscot Bay, 50 miles nearer Boston and the West than Mt. Desert—southwesterly exposures, fine harbor fronts, bold rocks, beaches, and fine trees, broad views of mountains and islands, extended drives along the shore and among the hills, new wharves, and good daily connection by boat and rail. These lands are offered at low prices to persons intending to build and occupy. A very few hundred dollars will buy a fine high shore lot of several acres. Several tracts of from 20 to 50 acres are offered at low prices. Send for descriptive pamphlet and further details to
J MURRAY HOWE & BRADLEE,
28 State Street, Boston.

Chemical Lecture Experiments.

NON-METALLIC ELEMENTS.

By G. S. NEWTH, F.I.C., Chemical Lecture Demonstrator in the Royal College of Science, South Kensington. With 224 Illustrations. 8vo, $3.00.

It is intended to supply chemical lecturers and teachers with a useful *répertoire* of experiments, suitable for illustrating upon the lecture-table the modes of preparation and the properties of the non-metallic elements, and their commoner and more important compounds.
It has also been the author's object to furnish the chemical student with a book which shall serve as a companion to the lectures he may attend.

LONGMANS, GREEN, & CO.,
15 East 16th Street, New York.

History of Dartmouth College

AND THE TOWN OF HANOVER, N. H., by FREDERICK CHASE. Vol. I. to the outbreak of the college controversy. Large 8vo, cloth, $3.50 net; postage 24 cents. Sent on receipt of price by
JOHN K. LORD, Hanover, N. H.

COTTAGE AT MT. DESERT,

For rent 1894. Twelve-room cottage, near the shore. Excellent location; sanitary plumbing; grand ocean and mountain views; new and convenient.
Apply to M. TIBBETTS,
Seal Harbor, Mt. Desert, Me.

YALE MIXTURE.

The choicest tobacco made, and pre-eminently a gentleman's smoke.

Marburg Bros., The American Tobacco Co., Successor, Baltimore, Md.

A Tonic

For Brain-Workers, the Weak and Debilitated.

Horsford's Acid Phosphate

is without exception the Best Remedy for relieving Mental and Nervous Exhaustion; and where the system has become debilitated by disease, it acts as a general tonic and vitalizer, affording sustenance to both brain and body.

Dr. E. Cornell Esten, Philadelphia, Pa., says: "I have met with the greatest and most satisfactory results in dyspepsia and general derangement of the cerebral and nervous systems, causing debility and exhaustion."

The Nation.

NEW YORK, THURSDAY, MAY 10, 1894.

The Week.

THE inevitable has come to pass, and the Democratic Senators have agreed upon a tariff bill which they can put through the Senate. This being now settled, the Republicans and Hill will probably keep up their bluster and obstruction for a few days, and then suddenly acquiesce in an agreement to take the final vote. Even before the caucus was held, the accurate Washington correspondent of the *Wool and Cotton Reporter* wrote that "the chances are good to-day that a moderate bill will become law with the beginning of the fiscal year." Nearly all business men have settled down to this conviction, and even the Democrats in the Senate cannot be so inconceivably stupid as to falsify it. The *Reporter*, by the way, will be read out of the Republican party if it keeps on uttering such heresies about wool and the "sheep business" as crop out in its editorial columns last week. After saying that the "dark days" are "by no means entirely attributable to hostile tariff legislation," it goes on to advise farmers to go into sheep-raising, on the ground that "it will pay better than any other branch of stock-breeding upon the American ranch or farm before many months have passed." What, with wool free! Imagine the feelings of Delano and Lawrence when they read that. The least they can do is to bring out a rival prophecy, and they have such a large supply of misfits on hand that we are sure they can speedily produce one that will answer.

What has become of that wonderful resolution of the Senate's, asking the President to ask Mexico to let us do her silver coining for her? It passed the Senate unanimously, and it is not to be supposed that a body of such thoughtful statesmen would have spent several days debating a measure which had no underpinning. Yet we see with pain that their little attempt to do something for the great goddess Argentum has been received with cruel mockery in Mexico. The leading newspaper of that country says that, if we are to coin Mexico's silver and take away her job of supplying China and India, we must give her something in exchange. As a fair measure of reciprocity it suggests that we let her print our greenbacks. It urges with great force that she would have to have something to pay us for our exportations, and what could be easier or more friendly than to ship her C. O. D. one of Mr. Chase's printing-presses?

The Republicans will not be able to extract much comfort from the bye-election in the Third Congressional District of Ohio last week. It was held to fill a vacancy caused by the death of Congressman Houk, and the campaign was conducted on the Wilson-bill issue alone, the Democratic candidate standing squarely by the bill as it passed the House. The district, though a Democratic one, was carried by McKinley for Governor last fall by about six hundred majority. The Democrats have now carried it by nearly 2,000 majority, or about half the majority given to Mr. Houk in 1892. The district is the very centre of McKinleyism, and the Republicans had every reason to think that the "reaction against tariff reform" which they have been placing such faith in, would show itself in formidable proportions there. In addition to this, they had the hard times and the open support of the American Protective Association, the new anti-Catholic order which is said to be playing such a momentous part in the politics of the West. That the Democrats should hold their own under such conditions is remarkable.

The "industrial armies" are being rapidly resolved into their constituent tramps, and we shall soon hear no more of them, except as the same old individual wandering beggars and marauders that we have long known. The glamour was all taken away from the movement by the very prosaic treatment meted out to Coxey himself and his stragglers in Washington. The newspapers, too, have ceased to be tickled with the novelty of the thing, and the glory and heroism of the armies have all along existed solely in their columns. How strangely men's sympathies have run away with their judgment in this business may be seen in the extraordinary article by the Rev. Dr. Duryea in last week's *Outlook*. He saw Kelly's army in the first rush of curiosity and amused interest at Omaha, and thought "the spectacle" one to "kindle the imagination" and "fire the heart." "Sober, thoughtful men," he added, were very anxious lest any harshness or severity on the part of the civil authorities towards the armies should produce a "whirlwind." But there was no whirlwind in Washington when the ordinary laws against vagabonds and disturbers of the peace were applied to Coxey and his nondescripts. Dr. Duryea was as wide of the mark in that particular as he was in the prediction that Kelly's "pilgrimage will be one continuous ovation."

The great labor organizations of the country are considered by the Galveston (Tex.) *News* the chief agency which has been at work of late years to drain the farms of the needed men and to swell the armies of unemployed in the cities. "The young man," it says, "who lived contentedly at farm work at $15 per month ten years ago learned from the papers and from the labor agitators that men of his class in the cities were contending in organized and victorious armies for three or four times as much wages and eight-hour days, instead of the long and dreary twelve-hour days of the hot farm." He was easily persuaded that he and others had a natural right to just such hours and wages as they might demand; he condemned as a "traitor" or "scab" any free man who dared to apply for work on his own scale; he took eagerly to the discipline which made it a high crime for a carpenter to pick up a painter's brush or a fast bricklayer to do more work than a slow one, and such influences at last made him an uncompromising champion of "organized labor." He will never again be content to work on a farm for what he is worth, and he will wait until doomsday for service along the pleasant line of his own choice. The *News* is convinced that "the spirit and drift of the great labor organizations have tended to drain the farms of laborers, to relatively depopulate rural districts, to congest cities, and to draw into this country armies of laborers from foreign lands, and their policy and teaching run naturally into Coxeyism." Few people have given much thought to this element in the situation, but nobody can deny that there is much force in the argument.

In spite of the reprobation excited by Quincy's consular debauch, and in spite of Mr. Cleveland's recently renewed declaration of his preference for "principles instead of spoils," the work of distributing spoils goes merrily on. Mr. John Worthington was appointed American consul at Malta in 1882 by President Arthur. He has filled the place admirably, and done credit both to the United States and to himself in it, and was left undisturbed both through Mr. Cleveland's first administration and through President Harrison's. No charge has been made against him, or fault found with him. But towards the end of last February he saw in the London *Times* that he had been removed to make way for "Col. Kennedy of Missouri." About a month later he got notice of it from the State Department. There is, of course, little difficulty in estimating the fitness of "Col." Kennedy for the place. A swarm of these Western worthies has been injected into the consular and diplomatic

service to its infinite damage and our infinite discredit. Tripp of South Dakota, for instance, has been sent to Vienna, the most formal and socially difficult court in Europe, without other fitness for the place than is given to a man by residing on a boundless prairie. Fancy this personage making himself a *persona grata* at the Burg. The extraordinary feature of these appointments is that they continue to be made in the teeth of reiterated fulminations against the spoils system from the White House.

The news of the collapse of the much-talked of Stein expedition to Ellsmere Land will be cause for congratulation to many who believe that expeditions should be planned with circumspection and dignity, and so equipped as to insure for them a reasonable measure of success. More particularly are these conditions necessary in arctic ventures, as experience has only too emphatically taught. The "expedition," so called, that was to begin this summer a campaign of several years, had seemingly a more slender basis than perhaps any other arctic expedition, if we except that of the unfortunate *Ripple* of 1892, whose commander, Björling, ventured into the icy seas in a craft that was condemned in its own port, and with resources that would hardly have been considered sufficient for a cruise among the lakes of Maine. It is a singular fact, however, that the Stein expedition received the official approval of the most dignified scientific bodies of Washington, including the National Geographic Society, and of men who stand at the front of scientific investigation, such as the directors of the national Geological and Coast Surveys and the leaders of past fortunate and unfortunate arctic parties. More singular still was the heralding in advance the names of those for whom new physiographic features—mountains, capes, and glaciers—would be named on an "unknown" coast-line of 300 miles. There were a hundred such names, of women as well as men, known beyond their limited circle chiefly as founders of hospital-beds, homes for the aged, and other worthy charities, and constituting a grotesque arctic "legion of honor."

The Governor has vetoed the bill giving the mayor the power to remove the heads of departments within sixty days after his election, justifying himself in the main by arguments drawn from the report of the Tilden Commission in 1876-'7, in which the danger of giving one man so much power over the city service and finances is fully set forth. The answer to these arguments is, that we have, within the last twenty years, had a great deal of new experience in municipal government; that the system which the report thought so dangerous has since been tried in Brooklyn, for twelve years, and with results generally considered happy. Three bad mayors, it is true, have within that period under it occupied the mayoral chair against two good ones, but the badness of the bad ones has not been a hindrance to their complete overthrow when the people determined at a municipal election to vote on municipal affairs solely. So that the anticipations of the commission as to the difficulty of overthrowing mayors vested with these powers have not been realized. What has been becoming clearer and clearer for many years past is that our sole hope of deliverance from the evils which afflict us at present, lies in the concentration of responsibility on a single head. This is the tendency of municipal reform all over the country, in Chicago and Philadelphia as well as in Brooklyn. This undoubtedly breeds new dangers, as will any change whatever, but it arms a careless or partisan community with the power of rectifying abuses at one stroke—an enormous gain, every one will admit who knows how complicated our electoral system is, and how difficult it is for any voter to tell what the effect of his vote will be if he has to vote for a great many officers in the same organization Gov. Flower would have done far better if he had discussed the experience of Brooklyn and other cities since the Tilden Commission's report was written, though we admit that he makes a much better show by quoting it than he would have made by saying frankly that Gilroy, Croker, and Hill were all opposed to the bill under consideration, and he therefore vetoed it.

A retired boss is a novelty in Tammany politics. Hitherto all such bosses have remained in power till death, or defeat, or imprisonment has put an end to their reign. Tweed, with the shadows of coming defeat and disaster heavy about him, remained at his post, was exposed, stripped of his plundered wealth, and died in jail. John Kelly, even after defeat, retained his boss-ship and devoted all his energies to an effort to keep his followers together, till approaching death compelled him to retire. Croker, profiting by these illustrious examples, has decided to retire before defeat arrives, and before disaster can overtake his private fortune. Instead of "going down with the ship," as his predecessors elected to do, he deserts the ship, taking his treasure-chest with him, on the signs of coming storm. Let what may happen to the organization and to its members, the boss will be out of harm's way when the trouble begins. And Mr. Croker will take enough with him to make him very comfortable in his retirement. He has had greater opportunities and has been working a far more lucrative system than even Tweed had. Nothing like the systematic blackmail of the past few years was known in Tweed's or Kelly's time. No boss before Croker took away all the "legislative business" from the lobby and the individual "strikers" at Albany, and made it a system for his personal profit, levying upon all corporations and other interests at the mercy of the Legislature one tariff for immunity from hostile legislation, and another tariff for friendly legislation. The tremendous profits of this business can only be surmised. A glimpse of them is afforded in the sudden accumulation of wealth by Croker as revealed in his more notable expenditures of the past few years. A list of these will give some idea of the comfortable circumstances under which the boss passes from public to private life:

Invested in stock farm	$250,000
In race horses	103,000
In a Fifth Avenue residence	80,000
In family carriages	3,200

In speculating upon the causes of Croker's retirement, the *Tribune* says:

> "He possibly cannot help reflections that, in case of the election of a Republican Governor and Legislature this fall, an official investigation may come which will lay bare the sources of his revenue."

But why did you, as the chief Republican organ, not insist upon such an investigation by the last Legislature? That was a Republican body, and it did not need the assistance of a Republican Governor to enable it to "lay bare the sources of Croker's revenue." You were besought in vain for several months to call upon the Legislature to do this work, but you did not heed the request till very late in the session, and did not even then upbraid Tom Platt for ordering his man Lexow to refuse such inquiry. Croker is able to retire in safety now because you and Platt combined to spare him from an inquiry which would have laid bare the sources of his revenue. He is afraid to run the risk of not being able to escape a second time, and hence retires now. His escape this year was due to the desire of you, Mr. *Tribune*, and Tom Platt, to get a "divvy" of police-board patronage with Tammany Hall; and in your zeal to get that you spared Croker and Tammany from the perils of a full and thorough investigation. No amount of abuse of Croker now will conceal that disgraceful fact.

The death of Mr. John Jay removes a prominent survivor of the grand generation which carried the slavery conflict to its final triumph. There was every temptation in life to a young man in 1836, gifted as he was with fortune, good connections, illustrious ancestry, and honorable ambition, to eschew the anti-slavery cause on leaving college. Its adherents were then not only de-

spised as fanatics by the great business and professional world, but were hated as the enemies of religion and order and the Union. It would have been the most natural and most excusable thing possible if he had kept wholly clear of them. But he did not. He threw himself into the thick of the fight, and, for the thirty years following, he labored as he would not have labored for bread, by speeches, addresses, lectures, articles, lawsuits, in courts, in conventions, in public meetings, in churches, in clubs, for the emancipation of the negro. When the war broke out, he was equally zealous in helping it on and in maintaining the public courage and tenacity. When it was over, he embarked with equal enthusiasm in other good causes, such as civil-service reform and sound currency, and became involved in a great number of controversies on their behalf. His anti-slavery experience and training gave him a love for polemical dialectics which lasted almost till his last illness, but no foe or cause was bad enough to make him lose his temper. No man with so winning an exterior probably ever took part in so many combats. He remained through them all every inch a gentleman, simple, kindly, courteous, hoping all things, believing all things, and forgiving everybody, and bore with uncomplaining fortitude the long period of suffering which closed an illustrious career.

Last week's gold exports to Europe aggregated something over $5,000,000. The total exported for the year to date is about $23,000,000—an amount considerably smaller than the average for the same period in the last two or three years. It is, however, much above the average gold export throughout the past decade, and the reason is plain. Partly because of the paralysis from last year's unprecedentedly violent convulsion, and partly because of the delay in fixing the new laws regulating foreign trade, our industries have not yet revived as had been hoped. With industry stagnant, opportunities for investment are restricted. How sparingly trade is at the moment calling for the use of capital may be seen at a glance in the continuous flow of interior bank deposits to New York. From three to four millions a week are still coming on this account into the vaults of our city institutions, and that with the local money market at its lowest recorded rates. If domestic capital takes this view of the season's American investment market, it is hardly strange that foreign owners of capital on deposit here should look for more immediately profitable fields of investment.

Another "International Bimetallic Conference" met in London last week. Of those present, except Mr. Lidderdale, the late governor of the Bank of England, the only one of real note, or likely to command any public confidence, was the President of the Bank of the Netherlands. The others were in the main, except Mr. Arthur J. Balfour, what we may call, without disrespect, old bimetallic hacks who have for years been wandering from conference to conference, predicting terrible consequences from the appreciation of gold. The appearance of several Australian bankers on the scene is not likely to propitiate the British public, as these gentlemen, by their recent failures after a most reckless conduct of their business, have spread desolation through the United Kingdom, and more particularly Scotland. In fact, as a general rule the more frantic bimetallists are men whose private affairs are in a condition of dilapidation. The prominence of Mr. Balfour in the movement is not likely to help it either in the eyes of business men. He is much better known to the public now than he was when ruling the Irish with a rod of iron as "brave Mr. Balfour." There are apparently some people to whom mathematics are impossible, and who, though brilliant in many other ways, could not, to save their lives, solve one of the simplest problems of Euclid. So also it may be said that there are minds to which a clear idea of the nature and functions of money is impossible. Now, when a man finds that he has no head for mathematics, he generally drops it altogether. He does not go about pretending that he has found ways of proof which leave Euclid without a leg to stand on. But when he finds he has no head for currency, he does not drop it. He goes about pretending that all the old masters were on the wrong track, and indeed that the world is wrong in its love for gold, or for silver, as the case may be, that he has got the only true key to the problem, and that if he is not listened to, something dreadful will happen. Mr. Balfour belongs to the latter class. He is an acute metaphysician and an accomplished littérateur, but he really knows nothing about currency or business, and is apparently incapable of seeing what the real use of money is. Had he not been pushed into prominence by the Irish business, he probably would never have thought of taking up the currency problem at all. Mr. Henry Chaplin's qualifications as an authority on currency are too absurd for discussion. The leading London papers treat the whole business with ridicule, as well they may, and they, of course, really represent the business community.

The small Government majority in England on the registration bill will very likely dwindle still more on the various clauses of the budget, and although the budget may pass, the Liberals will probably see the necessity of dissolving before long. Sir William Harcourt is said to be tired and probably not very enthusiastic, and Lord Rosebery has clearly not held his own as premier. The slight wave of enthusiasm with which he was greeted when he took office has not lasted, and his appeals in behalf of the Irish, and protests against the labor element's machinations against the Liberal party, are pathetic enough to be signs of distress. The labor vote has now become very important; the Irish are disaffected, and the chances are, therefore, strong that the Liberals would be beaten at a general election unless they got the registration bill through. In fact, what a very wise observer said immediately after Mr. Gladstone's retirement is coming true —"This means a great deal more than people think it does." The worst of it is that if Rosebery retires, there is no one marked out distinctly for the Liberal leadership. Sir William Harcourt's health is poor and he is tired of harness. Mr. Morley's is not good either, and he is not supposed to have the kind of temperament that keeps cabinets together. But the worst feature in the situation is that just now there does not seem to be much place for moderate Liberals in England. They are in a decided minority. What with the Irish and Labor, their place seems to be with the Conservatives.

Protectionist organs will be pained to learn that they have not made our industrial situation clear to the puzzled foreigners. Here is the Paris *Débats*, for example, talking about the deep distress caused by "le bill Mac-Kinley," and finding in that the sufficient explanation of our embattled Coxeyites. There really is some excuse for the foreigners. They are not profound enough to take in the subtle explanations which are so clear to our more intelligent public. The foreign contention that our troubles are due to laws passed in 1890 is a miserable specimen of the post-hoc fallacy; while the explanation that all our distress is due to the Democratic victory in the election of November, 1892, is a case of the strictest inductive reasoning. To our acuter minds this is obvious enough, but, for the sake of the duller foreigner, it is to be wished that the demonstration might have been made a little more impressive. If paralysis had fallen on business in this country the very morning after the last Presidential election, instead of waiting for eight months, or if prosperity had continued unabated until the very hour that the Wilson bill became a law, then to be followed by instant bankruptcy, even the thick heads across the Atlantic would have seen the point. As it is, we fear they will go on talking about our affairs in their benighted way. It would not surprise us to see them attributing the revival of business to the Wilson bill.

THE NEW LAWLESSNESS.

ONE of the members of one of the "industrial armies" of the West was heard to say, in the intervals of stealing trains and levying forced contributions on the inhabitants of the towns through which they passed: "We are getting along so well that we wonder nobody ever invented this plan before." There is a novelty about it, but it is in the victims, not the operators, of the plan. Stealing and exaction and obtaining money and sympathy under false pretences are no new discoveries; but what is new is the indifference or actual complacence with which they have come to be looked upon.

The truth is, that a bare statement of the events which have taken place in this country within the past three months is enough to show a most astonishing callousness to the prevalence of crime, and a most alarming tendency to invent flimsy excuses for it. Trains have been stolen by organized mobs, and the same public that called for vengeance upon the Jesse James gang and other express robbers, has weakly said of these industrial train robbers, "Poor fellows, they are out of work and must do something." A whole railroad system has been tied up by a strike with the avowed purpose of coercing the receivers into doing what they did not believe the interests of the stockholders would admit of, mines have been seized and held against their lawful owners, coke ovens raided, factories closed by marching mobs, and with it all there has been little or none of that swift demand for the enforcement of the law and the maintenance of public order which the inherited respect for law makes almost instinctive in an Anglo-Saxon. The newspapers have treated these occurrences either flippantly or in a partisan and perfunctory manner. The politicians have cautiously looked about to see, before speaking, how many votes there might be in it, to be won or to be lost. In few quarters have we seen straightforward talk to the law-breakers or to those, almost equally criminal, who wink at law-breaking because it puts forward some grotesque excuse for itself.

There are, of course, actual laws which these organized tramps and violent strikers and intimidators violate and know they violate. Existing statutes are sufficient to curb them, if duly applied. But it is more at the general spirit and presuppositions of law than any particular enactments that this new lawlessness, in the offender and in the condoner, strikes a dangerous blow. It violates the good faith upon which all normal society rests. Men out of work who pray God they may never find it; strikers against tyrannical corporations who are themselves more arbitrary and cruel than any tyrant; riotous foreigners driving workingmen out of their shops in the name of American liberty and equality—such things so contradict our fundamental ideas of social order that to let them go on unpunished, much more to find cheap palliation for them, is to put that social order in deadly peril. We have, in fact, come dangerously near the condition of things at the time of the French Revolution, when, as Burke says, "the leaders of the present system tell them of their rights, as men, to take fortresses, to murder guards, to seize on kings without the least appearance of authority from the Assembly, while, as the sovereign legislative body, that Assembly was sitting in the name of the nation."

The ghastliest part of all is the way the law-breakers are clamoring for new laws to set all right. What warrant have they that others will have any more reverence for their new laws than they have for those already on the statute-books? Evidently none whatever. They are doing all they can to promote lawlessness, at the same time that they say society is suffering from not having laws enough. There never was a more palpable case of suicide. Suppose, by some bedevilment of Congress, Coxey or the lawless socialists should get the laws they are calling for. Might not the new statutes remain as contemned and spit upon as those which they trample upon every day? To propose to cure the ills of mankind by law, and to go about it by exciting a spirit of universal disregard of all law, is one of the curious twists which have got into the brains of these men.

They and the atmosphere about them and the state of society which tolerates them breed cranks as fast as bad milk does bacteria. It is laughable, but it is also depressing, to note how the men with social crotchets and with perverse convolutions in their gray matter have flocked to Washington to be on hand with their nostrums when the time came to get Congress to adopt suggestions. From men who hold up trains to take the passengers' watches and purses, the gradations run all the way through tramp train-stealers on to the men who have a divine revelation about the proper ratio between gold and silver. They are all in an unholy alliance at present, and are encouraged to go on in their various kinds of crime and craziness by the fatal good-nature, the lazy indifference and the criminal toleration with which the press and the public for the most part look upon their performances. The new lawlessness is most alarming of all in those whose part in it is passive. It would be easy enough to make an end, in one day, of all the disorders by which the country is afflicted and disgraced if there were in the minds of those set to enforce the laws, and, above all, in the minds of those to whom the men set to enforce the laws look for a spur and support in doing their duty, the ancient regard for the sacredness of the law which is our best inheritance and surest strength.

TAMMANY AND HOME RULE.

WE have always wondered that Tammany was not used more freely by the British Unionists as an argument against home rule. It has been used a good deal in private, but not nearly as much in Parliament and on the stump as one would have expected. Lord Salisbury in his speech on Thursday produced it more prominently than any other speaker on his side has hitherto done. It is a perfectly legitimate argument. It is not unfair for people at a distance to infer, from what they see of the government of this city, that the government of Ireland by Irishmen would be something of the same kind. Nor is it unnatural for Lord Salisbury to suppose that, if home rule were granted, the Irish who have been practising the art of government in New York, would hurry home to Ireland to practise it there. But it is a very erroneous inference, nevertheless. It is the kind of mistake into which people constantly fall through judging events at a distance. The Tammany chiefs would not go home, for various reasons. The first is that their pickings and stealings in Ireland would amount to very little, even if they were possible; Ireland being a very poor country. They can make more in New York in a day than they could in Ireland in a year. If they were forced to leave New York, Ireland is probably the last country in the world they would go to. They are much more likely to go to San Francisco, or St. Louis, or Portland, or some other rising American city in which the boss system has not yet been fully established, or, failing this, to some of the South American States, where the bulk of the population is very ignorant and the ruling class small and corrupt.

Moreover, most of them left Ireland in their youth. They have few or no associations with it, and would find no friends there if they went back. They would be received as strangers and Americans, and would get no chances worth mention. And justice compels us to say that no party in Ireland at any time has ever given office, either municipal or state, to men of as low a type as the Tammany men, so ignorant, and illiterate, and characterless. The Irish members of the House of Commons have been a good deal abused by the Unionists, but they are all scholars and gentlemen compared to the Tammany people, and not one of them has ever been accused of corruption of any description, or of any conduct of a dishonorable nature. Nor is there any Irish town or city in which the appearance of men like Gilroy or Croker in the mayoralty or common council would not be an astounding phenomenon. The Irish cities have a good many men in their governing bodies who cannot be called refined or cultivated, but they all have some respectable connection, of

business, property, or ancestry, with the place. The idea of taking a parcel of unknown vagabonds out of the streets and public houses of the town, and making mayors and commissioners of them, has never occurred, we venture to say, to the voters of any Irish municipality.

This much is due to the Irish at home. Something is also due to the Irish here—that is, to the Tammany men themselves. We have always considered the capture of the city of New York by three or four foreign adventurers a wonderful exploit, more wonderful by far than any of the exploits of the Buccaneers in the Spanish Main in the sixteenth and seventeenth centuries. But nothing happens in politics from one cause only. No man or band of men ever seized and held the government of a community without the conscious or unconscious help of the community itself. Tammany societies do not spring up out of the stones. They spring up out of a prepared soil. These fellows entered the city hall by an open door. They retained the government in 1890, after their character had been fully exposed, by a peaceful majority vote of the citizens. Ever since that year at least, we have all been in the same boat with these Irishmen. They are our lawful agents, chosen by us with full knowledge of their qualifications. They make the city a by-word and a reproach all over the earth with our cognizance and approval. Whatever Lord Salisbury or any one else says about them reflects on us also. We introduced them to foreign nations last year as our lawful representatives. If they go back to Ireland to lie and steal and cheat, we ought all to go with them, and support them there, as we do here, with our approval and acquiescence. We ought to keep our faces straight when they discourse on wealth and taxation and constitutionality there as we do here. We ought, in short, in common decency, after having made them, to share whatever fate may be in store for them.

SOUND-MONEY SENTIMENT IN THE SOUTH.

THE Galveston (Texas) *News*, which is one of the most intelligent and clear-sighted journals in the South, insists that Northern people take too pessimistic a view of Southern sentiment on the financial question. It admits that "there has been a great din of screaming and thundering vociferation here and there in the South for the silver phantasms of the Blands, the Reagans, the Morgans, the Pughs, and the Tillmans," but it points out that "people madly intoxicated with an idea or a stimulant can always make ten times more noise than people who are duly sober." The *News* says, what everybody will allow, that as a rule the latter class are largely in the majority, and it is confident that the present case is not an exception.

As evidence in support of its contention, the *News* quotes from a recent article in the Florida *Citizen*, which admits that the free-silver notion prevailed to an almost alarming extent in some sections of the South during the last campaign, but declares that for some time past sentiment in favor of sound money has been steadily gaining ground. As evidence of this, it cites the fact that during the crisis of last year petition after petition went up to Southern Congressmen urging upon them the importance of an immediate repeal of the Sherman law and a declaration in favor of a sound financial policy for the Government. The *Citizen* thinks this "shows the difference between sentiment and demagogy on the one hand and sound common sense on the other, when an emergency had arisen which took politics out of the question and left it to be settled upon higher grounds." The fact is also pronounced significant that most is heard about the free-silver lunacy when there are offices to be filled the incumbents of which are presumed to hold some sort of notions on economic questions. The *Citizen* goes so far as to assert that "the whole agitation begins and ends with the politicians and demagogues, who seek to make the people believe that their poverty and distress have arisen solely from an improper system of finance."

The Memphis *Appeal-Avalanche* has heartily endorsed the position of the *Citizen*. All through the controversy over the repeal of the silver-purchase act this journal asserted that the politicians grossly exaggerated the feeling in favor of free coinage. It is more positive than ever on this point now. It argues that free coinage benefits only the silver-producers, and would be positively harmful to the South, and it insists that a great proportion of the Southern people share this view.

We find evidence that there is much more support of Mr. Cleveland's position on the financial question among the many smaller newspapers of the South, which come close to the people, than one would judge from reading the few city papers. In Mississippi, for example, the Vicksburg *Commercial Herald*, which is one of the most prominent journals in the State, is bitter against the President and fanatical for free coinage. But in discussing a nomination for Congress the Vicksburg *Post* predicts that the man who espouses the cause of President Cleveland, and stands up boldly for a sound system of national finances, will win. The Jackson *News* concurs in this view, and says: "Sound money would win, and the people would enthusiastically rally to the support of the only Democratic administration we have had in thirty years. The people are with Cleveland, and at the proper time will prove it very conclusively." The Newton County *Progress* is of the same mind, saying: "The people want a sound administration and sound money: some of the Representatives seem to want the country flooded with unsound money and unsound talk."

In Alabama, too, there have been plain signs that the mass of the people are with the President. Senator Morgan has been making speeches in that State full of bitterness against Mr. Cleveland, and his course has been warmly resented. He tried to defend himself at Montgomery the other day, and it is stated that, as he proceeded to expatiate on his free-silver hobby, the audience manifested its disgust by proceeding to leave the house and he was obliged abruptly to close. The overwhelming majority of the local papers throughout the State have condemned the Senator and announced themselves on the President's side.

We agree with the Galveston *News* that such signs as these are full of hope, and we are glad to coöperate with it in bringing them to the notice of the Northern public. But, after all, the only way to judge of public sentiment on the financial question in the long run is by the character of the men who are chosen to make laws bearing on finance. If the people are not crazy about free silver, they must assert themselves when there are offices to be filled, and see that lunatics do not get nominated for Congressmen. The *News* says on this point:

> "The trouble is that the sober majority have not been sufficiently explicit and decided in pronouncing against the follies of the intoxicated minority, and in rebuking the politicians who sought to profit by humoring and contributing to the intoxication. For this reason we have so often had in politics, and more or less in legislation, a riotous régime of lunatics and speculating demagogues, to the grief and humiliation of a too silent and too patient majority."

A majority which is so "silent" and "patient" that it consents to be utterly misrepresented might as well be a minority. The reason Northern people generally consider the South wrong on the financial question is because the Senators and Representatives whom it has elected have as a rule been wrong. It is infinitely pleasanter to believe that the mass of the people are sound, but the only way to demonstrate that fact is for them to send to Congress men who represent them in that attitude.

THE DELPHIAN HYMN TO APOLLO.

AMONG the recent spoil collected by the French School of Archæology at Delphi are two hymns to Apollo found last year in the Treasury of the Athenians. They are published in the current number of the *Bulletin de Correspondance Hellénique*, under the able editorship of M. Henri Weil and M. Théodore Reinach. One of them is prefaced by a decree of the Delphians which confers on the author, Aristonoos, a Corinthian, various privileges and complimentary titles in token of gratitude for

the offering of his muse. His hymn, dating from the third or second century B. C., consists of six glyconic stanzas displaying more art than inspiration, yet composed with a certain elegance that savors faintly of Callimachus. It is worth noticing that the lapidary has, to a certain extent, marked the metrical couplets by breaks in the lines of the inscription.

By far the most remarkable novelty, however, is the fragment of a pæan, accompanied by musical notes which are reproduced in modern musical notation by M. Reinach. The words and music are found on two mutilated slabs, which, for weighty reasons, appear to belong together. The music was performed in Athens last March at a reception given by the French School, and the words have already attained the distinction of being parodied by the irreverent Athenian newspapers. It was composed by an Athenian, to be sung by a chorus of his countrywomen as a processional hymn, during a thanksgiving ceremonial at Delphi for the deliverance of Athens from the invasion of the Gauls. These circumstances account for its preservation in the Athenian treasury as part of the official record of this "theoria." The date may be placed near 278 B. C., soon after the Gauls had attempted to pillage the temple and were miraculously foiled in their attack. The poet begins with an invocation to the son of Zeus and an allusion to his victory over the dragon Python, which he evidently compares to the recent repulse of the "impious warlike host of Gauls." At this point the thread is lost, but in the second fragment it is resumed with an invitation to the Muses to leave the deep forests of Helicon, and sing of their golden-haired brother who, dwelling on twin-peaked Parnassus, visits amid high-born Delphian dames the fountain of Castalia. Finally the poet addresses the chorus of Athenian women, who by the grace of Athene "dwell in a land inviolate, while on the altars burn the thighs of bulls, and the breath of Arabian incense mounts to Olympus," amid the airs of shrill-toned flutes and of the cithara.

The style of the poem shows more animation, spontaneity, and lyrical spirit than might be expected in an official composition of this period. The rhythm is pæonian, a movement especially consecrated to Apollo and the pæan; a rhythm, however, in five-eighths time, equally unknown to modern verse and modern music. The present example is not antistrophic in arrangement, like Pindar's 2d Olympian and 5th Pythian; the pæons follow continuously without admixture of other feet, and exhibit a license in combinations of short syllables which Simonides rarely, if ever, permitted himself. As the lapidary followed the musician's copy which was prepared for the use of the singers, he incidentally furnishes us with some curious information on the subject of pronunciation as well as of musical enunciation. When a vowel or diphthong is sung on two notes, the lapidary writes the vowel twice; a diphthong is sometimes repeated, sometimes resolved into its elements, for example: ταύρων, εὐύδρου, ᾠδαῖσι are written ταούρων, ἐουύδρου, ᾠδαεῖσι, This furnishes a clue to the pronunciation of the period, and some interesting evidence as to the original sound of the vowel *υ*. Such duplication or resolution we might expect, *a priori*, in every case where, in strophe and antistrophe, a long syllable corresponds to two shorts.

The chief value of the discovery, however, arises from the light it throws upon ancient music: it is, in fact, the longest and most authentic specimen we possess of the early music of the Greeks. While the theory of music is discussed at some length in treatises that bear the names of Aristoxenus, Euclid, Alypius, and others, hardly any actual examples have come down to us save some mediocre compositions of the epoch of the Antonines, a short inscription from Tralles, and a wretched morsel of a chorus from the "Orestes" of Euripides. While the present fragments give us no information that is essentially new, they confirm the facts already in our possession. The musical signs employed are modifications of the letters of the Ionian alphabet, each note being placed over the corresponding syllable of the text. If the same pitch is sustained over successive syllables, the note is written only once, over the first syllable to which it belongs.

In transcribing the melody in modern musical notation, M. Théodore Reinach was confronted by a problem that might have been insoluble. The same letter, in different modes or scales, expresses a different absolute pitch; and Alypius preserves the notation of fifteen different scales, each in the diatonic, the chromatic, and the enharmonic genera. It may be well to explain that in ancient Greek music the scale consisted of four notes (instead of eight as with us), comprising a "tetrachord." The extreme notes of the tetrachord form the modern interval of a fourth (E—A). The matter was complicated, however, by the use of three "genera"—the diatonic, in which the three intervals comprised two whole tones and one semitone (as with us); the chromatic, comprising two semitones and one interval of one and one-half tones; the enharmonic, comprising two quarter tones and one interval of two full tones (a major third). Furthermore, there were a variety of "modes"—Dorian, Phrygian, Lydian, and others—governing the order in which the prescribed intervals should occur. Each could be applied to any one of the three genera. Fortunately, twelve of the fourteen signs employed in this hymn are at once discovered in Alypius's diagram of scales of the Phrygian "tone" or "trope." The air, while written, as might have been expected, in the Dorian mode, offers an interesting example of those mixtures of genera and modes which characterize the elaborate and artificial style of the post-classical epoch, passing from a diatonic opening to a chromatic passage, and swinging to and fro in accordance with the sentiment of the poetry.

If we inquire why the music of this hymn sounds strangely to the modern musically cultivated ear, we shall find the reason in the unusual time (5/8), and in the use of certain progressions to which we are not accustomed. The strangeness of the time soon disappears when the music is studied carefully. We are then conscious that the melody has a somewhat monotonous character, and that this is due to the frequent recurrence of certain peculiar progressions, and to the curious fact that the verses, as such, do not seem to have suggested to the composer musical phrases coextensive with them, as we find them in modern lyric music. One feels that the foot was more to the composer than the verse. It is worthy of note that, when sung quickly enough to grasp such phrasing as there is, the melody becomes decidedly trivial; whereas, when sung much more slowly (say 1/8 = M.M. 54), every suggestion of phrasing disappears; but the effect is noble and not unlike that of a Gregorian chant. This is not surprising. The human voice has in it such a quality of sympathy that, if the hearer is given sufficient time to receive the impression, even single notes are impressive, especially if sung by many voices in unison. We incline to believe that this hymn was chanted in very slow time—not faster than sixty eighth-notes (twelve bars) to the minute.

Some of the progressions suggest the Æolian harp, a characteristic also of the music of primitive and notably of savage peoples. Certain passages are pitched decidedly lower than the rest, and suggest the possibility that the chorus was composed of sopranos and contraltos, or possibly of male and female voices.

It may be easily verified by trial that, in the least satisfying parts of the hymn, the judicious insertion of a bass note makes everything right. This suggests the inquiry whether that which seems to be lacking was not supplied by notes struck on the *barbiton*, while the *auloi* sustained the voice. There is another inscription which shows instrumental in lieu of vocal notation; but it is held that it must have been written for the voice because the syllables are repeated when a quarter note is resolved into two eighths. This argument is far from convincing. The player would need to know, not only the length of each note—which he might infer from the number and quantities of the syllables—but also how many times that note was to be struck; for which no other provision seems to be made except this of repeating the syllable when a long in the verse corresponds to two shorts in the air. Surely, when instrumental music is provided with words, the burden of proof must rest on those who deny an instrumental accompaniment. That this was the function of the stringed instruments seems a reasonable conjecture. While the flutes would be adapted to sustain the voice, the stringed instruments, which it seems to be proved were also used, were, from the nature and the limited duration of their notes, and especially from the lack of semitones, quite unadapted to the purpose. What, then, was their function, if not to supply from time to time the bass note which is needed as the bond of union and the key, so to speak, of the musical combination?

Mere accident, if nothing else, could not fail to reveal to the Greek artists that a bass note at a proper interval would improve the effect of an upper note. A string accidentally twanged while one sang would be enough. Is it conceivable that an æsthetic people like the Greeks would fail to utilize such a discovery? We do not affirm that they did so in their religious music, where they may have been fettered by archaic tradition; but that instrumental accompaniments not in unison with the melody were not unknown to them might be guessed *a priori*, even if it were not sufficiently proved, as it seems to be, by the well-known texts from Plato (Legg. 812 D) and Aristotle (Probl. xix., 39). If the instrumental accompanists were not usually furnished with a score in their own notation, which seems the more probable opinion, it is reasonable to believe that the professional musicians were so trained in harmony that they were able to furnish a bass to the melody even without one—a thing which a little practice will enable any one to do who possesses a good ear, provided the melody is not too complicated. And this is, perhaps, what Plato means when, in the same passage, he names accompaniments different from the melody as one of the things which are too perplexing for a boy to learn in a three years' course; although, with the aid of the modern pianoforte, it is not found very difficult to teach even young children to harmonize in a much shorter time.

JAPANESE POLITICS.—II.

Tokyo, April 2, 1894.

Again and again it has been said abroad and in some of the local English newspapers in Japan that the strict treaty-enforcement measure is evidence that the Japanese have renewed their old hatred of foreigners. The most friendly construction has been that the Japanese are justly incensed against foreigners for refusing to grant new and liberal treaties in place of the present obsolete and unjust ones. Under the present treaties the Japanese Government cannot frame its own tariff on imports or exports. It has no jurisdiction over foreigners who commit offences in the country or who are sued by Japanese. Foreign courts are established in the treaty ports by various governments to try their own subjects, and in this way Japan is put on a par with Turkey or Morocco. These and certain other restrictions on the sovereignty of Japan are undoubtedly irritating to a high-strung people like the Japanese, and it may indeed have entered the minds of a few fanatical and inexperienced members of Parliament, who are influenced by the old spirit of patriotism (*Yamato damashi*), that the only way to secure absolute sovereignty is to put the screws upon the foreigners in Japan as far as the treaties permit.

But the vast majority of the members are perfectly aware that this is not only an unjust but a highly inexpedient view of the situation. They know that it would be perfectly impossible for any cabinet, even of their own party, strictly to enforce the treaties, and their only object is to annoy the present Government and force it to resign. Mr. Fukuzawa, one of the best-known men in Japan, who thoroughly understands his countrymen, has said, both in private and in his paper, the *Jiji Shimpo*, that the so-called anti-foreign movement is merely a "stick to beat the Government with. This is only a family quarrel, and foreigners need not bother themselves about it." The only danger has been that politicians might, for the sake of temporary agitation, succeed in inflaming the minds of the more guileless country people, though up to the present no serious consequences have followed.

Three times the Japanese Government has been in sight of treaty revision, and in every instance negotiations were broken off, not by the foreign governments, but by the Japanese themselves. The last serious attempt was made by Count Okuma, Minister of Foreign Affairs, in 1889. The provisions of this treaty (or rather of these treaties, since they were made with all the important powers) were in the main excellent. The Japanese at first hailed it with acclamation, and bestowed the most extravagant praise upon Count Okuma for having at last solved the knotty question. Even the foreign community in Yokohama did not protest against it, as they undoubtedly would to-day. Slowly, however, the temper of the press and people began to change. An undercurrent of opposition to the new treaty began, growing most mysteriously in strength and volume, until it overwhelmed the former friends of the treaty. This opposition finally culminated in an attempt upon Count Okuma's life and the withdrawal of the treaty. It is now hardly an open secret, however, that this whole unpatriotic and inexpedient movement was manufactured by the Sat-Cho enemies of Count Okuma, who were jealous of his success and determined to undermine him. What men were the head and front of this intrigue need not be specified; it is enough for our present purpose that Count Ito, the present Premier, and Count Inouye, now Minister of the Interior, were among the instigators of it, and to-day they and Japan are suffering the consequences. Count Okuma, who is undoubtedly the most ingenious political manager in Japan, is employing all his resources, as leader of the *Kaishinto*, to get even with those who wrecked his fortunes. He would indeed be more than human were he tamely to look on and see his opponents carry out his programme and reap his honors. Thus the genius of intrigue broods over Japan, and ruins its most cherished purposes. The so-called anti-foreign sentiment, the strict treaty-enforcement measures, are simply grist for the mill of those who wish to overthrow the present Sat-Cho cabinet, and who employ any means to succeed in the attempt. If there is any feeling of hostility towards foreigners, it has a most feeble hold upon the people, and would soon die a natural death except that it is fanned into life by intriguing politicians and partisan newspapers. Count Okuma himself and the *Kaishinto* have always been known to be friendly to foreigners.

On March 1 the elections for a new Parliament were held. The cabinet took extraordinary precautions to have a fair and peaceful election, as even the Opposition newspapers have confessed. The only real issue before the country was the question of the strict enforcement of treaties. The Progressionists and National Unionists at first tried to champion this cause, but they soon discovered that the country utterly refused to respond to their appeals. One of the ablest leaders of the *Kaishinto*, who was known to have favored the address, had to publish a defence of his conduct, in which he carefully explained that his action was in no way based upon an anti-foreign prejudice. In the former election he was returned almost without opposition. In spite of his great popularity and the untiring efforts of his party, he barely escaped defeat by a majority of two. Abei Hankon, perhaps the most enthusiastic supporter of the address, was defeated, though he was one of the most respected men of his district. Most significant of all, however, was the fact that Hoshi Toru, known to be the most vigorous opponent of this measure, who only a few months before had been ignominiously expelled from the House, was elected by a larger majority than before.

A comparison of the important parties in the present and the former Parliament tells the story succinctly. The *Jiyuto*, who were the chief party to oppose the address, commanded seventy-seven members in the old House. They succeeded in returning 126 members, thus achieving a success as astonishing as it was gratifying. In political tact and generalship they are far behind the Progressionists. Their leader, Count Itagaki, has even been taunted with his want of sense in the art of "practical politics." The *Kaishinto*, who had forty-three members in the old House, succeeded in returning only fifty-seven, a gain of but fourteen seats, in spite of their excellent organization and management. The *Kokumin Kyokai*, the allies of the *Kaishinto* in advocating the address, and the real conservatives of the country, found their numbers reduced from over seventy to thirty-five or six. The *Jiyuto*, therefore, need only the votes of twenty-five or six independents to carry the field.

Ever since the election, the *Kaishinto* have made every possible effort to establish a union for the sake of getting a majority against the *Jiyuto*. Thus far, however, they have failed to accomplish their purpose. As a last resort, the *Kaishinto* newspapers have formed a league of all the opposition press, including several journals that have hitherto stood aloof from party contests. The avowed object of this league is to bring about the formation of party cabinets and to oppose the measures of Count Ito and the *Jiyuto*. The manifesto states that the doctrine of strict treaty-enforcement is the most important means of securing treaty revision.

The Government has appointed May 12 as the date of the next meeting of Parliament, and it will then be seen whether this league will be able to bring about a majority against the Government.

G. D.

ÎLE DE FRANCE AND PICARDY.—I.

London, April, 1894.

I may sum up our short tour taken in Lent by saying that we travelled 450 miles, were never over 80 miles from Paris, were gone 10 days, and spent less than 16 francs a day apiece. We visited five cathedral towns, five other towns, of which three had interesting castles, examined a score of churches, and saw unnumbered others from the slow-moving cars well enough to enjoy their picturesqueness and even to give a shrewd guess at their age. It would have been better to spend more time, but that was impossible, and we can say that we never hurried save when we were obliged by the regulations to put ourselves into the power of a guide.

This part of the country is the cradle of ogival architecture, which the Renaissance called Gothic to show its contempt for a style that was then out of fashion. In the south of France one finds fine examples of the pure Romance style that preceded the ogival, but in the north are the best specimens of the transition: the churches grow more and more lofty and are more and more richly decorated, and the sculptures pass from the rude but vigorous and expressive figures of the twelfth century into the skilful work of the fourteenth, gaining in proportion, in truth to nature, in beauty, but sometimes losing with their quaintness a part of their charm. It is true these changes may be studied within a single church, for the cathedrals, though often quickly built, were slowly completed, their construction running over two or three centuries and each generation leaving its impress upon the part that it added to the great pile. This diversity of style adds wonderfully to the interest. It is pleasant to follow out the variations in different parts of the building, to make discoveries for one's self, as, for instance, to detect the lateral enlargement of the cathedral at Amiens by the difference in the masonry of the outer and inner half of the chapel walls in the nave, the outer half having evidently been the original buttresses.

Soissons was the first city we came to. The contrast with the metropolis was complete and striking. We admired its clean streets, remembering the black mud and dingy houses of St. Denis; we enjoyed the strangeness of lines of houses where no one resembled its neighbor in form or size; and the odd-shaped roofs, with their red or green or blackened tiles, offered bits to charm a painter in search of the picturesque. It is difficult to say which is the most admirable, the cathedral which has just been restored in the most conscientious manner, and is as fresh inside as when it was first built (without being in the least modern), or the Abbey of St. Jacques des Vignes, of which only the two towers of the gateway are left, still showing the marks of the bombardment by the Prussians. Those towers are so light, so well proportioned, they stand out against

the sky (which one sees not only between, but through them) with such distinctness, that the abbey when complete must have been less beautiful. It was their effective photograph that had led us to go to Soissons. There are two or three other churches worth a visit, especially one now used as a gymnasium, a bit of pure Romanesque architecture which the traveller should not fail to see and study. To reach it he passes through the little market-place planted thick with trees that have been pollarded after the French fashion till the trunks end in a mass of knots forming a capital, as it were, of double the diameter of the trunk, from which gnarled and twisted branches run out horizontally till the little wood seems not real, but a weird design of Doré.

Soissons has a long military history, beginning with the victory of Clovis near its walls and running through numerous sieges down to 1871, when the defenders attempted to keep off the Germans by damming the Aisne and flooding all the country around; but without success. Even now one of the ancient abbeys serves as barracks, what is left of another harbors the military bakehouse, and the red jackets seem more numerous in the street than the citizens themselves.

It is interesting to observe, when one goes even so small a distance from Paris as to Soissons or Reims, what a difference there is in the facial type. Of course at Paris there is a mixture from all the provinces, to say nothing of the foreigners coming from many parts of the world. Yet there is a prevailing Parisian look, especially among the lower classes, which one feels, though it is not easy to describe. In the north there is the same face, but combined with others which show that the Netherlands are near. At Reims especially one sees in the streets two peculiar types, one a long Flemish countenance, such as often occurs in the early Flemish paintings, the other a short Celtic face. Both of them are to be found again in the carvings of the cathedral. Every one knows the much-pictured cathedral of Reims. It will repay many a visit, but I will leave it with this, for I remember that the old canon who rightly calls it "l'estonnement de toute la chrestienté pour la structure et cimeltrie des bastiments," says that "les regardants en l'admirant se taisent plus tost que d'en parler." Less known and less rich, but not inferior in interest, is the abbey church of St. Remi, two centuries older, though, like all the Romanesque churches, it has been added to and rebuilt, and shows a curious mixture of styles. It was erected over the spot where St. Remi chose to be buried, intimating his will in a way that recalls the table-tippings of a later day, for his coffin stopped short when the bearers were taking it to the Church of St. Timothy, and refused to budge as one church after another was named, till at last they reached the name of St. Christopher, who had a little chapel falling into ruins on this spot, when the burden became as light as a feather. All this may be seen in the tapestries given to the church by Robert de Lenoncourt, and is set forth in their inscriptions :

"Tout le clergé par bō accord
Cōclut que auecques l'ayde de dieu
Seroit entere le saīct corps
En leglise saīct timothee.

"Le sarcueil ne peuluent porter
Au dict lieu ni en aultre pars
Prient dieu les recōforter
Et que de la faient despart.

"En une eglise ancienement faicte
Est mys le corps en digne sepulture
La uoulonte de dieu fut lors parfaicte
Car de la tere on fist large ouuerture."

It was this Archbishop Robert de Lenoncourt, by the way, whose coffin was sacrilegiously opened by the prévôt of the cathedral and five canons in 1741, when they passed their hands over his body and found all the flesh still on the bones after two hundred years of burial, though it was "un peu mollasse." The tapestries which he gave to St. Remi deserve a careful study, as does also his gift to the cathedral. Shown with the latter are two after Raphael made at the Gobelins. They are marvellous copies of famous pictures; but I must confess that they do not give me so much pleasure as the ruder compositions whose naïveté is suited to such inscriptions as I have copied above. There are some other tapestries in the cathedral which, strangely enough, were designed by a Protestant, Daniel Pepersack. As the heads of the Virgin were not well done, it was attributed to his Protestantism, and only two of the fifteen are shown. The Museum, the Roman arch of triumph, the House of the Musicians, and many other curious old houses, the old church of St. Jacques, the older church of St. Remi, and the archepiscopal palace—all these having been seen, and the cathedral visited repeatedly without exhausting it, we were yet sorry to be denied the sight of another church of admirable design, built in part by a son of the architect of the cathedral. Save the tomb of Jovinus, the finest Roman bas-relief in France, nothing is left of this church. In the first Revolution, whose destroying hand we find everywhere, the noted Santerre, brewer and general, bought it of the State, pulled it down, and sold the materials.

We had heard of the severer manners of the province, for French writers are wont to insist on the devout dulness of country towns. Reims, to be sure, is a large city, but we had not expected to see the masks and costumes of Mardi Gras rushing through the streets with discordant cries on the first Sunday in Lent, and to find the same evening a variety show in full activity from eight to twelve, followed by a ball from twelve to daylight. It may be that there is a revival of religiosity in France; I can only say that at none of the dozen inns we went to on our trip did we see any signs of abstention from meat, nor had the butchers' shops the appearance of a decreasing traffic.

C. R.

MARSHAL OUDINOT.

PARIS, April 25, 1894.

MARSHAL OUDINOT was one of the men who in time to come, when history has been replaced by legend, will appear around the central figure of Napoleon as we now see Roland and Turpin around Charlemagne. It may be said of such men as Oudinot that their history assumes even in our own eyes almost the character of a legend. He received no less than thirty wounds, some of them very severe, before he was made a marshal of France; he was the son of a beer-brewer of Bar-le-Duc, in Lorraine, and he became Duke of Reggio. He was born in 1767, under the old régime, and he died, at the age of eighty-one, in 1847, as Governor of the Invalides.

He was educated for trade, but his military vocation was irresistible, and he enlisted in 1784 in the regiment of Médoc infantry at Perpignan, at the age of sixteen. When the Revolution broke out, he was elected chief of battalion; and then began his life of war and adventure. He took an active part in all the operations of the army of the Rhine under Moreau; afterwards he made the campaign of Switzerland under Masséna, and took the most glorious part in the battle of Zürich; he was besieged with Masséna in Genoa, and their long resistance during the severest blockade allowed Napoleon, who had become First Consul, to win the battle of Marengo. During this famous blockade "we were reduced," wrote Oudinot, "to such misery that our soldiers thought themselves fortunate to eat the straw of the hospitals; this last resource failed us, and we kept our strength only by drinking the generous wines which we had found in abundance in the cellars of Genoa. The sentries, who could no longer stand, kept their posts sitting on gilded chairs and drinking Médoc wine from excess of misery."

We cannot follow Oudinot to the camp of Boulogne, in the campaign against Austria during which he was commander-in-chief of the new grenadiers, to Hollabrunn, where his behavior was truly heroic, to Neufchâtel, to Dantzig, to Friedland. After the peace of Tilsit, he returned to Bar-le-Duc to see his family. He there made the acquaintance of Mlle. de Coucy, who, four years afterwards, was to become his wife. The Duchess of Reggio wrote in her last days memoirs which are now published, at least partially, under the title of 'Récits de Guerre et de Foyer,' and with the sub-title "Le Maréchal Oudinot, Duc de Reggio," by Gaston Stiegler.

The Duchess of Reggio gives an interesting account of the life which she led in Lorraine as Mlle. de Coucy. Her father was captain in the regiment of Artois and a knight of Saint Louis. Her grandmother was a Scotchwoman of the name of Cunningham. The Coucys were very numerous, and lived in the most patriarchal manner. As they belonged to the nobility, however, they were persecuted during the Revolution. The father and mother of the Duchess of Reggio were imprisoned, as well as her sister, who was only fourteen years old. She herself was only two and a half years old at the time, and was put in prison with her mother.

"Suddenly there is a rumor that the younger Robespierre is coming to our neighborhood, as representative of the people. With great difficulty my maid, the brave Rosalie, who had *popularized* herself by excess of devotion, and had thus contrived to remain free, and was, on the outside of the prison, looking after all our interests, obtained permission to take me out for a moment. She took me from the arms of these horrid men, who prided themselves on the name of *sans-culottes*. I remember that they had on their heads foxes' skins; the man who gave me to my maid had let the long tail of the beast dangle down his back, following all his movements; it gave me a terrible fright. I wept, but Rosalie had her plan."

Rosalie very sensibly brought the child to Robespierre, whom she found in bed. Robespierre had the case explained to him. "Why," said he, "she is two and a half years old, and they have issued a warrant against her. What an absurdity! Do they want to make the Government ridiculous? Let her be set free at once." Rosalie obtained nothing for the mother, so she kept the child herself and kept her for a long time.

There are many charming details in the account which the Duchess of Reggio gives of the days of her youth, spent in the troubled times of the Directory. Often did she hear the name of Oudinot, who had risen rapidly to the highest rank in the army, and was cited everywhere in Lorraine as a type of bravery in battle and of generosity after the victory. Her own family was royalist, and admired Oudinot for the humanity which he had shown in the war of the Vendée. His name was constantly pronounced before them coupled with the name of Bonaparte, which was beginning to be in

everybody's mouth, as he was already considered the saviour of France. At Bar, where she lived with her sister and her brother-in-law, Oudinot was regarded almost as public property. His first wife resided there, and he came to live with her in the intervals of his campaigns. Mlle. de Coucy was presented to the general for the first time in 1808. "I must tell here what idea I had formed of the commander-in-chief of the grenadiers, a formidable corps which went under the name of the Infernal Column. I represented him to myself as extremely tall and strong, with a voice of thunder, always speaking and moving with the tone and air of command, armed to the teeth, and with a big sword." She found a very different Oudinot, sitting in his garden, moving with difficulty as he was nursing his leg, which had been broken at Dantzig not long before, very kindly and polite. He asked Mme. Oudinot to give some flowers to the girl who was to become in a few years his second wife. Shortly afterwards, Oudinot received the title of count and was given the domain of Inoclavo, which was worth 80,000 francs a year. He bought, in the neighborhood of Bar, the estate of Jeand'heure, which had been sold nationally under the Revolution—an old abbey, founded in the middle ages by the order of the Premonstrants, and which became his favorite residence.

During the Congress of Erfurt, Napoleon appointed Oudinot governor of the city, and he came, in that capacity, in contact with all the sovereigns and princes who congregated round the man who seemed at the time to be the arbiter of the world. Napoleon presented Oudinot to the Emperor Alexander in these words: "Sire, I present to you the Bayard of the French army; like the famous knight, he is without fear and without reproach." "I have known him for a long time," answered Alexander, alluding to the campaign in Switzerland. A new campaign began in 1809 against Austria, and after the death of Lannes the Emperor gave the command of the second corps to Oudinot. During the battle of Wagram, Oudinot took the initiative at an important moment and stormed Wagram without waiting for orders. The next day Napoleon said to him: "Do you know what you did yesterday?" "Sire, I hope I did not do my duty too badly." "What you have done. . . . You deserved to be shot." A few days afterwards, in the official order of the day, Napoleon wrote: "His Majesty owes the success of his arms to the Duke of Rivoli and to Oudinot, who pierced the centre of the enemy while the Duke of Auerstädt turned their left flank"; and he appointed Oudinot marshal of France. A month afterwards he gave him the estate of Reggio in Calabria, with the title of duke and an income of 80,000 francs a year.

Mme. Oudinot died after a short illness in the spring of 1811; the marshal was at the time in Holland, charged with an important mission, at once military and diplomatic. She had borne her husband two sons and four daughters; the eldest daughter had been married shortly before to Gen. Pajol. A year afterwards, Oudinot came back to Bar, and in an interview with M. de la Guérivière, the brother-in-law of Mlle. de Coucy, he told him that he wished to marry again, and that his choice had fallen on Mlle. de Coucy. "She knows," he said, "that I have six children, but they are good children. You will tell Mlle. de Coucy that I am forty-four years old and that I have 500,000 francs a year. As for my social position, she knows what it is, and I shall be happy to have her share it with me." Mlle. de Coucy had no hesitation, and accepted the offer. She was well prepared for this union by the admiration she had always felt for the marshal, and also by the efforts made by all her family, which saw a powerful ally and friend in one of the favorite lieutenants of the Emperor.

The marriage took place at the beginning of 1812, and, soon afterward, Oudinot, who was commander-in-chief of the second corps of the Grand Army, had to leave Lorraine for Westphalia. He asked his wife to accompany him to Münster, and she was very proud and happy to do so. She herself explains what her feelings were at the time of her marriage: "I was united to a man towards whom I felt irresistibly drawn, but who inspired me with a sort of timidity. . . . I was passing from a calm, uniform, and reserved life to an external life, going, without any transition, from the shade to the light." The journey was made in a post-chaise, with a numerous suite. All was new to the young Duchess. She was accompanied by her stepdaughter, the wife of General de Lorencez; their united ages formed a total of thirty-six only. She arrived with the second corps at Berlin. Oudinot had been ordered by the Prince of Neufchâtel, major-general of the army, to make a triumphal entry into the capital of Prussia. France was at the time in a delicate situation with regard to Prussia, which was nominally our ally. Frederick William had allowed the French armies to traverse his kingdom, but he had himself left the capital with his family for Potsdam.

The Russian campaign was beginning. Napoleon was on the point of arriving in person, and Oudinot sent his wife back to France; she made the journey with Mme. de Lorencez and Mme. Pajol. She was living in great retirement at Bar when she heard that her husband had been severely wounded in the shoulder, and had been obliged to leave the command of his corps to Gouvion-Saint-Cyr. "I start for Wilna," she exclaimed, as soon as she heard that Oudinot had been carried to that city. She was accompanied by her uncle, who would not let her travel alone. She tells at great length, in her Souvenirs, the incidents of the journey, her meeting at Berlin with Marshal Augereau, the difficulties of the roads, the arrival at Wilna, amidst all the signs of war—dead horses already reduced to skeletons, abandoned carriages. She had but one thought. She found the marshal with his arm still in a sling, but convalescent. At Wilna she saw the Duke of Bassano and the Count Louis de Narbonne, the Narbonne of the Revolution, now in the diplomatic service of the Emperor. The news from the army was kept secret, but everybody felt that all was not right. Oudinot was becoming more and more anxious, and, hearing that Gouvion-Saint-Cyr, who had replaced him, had been wounded in his turn, he decided immediately, and without waiting for orders, to start at once for the seat of war, finding himself sufficiently well. The second corps was already retreating towards the Beresina.

The two corps of Oudinot and of the Duke of Belluno were the only corps of the Grand Army which were still compact and organized; but they consisted together of no more than 25,000 men. Oudinot made great efforts to secure the passage of the Beresina for the bulk of the army; but in the battles which took place he was wounded again, and had to be carried off the field. The surgeons could not extract the ball which had struck him, and he had to be carried towards Wilna in a high fever and in the most terrible cold. He was accompanied by his eldest son Victor. The little escort had to fight the straggling Cossacks from time to time. Mme. Oudinot was struck, when she saw her husband again, not only by his physical state, but by the despairing view which he took of the situation. Napoleon, on hearing of the conspiracy of Malet, left the army to return rapidly to Paris. The famous twenty-eighth bulletin was published, and France as well as Europe knew the whole extent of the disaster which ended the Russian campaign. Oudinot heard almost with despair that all his artillery had been lost; he abandoned all hope of making of Wilna a centre of further resistance, and consented to leave the city with his wife. His ball could not be extracted, and he had still to be carried with many precautions.

Correspondence.

CREDIT TO WHOM CREDIT IS DUE.

To the Editor of The Nation:

Sir: In the *Nation* of April 12, page 273, there is a paragraph on the general subject of the discovery of the variation of terrestrial latitudes. The specific object of this paragraph is to show that a section of the *Publications of the Astronomical Society of the Pacific* (for which section I am responsible) is so worded as to *purposely* convey the impression that the discovery in question was made by a foreign and not by an American astronomer. Your correspondent finds that "a preference for attributing discoveries to foreigners . . ." "is not extinct on the Pacific Coast," and that, in order to effectively convey this preference, "words are omitted in a way that might be called garbling." Please observe that your correspondent lays the stress on intentions which he discovers in a short paragraph which purports to state only the *results* of the observations of the past year, and which omits not only the honored names of Chandler and Newcomb, but those of Euler, Peters, Nyrén, Nobile, Kuestner, and a host of others as well. In short, the paragraph in question does not mention a single name, and deals, not with history, but with results. In this brief paragraph your correspondent sees only an intention to depreciate American astronomers! Will it be believed that the very "completed volume" which your correspondent held in his hand contained not only the obnoxious paragraph, but an elaborate article (page 191) giving a careful treatment of the whole subject, and assigning with scrupulous exactness the share of each investigator in the development of this great discovery?

In my article in the *Forum* for August, 1893, "America's Achievements in Astronomy" (there's a patriotic title for you!), I have twice referred to this "brilliant discovery" which was made by Dr. Chandler, and which has received an important addition from Prof. Newcomb. But your correspondent sees only the short paragraphic summary of results; he discovers only a disposition on the part of various people to depreciate American work, and to garble; and fails to read the long article which contains the very statements which, he says, are purposely omitted!

When one comes across a good old-fashioned robust slander of this sort, one considers who will read it, and what its effect will be, and regulates his answer accordingly. This particular accusation will be seen by the intelligent readers of the *Nation*. I do not believe, for one instant, that they will credit any insinua-

tion of the sort; and I am sure that they will not after I explicitly deny the "preference for attributing discoveries to foreigners," the "garbling," etc., as I now most emphatically do. The accusation is simply not true, whether it relates to the Pacific Coast, the Astronomical Society of the Pacific, the staff of the Lick Observatory, or to me personally. With that I leave the matter for the present.

Respectfully, EDWARD S. HOLDEN.

MOUNT HAMILTON, April 24, 1894.

[We regret that Prof. Holden mistakes the subject of our note, which was not the variation of latitudes, nor any general indisposition on his part to give credit to Americans, but a certain backwardness on the part of American popular writers, especially those of a generation ago, in giving credit to the scientific work of their countrymen. The case in question was cited only as an unimportant and yet rather striking example of this.

Some three years ago, the German astronomers, by a series of very refined observations, brought to light an enigmatical variation of the latitudes of places on the earth's surface. About two years ago, one American astronomer worked out the law of this variation, from a profound discussion of an immense mass of observations, old as well as recent; and another soon after explained the phenomenon in one or more published papers. In his anniversary address as President of the Royal Society, Kelvin outlined these researches substantially in the order in which we have described them, setting forth what had been done by the two American astronomers, expressing his acceptance of the theory on which one of them had based his explanation, and characterizing the result as "the present year's great advance in geological dynamics.". An abstract of the passage is published in an American journal, in which the passages referring to the American astronomers are rendered in such a way that the reader would never for a moment suspect that any American had had anything to do with the discovery, which would seem entirely due to the International Geodetic Association and Lord Kelvin himself. Prof. Holden does not mend the case by mentioning five European names which were also omitted, because of these five names only one appears in the address.

The fact that the same journal subsequently reprinted from another journal an article on the subject written by a professor in the Leland Stanford University, in which due credit was given to the Americans in question, would certainly relieve Prof. Holden from the imputation of being determined to ignore the work of his fellow-countrymen, had we ever brought any such charge against him But we were not aware that he was personally responsible for the article on which we commented, and, although he does not say so, we believe and are willing to maintain that the omission was merely the result of haste in preparing the abstract.—ED. NATION.]

A LAW-MAKING CABINET.

TO THE EDITOR OF THE NATION:

SIR: I hope your friend "G. B." will pardon me for getting ahead of him for once on his great and all-absorbing topic; but I have so long "sat at the feet of Gamaliel" that I can feel and appreciate the benefits of cabinet over committee legislation as fully as the great sage himself.

Your Constitutional Convention will meet in Albany on the 8th of this month, and will have an opportunity for many valuable experiments. My proposition is simply this: Let one Senator and four members of the Assembly be elected by the State at large; pay these five members of the Legislature a salary sufficient to compensate them for their whole time, and demand that their whole time shall be given to the business of legislation. These five men would fill the place in the framing and pressing forward of laws which is, in England or France, taken by the Cabinet, and would, more than any contrivance yet invented in this country, break up the operations of the lobby. The election of representatives at large is nothing new in American politics; the participation of executive officers in the debates of a law-making assembly is. If the beneficial ends of your friend "G. B." can be attained, in great part at least, by ways not unfamiliar to our people, let us try those ways.

My plan contemplates that all, or all but one, of the professional lawmakers should belong to the same party, like a true cabinet; but this is matter of detail.—Truly yours,

L. N. D.

LOUISVILLE, KY., May 4, 1894.

AN APPEAL FOR GREECE.

TO THE EDITOR OF THE NATION:

SIR: Some public service in Greece, deepening a life-long sympathy with her brave and struggling people, must be my warrant for this appeal. "The Niobe of Nations" is still heroic in her woes; and more than ever it would seem that when her sorrows come, "they come not single spies but in battalions." Within the twelvemonth past, or little more, she has rounded a full cycle of calamity—earthquake well-nigh destroying Zante, constitutional crisis, national insolvency or the next thing to it. And now, in the very throes of her economic distress, she is prostrated by a fresh visitation of Heaven which is without a parallel in her modern history. In its wide range and appalling consequences, this convulsion is of the first magnitude. It has shaken the solid core of Greece from the Isthmus to Thermopylæ, as well as the great island of Eubœa—rocked it like a ship upon an angry sea. The Atalante region, according to the cables, experienced 365 shocks in less than eight hours; in fact, "the earth swung to and fro like a pendulum." Of the destruction wrought we do not yet know the full measure; but Thebes and Atalante (aggregating a population of seven or eight thousand), with many towns and villages, are in ruins. In Locris alone the loss of life exceeds 300 souls, and the total in the earthquake area may reach twice that number. Some ten thousand families are rendered homeless.

At the best, this would be an appalling situation, but it is aggravated by the economic crisis. In ordinary times, with an even chance, Greece can take care of herself. Her resources are modest but adequate to her simple needs, and a more frugal and industrious people can hardly be found in Europe. But they have not had the even chance. In sixty years they have had to build up a free state on the wreck and ruin left by a retreating Oriental despotism after four centuries of barbarous misrule. No people ever faced a more appalling task or mastered it more heroically. The regeneration of Greece is one of the marvels of history. But, added to the rebuilding of a desolated country, they have upon them the burden of the European system without the political and economic training to bear it. And so, to meet extraordinary reverses, the country has only a vast debt and a depreciated currency. These will not restore ten thousand desolated homes.

The friends of Greece must lend a hand. Now, if ever, Philhellenic sentiment must precipitate itself in active sympathy. The way is open. The Greek consul-general in New York has appealed for aid. At Athens we have a minister in full and intelligent sympathy with the people to whom he is accredited, and who is in a position to administer effectively whatever means may be placed in his hands. No better envoy than Mr. Alexander could represent us there at such a time.

There are many among us who will hardly wait for further appeal than the facts already flashed across the seas. Certainly wherever Greek is cultivated—in every school and college and university throughout the land—there ought to be open hands. If every instructor and every class in Greek would give but five dollars, it would aggregate a substantial sum. Then there are the thousands of our travelled countrymen who have found in Greece a charm they can never escape; hundreds of these, men and women of wealth and culture and generous spirit. I have myself received there and witnessed their intense enjoyment of that land unapproachable in beauty and matchless in its memories. Is it not a good time for a thank-offering from every man and woman who has had the rare felicity of visiting Greece?

The season past, art-loving New York has spent her sympathies and some of her treasure on the imagined woe of Theban Œdipus and Antigone. To-day Thebes is a heap of ruins, and four thousand Thebans are homeless and hapless as blind Œdipus. May not the patrons of Mounet-Sully's Thebans open their purses as freely for real Thebes in her heroic griefs to-day? J. IRVING MANATT.

BROWN UNIVERSITY, May 7, 1894.

Notes.

G. P. PUTNAM'S SONS will issue at once 'Common Sense Applied to Woman Suffrage,' by Dr. Mary Putnam Jacobi; 'Joint Metallism,' by Anson Phelps Stokes; and 'The Ills of the South,' by the Rev. Charles H. Otken of Mississippi. This firm announces that it will hereafter publish, by arrangement, Mr. Unwin's "Pseudonym Library," under the title of the "Incognito Library," as well as his short-story "Autonym Library."

The Longmans have acquired of Lee & Shepard Mr. T. W. Higginson's entire list of works, plates and stock, and will give their own imprint to them.

Macmillan & Co. have in press 'The Wings of Icarus,' a novel, by Laurence Alma Tadema, daughter of the painter; a selection from

the poems of Aubrey de Vere, with an introduction by Prof. Geo. E. Woodberry; Dr. Friedrich Paulsen's 'Universities of Germany,' translated by Prof. E. D. Perry of Columbia; and 'The Senile Heart,' by Dr. Geo. William Balfour of Edinburgh. In connection with the Clarendon Press they will publish a posthumous volume of Freeman's 'History of Sicily,' edited by his son-in-law, Arthur J. Evans.

Ginn & Co. will have ready next month 'The Technique of Sculpture,' by William Ordway Partridge.

Summer novels by Herbert D. Ward, 'The White Crown, and Other Stories,' and by M. E. Francis, 'The Story of Dan,' have just been issued by Houghton, Mifflin & Co.

Seasonable also are 'Tales of the Maine Coast,' by Noah Brooks, and 'The Navigator's Pocketbook,' which are on the list of Charles Scribner's Sons.

'Wealth and Moral Law,' by President E. Benj. Andrews, will shortly issue from the Hartford Seminary Press.

The Student Publishing Co. of Hartford have in preparation 'An Honest Dollar,' also by President Andrews; an illustrated book of travel, 'A Trip through Russia,' by William Wilberforce Newton, D.D.; and 'The Epic of the Orient,' a metrical version of the Book of Job, by the Rev. H. M. Sydenstricker.

'A Bird-Lover in the West' (Houghton, Mifflin & Co.) is the fourth volume of a series in which Mrs. Olive Thorne Miller gossips pleasantly about birds. It has been preceded by her 'Bird-ways,' 'In Nesting-Time,' and 'Little Brothers of the Air.' The present studies were made in the West—a part of them in Colorado, some in Utah, and the rest in Ohio. Several chapters are reprinted from the *Atlantic* or other periodicals; the remainder are now first published. Mrs. Miller is in sympathy with birds, takes a friendly interest in their concerns, and tells us about them in a vein which recalls Mrs. Lippincott's 'History of My Pets.' Such stories may be quietly enjoyed, in no critical mood; they are affairs of sentiment, with which science has little to do. But every ornithologist will recognize the fidelity of Mrs. Miller's airy sketches. We hardly think she needs any technical nomenclature for her artistic purposes; but if she wishes to label her pets in Latin, she should be particularly careful to say *Icterus spurius*, and not *Icteria spurious*, for example, and coax her printer into his lower case for initial letters of all specific names. The book is well indexed, and will doubtless find the same favor with bird-lovers that her previous writings have secured.

Under the title 'The Rise of Modern Democracy in Old and New England' (Scribners), Mr. Charles Borgeaud discusses a familiar subject from a point of view which has of late perhaps not been sufficiently regarded. The author is connected with the faculty of law at Geneva, and may thus claim a certain local authority for his exposition of the advanced political theories of the Puritans; for their period of exile in Switzerland certainly caused many revolutionary seeds to germinate. He reviews the manifestoes of the different factions of the time of the Commonwealth, and finds in the "Agreement of the People" of 1647 much of the spirit of modern democracy. He criticises the prevalent tendency to account for the institutions of New England by referring them to the folkmoot, although he acknowledges a certain genetic connection, and he emphasizes the influence of "Congregationalism." It is well to remember, as he says, that "in the beginning each settlement or town was, before all things, a congregation, and that the town meeting was in most cases the same thing as the assembly of the congregation." The translation is by Mrs. Birkbeck Hill.

Geologists will welcome the second volume of Lord Kelvin's 'Popular Lectures and Addresses' (Macmillan). These are especially devoted to geology and general physics, and are popular in so far as, having been delivered before societies comprising in their membership students of other branches of science than the purely mathematical, they give the speaker's general conclusions, divested of the details of the mathematical calculations by which he arrived at them, on such important theoretical questions as the internal condition of the earth, geological time, the dissipation of energy, uniformitarianism, polar ice-caps, etc. They will, however, hardly be within the comprehension of the general reader unless he be exceptionally well read in both geology and physics. Sir William Thomson, as he is best known (his other title being of quite recent creation), has long been the highest authority on what may be called the physics of geology; but the results of his investigations, which embrace very broad fields of scientific research, are scattered through the transactions of many learned societies, and are often inaccessible to geologists except at second hand and generally in somewhat fragmentary form. Here will be found a compact yet complete and authoritative statement of them in sufficiently untechnical language by the author himself. They range in date from an address delivered before the Royal Institution in 1856 to the end of the year 1893, extending thus over nearly forty years—a long period for one who is still in his intellectual prime.

The French are trying to come to the front in yachting matters, and have taken to publishing as well as sailing. Philippe Daryl published some years since a book remarkable for its many sins of commission and omission, and now comes Baron T. de Wogan with a neat little 'Epitome of Yachting' (London: Allen & Co.) in two thin volumes. He has drawn largely from the recognized authorities—dear old Vanderdecken, who has never been equalled, Dixon Kemp, Knight, and even R. H. Dana. The advice he gives is sound, and beginners will learn much from his pages, which form a good introduction to larger works on the same subject.

The correspondence between Mme. de Sabran and her lover, afterwards her husband, the Chevalier de Boufflers, especially for the period from 1789 to 1797, when the mistress was exchanged for the wife, is being edited by M. Pierre de Croze, from the papers of Comte Elzéar de Sabran, son of the lady who is already pleasantly famous from the memoirs of Boufflers.

'Les Grands Historiens du dix-neuvième Siècle,' by George Meunier (Paris: Delagrave), though coming rather under the head of a class-book, deserves notice. It consists of brief accounts of all the great French historians of the present century and remarkably well-chosen extracts from their works. Two other books of this class are a new edition, admirably annotated by A. Rébelliau and M. Marion, of Voltaire's 'Siècle de Louis XIV.,' preceded by a scholarly introduction; and a similar edition, equally good, of Voltaire's 'Précis du Siècle de Louis XV.' for which M. Fallex is responsible. Both volumes are published by Armand Colin & Cie., Paris.

'Derniers Essais de Critique et d'Histoire par H. Taine' is published by Hachette & Cie., Paris. All but one of these essays, that on M. de Sacy, were written after the "Nouveaux Essais," and it was Taine's intention to collect and publish them as they now appear. The essays on Sainte-Beuve and George Sand are particularly interesting, as well as the two on Heredity and on Schopenhauer, Bain, and Spencer.

On Taine a thick volume has been written by M. Amédée de Margerie (Paris) from a Roman Catholic point of view, though by no means with as much prejudice as might be expected. M. de Margerie, who is a professor, has had occasion to discuss Taine and Taine's views in his courses; he admires him as a thinker, though he makes certain reservations and sets up certain objections. His book is very fair, on the whole, and not only lets the reader see wherein the author differs from Taine, which is not very important, but also, which is important, what manner of thinker and writer Taine was, as a philosopher, as a critic of art and letters, and as an historian.

M. Clair Tisseur, whose 'Modestes Réflexions' were noticed at the time of their publication, has given to the public a volume of his own verse, 'Pauca Paucis' (Paris: Rousseau). The book is in two parts; the first was published for private circulation, the second has been added, on the collection being given to the public. M. Tisseur comes of a poetic and literary family, and his volume of verse is worthy of his associations. It contains many charming pieces.

'Bismarck's Leben und Wirken' (Leipzig) is by an anonymous author, who claims for his book an essentially autobiographic character, since he has used, so far as possible, Bismarck's own words in this condensed sketch of his life and influence. The sources of his information are letters, official documents, despatches, speeches, reports of interviews, and other occasional utterances of the ex-chancellor before and after his forced retirement, the account of which is quite as discreditable to the German Emperor as that given by Dr. Hans Blum. The volume contains two portraits, one of Bismarck in middle life, and the other recently taken.

In 'Theodor Parker in seinem Leben und Wirken' (St. Gallen: Wirth), Alfred Altherr, pastor of St. Leonard's Church in Bâle, Switzerland, gives a clear and concise survey of the life and labors of Theodore Parker, his theological views and his vigorous coöperation with Garrison and other philanthropists in the anti-slavery movement. The book is written in an admirable spirit and shows a thorough knowledge of the subject. The frontispiece is a portrait of Parker in the thirty-ninth year of his age.

A recent addition to the German works on the United States already reviewed in these columns is 'Landwirthschaftliche Reisestudien über Chicago und Nord-Amerika' (Breslau). The contents consist of essays written by the editor, Prof. Wohltmann of Breslau, and by five of the students of agriculture who accompanied him last year to the United States. They offer a critical review of the agricultural department of the World's Fair at Chicago, the condition of agriculture in the United States and more particularly in the Northwest, methods of tillage, climate, products, cultivation of the sugar-beet in Nebraska and its prospects, the Weather Bureau in Washington and its relations to husbandry, model farms and experimental stations (*Versuchsstationen*), agricultural colleges and their courses of study (those in Illinois and Utah are given in full), and kindred subjects. The researches were evidently conducted with zeal as well as knowledge.

A noteworthy example of Spanish erudition is the "discurso" read by D. Francisco Fernández y González on the occasion of his public reception into the Spanish Academy, January 28, 1894. It is entitled "Influencia de las lenguas y letras orientales en la cultura de los pueblos de la Peninsula Ibérica' (Madrid; El Progreso Editorial), and is both a learned and an interesting résumé of the literature and science of the Moslems and Jews in Spain during the Middle Ages. In his reply on behalf of the Academy, printed in the same brochure, D. Francisco A. Commelerán y Gómez supplemented the address of the new academician by an account of Christian letters in the peninsula during the same period. The two essays taken together, though not intended primarily as contributions to science, contain in a compact form a large mass of valuable and often new information. To Americans they inevitably suggest the thought that we do not sufficiently know and appreciate what Spanish scholars are doing. Their learning is, to be sure, not quite of the German kind, and in many indefinable ways departs from the standards and ideals to which of late years we have been striving to conform ourselves. None the less, however, is it real learning and decidedly worth taking into account. In the Semitic field, in particular, Spain has no reason to be ashamed of what her students have done.

The success of Luigi Morandi's 'Antologia della nostra critica letteraria moderna' is attested by the fact that the editions now succeed each other at the rate of one a year. The ninth, dated 1894, now lies before us (Città di Castello: S. Lapi). The book is, indeed, a useful and ingenious one. It is so contrived as to present at once specimens of the work of all the best living Italian scholars and critics, and also a picture of the development of Italian literature. It will probably surprise most readers who have not been following closely the revival of studies in Italy, to see how many are the really competent Italian writers now engaged with these matters. Americans will do well to learn the names and styles of some of these from the present volume. It may be added that the matter contained in it is far from being all taken from other publications. Much is either new or rewritten by its authors for this special purpose; and D'Ancona and Bacci have often chosen to refer to articles here printed, in the excellent prefatory notices of their 'Manuale della letteratura italiana.'

The Paris *Débats* records with pleasure, for its bearing on international good will, the foundation and rapid growth of a local "Société d'Études Italiennes," under the initiative of Prof. Charles Dejob of the Collège Stanislas. From its present membership of 200 it hopes to pass to 1,000 (*mille*)—"a figure," says the *Débats*, with a Garibaldian allusion, "not likely to displease the Italians." Jules Simon is president of the new society.

Readers of Browning may be interested in a parallelism between the "Pope and the Net," in the poet's last volume 'Asolando,' and Sacchetti's 149th *novella*. In Sacchetti it is an abbot who feigns great humility and lives with exemplary abstemiousness, but is all the while eaten up with ambition and longing for the good things of this world. At last he is made archbishop of Paris, and on a fast day his steward provides him with the small fish he had always had before. The archbishop asks whether there was no better fish in the market. "Plenty," is the answer, "but small fish is what you have always ordered me to get." "Know, fool," replies the archbishop, "that I ate small fish while fishing for big. Now, I have caught it, and henceforth bring me no other."

The *Portfolio* for March contains a most interesting monograph by Prof. A. H. Church on Josiah Wedgwood. A life as perfect as that of the English master-potter finds its fit monument in the never-dying interest which attaches to him and his works. The presentments of his art-works given in this monograph are beautiful, but the vast majority of his manufactures were what he called "useful ware," and would have proved equally attractive in illustration and more indicative of Wedgwood's individual designs, of his expert and ingenious modelling. The medallion portraits shown of Flaxman, Herschel, Catharine II. of Russia, and Dr. Johnson are of special interest; the engraving of the Portland vase noticeably fine.

We have just received from Alinari Bros. of Florence their catalogue of isochromatic photographs taken recently in the Veneto. Among the most interesting items are Tintoretto's "Miracles of St. Mark" in the Royal Palace (Nicene Library) at Venice; the Altichieri, Mantegna, and Titian frescoes in the Oratorio di San Giorgio, the Scuola del Santo and Church of the Eremitani at Padua; the grand Montagnas in the Vicenza Gallery; the pictures by Lotto, Pordenone, Sebastiano del Piombo, Savoldo, and Titian (the famous "Annunciation"), at Treviso; finally, Paul Veronese's frescoes in the Villa Barbaro at Maser (near Asolo). These last are of unrivalled importance, not only as being works of Veronese's early maturity, not only as amounting in quantity to almost half of that great master's genuine works, but as being by far the most complete specimen of Italian interior decoration that has come down to our own times. It will be noted that among the items mentioned Giotto's Arena frescoes do not occur. The Messrs. Alinari have been prevented from photographing these precious works by the rapacity of the Paduan municipality, which reproduced them before isochromatic photography was known, and insists upon selling its rubbish at an exorbitant price to an eager public, who otherwise might have perfect reproductions for half the money.

Boussod, Valadon & Cie., No. 303 Fifth Avenue, send us the first of the six supplements to the *Figaro* which will deal with the Salon for 1894 as with previous Salons in the past decade. The text is by Charles Yriarte, the size of the publication the well-known folio, and the engraving half-tone in many tints and styles.

The current number of the *Bulletin de Correspondance Hellénique* contains an unusual quantity of valuable matter, among which we may note a monograph by M. Svoronos on the coins and history of the island of Myconos, a continuation of M. Pottier's observations on the vases of the Louvre, a series of inscriptions collected from Mysia and Bithynia, and some excellent detailed plans of the engineering work at Lake Copais, to complete M. Kambanis's article on that subject, which we have already summarized. An important contribution to the history of ancient slavery is the collection of Delphic inscriptions discovered in 1880 by M. Haussoullier in the polygonal wall at the rear of the "Portico of the Athenians," and now first published in their entirety. They are more than one hundred in number, and exhibit all varieties of that legal fiction by which a slave was manumitted under the form of a sale to the temple divinity. One of these contracts (No. 80), which we here condense, contains the following incredible provision: "Dioclea shall remain with Cleopatra . . . subject to her orders, but not for sale, and, after her death, shall be free. If during her residence with her mistress she shall have a child, *she may have liberty to strangle it;* if she wishes to rear the child, it shall be free, but she may not sell it."

In a letter dated at the Argive Heræum, on April 6, Dr. Waldstein gives a brief account of the success which had already attended this spring's excavations of the American School of Classical Studies at Athens, at that place. He had 258 workmen engaged in removing accumulations of soil, and had already completed the excavation of the eastern end of the second temple platform. New ruins of buildings had been brought to light, besides more than a score of basketfuls of vases, bronzes, cut stones, etc. The most important discovery was that of "another metope head in perfect preservation, of the best fifth-century art." This head illustrates perfectly Polycletan art, and "reminds one of the head of the Doryphoros." Another male torso, from a metope, and a later head were among the discoveries. Much work remains to be done.

The island Sakhalin is the subject of the principal article in *Petermann's Mitteilungen* for March. Though apparently a part of the Japanese group of islands, it belongs geologically to Siberia, and since 1867 it has been Russian territory. The presence of valuable coal deposits on the western coast has led the Government to attempt to reclaim the cultivable land by means of convict labor. The convicts, all of whom are condemned for criminal, not political offences, numbered, in 1892, 10,687, or a little more than half the total population. They are divided into three classes: those who, under the constant supervision of the soldiers, work in the mines, upon the roads, clearing the forests, draining the swamps, or in the prisons; those who are employed in certain districts under the direction of officials in preparing the soil for cultivation; and settlers who are provided by the Government with cattle, farming-tools, and seed, and have perfect liberty except that of leaving their districts. The climate is so unfavorable (winter lasting for six months and the short summer being almost without sunshine from the constant rain and fog) that the raising of crops is very difficult except in the southern part of the island. In 1890 a considerable quantity of hay and potatoes was exported to Siberia and Japan after the wants of the islanders themselves were supplied. Here, no doubt, agriculture can be carried on profitably, but whether by convicts remains to be proved. Besides preparing large tracts of forest land for cultivation, the convicts have constructed about 400 miles of road and 500 miles of telegraph.

The Lowell Observatory, which is to be established shortly near Flagstaff, in Arizona, will be a contribution to the cause of astronomy made by a private citizen of Boston, Mr. Percival Lowell, already well known to our literary public through his sketches of Japan, while his name is familiar to the well-informed throughout the country by the connection of his family with the lecture courses of the Lowell Institute. The idea of observing the coming opposition of Mars from some desert site having been suggested to him, and meeting with his approval, he has undertaken to erect and equip a temporary observatory, and he has already purchased his instruments and engaged his staff. The extent of his preparations in the matter may be judged from the fact that he has secured a telescope of eigh-

teen inches aperture and one of twelve inches, in addition to other smaller instruments. The work will be under his personal supervision and direction, and during the summer and fall he will make Arizona his abiding-place. Two of the gentlemen selected by Mr. Lowell to assist him in his work have been connected with the Harvard Observatory, and have temporarily severed their connection with that institution for the purpose of joining Mr. Lowell.

—In *Harper's* for May Mr. Howells begins a pleasant bit of autobiography which he entitles "My First Visit to New England," and in preparation for which he confides to us his literary acquirements, ambitions, acquaintances, and admirations of the time (1860) he writes about. Except for this contribution, the interest of the number lies in its fiction. "Trilby" continues to be amusing; and the first instalment of a dilettante story by James Lane Allen gives a sufficiently agreeable glimpse of refined Kentucky life in antebellum days. But the strong tale of the collection is "A Kinsman of Red Cloud," by Owen Wistar, author of the realistic though repulsive sketch of Western manners in the January number of the same periodical. The present story is not so new either in matter or treatment, but the author again exposes the brutality of the typical Western life stripped of all the ideality with which Bret Harte and the other writers of the old romantic school have invested it. The "Study" comments on the recently published Report of the Committee of Ten on Secondary School Studies, and all who have an interest in such matters must echo Mr. Warner's emphasis of what is certainly the most important recommendation of the report, namely, the necessity for improving the *quality* of teachers by better training and better pay.

—*Scribner's* has for its most important paper an essay on "The Ethics of Democracy," by Mr. F. J. Stimson, in which, under the subhead *Liberty*, he discusses the limitations of legislation on individual freedom. He discerns a dangerous tendency in our lawmaking to sacrifice true democratic to socialistic principles, and in support of his argument he presents a tabulated list of all the laws passed in the forty-nine States and Territories and by the national Government during the years 1889–90. Taking from the total of these statutes only such as involve some principle of social science or jurisprudence, he finds that 29 per cent. are of socialistic character. It is significant that New England has the lowest proportion, 20 per cent., of such legislation, while the Northwestern States, with Ohio, Iowa, and Nebraska in the lead, have the highest, 42 per cent. The author furthermore classifies and considers these various enactments under their several heads, and this digest the reader, whatever may be his views on the main question, will find both useful and suggestive. Another paper of sociological interest is that on Working Girls' Clubs, by Miss Clara S. Davidge, who gives as adequate an idea of her subject as space and occasion permit. Both in spirit and in letter her contribution is a refreshing relief from the meandering article on "Womanliness as a Profession" which precedes it. There is also a very readable description of the Rio Grande, by Capt. J. G. Bourke, U. S. A.; and a lately discovered terracotta medallion of Franklin is reproduced with a short sketch of the artist who modelled it.

—The *Atlantic* adds as its quota to the educational discussion which is so promisingly active at present, "The Ethical Problem in the Public Schools," by Mr. F. W. Slocum, jr. What this problem is, and what its importance, can best be appreciated by remembering that an unfortunately large percentage of the children who attend our public schools, especially in towns and cities, utterly lack the moral training of good home influences. In too many cases, indeed, these influences are actually evil, and the child exposed to them not only is corrupted itself, but becomes the source of corruption in others. How far the public schools can improve and counteract these conditions by direct moral teaching is, of course, only to be answered by prolonged and patient experiment, but certainly such experiment should be made. Other topics of the time are touched in the review of the Encyclicals of Pope Leo XIII., for the present pontiff is undeniably progressive, as his bulls on socialism and the French Republic prove. The late Francis Parkman is the subject of two glowing tributes by Mr. Justin Winsor and Mr. John Fiske respectively; and there is an essay on "Egotism in Contemporary Art" that is well worth reading.

—In the *Century*, Prof. Josiah Royce of Harvard sends out, under the title of "The Imitative Functions and their Place in Human Nature," a psychological circular which it is to be hoped will meet with general response. His object is to collect data bearing on the psychology of imitation, whether in the child or in the adult, and he asks of all whom it may concern—and it should concern every reader of his article—to observe for him and report to him what they see in others and are conscious of in themselves of such phenomena. He prefaces his appeal, which is an ingenious attempt to enlist the public at large in scientific experiment, with a brief but general survey of his subject. Some prose fragments from Lowell, and a translation in verse of the Finnish epic 'Kalevala,' which he cites as a specimen of spontaneous imagination unconventionalized by literature, will attract attention. There is a note of regret in the reference, as if the author were deploring his own remoteness from such naïve mental conditions. "Book Binding in the Past" gives Mr. Brander Matthews occasion to write entertainingly of an elegant art; and the Servian poet Zmai Iovan Iovanovitch is introduced by a little sketch, with several of his poems done into English by Mr. Robert Underwood Johnson. The leading article, by Mr. William A. Coffin, deals with the French painter Dagnàn-Bouveret, and is profusely illustrated with some of the more famous of his admirable pictures.

—The new *Revue de Paris* (New York: Chas. Eitel) began very appropriately with the publication of Balzac's letters to Mme. Hanska, for it was in the original *Revue* of that name that Balzac published the opening pages of the 'Lys dans la Vallée' and 'Seraphita.' It was then managed by Buloz, better known as the managing editor for so many years of the *Revue des Deux Mondes*. The latter aimed at greater learning, the *Revue de Paris* inclined more to letters and art, and at first glance it seems as though the editors of the new venture intended to maintain this distinction. But only at first glance, for while the literary quality of the *Revue* is high and the purely literary articles are numerous, it is evident that politics is intended to play no small or insignificant part. This is the more probable because it is whispered that the *Revue* is backed financially by the heads of a political party still strong and still hopeful of eventually regaining power. Meanwhile the editors show themselves very catholic in their judgment, and set forth, number by number, a very attractive programme, including unpublished manuscripts of great writers recently passed away and contributions from most of the leading lights. Heine, Wagner, and Rudyard Kipling have already been treated of; the younger writers have their place beside the older and better known; Gyp furnishes the main portion of the fiction, and Faguet and Simon are among the critics. If the *Revue* keeps on as it has begun, it will speedily become a favorite.

—M. Ernest Legouvé, in a recent letter to an editor of the *Ménestrel*, gives some rather curious information as to a certain side of Béranger's earlier life. Everybody knows Béranger as a song-writer, but few know of him as a singer of his songs; and yet his whole youth was passed as a singer. He did not publish his songs—for the most part he did not even put them into writing; he simply kept them in his memory, and, when there was occasion, sang them. He found plenty of opportunities. Any dinner, or fête, or reunion of friends would serve, and he would be seen to rise, glass in hand, at dessert, and sing verses which he had, perhaps, only just improvised. The air always played a great part in Béranger's songs. He told M. Legouvé that when the idea of a song came to him, he never tried to put it into form until he had found an air for it. Sometimes he had to seek long and far for this, but he would not give over till he found it. He wanted, as he said, a "love match" between his song and its tune. As to how well he sang, M. Legouvé knows nothing, nor does he know what his voice was, though his impression is that it was not a tenor. What is certain is, that he was a little vain of his performances. This is amusingly shown in a letter of his of the date of 1812 (Béranger had published nothing at that time). In this he says:

"I dined lately with Arnault, Roger, and Auger at Guérin's. This dinner was a little triumph for my songs. I sang only gay ones, and all of them received extraordinary applause. Auger, especially, begged for them, and, great as were the praises which all gave me, I believe they were given in good faith. I never had so formidable an auditory; so I sang badly enough. All the rest sang, too, and they got out of it hardly better than I. They wanted to keep me at Ville d'Avray over the next Sunday and give me a dinner at Etienne's, where I have dined often with Désaugiers, but I didn't care to do that. Désaugiers sings as well as anybody can, *plays* his songs very well, and, in his mouth, everything seems good. I have not that advantage, and in a strange house, where I should not be supported, I should have everything to fear from such a meeting."

What an odd glimpse this affords of Béranger in the days before his glory, giving himself the little airs of a stage baritone. And, after all, how harmless and good-natured his vanity is.

—Some of those who witnessed the recent performance of Terence's "Phormio" at Harvard, may have asked themselves, Who was this master of Latin, complimented as such by the matchless Cæsar, studied as such in "regions Cæsar never knew"? He was an African slave, a captive from the territory of Carthage, a child of the Libyan seaboard, and no more a native born to the Latin speech than *Othello* was to the Venetian. His name, Afer, stamps him for ever as absolutely alien, not only to Rome, but to Europe, yet he could bring out of the language of Rome treasures such as were

in the next generation unknown to Caius Gracchus, her greatest orator and statesman. It was impossible, his contemporaries said, that an African slave should write such Latin. It is impossible, some critics say now, that a Stratford deer-stealer should write such English. Who has helped him? Who wrote his plays for him? What statesman and scholar, what Latin Bacon, is using the amiable, gentle African as a medium for his wit? "We know well," was the answer to these questions in his own day. "It is young Scipio, the child of great Aemilius, the adopted of a greater name; it is he and his friend Lælius who furnish this heathen, swarthy slave with his wit, his pathos, his delicate complications, his faultless language. Our native dramatists and original poets are neglected because these fashionable aristocrats are shooting their sarcastic arrows at us under the mask of a Libyan." And it must be confessed that Terence, defending himself gallantly against the charge, has little better to say than that it is an honor and not a disgrace to be favored by great men; that those whom the people love should love him. If similar charges had been made against Shakspere in his day, would he have made the like answer? So it is that questions of art, like questions of politics, repeat themselves after centuries.

COXE ON THE JUDICIAL POWER.

An Essay on Judicial Power and Unconstitutional Legislation: being a Commentary on Parts of the Constitution of the United States. By Brinton Coxe of the Bar of Philadelphia. Philadelphia: Kay & Bro.

THIS book of 415 royal octavo pages relates to a single subject, the Constitution; to a single element of the Constitution, the judicial power; to a single exercise of the judicial power, the right to declare an act of Congress void. Mr. Coxe, moreover, died before the work was completed, mournfully hoping that his friend and fellow-student in constitutional history, Mr. William M. Meigs of Philadelphia, would be able to take up the imperfect manuscript and complete it for publication. It was found to be too incomplete to enable Mr. Meigs even to ascertain the author's final conclusions. But the reader will agree with Mr. Meigs that, while this is to be regretted, and while it is sad that the purpose of such a truly devoted author was not fully carried out, yet nevertheless "the defect is more apparent than real, for the published portion is entirely capable of standing by itself, and contains all that was intended to form a part of the historical commentary upon the Constitution."

In literary characteristics the book is learned and pedantic; in analysis and criticism it is strong. Here the list ends. It is not a constructive work. It takes to pieces, unravels, disentangles, compares, tests, and reaches results by processes like those of the analytical chemist. The author does this work with wonderful patience and thoroughness, repeating his propositions, and quotations, and citations again and again, so that the reader never has to turn back to a previous page, and is left without even an excuse for misunderstanding what is meant. The book is not light reading: it requires very close attention, and considerable knowledge of the law. The author himself says: "This essay is a legal treatise; it is intended for 'the learned reader'"; and there are sentences in it such as "All the *casus* named in one text were intended to be *aptati* to the *jus* of the other text." But nevertheless it is a book not likely to go unappreciated or to be misunderstood.

Mr. Coxe almost immediately turns his critical microscope upon the indefatigable reporter of the Supreme Court, Mr. Bancroft Davis, who in the last ten years has turned out 43 of the 150 volumes of that court's reports. At the centennial era of the court, Mr. Davis most appropriately appended to 131 U. S. R. 280 pages of matter relating to the Federal judiciary, including a "Table of cases in which statutes or ordinances have been held to be repugnant to the Constitution," etc. From this table the great and notable case of Dred Scott was omitted. Why it was, seems inexplicable. The omission remained unobserved by all eyes until those of Mr. Coxe discerned it. He shows in his careful, step-by-step method that the opinion of the court expressly says that "the act of Congress which prohibited a citizen from holding and owning property of this kind in the territory" "is not warranted by the Constitution, and is therefore void." He then shows that the case, apart from its political interest, was most remarkable in constitutional history as being "the first in which an act of Congress was decided by the court to be unconstitutional for reasons *not* relating to its own judicial department." In all the previous cases the unconstitutional acts concerned the judiciary. In Dred Scott the decision extended to the sovereign powers of Congress.

There are two early cases, "——— vs. The Secretary of War," and "United States vs. Yale Todd," one of which is referred to by Marshall in Marbury vs. Madison, and the other is relied upon by Chief-Justice Taney in United States vs. Ferreira. The latter is said to be remarkable as being the first case where the Supreme Court actually adjudged an act of Congress to be unconstitutional. Chief-Justice Taney so said in the Ferreira case, and it was therefore proper for the reporter to place it on the list; he could do no less. But Mr. Coxe drops these cases into his crucible, and it is extraordinary how the unconstitutional element disappears. Of "——— vs. The Secretary of War" he shows that not a shred exists; that there is no evidence that the case ever existed—no record, order, notice, or paper. The other case did exist, for the judgment of the court is found; and on this judgment Chief-Justice Taney rested his conclusion that the court had adjudged an act of Congress to be void. But Mr. Coxe shows that there is no opinion of the court extant; that there is no statement, memorandum, minute, or scrap of evidence to show that such an opinion ever existed; that there is no speech, argument, newspaper, or private letter which even alludes to the great assumption of judicial power, to the great event of a court for the first time holding an act of Congress unconstitutional; and finally he shows that the constitutionality of the statute was not necessarily drawn in question.

The general argument we may summarize as follows: Mr. Coxe first states the position taken by Mr. McMurtrie in his "Plea for the Supreme Court," that the authority to declare an act unconstitutional was "*lodged by inference, and by inference only,*" in the judiciary (the framers of the Constitution not knowing what they were doing); and the position taken by the Supreme Court in the last of the legal-tender cases (110 U. S. R., 421), that Congress can exercise all the ordinary powers of government which foreign sovereignties exercise, provided only that such constructive powers are not "prohibited" by the Constitution. He then examines the power which foreign sovereignties exercise over the judiciary, and draws the conclusion, logically enough, that if both doctrines "be wholly true," it is also true that the Constitution gives to Congress the power to make a law prohibiting the courts from declaring an act of Congress unconstitutional and void.

Having thus put one or both of these authorities in the wrong, Mr. Coxe seizes upon the example of the Supreme Court as a justification for examining the judicial action of the whole civilized world in all ages, and proving thereby that the idea of a court holding a legislative act unauthorized and void was not a new one when the Constitution was framed. Roman law, French law, Swiss law, German law, English law, canon law, pass under his critical review. He goes back to the constitutions of Clarendon, the conflict between Becket and Henry II.—that is to say, the conflict between the statutes of Parliament and the canon law; he takes up colonial judicial history, not merely of our colonies, but of all English colonies, and he shows in many ways that the world had more than once seen a statute declared void ere our Constitution was framed. After thus exhausting the historical part of the subject, Mr. Coxe settles down to the solid and valuable part of his work, and at last brings it to a triumphant conclusion. We regret that the limits of this article do not admit of following him through his careful study and close analyses, which end in a demonstration that must be convincing to every unprejudiced mind. That result is (briefly and imperfectly stated) that the authority of the judiciary is not a matter of inference; that it is expressly *given* though not expressly *defined;* and that the framers of the Constitution *intended* to make this grant of judicial power.

In the *Nation* of December 7, 1893, it was said that the then expected work of Mr. Coxe might throw new light upon the origin of this element of our judicial power. The light has come, and it may be doubted whether an additional ray will ever fall upon the subject. But the stronger light only makes plainer the fact that neither the colonial nor the European precedents exercised the slightest influence on the framers of the Constitution. They were men of some learning and great intelligence, but they were men of affairs, statesmen of the practical type, and they bent all their energy on the solution of the hard practical problem before them. Nothing, moreover, could have been more certainly fatal to the work of the Convention than the memory of these "historical precedents." Had not Connecticut twice enacted statutes to secure the distribution of a man's real property among his children; and did not the Privy Council declare these laws repugnant to the law of England, and force the principle of primogeniture upon the colony against its properly avowed will? What could have been more fatal to the work of the great Convention than the belief that this irremovable, irrepealable Supreme Court which had been set up in perpetuity was another King in Council to annul the laws of the people's representatives? The same thing was true of all the other precedents: the Pope annulling acts of Parliament; the canon law made higher than the statute law; the judges of the Crown defeating the will of the people. If these suggestive precedents had been remembered, the wonder would be that they did not defeat the Constitution.

The framers of the Constitution, in addition to the local suspicion and State jealousy of which so much has always been said, were

confronted by three specific difficulties. The first was the power of the States to issue paper money. All had done so; Maryland and New Jersey were strenuous for retaining the right. Even then Rhode Island had just passed an act (1786) to establish fiat-money, and had ingeniously infused value into fiat-money by making a refusal to receive it, or selling goods at one price in paper and at another in silver, a misdemeanor without trial by jury and without a right of appeal. And the judges who upheld the right of trial by jury in the great case of Trevett vs. Weeden had been turned out of office by the Legislature only a month or two before the Convention began its work. Rhode Island, fortunately, was not one of the States represented in the Convention; but the thing was in the air. The second difficulty was that six States had enacted laws in conflict with the treaty of peace; laws which denied to loyalists rights secured by the treaty. The Congress of that same year had before them a fair prospect of either State rebellion to Federal authority or another war with Great Britain. The third difficulty was that the people of 1787 never would have knowingly consented to that provision of the Constitution which is now our boast and pride, the supremacy of judicial authority, the power of the judiciary to uphold the Constitution against the will of their representatives in Congress. The first and second were difficulties that had to be faced, and the Convention faced them manfully with words, uttered in the Constitution, which gave no uncertain sound. Of the third the Convention spoke beneath its breath. The framers builded better than they knew; they builded much better than they spoke. In terms they did not say that the Supreme Court should have power to annul a legislative act, or to declare a State statute void; but they placed conditions in the Constitution which rendered these results inevitable. When they wrote into the instrument the words, "This Constitution, and the Laws of the United States *which shall be made in pursuance thereof*," "shall be the supreme law of the land," and the words, "The judicial Power shall extend to all cases in law and equity arising under this Constitution," the rest must follow. It was as inevitable as that human affairs would bring legal controversies. The greatest stroke of all, however, was in committing the trust to an independent judicial tribunal which should be above and beyond the grasp of the legislative power.

The portions of the book which relate to European governments we have not attempted to verify or criticise. Occasionally we notice a trivial slip. On p. 266 a typographical error makes the Convention sit in 1786. On p. 220 there is a very singular mistake, inasmuch as it is three times repeated in one short paragraph. "Seven" cases are alluded to where only six were intended. We notice also some semi-political flings which are below the purpose and character of the book; and we notice with great regret a passage in which Mr. Coxe, leaving his proper rôle of scholar and critic, breaks into a political wail just as he reaches the successful climax of his work. The passage has no connection with his argument, and if Mr. Meigs had heroically cut it out, notwithstanding that the author had put it in type, we think every sensible person would have said, Faithful are the wounds of a friend.

WINSOR'S CARTIER TO FRONTENAC.

Cartier to Frontenac: Geographical Discovery in the Interior of North America in its Historical Relations, 1534–1700. With full cartographical illustrations from contemporary sources. By Justin Winsor. Boston: Houghton, Mifflin & Co. 1894.

One might think at first sight that this book was a rehash of the fourth volume in Mr. Winsor's 'Narrative and Critical History of America.' It seems to be nothing else as we turn over four-score maps which are identical in both works—as are divers views of Indian forts and fights as well as portraits in costumes of church and court. Such a first impression, however, vanishes the moment we examine the letter-press. The whole of the present volume is Mr. Winsor's own composition, while the larger part of the fourth volume, though edited by him, was written by other hands. Moreover, whatever had been written by Mr. Winsor himself in his great history he has here presented in such new relations that it becomes altogether new matter. What was merely cartographical now becomes cartographico-historical or historico-cartographical.

It is a favorite theory with certain French writers that Basque and Breton fishermen, those mediæval Nimrods of the sea, while chasing whales, were so engrossed in pursuit of their quarry that they crossed the ocean unawares and had begun fisheries on the Grand Bank before the era of Columbus. However this may be, Mr. Winsor's aim, starting from a date when nothing of North America beyond Newfoundland was known to the French, is to show them discovering the St. Lawrence, the chain of great lakes to the utmost corner of the West, and the Mississippi, with their affluents and watersheds. This discovery was made by individual adventurers, by societies secular and religious, as well as by national officials. It was prompted sometimes by curiosity, more often by commercial enterprise, religious zeal, and military movements. Its rate of progress was very unequal. Its morning sunrise was with Cartier in 1534, but within a decade a dim eclipse darkened and deadened it for sixty years and more. The next sunburst was the era of Champlain. The wondrous story has been told by Parkman in half-a-dozen volumes with a vividness and vivacity not likely to be surpassed, and which have given it a wide popularity. It remained a desideratum to knit together the scattered sketches into one whole body. This work Mr. Winsor has done, and that admirably.

A special charm was added to Parkman's relations by his own travels in the track of the original explorers. Personal observation enabled him to give his pictures a more truthful local coloring, and the more since many of his trips were taken in the primitive fashion. Despairing of rivalry in the line of travel, Mr. Winsor made a new departure in another direction. As Harvard's librarian he lived in the midst of cartographical treasures unequalled on this side of the Atlantic. The gathering of them was begun more than a century ago by Ebeling, who, as the city librarian of Hamburg, the chief German port, had special facilities for his life-long search. His accumulations were presented to Harvard by a Boston merchant in 1818, and formed a nucleus which has been growing ever since. It was early remarked that Hume's appointment as Edinburgh librarian turned him into a historian, and Irving informs us that he was himself led to think of writing his Life of Columbus when he first beheld the materials in such profusion made ready to his hand in the archives of Madrid. In like manner the surroundings of Mr. Winsor, not only in the Harvard library but in other cartographical fountains near and far, which yielded him the streams he needed, have given direction to his studies and made them subserve his purpose.

His object was to show not only how discoveries were made, but how they were bit by bit made known through maps, strangely wrong and again strangely right; and as far as possible by contemporary maps, which may be considered as eye-witnesses. With this view he has taxed all the world. We have facsimiles here from originals found only in the British Museum, or the Propaganda in Rome, or the French Archives of the Marine and Colonies. Then, maps appear which, lurking long in the collections of private individuals, seemed born to blush unseen. The Portuguese are also laid under contribution, and especially the Dutch, as Mercator, to whom we owe the word atlas, and Ortelius, whose type of map was much copied in the decades introducing great French discoveries. One of the most curious maps was made in Florence by Dudley, a son of Leicester, Queen Elizabeth's favorite, and the inheritor of Kenilworth Castle from his father. The unique American copy is a Harvard rarity. This map of Dudley's, which sets down a navigable water, or strait, between the St. Lawrence and the Bay of Fundy, affords a representative specimen of geographical errors which of necessity abounded in early maps. Thus, too, Lake Champlain was sometimes charted east of the Connecticut, and Lake Michigan north of Lake Huron. Step by step errors were eliminated. Instalment after instalment during the rise and progress of French exploration from the mouth of one of our two chief rivers to the innermost recesses of its source and down to the mouth of the other, unfolds such a geographical panorama as has never been elsewhere beheld. The multitudinous stages of the development of arcana in Mr. Winsor's maps show each an individuality of its own which in a degree turns a chaos into a cosmos. The resultant and cumulative impression is analogous to that made on one who visits the museum at Cairo, where the relics are ranged chronologically so that each epoch has a hall all to itself. In the long lapse from Cartier to Frontenac each map represents a dynasty with features of its own.

Mr. Winsor's comparative studies in maps show how they "have had an obvious tendency to a true conception of physical realities even at eras when scarcely any attempts were made to solve geographical problems by exploration." On the other hand, they convict more than one nation of strange ignorance as to what another had achieved. Thus, Heylin's map of 1657 sets down only one of the great lakes thirty-five years after Champlain had charted them all but one. Such ignorance seems astonishing in an English cosmographer whose folio went through more editions than almost any other work of its class. But what can surprise us in the maps of a writer in whose letterpress we read as follows?

"Water making but one globe with the earth is yet higher than it. This appears, first, because it is a body not so heavy; secondly, it is observed by sailors that their ships move faster to the shore than from it, whereof no reason can be given but the height of the water above the land. Thirdly, to such as stand on the shore, the sea seems to swell into the form of a round hill till it outs a bound upon our sight. Now that the sea, hovering thus over and above the earth, doth not overwhelm it can be ascribed only to his Providence who *hath made the waters to stand on an heap that they turn not again to cover the earth*," etc.

Our citation is from page 27 of the first folio,

1652, five years before the edition which Mr. Winsor appears to suppose the earliest folio ('History,' iv., p. 385).

The map of Sylvanus, representing the opening of the sixteenth century, and that of Franquelin, representing the close of the seventeenth, are placed side by side, both on the frontispiece and outside the cover of Mr. Winsor's volume, as if the force of contrast could no further go. Long as is the cartographical chain, we wish it had at least one link more. All the maps given are more or less inaccurate, and should have been supplemented by another, or by half-a-dozen sectional maps, with all modern corrections. In some maps the legends are less legible than in the fourth volume of the 'History,' from which they were copied. One instance is Cabot's mappemonde (p. 53). In other cases the lettering is vexatiously indistinct. We pass from this topic with the remark that Mr. Winsor, in his new departure, has had to avail himself of a latter-day vocabulary. Dr. Murray dates the word *cartography* from 1859, *cartographer* from 1863, *cartographical* from 1880, *chart* as a verb from 1851, *charting* as a noun from 1854. In 1878 *cartography* had no name to live among the titles of the 'Encyclopædia Britannica,' but it appeared in the index of 1889. We cannot detect it in the 1865 edition of Brunet. The term *cartographics* we have not yet noticed, but it will soon be coined after the analogy of economics, etc. *Portolano* is not to be found even in the 'Century Dictionary,' though in Italian it is more than four centuries old.

The regal act of French possession with august ceremonies at the outlet of Lake Superior is dwelt on by Mr. Winsor more glowingly than any other scene (p. 206). He says: "There was hardly a spot on the continent that opened more striking vistas of domination along such lines of transit as nature had provided here. Marquette had divined it in relation to the missionary service—speaking of Mackinac as the portal of the southern tribes, as the Soo is to those of the North and West, so that many nations pass these gates," etc. These words were never so true as to-day, but must be transferred from the outlet to the head of the great lake, from which several iron rivers now radiate to the Pacific, and where Duluth and Superior during the last decade had a greater percentage of growth than any two other cities in the country.

Regarding the name Green Bay, Mr. Winsor, as we venture to think, has fallen into a notable mistake. His words about it are: "'Grand Baye,' perverted by the later English to Green Bay" (p. 23). "Grand Baye" is neither French nor English. The phrase means, we suppose, that the word *grand* was changed to green. If this were the fact, we should meet with similar changes in the names of other bays or lakes and rivers that were called grand by the French. But how many can Mr. Winsor show? Again, we cannot allow that Green Bay was often called Grande Baye by the French, and we doubt if it ever was. It is not so called on any one of Mr. Winsor's maps, nor by Joliet, Marquette, or Perrot, nor yet in the Jesuit Relations. In the Relation for 1660 (p. 9) we once read that a certain Father "left the lake of Ouinipegouek, which is properly only a great bay [*une grande baye*] of Lake Huron. Others call it *le lac des Puants*." But *grande* is a descriptive, not a nominal, epithet. The water now termed Green Bay appears on the Ostensorium of Perrot as "La Baye des Puans" in 1686. It so appears in nine of Mr. Winsor's maps; in others, as Sanson's (p. 179), Duval's (p. 216), *Lac* appears instead of *Baye*, but with no prefix. The only case where an epithet like "Grand" may possibly be intended is the following legend on a map of Creuxius (p. 184): *Magnus Lacus algonquintorum, seu Lacus Foetentium*. The name as abbreviated became *La Baye*, without any prefix whatever, in all instances which have come under our notice. If, to conclude, the epithet *Grande* was unknown to French usage, there was nothing in the French name for the English to "pervert into Green."

After returning from the voyage down the Mississippi, Joliet, says Mr. Winsor, "leaving Marquette at Mackinac, passed on to the Sault Ste. Marie" (p. 244). But the truth is that Marquette was not there to be left. He had been grievously ill on the return trip, and hence would naturally stop at the first mission he reached, which was at the Bay of the Puans. Mackinac, as Carver tells us, was fourteen days' sail further. Would the invalid have risked such a voyage, especially in October, and that only to repeat it the next season when he was bound to go south among the Illinois? That Marquette went on to Mackinac is denied by Parkman and Shea, and must be by all who will not show Mr. Winsor to be divided against himself, for he says (p. 249) that "Marquette on his return had lingered at Green Bay till the spring of 1674." But Marquette's account of the Mississippi expedition was written during that winter, and has led the people of Wisconsin to claim him as their earliest author. They naturally object to such a celebrity's being described as passing on from their hospitalities to winter beyond their limits. But the most unkindest cut of all is the assertion that "St. Anthony's Falls are near the modern St. Paul" (p. 276). This remark, which is like saying that Faneuil Hall and Bunker Hill monument stand near the modern Salem, will be counted high treason in Minneapolis.

But we have made too much of peccadilloes in a work which no student of the French in North America can afford to be without, and which is, besides, in its make-up, one of the daintiest of books. The proof-reader, it is true, gives too many signs of nodding, preëminently in conspicuous phrases like "Vexilla Regis proeunt."

History for Ready Reference and Topical Reading. By J. N. Larned. In five volumes. Vol. I., A to Elba. Springfield, Mass.: The C. A. Nichols Co. 1894.

ONE opens this ponderous volume of 800 pages with some misgiving. "Topical" jars upon the nerves; the work might just as well have been called a "Dictionary" or "Encyclopædia"; and there are already a score of excellent encyclopædias and "conversation-lexicons" in which the reader can find some account of most subjects of historical interest. This misgiving is heightened when one learns the plan of the undertaking; which is to cull the articles from historical literature—a column or so from this writer, a paragraph from that—and make not only the work as a whole, but every important article, a mosaic of scrappy quotations. The editor cherishes, indeed, the hope that the selections will be found to have been chosen "as one might pick choice fruits, . . . careful to keep their flavor unimpaired." But, alas! the "choice fruits" of literature can hardly be cut about for dictionary purposes and packed together without regard to kind, without losing something of their flavor. As Mr. Richard Swiveller observed to the Marchioness—to use a grosser analogy than the editor's—even beer "can't be *tasted* in a sip."

Nevertheless, when one comes to examine the book more closely, one is bound to confess that it looks as if it would be useful in many ways, and that the scheme seems to have been carried out with painstaking care. As a rule, the excerpts are taken from writers of deserved reputation, and if the reader should go wrong, he will go wrong in good company. But there is at least one exception to this rule, and that is in the case of articles dealing with the history of the last two or three decades. We are too near the events of our own time to feel much confidence in interpretations of their meaning; and the wise policy would have been to restrict the articles concerning them to a bare recital of external facts about which there is no question. If any opinion should be expressed, it should be the opinion of men whose other writings give reason for confidence in their judgments. Instead of following either of these two courses, Mr. Larned too frequently presents us with the opinions of anonymous newspaper men. For instance, the writer of the "New York *Tribune* Extra," who here sums up the defects of the government of Dom Pedro of Brazil, may, for all one knows, be a publicist of large knowledge and experience. But Brazil is clearly not yet "out of the wood"; and we must see what "the autonomy of the federated provinces" comes to before we can fairly judge the imperial "system of centralization."

The arrangement is good, on the whole, and there are usually sufficient cross-references. The only place where they fail is, oddly enough, in the important matter of constitutions. The text of some dozen of these documents—from the Argentine Republic to Venezuela—will be found under *Constitution*, and not where they would naturally be looked for, under the names of the several countries. Moreover, there is no indication under Argentine Republic, Brazil, or Canada that the text of the constitution will be found in a later place. This omission might be avoided in succeeding volumes.

The work will deservedly find a place on the shelves of every important library; and instead, therefore, of criticising particular articles, it may be more useful to call attention to parts of the scheme which are capable of improvement as the undertaking goes on. The only pieces of original writing of any length are to be found in the appendices, and it will be worth while for the editor to consider whether the style of these appendices cannot be pruned of exuberances and made a little more simple. Thus, to speak of "the Danubian, Balkan, and Levantine States," together with "the Austro-Hungarian lands immediately adjoining" (App., p. vi), as "forming *one* of the great *fulcrums* for national movements," is surely an unnecessary extension of the ordinary meaning of "fulcrum." It is with regret, finally, that one feels obliged to urge the editor not to carry out the fell purpose of printing any more of his own original compositions described as "Logical Outlines"—"a number of national histories, printed in colors to distinguish the influences which have been dominant in them." The two "logical outlines" here printed, of Austrian and of Athenian and Greek history, are bad enough to lead even their proud inventor to repentance. Pity for the eyes of his readers who will attempt to distinguish the colors by artificial light should make him pause, if nothing else. And let us quote an example:

"The history of Austria . . . is unique

in being the history of a family and not the history of a state . . . [*In green:* denoting, according to the key in the corner, "social and political influences and conditions."] Territorially the name was attached . . . to an inconsiderable arch-duchy on the Danube; [*red:* "physical or material"] in that corner of Teutonic Europe where the Germans of the middle ages fought back the Turanian races and the Slavs" [*blue:* "ethnological"].

It is difficult to imagine the sort of person likely to be helped by these kaleidoscopic devices. Perhaps a few boys and girls at school will find it easier to compose essays by picking out all the green or blue bits and running them together, and will get credit for it if the master does not discover the source; but one trembles to think of the conceit with which their easily found and high-sounding knowledge will fill them. A work in many respects so solid and scholarly will certainly gain by the omission of features more suitable to third-rate pedagogy and itinerant memory-teachers.

Random Roaming, and Other Papers. By Augustus Jessopp, D.D., Rector of Scarning, Norfolk. G. P. Putnam's Sons.

THESE papers lack the fulness of material and the consecutiveness of thought and of style that gave substantiality to Dr. Jessopp's earlier writings. They are the leisurely gleanings of fields from which the harvest, a rich and ample one, has already been strenuously gathered. The title paper has been put together from hurried notes of an antiquarian ramble in Sussex and Kent. It starts in a humorous key, but the humor is forced throughout, and the moral reflections are heavy. The chronicles of Castle Acre, in Norfolk, which follow, are also heavy. Most readers will feel, after putting down these essays, that it is better to take to the by-paths of fanciful excursioning with Mr. Stevenson, or to foot the high-road of local history with Mr. Freeman. When, however, he comes to unfold the questionable secrets of "Hill-Digging and Magic," or ingeniously to reconstruct the figure of "A Fourteenth Century Parson," who was lord of the manor also, the old fascination of Dr. Jessopp's pen begins to reassert itself. In the one instance, the rusty memory of an ancient parish clerk is ransacked to illuminate the subject of earth-mounds and barrows; in the other, from the balance-sheet of a rector's bailiff for the year ending Michaelmas, 1306, has been drawn a picture that in vividness and brilliancy is the literary success of the volume.

The last paper, "Village Almshouses," desultory though it is, discloses the most winning and characteristic of its writer's varied phases of thought and sympathy. It is, in substance, an appeal for individualism in charities. But there is in it that which should suffice to conciliate the most uncompromising advocate of organized and impersonal help. Individualism backed by such clear insight into the needs, higher and spiritual as well as lower and corporeal, of the recipients of relief has nothing in common with selfish and demoralizing almsgiving. The conditions that Dr. Jessopp has to deal with are naturally the picturesque and comparatively stable ones of an English country parish. His pages are rich in the idioms and allusions that still surprise and delight by their survival in the ordinary conversation of the people born and bred in the old scenes, amid the old ways. The familiar recurrence of names of venerable places, of quaint terms and time-worn expressions, lends, in the ears of those with whom they have passed out of daily use, a touch of poetry to plain prose. The imagination makes by their help a noble perspective to the commonplace doings of every day. Whatever their shortcomings, these essays are instinct with the charm of a mind that has grown ripe in the rich and mellow Old-World atmosphere.

Driving Lessons. By Edwin Howlett. New York: R. H. Russell & Son.

THE number is limited of those who have been gifted with the peculiar attributes needed for the "elegant pastime" of four-in-hand driving, but all who love a horse and who have a warm corner of the heart for a good and kindly horseman, will be glad to see this work by Mr. Howlett of Paris, whose life seems to have been passed on a coach-box, and who now devotes himself to the instruction of neophytes in his art. The writer of his biographical preface, Comte de Clermont-Gallerande, tells us that Mr. Howlett gives twelve hundred lessons a year. He is the son of a coachman of the Marquis of Hereford. At the age of sixteen he entered the stable of an Italian princess. After thirteen years' service as coachman to various Continental noblemen, he set up a stable of his own in Paris. He is held in high esteem, and he has bred up a whole coach-topful of hearty sons and daughters, who lend an imposing character to the frontispiece of the book, and who are said to be skilful teachers in their father's out-of-door school.

There are twenty full-page reproductions of instantaneous photographs, showing the coach and its team in various evolutions; and the minute and clever instructions of the text are elucidated by figures showing hands and reins and all manner of "correct" details. So clear is the exposition that even he who runs as he reads may learn to "catch double thong" with ease—and to catch double thong is the despair of some old drivers. There is even a series of five cuts giving the entire imposing figure of Mr. Howlett himself in successive positions of the solemn act of taking the reins from the back of the off-wheeler and mounting to the box. Put him in a zoetrope and we should actually see him climb.

While much of this serious instruction is beyond the grasp of the lay mind, much is of general value, and there is a personal element in the book which will appeal to all horsemen; and, strange to say, though this is a horseman's book, the personality is not obtrusive. We see a hearty, wholesome, and genial horsemaster who knows his horse, and drives him with tact and skill, and whose touch of the four sensitive mouths of his team is the touch of intelligent control. His "hand" must come up to the old description, and be as firm as the grasp of steel, but soft as the touch of love, and his temper is absolutely smooth, as a number of incidents testify. For example, he met on the Champs-Élysées a baulking team, "all the horses jibbing." He says:

"The people on the coach tried in vain to start them; finally, they sent down for me. As I reached them, the team was standing across the avenue. Having no room to turn around and come down the hill, I was obliged to go up. I looked at all the horses, knowing none of them, and, after picking up the reins, I politely asked them to move on; they responded one after another, two of them running back when they felt the collar pull, but I was so polite that they finally all started away together, and a little while after I could stop and go on with them as I pleased. I suppose that I must have appealed to their better judgment."

Mr. Fish and the Alabama Claims: A Chapter in Diplomatic History. By J. C. Bancroft Davis. Boston: Houghton, Mifflin & Co. 1893.

THE treaty between the United States and Great Britain, concluded at Washington on the 8th of May, 1871, has justly been regarded as one of the most important achievements in our diplomacy. Within its forty-three articles it provided for the adjustment of all matters of controversy then pending between the two countries, including questions of claims, of the navigation of rivers and canals, of fishery rights, and of boundary. But of all these questions the gravest and most difficult was that of the *Alabama* claims, which involved not only contested principles of law, but also the general course of the British Government during the civil war. On both sides national feeling was deeply stirred, and concession was rendered precarious by the prominent advocacy in both countries of extreme and impracticable views. The occasion was one that demanded statesmanship of a high order—a spirit of conciliation, unerring tact, and a clear and discriminating sense of right.

In a brief compass, and without intending to present a complete history of the settlement of the *Alabama* claims, Mr. Davis has undertaken to exhibit the part borne by the late Hamilton Fish, who was then secretary of state, in that transaction. For this task Mr. Davis is exceptionally fitted. Holding at the time the position of assistant secretary of state, he was also American secretary to the Joint High Commission by which the Treaty of Washington was negotiated; and he prepared the American case and represented the United States as agent before the tribunal of arbitration at Geneva. There can be no doubt as to the importance of the services of Mr. Fish in the settlement of the *Alabama* claims. The management of the American cause was in his immediate charge, and although, when he came to negotiate the treaty, he gathered about him eminent and able assistants, his was, as Mr. Davis says, from the beginning to the end, the inspiring, regulating, and dominating mind. In the first informal stages of the negotiation, he found himself at variance with his personal friend Mr. Sumner, who was then chairman of the Senate committee on foreign relations, as to the grounds and the extent of Great Britain's liability. It is in the nature of controversy that both parties generally assume positions that they must yield if they would reach an amicable solution. Mr. Sumner was prominently identified with the position that the hasty concession by Great Britain to the Confederacy of the rights of belligerency afforded a valid ground for a claim of substantial pecuniary redress. On this position Mr. Sumner strongly insisted. The position of Mr. Fish, as stated in his instructions to Mr. Motley, was as follows:

"The President recognizes the right of every Power, when a civil conflict has arisen within another State, and has attained a sufficient complexity, magnitude, and completeness, to define its own relations and those of its citizens and subjects toward the parties to the conflict, so far as their rights and interests are necessarily affected by the conflict. The necessity and the propriety of the original concession of belligerency by Great Britain at the time it was made have been contested and are not admitted. They certainly are questionable, but the President regards that concession as a part of the case only so far as it shows the beginning and the animus of that course of conduct which resulted so disastrously to the United States. It is important in that it foreshadows subsequent events."

This declaration opened the way to the nego-

tiations that resulted in the Treaty of Washington. The services of Mr. Fish in the settlement of the *Alabama* claims did not, however, end with the conclusion of the treaty. In the controversy that subsequently arose as to the jurisdiction of the tribunal of arbitration, he materially contributed by his wisdom and firmness to the solution of the difficulty. From first to last his conduct was worthy of the best traditions of American statesmanship, and Mr. Davis has performed a loyal service in presenting it in so clear a light.

Some Minor Arts as Practised in England. By A. H. Church, F.R.S., W. Y. Fletcher, F.S.A., J. Starkie Gardner, Albert Hartshorne, F.S.A., and C. H. Read, F.S.A. With many illustrations. Macmillan & Co. 1894.

UNDER the above title are collected several papers originally published in the *Portfolio*. They describe English work in impressed horn, bookbinding, old English pottery and wooden trenchers, effigies in wood, and enamels. The fact that English art has been more interesting in its smaller aspects than in some of its larger —has succeeded better in decorative detail, for instance, than in sculpture or the more ambitious painting—is here well illustrated. English bookbinding, for instance, was conspicuously excellent as long ago as the twelfth century, and is still admired in our day. If it was in its early days inferior in precision of workmanship to its recent work, it was freer in invention and stronger in decorative effect. So English goldsmith's work, if we include with it, as Mr. Gardner here does, the early Celtic work, and the Irish up to the twelfth century, was in its time preëminent, especially in the art of enamelling; and some of its best examples belong to the period when the Irish illuminators were showing the way to the rest of Europe. Mr. Gardner, by the bye, is disposed to claim for English workmen a good many examples that have been undoubtingly ascribed to Continental; but without this largess there is enough to make good England's right to eminence. The illustrations of this handsome volume—woodcuts, half-tones, and color-prints—are as excellent as the periodical from which they come would make us expect.

BOOKS OF THE WEEK.

Allen, Rev. J. H. An Historical Sketch of the Unitarian Movement since the Reformation. Christian Literature Co. $1.50.
Alexander, Mrs. Broken Links. Cassell. $1.
Brown, G. P. Drainage Channel and Waterway. Chicago: R. R. Donnelly & Sons Co.

Wylie, Laura J. Studies in the Evolution of English Criticism. Boston: Ginn & Co. $1.10.
Yeats, W. B. The Land of Heart's Desire. London: T. Fisher Unwin.

"A grand story. . . . It is dignified, quick in action, thrilling, terrible. . . . There is everything that is exciting and turbulent, and nothing that is too extravagant to be possible with desperate men fighting for so great an issue as the throne of a 'powerful province'. . . . A great writer, and there is no flaw either in the design, execution, or wording of a really most ingenious tale."—*Chicago Herald.*

The Prisoner of

ZENDA.

By ANTHONY HOPE. 16mo, buckram, 75c.

"The plot is too original and audacious to be spoiled for the reader by outlining it. The author is a born story-teller, and has, moreover, a very pretty wit of his own."—*The Outlook.*

"For those who enjoy a book of adventure, this book will possess a great charm."—*Boston Times.*

HENRY HOLT & CO., N. Y.

Yale Mixture.

A GENTLEMAN'S SMOKE.

You won't know the luxury of Pipe-Smoking until you use Yale Mixture.

A two-oz. trial package, postpaid, for 25 cents.

MARBURG BROS.,
The American Tobacco Co, Successor,
Baltimore, Md.

LONDON, ENGLAND.

A gentleman wishes to let, furnished, his good house (billiard-room, large old garden, four tennis-courts, etc.), fifteen minutes rail, West End or city, on inexpensive terms, for four to twelve months. Servants left if desired. Communicate with P., care the *Nation.*

NOW READY.

THE LIFE OF JOHN CHURCHILL,
DUKE OF MARLBOROUGH,
To the Accession of Queen Anne.
By GENERAL VISCOUNT WOLSELEY.

2 vols., demy 8vo, with 10 Plates (8 Portraits), 11 Plans, and Illustrations and Index. $10.00.

"A genuine piece of independent historic research. Often, no doubt, Lord Wolseley's account coincides with that of other historians. It would be inevitable that it should do so; but there are nearly always *nuances* of difference which are of importance."—*Standard.*

"The author has displayed conspicuous ability in preparing and arranging this biography. It is rich in historical research, and enlivened throughout by a vein of enthusiasm, which justly holds up to our admiration Marlborough's prowess as a soldier, his *finesse* as a diplomatist, and his unrivalled capacity as a leader of men."—*Morning Post.*

"It would be to give a very faint idea of the charm of these volumes to omit to point out how individual they are—how full of the personality of the chronicler. In this case we are not dealing with the ordinary author or the professional authority on history. Affectation could go no further than to pretend that in reading Lord Wolseley's descriptions of military operations two-thirds of our interest does not arise from the fact that it is one of the most famous of recent English soldiers who speaks."—*St. James's Gazette.*

"By a happy combination of the arts of the historian, biographer, and the military critic, Lord Wolseley has produced a book which will charm and profoundly iuform all classes of readers."—*Irish Times.*

"Lord Wolseley has labored with energy and enthusiasm, and his book will rank among the biographies of permanent interest and value."—*Globe.*

LONGMANS, GREEN, & CO., Publishers, 15 East 16th Street, NEW YORK.

A Tonic

For Brain-Workers, the Weak and Debilitated.

Horsford's Acid Phosphate

is without exception the Best Remedy for relieving Mental and Nervous Exhaustion; and where the system has become debilitated by disease, it acts as a general tonic and vitalizer, affording sustenance to both brain and body.

Dr. E. Cornell Esten, Philadelphia, Pa., says: "I have met with the greatest and most satisfactory results in dyspepsia and general derangement of the cerebral and nervous systems, causing debility and exhaustion."

A DESCRIPTIVE CATALOGUE, giving Contents and Critical Opinions of the 528 books from HOUGHTON, MIFFLIN & Co.'s List included in the Model ("A. L. A.") Library exhibited at Chicago, will be sent to any address. 4 Park St., Boston.

The Nation.

NEW YORK, THURSDAY, MAY 17, 1894.

The Week.

SENATOR MILLS'S indignant rebuke of his Democratic associates for abandoning their professed convictions and bringing shame upon their party by their protectionist amendments of the Wilson bill, will be better understood as those amendments are studied in detail. Some of them have the trail of the serpent already visible over them, and the skilfully concealed iniquity of more of them will doubtless be brought to light as they are examined and debated. The general swinging back from ad-valorem to specific duties is of itself a clear sign of surrender to the protectionists. This is one of their oldest dodges. They know that the actual value and cost of products tend downwards all the while, and hence that a specific duty which now amounts, say, to 40 per cent. ad valorem, will in two years equal 60 per cent. and in four 80 per cent., by the sheer force of lessening the cost of production. This little game has been exposed again and again. It was played all through the McKinley bill, and was one of the most crying evils in it. For the Democratic Senators now to rush back to it, after having denounced it, and after it had been so generally discarded in the Wilson bill, is a most suspicious circumstance.

The desire of Senators Gorman and Brice to "discipline" Senator Mills for his denunciation of their tricky work with the tariff bill is a capital illustration of their own obtuseness. What Mr. Mills says meets the hearty approval of all true friends of tariff reform, but it causes them no surprise. They made up their minds long ago about those two bogus Democrats, and have had no doubt that they would exert all their influence on the side of protection. No one expected that they would do their work openly, for, as Mr. Gorman's chief admirer, the *Sun*, said of him during the silver campaign, he and Mr. Brice are always "most busy underground, burrowing for compromise." The compromise they burrow for is always against the interests of the country and their own party, and is invariably one which involves a large degree of personal profit to themselves. If they think to injure Mr. Mills by showing their disapproval of him, they have a very poor opinion of popular intelligence, for the opinion which he has expressed of them is the public opinion of the country to-day. Instead of disciplining him, they ought to unite in a formal rebuke to the American people.

Disgust with the Gorman-Brice tariff bill is so prevalent and deep among Democrats in all parts of the country that if a vote of the party could be taken upon it there would be no doubt as to its fate. Thousands of Democrats are saying that the bill is worse than no bill at all, and that they hope, in case it ever reaches the President in its present form, he will veto it. It would be bad enough were it merely a tariff bill; but when tariff-reformers look at its McKinleyized schedules and at its income-tax attachment, and reflect that this is the outcome of their long years of agitation and their great victories of 1890 and 1892, their feelings become too intense for moderate expression. If the Democratic party has fallen hopelessly into the hands of Brice and Gorman, and can accomplish no tariff reform save what those two protectionist allies are willing to grant, the sooner a tariff-reform party, on that issue alone, is started, the better for the country. There are thousands of honest men in both parties who have been made absolute free-traders by this dallying and dickering of the Democratic jobbers in the Senate, and these will welcome any movement which will place the tariff issue before the people on its merits, with no confusing political issues, in order that it may be argued to a solution and the business of the country freed for all time from the disturbing and disastrous effects of periodic tariff changes.

The decision of the Republican senatorial caucus on Monday night to fight the tariff bill in every particular and at every stage leaves the superior strategy of the Gorman compromisers in sad plight. They were going to be so devilish sly as to give Republican manufacturers protection up to the eyes, in the expectation that these gentlemen would then turn upon the Republican Senators and compel them to vote for the bill, or for some parts of it. For a time it seemed as if the scheme might work, and Senators Allison and Proctor incautiously came out into the open and admitted that things might be worse and that the bill would pass "speedily." But now they have been told to quit talking nonsense like that and to fight the whole bill tooth and nail. Orders have gone out from the Manufacturers' Club of Philadelphia to accept no concession except "the McKinley act as it stands." The *Manufacturer* says that "protectionists from principle must regard with feelings of indignation the alleged protectionists who have of late been flocking to Washington to ask for favors at the hands of the Senators who are urging the new tariff bill," and affirms with much force that the protectionist amendments are a confession of weakness, and that it "would be an act of folly of almost criminal proportions" for Republicans to accept any terms. In like manner the Boston *Journal of Commerce* thunders against accepting "any compromise whatever." All this is what any one not gifted with Gorman's supernatural craft might have foreseen from the beginning.

The Republican intention to filibuster brings the old question of minority rule in the Senate to the front again. The bill will never get into conference unless the Democratic majority in the Senate asserts itself. If the Republicans will not agree to take the final vote after a reasonable time, the vote should be taken with or without their consent, and with or without damage to the dignity of the Senate. The Vice-President intimated last summer, in the course of the silver debate, that he would put the question whenever an assured majority authorized him to do so. He may soon have to do it, and it should be much easier for him to do it now with a party majority at his back than it would have been last September with the Democratic leaders divided.

Why does not some Senator insist that those who speak in the Senate be compelled to speak to the question? In no respect does the "courtesy of the Senate" lead to buffoonery and the blocking of public business more surely than in its toleration of the habit of hitching any kind of a speech to any kind of a bill or motion. Stewart has made his silver speech a dozen times over on the tariff bill. Senator Higgins worked in a long address on the Hawaiian question while the same bill was before the Senate, and Chandler and Frye told trout stories and joked with each other by the hour the other day while the Senate was supposed to be debating paragraphs of the tariff bill. No one ever rises to call a speaker to order for such a gross invasion of the privileges and dignity of the Senate. Yet it is one of the elementary principles and presuppositions of all parliamentary rules that a man who speaks at all must speak, at least ostensibly, to the question under debate. But it appears hopeless to expect any of the senatorial discreditors of senatorial dignity to make a serious move in the matter. Senator Faulkner had the temerity the other day to call Senator Aldrich to order for speaking more than twice on the same day on the same motion, as being in flagrant violation of one of the express rules of the Senate, but a chorus of indignation at such a disregard of courtesy at once went

up, and Senator Faulkner apologetically withdrew his point of order.

There probably never was so droll a use made of the writs of a court of equity as the injunctions which various Western judges have issued to the Coxeyites, forbidding them to seize and carry off trains on the railroads now in possession of receivers. The injunction has hitherto been supposed by the lay world to be a process intended to restrain one of the parties to a suit in equity from committing, or persisting in committing, some act prejudicial, or likely to be pronounced prejudicial by a final judgment, to the other party's rights. But in these cases it has been issued to prevent parties in no way before the court from committing highway robbery. If we are not mistaken, too, it is usually not applied for or issued without notice to the other side. In other words, the Coxeyites ought to have had an opportunity to show cause why the writ should not issue—that is, to be "heard by counsel." Their "cause" probably would have been that the seizure of the trains was necessary to enable them to discharge a great public duty at Washington by urging on Congress the issue of $500,000,000 of irredeemable greenbacks to supply work to the unemployed.

It has been a close race between the Populist Governors of Kansas, Colorado, and Oregon, but the executive of the last named State has come out ahead as the champion of disorder. One of the Coxey "armies" appeared in Portland and committed lawless acts. As one of the railroads concerned was under the charge of receivers appointed by a United States court, Federal troops intervened, but other lawless acts were threatened, over which they had no jurisdiction. There was great public uneasiness, and much doubt as to the ability of the police to preserve order. An effective force of militia stood ready to perform any service required of them. Gov. Pennoyer was absent from his post, conducting a personal canvass for the United States Senatorship. The adjutant-general telegraphed him a statement of the facts, and asked for instructions to the officers of the militia. The Governor replied that he had no instructions to give, and added that he "didn't care a whoop" whether the lawbreakers or the United States troops came out ahead. The message was an official one, but the adjutant-general was ashamed to publish it. The Governor, however, was so proud of it that he read it from the platform to public meetings in both Grant's Pass and Jacksonville, boasting of it as a creditable performance and chuckling over it as a good joke on the city of Portland.

The latest statement of the condition of affairs in the Public Printing-Office at Washington is scarcely less edifying than the many that have preceded it during the past dozen or more years. Mr. Benedict, the head of the office, finds that there are at least four hundred more employees than he can find work for. "There are so many employees on the rolls that not only is there no work for all, but there is not room enough in the building to accommodate the crowd. There are more men in the building than there are desks, chairs, and other places of accommodation. The halls and aisles are rapidly filling up, and the building has become so crowded that hardly room enough is left to work in." In order to obtain room to work in, hundreds of employees have been let out indefinitely on a "system of furloughs." Mr. Benedict has begun his reform by discharging all these absentees, and is determined to keep on pruning the force until the standing-room is thinned out sufficiently to allow the work of the office to go forward. He does not propose, we believe; to build shelves or bunks, as was formerly done, to put the idle employees on in order that more floor room may be obtained. The cause of this ridiculous condition of affairs is the old one, that Congressmen of both parties are continually getting men into the office through "pulls" of various kinds. It is a great scandal, and the only remedy for it is the removal of the office entirely from politics by placing it under civil-service regulations. There has been talk for many years of erecting a new building for the public-printing establishment, but unless the propensities of Congressmen to stuff its force be checked first, nothing smaller than one of the great buildings of the late Chicago Fair would be adequate to accommodate it.

Alabama, like some other States in the South, holds her State election at a different time from the elections for Congressmen and President, the separation having been made in order to avoid possible complications with the Federal election laws while the latter were on the statute book. A Governor will be elected on the first Monday of August, and, under the new election law, voters must register between the 7th and 26th of May, except in the four chief cities, where thirty days are allowed. A registration certificate is required, which the voter must preserve and produce at the polls when he presents his ballot. This requirement is new in the State, although the system has prevailed in the city elections of Montgomery for years and has worked admirably. One motive for the law was undoubtedly the hope that the negroes would overlook the necessity of registering so long beforehand, and that some of them would lose their certificates during the intervening period; but the first reports from the "black belt" indicate that a large proportion of them mean to vote.

The situation of the United States Treasury in respect of the gold movement is briefly this: what ails the Treasury is not lack of gold in particular, but lack of revenue. The secretary a few months ago estimated his deficit for the fiscal year ending June 30 at $75,000,000. Since that estimate was made he has sold $50,000,000 of bonds, for which he received something over $58,000,000, leaving still a shortage of $17,000,000, or more likely $20,000,000, on the year's operations. Under such circumstances, his general balance is sure to fall by that sum, and it really makes no difference whether it be his gold or any other part of his funds, provided his gold does not get so low as to start a panic, of which there is not the least probability. The tariff bill has been so botched and bewitched in the Senate that no additional revenue can be got out of it during the present fiscal year, and we fear not much during the next. Probably the sugar required for a year's consumption will have been imported in advance of the passage of the bill, and thus the revenue which ought to go to the Government will line the pockets of the refiners. So, too, with the increased tax on distilled spirits. As to the income tax, if it passes, a full year will elapse before it will yield anything. On the other hand, the markets are so bare, and will continue to be until the bill passes, that a smart revival of business must then take place. The Treasury will reap its share of the benefit. Its revenues from ordinary sources, exclusive of sugar, whiskey, and incomes, will be much larger than they have been during the present fiscal year. Whatever brings revenue to the Treasury will bring gold, and when it once gets a monthly surplus, however small, all trouble about the gold balance will disappear. If it has to struggle with the present deficit beyond a certain period, it will have to make another loan or "shut up shop," and for this misfortune Congress, or rather the Senate, will be responsible.

Our dearth of great men has been a frequent subject of remark and lament among our most thoughtful citizens, but no one, we believe, has anticipated Mr. Brooks Adams in pointing out the sure remedy. Others have talked in a futile way about the levelling-down tendencies of democracy, and about the need of a great public question to bring forth great men, but he brushes all this aside and goes straight to the point—lack of cheap money. In his little pamphlet on 'The Gold Standard' he calls upon us to trace, among other high mysteries, the "impulse given to intellectual activity as the tide of money ran from south to north" in Europe in the six-

teenth century, as the flood of silver from the New World began to pour in after the discovery of America. Raphael and Michael Angelo were in their prime in 1515, and four years later silver had worked as far north as Germany and induced Luther to nail up his theses. Calvin could be born in silver-blessed France as early as 1509, but in England the white metal was so slow in arriving in fructifying quantities that Shakspere could not see the light till 1564. To produce great men of science was a still harder job for silver, as Mr. Adams observes, since it took about a hundred years of the "stimulant" to bring Galileo and Kepler into the world. As Mr. Adams remarks, "nothing is more curious" than this, and we cannot too soon set about enriching our own barren land with vast quantities of fertilizing silver coin. We knew before that it could drive some men crazy, but we did not know that it was the fruitful mother of genius and greatness.

It is natural, but entirely unnecessary, for the secretary of the Bimetallic League to give out an official explanation of the "apathy of the House of Commons" on the great question of a "stable par of exchange." From the point of view of the League, there was indeed something hard to account for. There it was, holding a tremendous international meeting in full view of Parliament, and Mr. Balfour had just answered with "an overwhelming yes" the question whether it was possible to make silver circulate on equal terms with gold. To have the House of Commons give an overwhelming no the next evening was somewhat trying to the bimetallist faith, and, above all, to the bimetallist sense of importance. If such things went unexplained, the eager watchers in America might begin to fear that England was not going to be in a hurry about getting down on her knees. But those who know London and the vast business carried on there, whose very life depends on the inviolability of the English standard of value, need no argument to show why the House of Commons should not do so preposterous a thing as to meddle with that standard of value. Mr. Balfour may talk about his overwhelming yes as long and as eloquently as he pleases, but he will get nothing out of the House of Commons but Carlyle's everlasting nay.

The French Government is reported to be about to give silver, and incidentally its embarrassed Treasury, a lift by coining $2,400,000 of subsidiary coin, on which, at the market price of silver, it could pocket a profit, or seigniorage, or whatever the wise it call, of $1,260,000. This great opportunity has come about through the Italian Government's having redeemed its own silver pieces circulating in France, and so given the latter country a chance to coin under the Latin Union agreement whereby each country can coin up to six francs per inhabitant. But the proposal has evoked vigorous protests, and in one of these, an open letter signed by M. Rochaïd, we find the happy phrase: "All the world knows that silver money has become simply a metallic assignat." Such a name is not only telling but truthful, and ought to stick. The free-silver men of France to-day are aiming at precisely the same thing as the assignat men of the last century, and in our country they are only new editions of the "shinplaster," and "red-dog," and "wild-cat" financiers of other days.

The new chairman of the finance committee of Tammany Hall, vacated by Croker, is "Johnny" McQuade, formerly a police justice, but during recent years the most favored contractor of the Public Works Department. Justice and contracting are apt to go hand in hand in the circles of Tammany government. Andy White ran the two together for some years, but finally concluded that he saw enough contracting in the Dock Department to occupy all his time, and he left the bench to devote himself entirely to it. He had his system in beautiful operation when the Legislature stepped in and blocked it, and the prospect is now so gloomy for him that Andy may be forced to return to the bench in order fully to occupy his time. He wails publicly that the upsetting of his system has made it necessary to discharge no less than 1,200 men. Anybody can see what a personal loss that must be to Andy. His fellow contracting justice, McQuade, has got a much better thing than contracting in the chairmanship of the Tammany Hall finance committee, but it is said that he is to have it not for himself, but for Mayor Gilroy, whose obedient servant he has been for many years, and that when the mayor's term shall expire in December next, he will succeed both to the boss-ship and the chairmanship of the finance committee.

Capt. Mahan, the commander of the *Chicago*, who is being made much of, though not more than he deserves, by the naval authorities in England, has declined to express an opinion on the naval programme of Earl Spencer, and yet Capt. Mahan's opinion would have been very valuable. When Secretary Tracy went over, he gave his very freely, and it was used against Mr. Gladstone in the House of Commons, although Mr. Tracy could not possibly be supposed to be an authority on naval matters. Capt. Mahan, however, did not mind saying that superiority of force at sea is now more necessary to Great Britain than ever, which appears clear enough. But the reason of it is that Great Britain has immense foreign possessions which can be got at only by sea, and can be held only by means of a fleet which can beat any two or three other fleets. This is a state of things which undoubtedly swells the national pride and is in some ways an advantage to the world. But it is full of inconvenience, and, should a period of declining trade set in, would be a positive calamity. There are probably few Englishmen who would now deliberately enter on the creation of what is called "the British Empire" as a programme. The creation of a fleet competent to protect it is to-day a great burden on all classes in England. Nevertheless, if our naval officers had their way, Capt. Mahan included, they would load us with similar responsibilities, in the shape of outlying dependencies, posts and garrisons, and "coaling stations," without a particle of the excuse which England had for her expansion. She had to find room and fields of activity for an overflowing and enterprising population cooped up on a small island, while we have more space than we can fill in a century or two; and as to fields of activity, now that the Indians are gone, our bolder spirits can always find occupation in seizing trains and "marching on Washington."

There has been no ministry in England in the present century which has had to face so many troublesome questions with so small a majority as the present ministry command. There are home rule, the registration bill, the Welsh church disestablishment, and, though last and least, the budget, to all of which there is fierce opposition among the Tories, and in support of which the Liberals are by no means thoroughly united. The nine Parnellites seem to have finally deserted the ministry, and there is a good deal of lukewarmness among the English about the Welsh church bill, while, on the other hand, thirty-one Welsh votes cannot be counted on with any certainty unless it is pushed. Wales is suffering from that old-fashioned Irish plague of the gentry and landholders belonging to one church (and that the dominant, established church), and the mass of the people to others. And the trouble has been aggravated as usual by the attempt of the landowners to discriminate against Dissenters in letting their farms. There has not been so much of this of late years, but there has been enough to keep old hates burning briskly. The Episcopal clergy, too, have been anything but conciliatory in exacting their tithes—a grievance which grew more serious as the times grew bad. In the present struggle the Welsh church has, as the Irish church had, the English clergy at its back, and the bishops have fulminated a good deal against the Welsh despoilers, which only makes the despoilers all the fiercer.

THE COXEY "PROBLEM."

In spite of the gradual disruption of the Coxey armies, the Coxey "problem" still continues to cause a good deal of discussion in and out of the pulpit. It is not of much consequence in itself. A few thousand ragamuffins "marching on Washington" cannot put the United States Government or social order seriously in peril. To rate it at its full importance as a sign of the times, we must take it in connection with the Populist movement. The Coxeyites are Populists of the lowest grade, mobilized, so to speak, for active service. All Populists look to Washington for aid or relief, but the Coxeyites start for Washington in person. And we must not imagine that because we break up the Coxeyite "armies," or cease to elect Populist governors or legislators, the poison of Coxeyism has left our system. As long as there is a large party, containing "our best people" in this country, preaching the doctrine that American industry cannot flourish without Government aid, that the withdrawal of that aid means ruin and misery, and that every man in business who finds that his market is poor ought to go to Congress for relief, we shall every year find ourselves face to face with the rising tide of Coxeyism. Protection and democracy, as the founders of this republic understood it, cannot indefinitely exist together. Protection leads straight to socialism, of which Coxeyism is simply a filthy eruption. It has been for forty years preparing the world for socialism, notably in the two most democratic countries of the world—France and America. When the French agriculturists the other day demanded protection for their wheat, M. Juarès "went them one better," by demanding that the Government should import the necessary supplies of foreign grain and sell it at prices to suit the times.

During the whole of this period of forty years the doctrine that the state should see that the workingman got good wages has been the main feature in all the protectionist pamphlets and speeches and books and addresses. But the relief was for a good while to pass through the hands of the employers. It was the millionaires and the iron-masters who were to get the Government money, and it was they who were to dole it out to the workingmen. But no intelligent person could expect that, with the ballot in the hands of the laborer, this arrangement would last very long. He was sure to find out that the distribution was not altogether fair, that his wages did not rise in proportion to the rise in the tariff. Having made this discovery, he was sure to ask the question what was the use of having these subsidies pass through the hands of the employers; why could not the workers get them direct from the Government? This question he has now begun to ask, and he will ask it with increasing vehemence every year as long as we follow our present course. This is what Populism means and what Coxeyism means. Both are a widespread turning to Washington for relief on the part of that portion of the population which does not manufacture or mine, and cannot be protected by high duties on imports, namely, the farmers and farm-laborers, and in fact everybody that is poor and in debt or distress. They want money or employment direct from the Government, without the intervention of bosses or employers; and everything that makes money seem easy to manufacture—greenbackism, silverism, joint-metallism, and bimetallism—thus finds favor in their eyes. If we desire social peace and security, we must in this matter take the back track. We must set to work to undo the teachings of thirty years, and try to spread among the people once more the spirit of independence and self-reliance which was the leading American characteristic in the earlier years of the century.

We were in hopes that a beginning in this great work of social healing was made by the triumph of the tariff-reformers at the last Presidential election. The platform contained the following, which is the true democratic gospel, the only one by which a democratic government can last in our time without serious danger to property and order:

> "We denounce Republican protection as a fraud, a robbery of the great majority of the American people for the benefit of the few. We declare it to be a fundamental principle of the Democratic party that the federal Government has no constitutional power to impose and collect tariff duties, except for the purpose of revenue only, and we demand that the collection of such taxes shall be limited to the necessities of the Government when honestly and economically administered."

The Wilson bill in its original form did not carry out this programme. It left protection for protection's sake on a great many articles; it reduced it only slightly on others. In the tinkering which it has since undergone, it has been so altered that nobody would recognize it as a tariff-reform measure. It does not carry out the saving idea of the platform. It does not reverse the Republican policy. It does not start the nation on its return to sound and pure Americanism. On the contrary, it is likely to confirm the working classes in the idea that there is no difference between the two leading parties, and that their only salvation lies in a "social revolution." If it did not contain free wool and one or two other exemptions, it would be no boon to anybody, and the Republicans might well accept it as their own measure. For the great need of the time is not so much a shifting of duties or burdens, as a radical abandonment of the doctrine of Government protection. Tariff legislation must be turned in the direction of total non-interference on the part of the United States House and Senate. To expect them to "foster" industry with either grace, wisdom, or understanding, is preposterous. The collection of taxes to meet the expenses of the Government is as much as they are equal to.

THE SAMOAN TROUBLES.

Common sense in regard to foreign politics has a strange, unfamiliar sound in public life nowadays, and consequently Secretary Gresham's letter in reply to Senator Gray's resolution about Samoan affairs must for most readers have had whatever charm comes from novelty. Samoa is about 3,000 miles from our shores. If it belongs to any "system" it belongs to the Australasian system. Its condition and prospects concern us no more than the condition and prospects of the Cape of Good Hope. The Germans have been at work for years ousting the natives in the very manner which we have practised so successfully in Honolulu; but instead of employing missionaries and sons of missionaries, they have employed common traders, who, by means of mortgages and land sales, have been rapidly getting possession of the islands in the regular Hawaiian fashion, and taking possession of the government in the old-fashioned way with which the white man has made the untutored savage so familiar. Now, if this concerns anybody, it concerns the New Zealanders. They are the coming power with whom the Germans are meddling, and if they do not like it it is for the British to call the Germans to account. But we, in forgetfulness of the traditional policy of the Government, as Secretary Gresham has pointed out, thought we must have a finger in the pie, and we intervened and insisted on a tripartite treaty, under the strange hallucination that whatever happens in the whole Pacific Ocean is our affair. So we are governing the island jointly with the British and Germans, although it is these two Powers which have nearly all the commerce of the place. We have literally no interest in the islands whatever, for we have hardly any trade with them. In 1887, the year of the last "Samoan conference," out of 229 vessels which entered the port of Apia only six were American, and the total value of their cargoes was $60,000, and there has since been no increase.

The government which Secretary Evarts in 1877 said he would like to see set up in Samoa was a "stable, independent native government." The government we have set up under the tripartite treaty is, to use Secretary Gresham's language, "in substance and in form a tripartite foreign government, imposed upon the natives, and supported and administered jointly by the three treaty Powers." The result has been continual unrest, disturbance, and foreign interference. This mania for foreign dependencies at great distances from our shores, which breaks so

completely with all the best traditions of our own Government, and seems to increase with the increasing difficulty of our domestic problems, is due to two causes. One is the theory, broached by Blaine and supported by high-tariff writers, that trade with distant points is started or promoted by "showing the flag," bringing our Government to the knowledge of the natives, or establishing lines of subsidized steamers. People are deceived by the old British phrase, "Trade follows the flag," concocted by Great Britain when she had no rivals, at s a or in manufactures, and could "lick" anybody who tried to compete with her, but senseless in these days, when every barbarian on the globe is pursued by the rival drummers of half-a-dozen great industrial Powers. Trade in our time follows cheapness and durability. All the navies, steamers, and telegraphs in the world will not make people look at your goods unless they are cheaper than other people's—a simple truth which it seems impossible to hammer into a protectionist skull.

The other is the growing disposition to shirk domestic reforms by means of a vigorous foreign policy to be carried out by a large navy. On the same principle on which the rich man acts who pays blackmail to Croker, but who will not work for municipal reform, a large body of our politicians try to either cover up or excuse their indifference to the condition of the suffrage, of the civil service, and of the finances by disputing with European Powers about protectorates and "coaling stations" in distant seas, and pretending that every little rock in the vast expanse of the Pacific is a "strategic point." Nothing to-day does more to lower American character and institutions in the eyes of the foreign world than the kind of men with which we fill our legations and consulships abroad; but it is much easier to try to meet this discredit by sending smart cruisers to show themselves in foreign ports, and bully weak Powers, than to reform our diplomatic service. Our trying to keep the Samoans in order when we cannot protect our great lines of railroads from armies of tramps, is surely a grotesque spectacle; and when twenty Republican Senators vote with a Harvard graduate to levy discriminating duties on the imports of our best foreign customer in order to compel her to change her standard of value—a proceeding in all respects worthy of the Samoan King Malietoa or Mataafa, or Tamasese, whom we have been trying to train in sound politics—surely it is time to let the poor savages alone.

WOMAN IN THE SOCIALISTIC STATE.

IT is always interesting to read the additional explanations which the socialists keep making from day to day about the kind of place their "State" will be when they have got full possession of the world. One of these, and a very curious one, appears in the last *Fortnightly* from Prof. Karl Pearson, the professor of mathematics and mechanics in the University of London, in an article on "Woman and Labor." It is extremely wordy and extremely obscure, as such productions are apt to be. There is a great deal about "evolution" and "development" and "transition," and a good deal of condemnation of the "competitive system," which we have heard before without much profit. But he says, "The two, and we might almost say the only two, problems of modern social life are the problems of woman and the problem of labor." Nothing is more curious in these writings than the extensive use of the word "problem." Almost everything animate is a "problem" to a socialist; that is, something he has solved or can solve or explain. Of course, every individual in the world is a problem to himself or somebody, as well as Labor and Woman. But most people select very early in life the problems they think they can solve and let the others alone. The social reformer is not so easily disheartened. When he recognizes anything as a "problem," he sits down before it and does not leave it till he solves it in an article or a book.

Most people will suppose that what Prof. Pearson means by the "Problem of Woman" is the best means of securing her a vote, or the best means of securing her equality with men in the labor market, or the best means of getting husbands for those who are likely to remain unmarried. But they will be mistaken. The women have got beyond these things. What is now in their minds, and what they are going to have, is "insurance against motherhood," on the part of the State—not, of course, the thing we now call the State, but the new socialistic State which is to succeed it. This is what "organized womanhood" is going to insist on, and it will not be content with anything else. The women, it says, who marry and bear children are worsted in the labor market by the single women; that is, are really punished for doing what is woman's highest duty. This state of things will certainly not be permitted in the socialist State—

> "a womankind seeking in a l classes to take part in social labor and activity, and, owing to the selective processes now at work, likely to have increased rather than decreased sexual and maternal instincts; conscious, too, of the vital importance of problems of heredity, and for which the problem of population, the question who shall be the parents of its children, will, with the growth of the socialistic tendency, become the chief problem of the State."

Such a womankind will on no account permit this open competition between the married and unmarried women to go on unchecked. The State must help the married women to hold their own, and for this purpose there is to be a fund called a "national insurance against motherhood," which is to subsidize all the mothers when bearing children. "To reconcile maternal activity," Prof. Pearson declares, "with the new possibilities of self-development open to women, is *par excellence* the woman's problem of the future."

What is most startling in this is the prospect it holds out that not only will the socialist State choose our occupation for us and fix our rate of wages, but it will also choose our parents. It is to decide who are to be our fathers and mothers. The privilege of marriage will probably only be accorded by a State board, after a hearing, we hope, "by counsel." The number of children a couple may have will, doubtless, considering the importance of the law of heredity, be settled in the same manner, after a minute examination of their moral and intellectual condition and their physical constitution. It will be easily seen what excitement the election of such a board will create, and what a temptation there will be to wirepulling and corruption of every description on the part of couples who feel doubtful of their ability to pass; or rather, we should perhaps say, *would* create under our present individualistic system, for, of course, in the socialistic State, people will be above such things.

What is the ordinary definition of insanity? Is it not a disregard of the facts of life and the ordinary course of events in human society? If this be a correct definition, may we not entertain harrowing doubts as to the mental conditions of many of these apostles of the new gospel? Their promises about their millennium are every day becoming more wonderful, and showing a closer approach to the hallucinations with which alienists are familiar.

There appears, in fact, just now to be a great wave of mental disturbance passing over the world, due, we believe, in large part to the rapidity with which science and invention have revolutionized social conditions. There is a story of an African chief who was carried on board an English man-of-war, and shown over the ship, including the engine-room. He was so overcome by the wonders he saw around him that he went insane, and committed suicide by jumping overboard. When we read some of these socialistic pictures of the future, and see on every side the worship of silver as a personality with human attributes, and find its abundance made one of the causes of great men, and see the widespread desire to live on the State as if it were an entity of limitless powers and funds, and the widespread belief that if the powers of Government were enlarged the qualities which have made government difficult for ten thousand years would disappear, we suspect that modern progress has proved too rapid and violent for poor human reason, and that, if society had a

neck, there would be much danger of its hanging itself.

A PROTECTED ORTHOGRAPHY.

WE have long been accustomed to distrust the Hon. William E. Chandler in any public capacity, and as a reformer particularly we can but view him with strong suspicion. The American Philological Association, or the friends of its "24 Joint Rules for Amended Spelling," do not share our prejudices against the New Hampshire statesman, and are using him as an instrumentality for fastening these rules upon the Government Printing-Office. For a scholar in politics they would more naturally have resorted to the Hon. Cabot Lodge, but as a veteran protector of infant industries Mr. Chandler had superior claims, the Amended Spelling being avowedly in the interest of infants. This class of the community is not, indeed, passionately addicted to the study of public documents, does not cry for them, and has never complained of the difficulty of reading them on account of our absurd English orthography. Still, for their sake, it is proposed to compel millions of adults, English-speaking and foreign, to learn to read and spell anew in order to avail themselves of the products of the Government press. Mr. Chandler, being an adept in class legislation, accordingly introduced in the Senate on February 19, 1894, a joint resolution to that effect, embodying the "24 Joint Rules" at full length, and the arguments by which they are supported.

Every one who has watched the slow progress of the reform knows, of course, that the Amenders are aiming at bigger game than the Public Printer. They hope through him to put the screws on publishing-houses and dictionary-makers and text-book makers and journalists. The joint resolution quite frankly professes its design — "to encourage better spelling of the English language, to make easier, more logical, and more rapid the work of pupils in learning to read, and to reduce the cost of printing and writing." A paternal government which regards it as its province to hold up the price of silver, and to foster manufactures, and to furnish work to the unemployed and a living wage to every worker, may well take a hand in this new business, on an economic pretext. Its promoters assure us that one-fifth of the bulk of all printed matter would be saved if a strictly phonic system were adopted. To have the long-winded Allen, Jones, or Peffer, or even Senator Chandler himself, reduced by so large a percentage in the *Congressional Record* would certainly be a boon, even if there were not "millions in it" for the overburdened taxpayer. Nevertheless, we have to ask ourselves if the disfigurement of the public documents with outlandish orthography is a justifiable step in the present state of cultivated public opinion upon the subject, which is far from being unanimous, and whether the Government ought to be dragged into a propaganda which apparently will not go of itself.

We do not now propose to discuss these questions, but we desire to say a word on behalf of the Eye in a controversy which is really between the Eye and the Ear. We are asked to consider mainly the young and their perplexities in learning to read by sound, and the Amenders pride themselves on having comprised in their rules the monosyllables and dissyllables "ever in our mouths." In other words, this small body of colloquial expressions, not too numerous to commit to heart, and presenting very extensive analogies, is to be transformed at the expense of intelligent readers who read without pronouncing because the form of the word is a distinct ideograph. Yet even here the Amenders have not had the courage of their convictions, for while they lop off the initial *w* in *whole*, they do not tamper with it in *who*, though the latter word is used a thousand times oftener. Moreover, the abbreviated *whole* at once competes in understanding with *hole* the noun. These diverse spellings for words pronounced alike are, as Mr. Henry Bradley says, established "useful distinctions," and to abolish them is to impose a hardship upon the child in the very act of pretending to relieve him. So, again, as the digraph *ch* has three if not four values, to strike out the *t* before it in *witch*, etc., is to abandon a perfectly satisfactory, because invariable, guide to the pronunciation. Some schemes for transliteration from the Russian employ *tch* regularly for the corresponding sound of *ch;* but our Amenders would reprobate this. *Gu*, again, if its vowel is sometimes silent and sometimes sounded, infallibly betokens hard *g*, yet the Amenders, having a blind man's spite against silent letters, banish the *u* before *a* and in all native English words, as, *guest*, *guess*, *guild*, thus introducing a fresh source of confusion.

A memorial now being circulated in behalf of the Chandler resolution assures Congressmen that, "because of the faults of the spelling now in vogue, many a bright, sensitiv, truth-luving child is made to feel that spelling is untruthful and cannot be lerned by an exercize of the faculties of reason," with a consequent "hindrance to the development of the natural and truthful instincts of his being." For our part, with all respect to the memorialists, we find this a puerile argument. Perfect consistency will never be reached in the English language—and, we will add, may it never be! But our piecemeal reformers simply bewilder still more the truth-loving child who is taught to pronounce *gess* (guess) with a hard *g* and *George* with a soft, *gild* (guild) with a hard and *gillyflower* with a soft, and who has to be saddled with explanations why *live* the adjective is spelled with a final *e* and *live* the verb without, why he must write *crost* and not *chast*, *lookt* and not *chancd*.

Without novel characters or the liberal use of diacritic marks, there can be no phonic assurance except practice in pronouncing the English vowels. Yet we are told that in "port, post, sport, tomato, potato," for example, "the spelling is truthful, logical, easy to lern, and easy to write and print." Ask a foreigner to pronounce *tomato* and *potato*, however, and see what he will make of them; or the words *thru*, *thuroly*, *enuf*, *lern to spel*. *Muney* is not a whit easier than *money*, or else *lern* should have been spelt *lurn;* and the form *money* (if the claims of the educated, including high-school children, may be feebly protested) accords with the spellings of the Latin and its derivative tongues on the Continent (Lat. and Ital. *moneta*, Sp. *moneda*, Port. *moeda*, Fr. *monnaie*, etc.), with which we should not needlessly put ourselves out of line etymologically. On the other hand, we needlessly foreignize our tongue by multiplying the single *f*, *l*, and *v* endings—*e. g.*, *litl*, *ruf* (rough), *hav*—which are repugnant to the English eye.

The alleged saving of time in writing by all these abbreviations is illusory. It defies computation. No one ever yet owned his debt to Webster for the aggregate leisure obtained by spelling *traveller* with one *l*. The effect on adults who have to accustom themselves to the new-fangled forms in reading and writing will be an irritating loss of time. The expense argument is equally illusory. A writer who checks his verbosity, or who uses short for long words or cultivates a simple rather than an involved style, will save far more than by practising the Amended Spelling. Then, what of the cost of making over our dictionaries, with initial *ph* to be sought for under *f*, *cinder* to be looked for under *s*, etc.? Is there not here loss of time, too, even if there are cross-references? Finally, let us not forget that the difficulties, the irregularities, the want of analogy, in our orthography grow out of the supreme merit of the English language, its capacity to borrow freely and assimilate perfectly from all others; that thousands of children (not necessarily falsehood-loving) have overcome these difficulties unconsciously at the age of three years; that the most approved mode of teaching spelling at the present day is not phonetically—by ear—but by the so-called word-method—by the eye—memoriter practice from the speller having been largely superseded by exercises on the daily lesson in the reader; and that the English race is not intellectually behind any other by reason of the greater time

necessary to acquire the art of reading and spelling.

A CATALOGUE FOR THE NATIONAL LIBRARY OF FRANCE.

A VERY important report has just been issued by the Bibliothèque Nationale of France. A committee of twenty persons, of whom nine were members of the Institute, four librarians, and three inspector-generals of libraries, has been considering the advisability and method of printing the catalogue of the largest library in the world, which contained at the end of last year 1,934,154 "numbers," forming at least 2,600,000 volumes. The report gives an interesting sketch of the history of the cataloguing of the library from the beginning, which is the not uncommon story of an insufficient personnel overwhelmed by great accessions, of neglect, bad judgment, increasing confusion, frantic efforts to remedy the evil, attempts to do too much—apparently a continued struggle to run a great library with a small staff. Finally, on the accession of M. Léopold Delisle in 1875, was inaugurated the present system, which led to the completion of the inventory in December, 1893. Nothing now remains to be done but to add the printed matter, often very important, which is included among manuscripts in the manuscript department, together with a collection of books belonging to the library kept at present in the palace of Fontainebleau, and then to print.

This the committee has unanimously decided to do, on two grounds—first, as a safeguard to the property of the library, and second, as a guide to the researches of students. For a century, losses of books have been frequent. Most of the books recovered come from booksellers and book-lovers who voluntarily restore books which they find on their shelves with the library's marks. The committee believes that the copies of the catalogue which would, of course, be accessible in every public library, would be an important instrument of verification and the best of guarantees for the public property. As for the service which such a catalogue would render to students, it is needless to speak. Scholars in the provinces and abroad will find in it the elements of a bibliography in their respective researches, and within the library a reader will find his book more easily, and will have to wait for it a shorter time, because he will put on the slip by which he demands it the exact shelf-mark, instead of handing in a request for a book which may or may not be in the library, and of which he may or may not have the correct title, and waiting while an attendant hunts it up in several catalogues—an operation which on the average takes thirty minutes. The committee no doubt considered, though they abstain from discussing it in their report, the feasibility of putting this same information before the readers on cards—that is, of extending to the older books the system of cards clamped in volumes which the library has adopted for all books received since 1872. Of the American improvements in card catalogues they perhaps have no idea, and of the Rudolph Indexer they probably never have heard. But to prepare the slips of the inventory of the older books for insertion in the card-books would be a work of some cost, and, while it would give a most useful instrument for the readers within the library, it would be of no use in the other libraries of the country, and, moreover, would not be to the world so glorious a monument of French literature.

The chief reason for printing, in our opinion, is the possibility of making from these printed lists, with no further expense than the cost of cutting up, mounting, and classifying, any number of bibliographies. Titles arranged in chronological order, which would present the history of literature; titles in geographical order, giving the typographical history of every place, so far as its printing is represented in the library; an arrangement by bindings, for all whose bindings are worth mention; an arrangement by donors; an arrangement by languages, forming national bibliographies; a classified arrangement with every refinement that it has entered into the mind of man to conceive; and finally, most useful of all, an arrangement under subjects placed in alphabetical order—all these the happy library that prints its titles can easily have. It is true that it costs money to cut up and mount, and above all to classify; but this is for future consideration. It is a pity that the committee does not discuss the application of logotypy. Perhaps they have considered it and found it too costly, but they say nothing of it. Perhaps if we had had to furnish the money, we should not have regarded these arguments as conclusive; but we are glad that they have appeared so to the committee; for this catalogue, like that of the British Museum, will be a boon to American students, and each of our great libraries will undoubtedly procure a copy. It will be most interesting to compare the two catalogues, and it will be found, we believe, that the two greatest gatherings of books in the world are by no means duplicates of one another. The Museum is, of course, far the fuller in English history and English literature, and its quantities of English pamphlets can nowhere be equalled; the Bibliothèque is correspondingly superior in French history and literature, and not weak in pamphlets, although we suppose it hardly has such numbers of these troublesome but often important issues of the press. What the Museum has, in fact, is not all revealed by its present catalogue; a mass of several thousand Mazarinades, for instance, is represented by a single entry, and the detailed cataloguing is reserved for the Supplement.

The rules suggested for the placing of entries are generally judicious. We do not see the use of having one catalogue for authors and a second alphabet for anonymous works, but this is a matter on which there may well be difference of opinion. Anonymous works whose authors are known will appear under their names —an improvement on the practice of the British Museum. Periodicals and the publications of societies will appear in special catalogues—another matter on which there is a difference of opinion among experts. This is not, we believe, the practice in any American library. It is audacious to disagree on any point with so eminent a committee, yet we can but think that they have not solved the still-vexed problem of books which remain anonymous as well as they might have done. Barbier pointed out the only way of salvation—entry in all cases under the first word, the only rule that cannot be differently interpreted by different cataloguers, giving the only place where one can be sure of finding a work. Panizzi wanted to follow Barbier entirely, but was overruled by his trustees and obliged to make several exceptions. Still, on the whole, the British Museum enters under the first word not an article or preposition. The French committee, however, propose to return to the older fashion—the first significant word—opening the door wide to all sorts of diversities of practice, and therefore preparing many vexatious disappointments to those who use the catalogue. *Remontrances*, for instance, are to be put either under "États-généraux" or under "Parlement," because, forsooth, there would be such a number of titles beginning with *Remontrance*. But will there not be quite as many entries, or more, under États-généraux and Parlement? Other "first words" are to be discarded in favor of "important words" selected by the cataloguer. The committee admit that it will be a work of tact to apply this rule. Certainly it will, and it will be a work of genius to find anything under it.

Again, works published under an initial are to be treated as anonymous. "The contrary system adopted by the British Museum has resulted in filling 192 columns [there are nearer 250 now] of that catalogue with titles entered under the letter B alone. This is enough to explain the decision of the committee." What an inadequate reason! The titles do not take any more room under B than they would anywhere else, and they are easier to find. It is not harder to put one's finger on B., T. A., than it is on Bacon, T. A.; it is as easy to find any one among the ten B., T. A., if there are so many, as it is to find it among the ten Bacon, T. A. The 192 columns are simply a bugbear which ought not to frighten anybody.

The committee mentions with pardonable pride the improvements introduced during the last quarter-century in the service of the library. In 1868 the reading-room had barely a hundred seats, and readers might often be seen wandering disconsolately and vainly in search of an empty one. Now the number of seats is quadrupled (but we must remark that such is the increase in the use made of the library that the vain search for a seat may still be seen). Readers then collected in crowds round the bureau, waiting for their names to be called, when, after a long time, the book demanded issued mysteriously from behind the screen. Now books are delivered to them at their desks (after an average wait of thirty minutes, as we ascertained last winter); and till they are brought the students have at their free disposal 9,000 volumes of carefully selected reference books. In 1868 they had no books whatever to consult during this time, and had to send in a "call-slip" to get the commonest dictionary. Then they were expressly forbidden, by repeated regulations, to consult the catalogue. Now they have author and subject-catalogues of all books received since 1872. In one respect they are even more favored than the readers in the great British Museum reading-room. They have the last numbers of the principal French and foreign periodicals laid out on a table for free use—not, indeed, the popular magazines which one finds in all American and English town and city libraries, and not even as many learned periodicals as one finds in our college and our greater public libraries, but still enough to be of great service. And yet, with all these ameliorations, the public complain. But the administration is not discouraged, and it projects further improvements—another reading-room fitted up for evening use, additional storage-rooms, more attendants.

THE INTERNATIONAL MEDICAL CONGRESS AT ROME.

ROME, April, 1894.

THIS important gathering of medical men (from March 29 to April 5) was composed of more than seven thousand registered members. Of this number probably only one-third took part in the proceedings of one or more of the nineteen sections into which the body was di-

vided to carry on its deliberations. The other two-thirds made the Italian journey more as a vacation outing, spending little or no time at meetings, but taking advantage of the many and varied opportunities for sightseeing and social enjoyment, both public and private. The Congress was formally opened at the large Costanzi Theatre, in presence of the King and Queen and a great concourse of notabilities, by Crispi speaking for the King. He laid particular stress upon the work of medical science in recent years in regenerating unhealthy regions and cities. Prof. Baccelli, the Minister of Public Instruction and president of the Congress, made his address of welcome and salutation in Latin, in dignified and formal sentences, with apt application of the Latin maxims, "Salus populi suprema lex esto," and "Nulla re magis homines ad Deos accedere quam salutem hominibus dando."

Prof. Virchow, the representative of the University of Berlin, in his address at the first general session, traced the history of medicine from the earliest times to Morgagni, the Italian who, in the last century, originated the science of pathological anatomy by his important discoveries of the changes in the tissues produced by disease, from which moment medical science moved forward on solid grounds. The noteworthy address by Prof. Foster of Cambridge, on "Organization in Science," laid bare the present defects and needs of the scientific world. He remarked that the literature of medical and physiological science is now chaotic, that it is impossible for any one worker to keep track of all the work done even in his own chosen field and to find time for any researches of his own; that there should be systematized endeavor in each department of science, directed by an international body—a skilled jury—whereby expenses would be met, the chosen gifted investigators stimulated, the incompetent discouraged; and, finally, that the numerous well-known problems now before us in physiology and biology should be attacked by united, regulated efforts, the results to be published from time to time in one common language, so that the great body of busy men could have early and sufficient cognizance of all true progress. In science, differentiation had come perforce, and now integration was urgently needed to prevent men from going over the same ground, to guide workers, and to repress the publication of crude material. Individual ambition would probably not be checked (though this point demands careful consideration), and the motive and aim of all scientific inquiry—the truth—would be furthered and the results more successfully garnered. Prof. Babesiu of Bucharest spoke instructively on the state of public sanitary laws and hygiene since the development of bacteriology—a period of scarcely twenty years. He predicted that the lately enacted sanitary code of Italy would return many times its cost even to the present generation. Modern states in general provide inadequately for the execution of sanitary laws. Consumption alone, a preventable disease, causes one-seventh of all deaths in civilized nations, whereas the panic inspired by a threatened cholera invasion, which may in comparison take only a fraction of this number of lives, impels lavish expenditure and temporary vigilance backed by the power of the State. The grounds on which this power was formerly withheld from sanitary authorities are disappearing, as the State alone, under the highest medical direction, can deal with members of a community who, by originating a focus of disease, menace the public welfare and involve the lives of an indefinite number of their fellow-citizens.

At the general sessions the discourses were usually in German, French, or Italian, and but twice in English. The papers contributed numbered in all upwards of twenty-five hundred, of which a goodly proportion will probably never get into print. Among the speakers not already named were Nothnagel of Austria, Brouardel of France, Hokvis of Holland, and Jacobi of New York. This American delegate sounded a note of warning against the encroachment of the social festivities upon the real objects of these congresses, which are always announced as being "purely scientific." Yet the newspapers of the city laid much and not undue stress upon the banqueting of the French delegates by the prominent Italians and their fraternal speeches. Prof. Virchow's political career and his part in the *Kulturkampf* were also brought up, his presence in Rome being thus invested with a significance quite foreign to his scientific reputation. The king treated him with exceptional distinction, but this is readily accounted for on purely personal grounds.

The sections met at the Policlinico, a series of five new buildings destined to form part of a magnificent hospital, one of the largest in Europe. It is situated without the walls on a commanding position on the north side of Rome. The plenary sessions were held in the city in an inadequate hall adjoining the handsome Fine Arts building on the Via Nazionale. This building contains a very interesting exhibition of scientific apparatus, books, models, and plans of sanitary and engineering works of many modern institutions and cities, European army medical equipments, medical instruments, rare old medical and philosophical books and writings, including many illuminated manuscripts and *codici di medicina* from the Italian libraries—notably those loaned by the University of Naples. Lavish hospitality was extended by the city and by private individuals, and galleries were freely opened to the guests. The most imposing event was the illumination of the "platea archeologica" on the night of April 3. The whole region from the Coliseum to the Capitol, including the Forum and the Palatine in every part, was lighted up in every detail by oil lamps and torches, with occasional bursts of colored pyrotechnics. The scene was truly extraordinary, and vividly suggested the glories of the great past. The various spaces and heights were divided into "tribunes," and the enormous crowds were fairly well placed and managed for this occasion. Bands of music played at several points, and one composed of guitars and stringed instruments was stationed near the royal tribune. The municipality also gave a reception to the "Congressistos" at the capitol, displaying the buildings and their beautiful contents to the best advantage.

The management of the enormous crowds on most of these occasions has been justly criticised, but never before was there a medical congress exceeding 7,000 members, for the most part, as I have said, more bent on sightseeing than on "wissenschaftliche Arbeit," as a German professor put it. The Eternal City was already full before this crowd streamed down upon it from the north and from all quarters of the world, and lodgings were at a premium. Women who desired to become members of the congress could do so and were on an equal footing with men, and many attended the sectional meetings diligently; at least one of them (a Russian) receiving high, outspoken commendation for her work. The weather was matchless; and at this season, with the bright freshness of spring in the air and over all nature, Rome seemed enchanting. C. A. S.

GREECE REVISITED.—II.

ATHENS, April 17, 1894.

THERE is one respect in which the travelling accommodations in Greece have not improved of late years—one, in fact, in which they have retrograded. This is in the connections with other parts of Europe. Between Constantinople and Greece there has been more or less quarantine all winter, and of this route I cannot speak. But when I was last here, one could be sure of at least three good steamers weekly between Athens and Italy; and, having read the accounts of the imposing ceremonies attending the opening of the Corinthian Canal last August, I had looked forward confidently to the passage through this as one of the new experiences to be enjoyed, and had hoped there might be even a larger choice of steamers than there used to be. Instead of this, however, I found that there is as yet no foreign line of steamers using the canal, which still lies awaiting the traffic that is to come. Various reasons have been reported as to the cause of this delay, but these, as Herodotus would say, I forbear to repeat, well knowing what I am about. There is undoubtedly truth somewhere among the stories I have heard, but it is not worth while to inquire where. The fact is, that for the present there are two steamers leaving Brindisi every week for Patras, that both leave on the same day and at the same hour, that both keep within sight of each other all the way, and that it is merely a chance which reaches its destination first. There is just enough of the flavor of old times in this arrangement to remind one that it is the same part of the world in which he used to travel.

From Patras the journey to Athens has been for some years made by rail, and this day of railway is more than sufficient to make up for the disappointment of not sailing through the canal. The sail through the Gulf of Corinth was always one of the most delightful experiences in Greece, but I do not remember that the scenery was either so attractive or so impressive as it is from the railway, which runs all the way close to the southern shore, and, having crossed the Isthmus,* skirts the coast of Megaris. This railway journey is worth crossing the Continent to take. The St. Gothard line is the only one in Europe which for beauty of scenery will at all compare with it, and the scenery along that route lacks the associations which give this a double charm and interest. For the best effects the sun is necessary. On a cloudy day the great element of its beauty—the color—is lacking. But with the sun full upon it, one gets that wonderful combination which I have never seen outside of Greece, of a light landscape against a dark sky, a sky in which the blue is of the purest and deepest, below which the mountains, in their delicate shades of pink and violet, seem to rest like clouds upon the earth, rather than to be a part of it. In the foreground, the gulf plays its part in the color scheme, the muddy rivers of the southern coasts sending out great shafts of green or yellow into the blue or purple of its own waters. Everything is delicate both in line and color. From the mountains along the northern coast rise others behind them, and in the backgrond Kiona, covered with snow, crowns the whole. Parnassos itself is in full view nearly all the morning, and, be-

yond it, the broad back of Helikon, the snow upon them quivering in the thin, clear atmosphere. On the other side of the railway are Erymanthos, Kyllene, and the hills which lead from them down to the sea.

After a comfortable halt for luncheon at New Corinth, we strike the isthmus, crossing the canal at a height of nearly two hundred feet, where it looks like a tiny thread between its huge, shelving walls. The isthmus passed, the line begins to climb the cliffs of Megaris, and here we come upon the most exciting, as well as the most inspiring, part of the day. The train winds along the Skironian rocks, which in many places have been blasted out to accommodate the railway; and, high above the sea, into which we should drop if a bolt gave way, we look out upon Aegina, Salamis, and the shores behind them, Hymettos and Pentelikon in the background, the bay of Eleusis and the mountains of Argolis. Indeed, the whole journey is like a great crescendo passage, reaching its climax as we come down through the Attic plain from the north, with the superb outline of the Akropolis in full view, and below it the city sparkling in the afternoon sunlight.

As to Athens itself, it would be idle to attempt an enumeration of the changes which have taken place in the last nine years. The city has grown, of course; there are more fine houses than there used to be, and many more of the humbler class. The number of good or pretentious shops has likewise increased; but in general the aspect of the city is the same. The streets are still either very muddy or very dusty, accordingly as it rained to-day or yesterday; the number of officers promenading them still suggests an army of untold proportions; and the stony little lanes leading up to the Akropolis are still as tortuous and deceptive as ever. But in what most concerns us there have been great changes, and, if one may judge from a week's experience, all for the better. The antiquities are now really taken care of. Even the Areopagos has an iron railing around the greater part of it, to protect the Grotto of the Furies from the profanations of the degenerate natives who no longer fear their terrors. The ruins of the Dipylon, also, and the cemetery outside it, have been enclosed, and must now be approached through gates which are guarded by custodians.

Of the Akropolis I shall speak presently, but I wish first to say something about what is practically a new creation since my last visit —the National Museum. Those who saw it in former days will remember the general air of shiftlessness which characterized both the building and its surroundings; the great yard between it and the street, filled with inscribed stones, which were arranged in a feeble attempt at order, with here and there among them the fragments of a grave-relief, waiting apparently for Time itself to join them together; the great unfinished façade of rubble, waiting for years—as everything used to wait in Greece—for its outer coating of stucco or marble; the interior, only a part of which was finished, with its cold gray walls, making merely a storehouse for the marble treasures, which were either leaned up against the walls or lying on the floor. A few of the more important statues had been set up, some of the fragmentary reliefs had been put together, and I remember one room around which busts were ranged, Greek and Roman indiscriminately. Now all this is changed. The yard in front has become a park or garden, with a large basin of water in the centre and shrubs and plants arranged in plots about the avenues which lead to the building. The inscriptions have been carried into the basement, where they form part of a valuable epigraphic collection, which was in charge of Dr. Lolling until his death, a few weeks ago. The building is finished, its façade consisting of an Ionic portico, with a long wing running out on either side; and if it is not beautiful, it is certainly no worse than most museums. The interior, which has only one story, consists of a chain of twenty-four rooms or halls surrounding two courts. On the inner or court side of these rooms, and connected with them, is a second series, smaller and narrower, of the kind known as cabinets. From the entrance-hall one passes to the left into the collection of sculpture, which now occupies fourteen of the larger rooms. The size of these has been admirably chosen, as they are all large enough to give an impression of space and dignity, yet most of them will admit but a limited number of statues or large works, so that there is no danger of bewildering or overwhelming the visitor with the sight of too many objects at once. The walls are painted a deep, warm red, and, with few exceptions, the rooms are lighted from one side only, the windows being high in the wall. A top light would have been still more effective, but this is so much better than the average that one cannot complain.

As a whole, I am inclined to say that this is the most effective museum of sculpture I know, yet I am not sure that the beauty of its contents has not something to do with this judgment, and also the fact that it is so vastly superior to what we used to expect. Certainly, if we take the contents themselves into consideration, there is no museum to compare with it, because everything here is Greek. There is, to be sure, nothing equal to the marbles which have gone to London, there is no single figure which equals the Venus of Melos, but there is that unmistakable delicacy of the pure Greek spirit pervading every individual fragment in the collection, from the crude "Apollos" down to the portraits of the Romans, which is not to be found to the same degree in any other collection. I do not know whether this charm is to be analyzed, but perhaps it is due to the very fact that the majority of the works here are of the less pretentious kind—gravestones, votive reliefs, and the like —in which the artistic instinct that was in the people expressed itself least consciously. In looking at these monuments one certainly has the feeling that we are seeing the Greek artist at home, and the feeling is based upon something more substantial than sentiment.

In the central portion of the museum is a large hall containing the works of the Mykenæan epoch—all the treasures found at Mykenæ itself, and those from other sites of the same period, such as Tiryns, Vaphio, Spata, and Menidhi. Here, without question, the museum is unrivalled, as all the other museums in the world combined could not produce a room like this. With the nature of the contents your readers are familiar, and it only remains to say that the arrangement of them is excellent, and the lighting much more satisfactory than that in the room of the Polytechnic Institute where they used to be exhibited. This winter the vases and terracottas have also been moved from the Polytechnic to the museum, where they are now being arranged in the rooms to the right of the entrance. In the first room of this series all the important bronzes in the possession of the Greek Government are being brought together, even the museum of Olympia and that of the Akropolis having been deprived of their principal pieces to make up this collection. The walls of all these rooms are lined with cases, and there are table cases standing about the floor; but few of them have been arranged yet, so that it is too early to describe them.

Turning now to the Akropolis, there is much less change in its external appearance than I had expected to find. I use the word external advisedly, because, although the surface looks practically as it used to do, every cubic foot of soil, down to the living rock, has been carefully turned over in the past twelve years, and sifted of its contents. Many of those who have read the accounts of the excavations must have wondered, as I did, whether the Akropolis was to be stripped of all its covering, and whether the demands of scientific curiosity would result in leaving it too realistic an illustration of the naked truth; but this has not been done. Even on the east front of the Parthenon, where the massive foundations were disclosed to a depth of twenty-five feet or more—I do not remember the exact figures—the soil has been put back, and even the fragments lying on the top have been replaced, though in a somewhat more orderly fashion than they were before. During the excavations all the data were measured, described, and photographed with the utmost detail, so that, although the surface looks as it did formerly, we know what lies, or what used to lie, below it, and, so far as one can foresee, it will never be necessary to excavate the enclosure of the Akropolis again. Some changes have of course resulted from this work. In several places the inner face of the surrounding wall has been left exposed, to show the architectural members of older buildings built into it, the space thus left being carefully protected from caving in by sustaining walls. In the same manner remains of the prehistoric period, and of the building to the southwest of the Parthenon, which lie far below the present level, have been left open, also protected by walls. The fragments of the Parthenon lie about in less picturesque confusion than formerly, but much more conveniently for those who wish to study them in detail, as the soil has been cleared out from around them, and the blocks themselves have been placed with some regard to the relative position in which they belonged.

The little museum on the Akropolis has grown considerably, as everybody knows, from the fruits of the excavations of which I have been speaking. Its chief additions are the painted fragments and statues, the most important of which have been made familiar in many publications. But I notice a very marked change in the condition of the colors of those I saw in 1885. The reds are fast disappearing; and, in fact, they are already gone entirely from many details where they were brilliant when the figures were discovered. The blues and greens have darkened considerably, and give but a poor impression of the bright color scheme which they formerly suggested. The Boston Museum of Fine Arts is to be congratulated on having acquired Gilliéron's water-colors of the best of these figures, made at the time of their discovery. As documents the value of his drawings will soon be inestimable; for even now it would be difficult for those who did not see the sculptures then to realize that some of the colors he noted had ever been on them. This disappearance of the colors is apparently inevitable. With the attention given to the antiquities under the able administration of Mr. Kavvadias, and with the jealous eyes of the members of four archæological schools constantly upon him, we may

be sure that these important traces would have been preserved if possible, but I believe no method of fixing them has yet been discovered. By and by the last scrap will have disappeared not only from these but from similar remains in other museums, and then those who do not like to believe that the Greeks painted their sculptures will no longer have the evidence of their own eyes to controvert them.

In closing this fragmentary account of the improvements which have taken place here within the last few years, I wish to acknowledge my own share of the gratitude and appreciation which every student of Greek art owes to Mr. Kavvadias, to whom much of what I have described is due. Working in behalf of an impoverished government, and with indifferent support from his associates, it is he who has completed and arranged the National Museum, adding largely to its contents, and carried out the work upon the Akropolis, as well as at Epidauros and other sites. Thanks to the liberality with which he administers his office, the foreign students now enjoy privileges and opportunities which were never hoped for in the old days; and, thanks to his energy, *something is done*. That is what used to be promised, and what we used to wait for, but under the old system we waited in vain.

EDWARD ROBINSON.

P. S.—In my last letter I spoke of the Hermes at Olympia as being suspended by the iron brace which is fastened into his back. I have since learned that I was mistaken, as the figure is supported by iron bars running from the knees down even through the pedestal and floor into the ground, the brace being an extra precaution against danger from earthquakes. This explains its presence, but does not excuse the inartistic manner in which such a support has been contrived, or the unsightly effect, which might easily have been obviated by treating it less baldly.

ÎLE DE FRANCE AND PICARDY.—II.

LONDON, April, 1894.

FROM Reims we came to one-syllable Laon, a city set upon a hill—the people say a mountain—apt for defence against the Gallic tribes in the Roman times or the wandering bands of mediæval robbers. A steep climb, that reminds one of Chattanooga or Montreal, brings one to a town which could not be complained of as modern or commonplace. The cathedral is seen, as they say a cathedral should be, through narrow streets that give you a glimpse of part of an arcade, a rose window, a sculptured portal, a columned tower, and make you wish to see more. But it is not merely the immediate neighborhood of the cathedral that is mediæval; the whole city is of a piece. Just covering the top of an abrupt hill, which commands the plain on every side, its lofty position, that repelled the attacks of Gauls, Alans, Vandals, Huns, and Normans, has also kept off the innovations of this century. The stream of modern ideas and fashions has passed by it below, with the railroad and all its abominations. As you lean over the rampart in the evening, there is a long line of blinding electric arcs three hundred feet below you; but if you glance up, you will see that the street light casting its feeble glimmer around is a simple oil lamp. The contrast is typical of the place. Below, the freight-yards, the coal-sheds, the factories, and what bustle there is in a not very bustling city; on the hill, the houses, whose projecting stories and distorted tiled roofs and constantly varying skyline mark them for constructions of another age; the narrow, winding streets, the alleys running under arches, the carved gateways of the larger houses; the images on the corners of the streets; the ancient ramparts, their gates flanked with solid towers, now useless for defence, but dear to the painter and the stroller; the tiny little shops, and the market in the open street. It would be misery to live there, but one might well spend a week or two in becoming familiar with every nook, corner, turn of its streets, and every changing aspect of the distant hills and the vine-clad slopes of the horse-shoe valley enclosed within the mountain's arms—for the hill is a crescent, from which feature some antiquaries derive its name, Laon (old Loon, Latin Laudunum), from *loo*, double, *om*, arm, *dun*, hill. They point in confirmation to Cæsar's name for it, Bibrax, formed from *brachium*, like *biceps*, *bidens*, *bipes*, from *caput*, *dens*, *pes*. But there are those who say that Bibrax is another town, and that *om* never meant arm. *Adhuc sub judice lis est.*

It might perhaps be misery to live here now, but happiness compared to life here in the past. The Laonnois is not that happy country which has no history. Five sieges which the town resisted successfully, sixteen in which it was taken and more or less sacked; four great epidemics, two of which killed each over a third of the inhabitants; uncounted famines; a populace always ready for a fight; bishops always encroaching on the royal rights on the one hand and the liberties of the commune on the other; a great and bloody insurrection, a bloodier revenge of the nobles; a great conflagration; a great massacre—such in abridgment are the annals of Laon. Gaudri, Bishop of Laon, bad successor of a line of bad bishops, who swore to observe the charter which he had sold dear to the citizens, violated it as soon as he could, and in every way possible, and was slaughtered for his reward. Thomas de Marne, afterwards a Sire de Coucy, who harnessed his serfs to his carriage by cords passed through a hole in the nape of the neck and made them pull it till they fainted, who compelled others to give him money by hanging them up by the thumbs, and shut prisoners from whom he could extract nothing in a church which he set fire to, who even suspended his enemies by the tenderest parts of their bodies till these were torn out and the entrails protruded, who yet does not seem to have been much worse than the rest of his race; citizens who thought nothing of pushing a stranger into a trap and keeping him there till he paid a large ransom; municipal authorities who nailed the criminal hand and foot to the rocky bed of his tomb and left him to perish by hunger and thirst; serfs who, when they were at last moved to revolt, anticipated the brutalities of the French Revolution and more—these made a society from which it is not strange that quieter men escaped in crowds to the monasteries.

And yet, in spite of sieges, famines, and pestilences, the city was populous; in spite of fires, pillagings, and ecclesiastical exactions, it was rich; and, though turbulent and constantly at war with its bishop, it ended by having in the fifteenth century, for a population of 13,000 souls, thirty-nine churches and seventeen chapels, with the title of "Laon la Sainte." It must have been that Laon's safety from wandering bands attracted families from the open country; that the ecclesiastics, while they got all they could from the citizens, spent in the city the revenues of the neighboring lands; that though *droits de tonlieu*, *étal*, *vinage*, *rouage*, *jailage*, *lardage*, *rotage*, *jaugeage*, *plait l'évêque*, *jolonie*, *prise de grosses bêtes*, and the like, have an unpleasant sound, they were borne as are rates and taxes now, and, for the ruder impositions, men got accustomed to them; that the situation was good for the commerce of the time and the Laon burghers were enterprising and energetic; and that between the great calamities there were times of peace in which they could work and enjoy.

The cathedral was built in one of these intervals, after Gaudri, with many of the nobles, had been murdered by the burghers, the murdering party slain or driven from the city and their houses sacked, the city and cathedral burned. The extremists of both parties being out of the way, things went on more quietly. The bishop, clergy, and citizens joined to replace their burned cathedral in one of those bursts of enthusiasm which raised all of the great cathedrals of the thirteenth century, when people flocked in crowds to the place where a church was building, as to a pilgrimage, worked without wages, for their food alone, or, if they could not come and work, gave freely of their money for the glory of God and to buy their salvation. If the cathedral was not too large to be finished at one rush, it was quickly completed, as at Noyon and Laon. But if it was conceived on a plan too vast to be carried to an end within a few years, the inevitable cooling of the first ardor caused the work to drag, and either the plan was cut down, like Robert de Coucy's at Reims, or the church was left unfinished, like almost all the French cathedrals, and notably that at Beauvais, which has no nave at all. In two years enough of the cathedral of Laon was up to be dedicated, but parts were added for the next two centuries, and two towers of the transept have never been carried above the eaves of the nave.

The product, therefore, of a time of emotion, the cathedral has in an unusual degree the highest quality of architecture—expression. Besides all that a Christian church should signify, it clearly shows the stern, rugged force of the Laonnese. At a distance it has more the appearance of a castle than of a church; near at hand the lowness of the nave, the flatness of the arches, the solidity of the construction, the heaviness of the whole effect give this impression to one who knows nothing of Laon and its history. When he learns the character of the men who reared it, he feels that they could not have built otherwise. And though the cathedral dates from a period of reaction against the commune, yet no cathedral in its construction is better fitted to serve as the agora of the people. In fact, meetings were held there, causes were pleaded and decided, even merchandise was sold till that desecration was properly forbidden. There, too, were held certain festivals in which the spirit of the inferior clergy, pent up all the rest of the year, was allowed to break forth without restraint—saturnalia that held the same relation to the sacred services which the misshapen animals, grinning faces, and grotesque gargoyles wherewith the early churches are decorated bear to the images of the holy family and the saints: a safety-valve for the popular humor. Many towns had such feasts—Douai that of the Giant Gayant, Cambrai that of the Ducasse, Beauvais the Fête de l'Âne, Laon the Fête des Innocents and the Fête des Fous.

In the first, on St. Nicolas's Eve, the choir boys elected one of their number Bishop of the Innocents (in the Scotch sense, simpletons), and in the mass of that day, at the words of the magnificat, "Deposuit potentes de sede et exaltavit humiles," the boys rushed into the stalls, thrust out the canons, and, while the

curé and the chaplains carried the cross and the candlesticks, the service continued with an inversion of the parts of priests and boys. During the ceremony they chanted a paraphrase on a passage in Revelation, beginning

"Beau sires Diex [Dieu] je vous demant
En dons en mon prologue avant
De la grace sainct espri tant
Que ce vos plaise qe je chant."

After the mass a mystery was performed, and then choir boys, canons, curés, after all sorts of buffooneries in the church, rushed through the streets, singing, dancing, doing their best to make the public laugh. It was not till the sixteenth century that soberer spirits succeeded in getting this extravagance abolished.

The Fête des Fous was like unto it, with the chaplains and vicars as leaders. On the eve of the Fête des Rois a Patriarche des Fous was chosen. All masked and travestied themselves with a mixture of church vestures and theatrical costumes or of men's and women's clothing, and for two days celebrated the church services with every possible grimace, contortion, and joke. The most extravagant was the most applauded. As in the other fêtes, they danced through the streets to amuse the people, and at the end played a religious piece in the church, burlesquing it, making it a *mystère pour rire*, a comic sacred history. In 1456 the canons, wishing to abolish this custom (it is not said whether because it was undignified or because it was expensive to them, for they furnished a great supper to the Innocents and the Fous), were prevented by the bishops, whom it cost nothing. The bishops wisely preferred opening their great edifices to the crowd, even for such follies as this, to letting the people meet elsewhere. In the cathedral the popular assemblies necessarily would have something of a religious character, and the Church would be felt to be the centre of everything.

There are other buildings to fill out a week in Laon: the museum of mediæval curiosities; the library, with its fine manuscripts; the Church of St. Martin, contemporary with the cathedral; the leaning tower, whose foundations seem to have been sapped by a neighboring spring so that it has sunk till it is much more out of the perpendicular than the famous tower of Pisa, and indeed would have fallen long ago did it not rest comfortably on the hill behind it, and on a bit of wall which the attentive townsmen have built for it. But, after all, it is not any one thing so much as the effect of the whole that attracts; a traveller who had spent his week there might well find it more difficult to get away than we who were forced to go after a single night and day.

C. R.

Correspondence.

A WORD MORE FOR STRICKEN GREECE.

To the Editor of The Nation:

Sir: The advices by mail down to April 27 now received emphasize the gravity of the situation in Greece as already reported by cable. The Athenian papers are full of dreadful details supported by long lists of the slain. In the single deme (municipality) of Larymna, comprising four villages, with an aggregate population of 3,000, 199 persons were killed outright and 130 wounded. The loss of child-life is enormous in its proportion. "Most of the victims are women and children—in the main, babes," writes the *Ephemeris* correspondent in Locris. "Of the men, the aged have paid the heaviest tribute of life to the earthquake. The ruthless dæmon has fallen on the feeblest beings. What dramas and what heartrending scenes! Babes slain upon their mothers' breasts or in their cradles!" And we are told of twenty-one children buried in the ruins of a single chapel. It is an appalling situation as portrayed in the Greek press—whole towns and villages, without a roof to shelter them, fleeing to the mountains or taking to their boats as if the sea might be more merciful than the land. The panic-terror recalls Thucydides's picture of the Plague.

May I, then, urge again the appeal of last week, and give it definiteness by a statement of what we have already done here? On Tuesday last a committee was constituted which at once took steps to interest the community. The appeal was primarily to the college and its immediate friends, but a circular letter was further sent to the secondary schools within our sphere of influence asking for their co-operation. It is not yet time for their response, but as the first fruits of a public meeting to day we have cabled Minister Alexander at Athens the sum of $350. And we hope to do much more.

We received one generous gift of $100, and there were three or four sums of $25 and upwards; but we particularly urged a popular subscription on the part of the college community, based on the unit of the Greek drachma at par (say twenty cents), and it was with pledges aggregating 300 drachmæ from the college classes that our movement started. We have suggested the same unit of contribution for our secondary schools. Will not the teachers of Greek throughout the country move on this line? Twenty cents is a trifle with us, but it means a day's living for a peasant family in Greece. In fact, it will buy nearly two drachmæ of their depreciated paper; and prices there have not gone up as fast as money has gone down. Let us, then, have a popular subscription, covering the entire area of Greek study among us, based upon the drachma and multiples of the drachma; five, ten, fifteen, twenty, twenty-five (say, $1, $2, $3, $4, $5). The committee already constituted here will gladly assist whenever called upon. The chairman is President Andrews, and the secretary is Prof. W. C. Poland, who has served as annual director of our School at Athens.

J. Irving Manatt.

Brown University, Providence, May 12, 1894.

A MEMORIAL TO TENNYSON.

To the Editor of The Nation:

Sir: It has been decided to erect on the highest point of the famous Down which overlooks the western end of the Isle of Wight, and separates the woods of Farringford from the sea, a lofty granite monolith in the form of an Iona cross. The design has been furnished by Mr. Pearson, the celebrated Royal Academician. With the permission of the masters of Trinity House, the present wooden pile, known to all mariners as the "Nodes Beacon," will be removed and its place taken by the "Tennyson Beacon."

The spot chosen is the "edge of the noble down" which Tennyson loved, and where he often, indeed almost daily, walked. As a land and sea mark, visible from all points by sea and shore for many miles, and in full view of every ship that passes the Needles, the Beacon Cross should form a conspicuous and fitting memorial to one of the greatest poets of our time and race.

A considerable sum has already been subscribed, but $1,000 more will be required to make the monument adequate in scale and finish. Every penny of this could be raised here to-morrow, but the undertaking is properly an international, not a national nor a local one, and I believe that there are many Americans who will gladly welcome the opportunity to contribute to the memorial fund, and it is hoped that the committee will be able to inscribe a record of this fact upon the Beacon Cross. Any subscription, however small, will be gratefully acknowledged by the committee as a loving tribute to the memory of a poet who belonged not to England only but to mankind.

I am desired to ask all who wish to contribute to send their subscriptions before July to the Rev. Joseph Merriman, D.D., chairman of the Tennyson memorial committee, Freshwater, Isle of Wight, England, by whom they will be at once acknowledged. A complete subscription list will be sent in due course to every contributor.

I am, sir, faithfully yours,

Arthur Warren.

Beach House, Freshwater, April 24, 1894.

"THE BILL, AND NOTHING BUT THE BILL."

To the Editor of The Nation:

Sir: Will you permit me to express my gratitude to "L. N. D." for his appreciation of and sympathy with my efforts on behalf of cabinet government? I am sorry I cannot make a better return than to point out that the substitute which he proposes is quite inadequate.

The urgent need is not for a representation of the people, even as a whole, but for the representation of administration—the application, in the guidance of legislation, of the test of experience in the results obtained, whether good or bad, from the enforcement of laws already in existence. This can come only from the chief executive officials who are responsible for administration. Another object, almost equally important, is to furnish a training-ground for the evolution of administrators and statesmen. The men who, in conducting or in undergoing a fire of incessant cross-examination, can demonstrate that they possess these qualities, will furnish candidates for the selection of the people from above instead of those pushed up by caucus work from below. The political education of the people is another consequence by no means to be overlooked.

None of these requirements would be met by a new legislative committee even elected at large, not to mention that they would be looked upon by the other members with almost as much jealousy as the executive officers.

I fear we shall have to stick to the main issue and refuse to accept anything else, however long it may take to get it, and I venture to hope that "L. N. D." can be counted upon to enlist for the war.

G. B.

Boston, May 12, 1894.

Notes.

Dodd, Mead & Co. have in press 'The Issues of the Press in New York from 1693 to 1783,' by Charles R. Hildeburn, a handsome volume of some 500 pages, illustrated with two dozen facsimiles of title-pages, the edition being limited to 350 copies printed from type; also, an English translation of Balzac's letters to Mme. Hanska, lately given to the light in the *Revue de Paris*.

In conjunction with T. Fisher Unwin of London, D. Appleton & Co. will publish an almost epoch-making work by Prof. William Martin Conway, called 'Climbing and Exploration in the Karakoram Himalayas,' with three hundred illustrations and a map. Besides its high scientific value, it is certain to take rank among the most readable works of a class associated in English with such names as Whymper, Stephen, and Tyndall.

The Century Company are about to issue a new Life of Roger Williams, by Oscar S. Straus, and the 'Jungle Book,' stories of animal life by Rudyard Kipling, gathered together from *St. Nicholas* and other sources.

J. Selwin Tait & Sons announce 'Cavalry Life in Tent and Field,' by Mrs. Orsemus B. Boyd, and 'The Green Bay Tree,' by the author of 'A Yellow Aster.'

T. Y. Crowell & Co. have nearly ready an historical and critical treatise on 'Modern Socialism and Social Reform,' by Prof. Richard T. Ely.

'Old and New Unitarian Belief,' by the Rev. John W. Chadwick, will soon be published by Geo. H. Ellis, Boston.

'Concrete Geometry for Grammar Schools,' by E. Hunt, former principal of the Girls' High School, Boston, announced by D. C. Heath & Co., is one of the fruits of the recommendations of the "Committee of Ten."

Henry Altemus, Philadelphia, will publish next month 'The Care of Children,' by Elizabeth Robinson Scovil.

In the strange wave of mysticism which swept over Spain in the sixteenth and seventeenth centuries, no figure stands out so prominently as that of Teresa de Ávila, who shares with the apostle Santiago the glory of being a patron saint of her native land. Her marvellous career, in which, with endless humility, resolution, and tact, she triumphed over persecution and founded the reformed order of Barefooted Carmelites, while enjoying visions of God and the unutterable raptures of ecstasy, has been the subject of innumerable biographers and has now found a new and most appreciative one in the person of Gabriela Cunninghame Graham, whose two portly octavos bear the imprint of Adam & Charles Black (New York: Macmillan). The authoress has all the enthusiasm necessary for the performance of her task—enthusiasm which seems to have carried her in pilgrimage to the spots hallowed by Teresa's labors—and she has produced a very readable account of the vicissitudes which marked the checkered life of the saint. There is perhaps too great a striving for the picturesque and too voluble a profusion of words, but these are faults readily pardoned by the general reader, who is not over particular about critical accuracy, and who, whether orthodox or heretic, can enjoy the romantic aspect of mystic devotion in its struggle with the hard realities of a selfish world, without inquiring too closely into the distinction between fact and legend. It may be suggested that in an extract from Teresa's *Carta* lxxvi. (vol. ii., p. 200) *letrados* should be rendered "lawyers" and not "men of letters."

Dr. Henry A. Mott's 'Yachts and Yachtsmen of America' (International Yacht Publishing Co.), a formidable first volume, occupies a place not before filled by the numerous publications concerning yachts, such as yacht lists and books of yacht-racing records. In many ways it comprises all the features of a yacht list and racing record, a history of yachting and a treatise upon the various rigs and types of yachts. The author has taken a commendable stand by insisting that rig, and rig alone, is the proper basis of classification of yachts. This will meet the approval of many yachtsmen who, in these days of fin-keels, bulb-fins, centreboard-fin-keels, and other modern variations in types of yacht hulls, find themselves somewhat bewildered by classifications which attempt to make distinctions between vessels based upon their model or type rather than upon the simple standard of rig. 'The Yachts and Yachtsmen of America' is of interest to every yachtsman who belongs to a yacht club, for the reason that nearly all the clubs of America find a place in its pages. The greater part of the book is devoted to historical sketches of yacht clubs, short biographies of leading yachtsmen, and descriptions of celebrated and typical yachts. Doubtless the most attractive feature of the work, and certainly one of the most valuable for reference, is its great number of excellent photographs of American yachts of every type and size.

M. Édouard Grenier, the poet, published in the *Revue Bleue* a series of interesting reminiscences of famous authors he has known or met in the course of his life. These articles have now been republished in book form, 'Souvenirs Littéraires' (Paris: Lemerre), and bear rereading with pleasure. M. Grenier relates delightfully, and makes us enjoy the company of Lamartine, Musset, George Sand, Mérimée, Sainte-Beuve, Augier, and others, as well as his own.

'La Rose de Grenade,' by Jean Rameau (Paris: Paul Ollendorff; New York: Charles Eitel), is well worth reading, if it were only for the first hundred pages, which contain a striking series of descriptions and episodes. It is a novel with a story and not an overdose of analysis, or psychology, or physiology, or anything else that most French novelists love to put into their books nowadays. The story is not new, the complications are familiar, the dénouement is in accord with the rules of poetic justice, and realists will object that the whole thing is trash. It is true that it interests, that it does not nauseate, that it is honestly a novel, and that it contains an effective opening; so the general public will like it, even if realists do not. One thing more: the hero has actually a will of his own, and, if somewhat romantic, is at least not the helpless, will-less sort of personages the novel-reader has been so much treated to.

M. Gilbert-Augustin Thierry has written some historical novels which have been well received. 'Le Masque' (Paris: Ollendorff) is not historical, that is clear; but it is not quite so clear, after one has perused it, that it has a religious character, and that it is "a cry to the unknown God." It reminds one of the nightmare passages in Bulwer-Lytton's 'Strange Story,' but it is not so powerful a work, so gruesome as 'The Haunted and the Haunters,' so fantastic as Hoffmann's 'Tales,' or so awfully oppressive as Maupassant's maniacal sketches. The author calls it a mingling of theurgic mysticism and materialistic mysticism. It may be that; it certainly is not a strong book or a very entertaining one.

As for Paul Gaulot's 'Les Chemises rouges' (Paris: Ollendorff), it is meant for a stirring, exciting historical novel of the days of the Red Terror. It utterly fails, nevertheless, to stir, or excite, or do anything else but make the reader feel exasperated at having waded through so much verbiage merely to feel bored from beginning to finish.

What is most valuable in M. Louis Ducros's new book about 'Diderot: l'Homme et l'Ecrivain' (Paris: Didier) is the chapter on the influence of English literature on the French writers of the eighteenth century. M. Ducros shows how strong the influence of Richardson was upon Diderot when he wrote 'La Religieuse,' and how the manner of Sterne suggested 'Jacques le Fataliste'—now remembered chiefly because M. Sardou found in one of its episodes the plot of his "Fernande." M. Ducros notes that Diderot met Sterne and begged the English author to send back to him in France the works of "Pope, Cibber, Chaucer, Tillotson, and Locke"—a strange medley of names.

M. Léon Gautier has at last brought out the second part of volume ii. of the second edition of his "Épopées Françaises" (Paris: H. Welter). Twelve years had elapsed since the fourth volume was published, and many scholars must long since have given up all hope of seeing the gap in their sets filled. M. Gautier has striven, in the volume before us, to give the complete history of the composition and transmission of the *chansons de geste*, from the earliest period to our own time; and he shows us the mediæval jongleur, the Renaissance romantic poet, and the modern philologist, all playing their several parts in this long and interesting story. Naturally much of what he tells was already known, but much also is new; and incidentally light is thrown upon several difficult problems of literary history. We can mention here only the discovery of a hitherto unnoted passage from the constitutions of Galterus, Archbishop of Sens, in regard to the Goliards, the mere date of which will compel an almost complete revision of the current speculation about the Goliards and their poetry. Now that M. Gautier has got this volume out of the way, it is to be hoped that he will proceed with the task, left unfinished in his fourth volume, of arranging and analyzing the existing *chansons de geste*. If at the same time he could a little restrain the ardor of his faith and his patriotism, his style would be more interesting to foreigners.

A wide welcome will greet the eighth edition of 'Ritter's Geographisch-Statistisches Lexikon,' under the direction of J. Penzler (Leipzig: Wigand; New York: Westermann). The first instalment of the first volume, *A–Amerika*, is before us, and, in the same printed measure, fills sixty-four pages, against forty-two of the sixth edition, which is nearest to our hand. This gazetteer needs no praise—its place is fixed among the most accurate and useful of our works of reference. It embraces all German places having 100, all Swiss and Austrian having 150, and other European places having from 300 to 500 inhabitants. The information regarding each is as full as possible for commercial and literary purposes.

The Napoleonic revival in the field of letters could not fail to find its echo in the ateliers. The first number of the *Figaro-Salon* (New York: Boussod, Valadon & Cie.) contained reproductions of two Napoleonic canvases, and the second, just to hand, contains three, without reckoning in, as we might, Georges Cain's picture of Sardou directing a rehearsal of his "Madame Sans-Gêne," with the actors in the costume of the First Empire.

The publication, under the auspices of the Hungarian Statistical Bureau, of the census reports which were gathered in 1890–'91, shows a lamentable degree of illiteracy among the inhabitants of the lands belonging to the Hungarian crown. Taking the kingdom in its entirety, it would appear that more than one-half of the total population is analphabetical—can neither read nor write; and among the Ruthenians this deficiency amounts to full 87

per cent. In the region west of the Theiss, an area more than a third of the whole of Hungary, the amount of illiteracy does not differ greatly from that of western Europe generally, and it is believed that nearly every inhabitant over six years of age can both read and write. The total population of the kingdom was estimated at the close of 1890 to be 17,349,000 or almost double what it was a hundred years ago, with an increase of 1,700,000 in the last ten years. The Magyars proper comprise upwards of 7,400,000 souls, and the Germans about 2,100,000, the rest being divided, in the order of numbers, among the Croats and Serbs, Rumanians, Slovaks, Ruthenians, and Slovenians. From Dr. Supan's article on the same census in *Petermann's Mitteilungen* for March we learn that the total emigration of Hungarians to America since 1880, when the movement began, is estimated at 80,000, "of whom a large part return to their homes."

In the *Midland Monthly* for May, Mr. B. F. Tillinghast, Secretary of the Iowa Famine Relief Commission, gives the second instalment of his account of that noble charity, accompanied by interesting portraits and pictures of Russian village scenes. He describes the arrival at Riga of the *Tynehead*, with her cargo of corn, the method of despatching the grain to the suffering districts, the hearty voluntary labor of the working-people in forwarding this relief, the self-denial and heroism of all classes of Russian society during that trying time. As we read it we can well believe that the name of America will always be dear to Russians, even to such Russians as had never heard of our land until two years ago.

The article of most general interest in the *Annales de Géographie* for April is upon the Russian colonization of Central Asia. According to the author, M. Ed. Blanc, about one-fifth of the territory acquired during the past forty years is available for cultivation, the remainder being either sand desert or high mountain region. There have been three principal lines of penetration, from Orenburg, Omsk, and the Caspian, all joining at Tashkend. Along these, Russian villages have been planted according to the water-supply—for water, not land, is here the basis of wealth. In some districts each family is given one hundred and fifty acres of irrigable land and a spacious and well-built house with thick clay walls and a sheet-iron roof. The number of colonists is not stated, but to Tashkend alone 60,000 families came after the famine of 1891. In Bokhara, Ferghana, and Samarcand, colonization has not succeeded as it has done in the country of the Kirghiz, the natives of Turkestan proper far exceeding the Slavs in diligence and intelligence. They also show, under the guidance and patronage of the Government, remarkable success in adapting themselves to European methods of cultivation. A singular result of this recent development of hitherto waste regions is that Bokhara is "dying of thirst," her water-supply being exhausted by Samarcand. The only remedy is to take water from the Oxus, nearly two hundred miles distant. A canal for this purpose will probably soon be begun and completed in three years. M. A. Krasnoff contributes an interesting account of the steppes of southern Russia, whose treeless condition he attributes to natural, not artificial, causes, such as the cutting down or burning of forests.

The *Architectural Review*, Boston, is publishing a series of letters from a travelling correspondent, entitled "A Glimpse of Modern Greece," beginning at Olympia. They are very good reading and are charmingly illustrated by the camera.

The *Japan Weekly Mail* of March 17 has a long and curious article on "Foreign Literature in Japanese Garb." The task of presenting European and American books to Japanese readers is not one of translation merely, but of trans-nationalization, so to speak. Japanese views of life are so different from ours that a literal translation would often be incomprehensible except to Japanese who have travelled. Much ingenuity, sometimes perverse, sometimes praiseworthy, has been shown in overcoming this difficulty. Under the first head comes an old version of the "Merchant of Venice" (known in Japan as "Nin-niku saiban," or the human-flesh trial at law), in which *Shylock* is a palpable Aino, *Portia* a smirking music-girl, *Jessica* a Miyanoshita tea-house girl to the life, and so on. Ten years ago English novels were the first favorites; to day Russian and German books have a larger sale, Tolstoi being the most admired of all western writers of fiction. Goethe's 'Sorrows of Werther' is a great favorite, and his 'Reinecke Fuchs' is also popular, although "the Japanese lose much of the exquisite humor of this satire in their sympathy with the woes of the maltreated wolf." Schiller's 'Robbers' has not proved popular. Molière's 'L'Avare' has given general pleasure, while of Zola's books only one has been translated. Disraeli's 'Coningsby' did not succeed, nor did 'Ivanhoe,' partly owing to inadequate translation. Jerrold's 'Curtain Lectures' seems to have struck a responsive chord. 'Robinson Crusoe' also took well. Tennyson's 'Enoch Arden,' Stanley's 'Darkest Africa,' and Mrs. Burnett's 'Little Lord Fauntleroy' are among recent successful productions.

The leading article in the April number of *Die Gesellschaft*, a monthly journal published at Leipzig, is entitled "Caligula, eine Studie über römischen Cäzarenwahnsinn," in which the author, Dr. L. Quidde, an historian residing in Munich, editor of the quarterly *Zeitschrift für Geschichtswissenschaft*, member of the Bavarian Academy of Sciences, and President of the Munich Democratic Union, holds the mirror up to modern sovereigns, and shows a would-be German Cæsar his own feature and image. Caligula was very young and inexperienced when he unexpectedly came to the throne. One of his first acts was to make away with Macro, the counsellor of his predecessor, in order to assert his independence and to indulge his own whims, especially as regards social and economical reforms, of which he was utterly ignorant. Other characteristics mentioned are the extravagance with which the treasure accumulated by the severely frugal Germanicus and Tiberius was squandered, a mania for erecting costly edifices (also a "fad" of Ludwig II. of Bavaria), an irrepressible passion for speechifying on all occasions, a predilection for the sea and pleasure in yachting, military ambition, and fondness for frequently alarming the troops, desire to rejuvenate the army, inordinate zeal in punishing lese-majesty, nervous restlessness and intolerance of opposition, and finally autocratic utterances, such as εἷς κοίρανος ἔστω, εἷς βασιλεύς (let one be master, one king), *oderint dum metuant* (let them hate, provided they fear), recalling *voluntas regis suprema lex* (the king's will is the highest law), *sic volo, sic jubeo* (thus I will, thus I command), *cave ergo adsum* (look out, for I am here), and similar sayings which have recently excited much indignant comment and adverse criticism. Dr. Quidde traces the gradual development and fatal consequences of Caligula's megalomania, and refers twice to the late King of Bavaria, but makes no allusion to any other monarch.

A new stage device was introduced at the Théâtre Libre in Paris on April 26, when M. Luguet's play "Le Missionaire" was brought out. This is an approach towards a revival of the classical chorus. It differs from the chorus, however, in being what may be called a *solus*. It is one actor and not a band. While the drama is proceeding, this person stands in a little loggia that runs along the side of the stage, and in a loud voice makes a running comment on the play, revealing to the audience the true state of soul of the people represented. For instance, one of the personages rushes upon the stage, seizes his wife in his arms, and cries, "Je t'adore!" At once the solus lifts up his voice and declares: "Ce n'est pas vrai. Cet homme ne pense pas un mot de ce qu'il dit." So he goes on throughout the piece. What success this new device will obtain may perhaps be guessed.

—The production of Washington material is continuous, and presents some points of interest. The most novel contribution is that of Mr. W. S. Baker, who has collected in one volume the 'Early Sketches of George Washington' (Lippincott). At the beginning of the Revolution so little was known in England of the Virginia planter who had been chosen to command the Continental army, that hack writers manufactured stories of his career to meet the demand for information. The result was, as a rule, curious rather than instructive—fiction in place of biography. It must have greatly puzzled the readers of that day to read of so many Washingtons, of such diverse origins and experiences. The value of the collection lies in what is told by men who had been with Washington. George Mercer, who was his companion in service in the early colonial expeditions, in 1760 gave a brief sketch of his personal appearance and character. "In conversation he is deliberate, deferential, and engaging. His demeanor at all times composed and dignified. His movements and gestures are graceful, his walk majestic, and he is a splendid horseman." No other writer gives so good an account relating to so early a period in Washington's life. The tutor of Jacky Custis, Rev. Jonathan Boucher, also wrote from personal knowledge, but after the Revolution had divided the two men: "He is shy, silent, slow, and cautious, but has no quickness of parts, extraordinary penetration, nor an elevated style of thinking." Another Maryland divine, Rev. Bennet Allen, saw only negative qualities—mediocre abilities, reserved temper, want of education, and diffidence: "ambitious, with the fairest professions of moderation, and avaritious under the most specious appearance of disinterestedness." In all, fifteen sketches have been brought together, and short notes on the writers by Mr. Baker make it a valuable record. Peale's early study of Washington is reproduced as an illustration.

—In the report of the American Historical Association, that indefatigable collector of Washington lore, Dr. Toner, gives a part of the diary for 1774, with copious notes and references. He has prefixed a notable attempt to trace the history of the Washington books and papers, and, of course, records great losses through interest or carelessness. When Mrs. Washington and Lund Washington destroyed what letters of the general they had, the most free and intimate expressions of the man were lost. Dr. Toner rejects the story that Hamil-

ton and Jefferson induced Lear to surrender to them their more confidential letters to the President. In the *Athenæum* (March 24) Gen. Meredith Read throws a side light on the Washington genealogy, giving the connections of Mildred Warner, daughter of George Reade and grandmother of Washington. By an oversight he omits to mention the wife of George Reade, and that is supplied in the latest issue of the *Virginia Historical Magazine*—Elizabeth, daughter of Capt. Nicholas Martian. A second attempt to sell the doubtful Duché MS. has been made in Philadelphia. The cataloguer guarantees the document, but, as he insists that the original letter to Washington has been lost, his guarantee is valueless. If he would compare his paper with the original in the Department of State, Washington, the guarantee would be better worthy of credence.

—In their 'Report on Governmental Maps for Use in Schools' (Henry Holt & Co.), Prof. Davis and his colleagues, C. F. King and G. L. Collie, a committee of the Chicago Conference on Geography, have opened a new field of culture. The causes of the shapes of the landscape have occupied the attention of an important school of geologists for two decades, and the technical literature thus produced evinces great progress, but the subject has been only sparingly treated in popular works, and its popularization is difficult because the types of form which constitute its best object-lessons are so widely scattered that the student can see but one or two without travel. The best substitute for the actual forms in nature is a series of accurate topographic maps, or maps representing faithfully not only streams, roads, and towns, but plains, valleys, hills, and mountains; and within a few years a rich store of such illustrative material has been placed within easy reach of our teachers and pupils. A half-dozen Government organizations, and especially the Geological Survey and Coast Survey, are engaged or have recently been engaged in the production of topographic and hydrographic maps of superior quality, and these maps may be obtained either without charge or at nominal prices. They offer the geographical student, not ideal types of form, but, what is better, actual types—just such subjects for analysis and explanation as he will encounter if he becomes a traveller. Heretofore this material, created and used for very different purposes, has not served the teacher. In general he is not aware of its existence, or, if aware, he does not know how to use it; and it is the mission of the new pamphlet to remove these two obstacles. It describes the maps as to size, field, and scope, and tells how they may be obtained; it selects for special mention certain individual sheets of peculiar educational value and describes each of them, pointing out the physiographic laws they severally illustrate; and it tells how to make maps most effective as means of instruction. In point of clearness, directness, suggestiveness, and adaptation to its purpose, it is all that could be desired, and it may be commended without reserve to every teacher of geography who is willing to add a new realm of interest to his field.

—By the completion of the map prepared under the direction of the Ministère de l'Intérieur, as just announced by Hachette & Cie. of Paris, France is now provided with two fine topographical charts. One, prepared primarily for the use of the army, and called "La carte de l'état-major," is on a scale of 1:80,000, and was completed in 273 sheets, 63x90 centimetres each. Of this map a new popular issue was begun in 1889 and is still in progress of printing, the latest available corrections being incorporated, and the date of revision being stated on each portion published. It is printed, without colors, in quarter sheets covering about 18x30 kilometres of territory, in such wise that four of them can be united when it is desired to mount them for wall use. These quarter-sheets are sold at 30 centimes each (equal to 6 cents), and the tourist who desires to make pedestrian excursions in France will find them economical and efficient aids to making his way with ease and certainty. Capt. J. Molard of the French army has prepared a useful booklet entitled 'La Carte de l'État-Major: Guide pour sa Lecture,' which is sold for 40 centimes. The map by the Department of the Interior, which may be called, by way of distinction, the civil-service map of France, is on a slightly smaller scale, 1:100,000 (1 centimetre: 1 kilometre), and the sheets are somewhat larger, their size being determined by the crossings of the parallels of latitude and longitude, each sheet covering one-half of a degree of longitude by one-quarter of a degree of latitude. The sheets are about 28x38 to 41 centimetres and cover the same number of kilometres of surface, but in cases where natural boundaries extend somewhat beyond these limits, they are nevertheless included, and the sheets along the national borders are always filled up, the non-French territory being exhibited with the same minuteness (so far as the materials are available) as the ground of France.

—This beautiful map is printed in five colors: red to show the roads, blue for the watercourses, green to indicate forests, lead color to show the conformation of surface, and black for other necessary indications. Its minuteness is remarkable. Five kinds of lines indicate different boundaries, from national to communal; an equal number of styles of type represent administrative distinctions; and, in the case of railroads, not only are double and single-track lines distinguished, but also narrow-gauge roads and tramways, while tunnels, viaducts, bridges, and stations are marked, and care is taken to indicate clearly whether roadways are carried over or under the rails, or across them on a level. The various kinds of roads, national highways, departmental or communal avenues, and even private roads and mountain footpaths, are shown and distinguished, as well as those in course of construction. The limits of river navigation are indicated, and all ports, bridges, ferries, turn-outs, etc., are shown, the same being done in the case of canals. In connection with the names of places, the population of each is stated, down to the smallest hamlet; and conventional signs show the locations of post and telegraph offices, churches, chapels, country seats, farms, water and wind-mills, gas and iron works and other manufactories, lighthouses, beacons and buoys, thermal and mineral springs; while altitudes are stated. Withal the map is remarkably clear and presents a beautiful appearance. There are 587 sheets in all, but any one is sold separately at a uniform price of 80 centimes, or, when folded into a lettered cloth case, 1 franc, while the sheets can be had on demand mounted on cloth at an extra charge of 75 centimes. Certain popular portions of the map are issued in special form, such as the two sheets for Paris and its environs, which are mounted on cloth, folded, and bound as one sheet at a price of 3 francs; and in similar convenient form can be had the Normandy shore, the neighborhood of Saint-Malo, and the forest of Fontainebleau.

—The issue of the hundredth volume of the Munich *Fliegende Blätter*, which has begun with the present year, is an event of considerable interest in the annals of jocose journalism. The first number of this humorous sheet appeared in October, 1844, and took its name from the satirical pamphlets that played such an important part in the polemics of the Reformation and in the German literature and politics of the seventeenth and eighteenth centuries. Its founders were Kaspar Braun and Friedrich Schneider, the former a highly original artist, endowed with an exhaustless fund of trenchant wit and cheerful comicry, the latter as remarkable for his geniality and tact as for his fine literary taste and uncommon business talent. These men were in every respect the complements of each other, and the combination of their opposite qualities supplied all the elements essential to the success of their enterprise. In the beginning the new comic paper was published frequently but irregularly; very soon, however, it became permanently established as a weekly. The early volumes differed from the later ones in giving large scope to political satire, which the state of Germany at that time rendered it difficult not to indulge in. The follies and abuses in state and society, the perversion of justice by secret courts of criminal jurisdiction, the stupid censorship of the press, bureaucratic redtapeism, petty imperiousness of the police, particularism in politics, philistinism in life and literature, and conventionalism and sentimentalism in art, were made the butts of ridicule. During the first twenty-five years of its existence the edition of the *Fliegende Blätter* gradually increased from 4,100 to 12,000; after the achievement of the political unity of Germany in 1871, it rose rapidly to 20,000 and 30,000, and is now nearly 100,000.

—The remarkable freshness and variety of its contents are due to the fact that it is not the organ of a club of wits or any association of professional humorists, and is absolutely free from every sort of cliquism. It is the intellectual product of the whole nation, a faithful mirror of good-natured Bavarian humor and South German *Gemüth*, just as *Kladderadatsch* and *Wespen* reflect the ready raillery and keen sarcasm of Berlin, and *Kikeriki* represents the sprightly persiflage and ironical pleasantry of Vienna. Unlike its elder brother *Punch*, it does not take its tone from the genius of an individual—a Douglas Jerrold or a Thackeray; and it differs from the Italian *Arlecchino* and *Pasquino*, the Spanish *Gil Blas* and *El Cascabel*, and the French *Journal pour Rire*, in being thoroughly decent as well as highly entertaining. Its pages are never sullied by an equivocal allusion or indelicate *double entente*, such as no gentleman would venture to repeat in the presence of a lady, and it is, therefore, a welcome guest at every fireside. Contributions are constantly received from all kinds of people. Every one who thinks he has a good joke or humorous conceit, sends it in; if used, it is paid for; if not, it is conscientiously returned. In turning over the successive volumes of the *Fliegende Blätter*, one gets a general survey of the various changes which art, especially as embodied in the German schools of painting, has undergone during the last half century from the cold classicism of Cornelius, the symbolical idealism of Kaulbach, and the somewhat chalky romanticism of Moritz von Schwind to the realism of Harburger and Fritz von Uhde. It is also interesting to trace here the evolution of wood-engraving and the

rapid improvement in xylographic technics and printing processes, especially within the past twenty years. The present publishers are the sons of the founders of the journal.

THE YOKE OF THE VIRGIN.

A Yellow Aster. By Iota. New York: D. Appleton & Co. and M. J. Ivers & Co.; Chicago: Chas. H. Sergel Co.

Our unappreciated novelists and miscellaneous writers have long enjoyed an enduring theme for times of dearth, to wit, the feebleness of modern English fiction, the reason for which, it is unanimously agreed, may be found in a tacit understanding with the public that the young girl is not to be shocked. The tone of these perennial articles has always been despondent because no one could hit on a practicable scheme for eliminating the young girl from our social system, and it has seemed hopeless to urge the passing of a law declaring it immoral for her to learn to read before she has ceased to be young or a girl and making infringement a penal offence. Deep depression has in consequence settled down upon those among us who crave powerful and inspiring fiction, and a conviction that, as the young girl cannot be got rid of, we must be at the pains of acquiring foreign tongues. But when the time is ripe for reform, deliverance is usually close at hand. In antiquity the hour always produced the man, now it is prolific of the woman, and it is not surprising that there has at last arisen in England a band of untrammelled spirits (feminine) to whom this ridiculous deference to virgins is intolerable, and who have apparently sworn to shatter the fetish. Any respectable object of reverence which they meet upon their way they promptly fling a brick at, for how shall superstition be extinguished if the least of idols be left intact in the shelter of a shrine?

The speed with which this spirited band has accomplished its object is a severe reproach to those who have so long protested without suggestion and mourned without hope. If they are thus deprived of a hitherto reliable source of income, it is no more than they deserve for their dulness and fatal lack of enterprise. They must see that their occupation's gone, for, when their bugaboo, the maiden, can be heard at every corner enticing diffident young men into discussion of the 'Heavenly Twins,' the 'Superfluous Woman,' and the 'Yellow Aster,' it is clear that her existence can no longer be truthfully said to cramp the novelist's genius. Thanks to well-directed and combined attack, the blushing maiden is rapidly becoming extinct; ere long she will have retreated to the mountain passes and desert places, and so awed are we by her ruthless assassins, by their scorn of our sentimentality, their jeers at our prudishness, their scornful diatribes against our sinful indifference to the welfare of the race, that we have not the pluck to pay her, vanishing, the tribute of a furtive tear. The most we dare to do for her is to maintain a critical attitude towards her successors, and, if ever their superiority should seem doubtful, to give her the benefit of the doubt.

It is reasonable to assume that the girl of the future will resemble the creations of those who have annihilated our common, obstructive girl, and that reconstruction will follow the lines of their explicit commandments. Until we can have the felicity of examining the real thing in considerable numbers, we are compelled to restrict ourselves to the fictitious models. Of these the "superb, dominant creature," the "magnificent, inscrutable creature," who is also the "Yellow Aster," presents the most startling variations from the known type of girl, and may therefore be accepted as the nearest to that which we shall presently know in its perfection. Blessed be modern science! All things seeming strange or anomalous or incredible about the "Yellow Aster" are accounted for by her parents, who, to continue the floral metaphor, may be called a blue chrysanthemum and a black rose. Phenomenal they certainly are, quantities hitherto unknown to experience, and an awful example of the dehumanizing effect of exclusive devotion to abstract science. We should like to mention the science of their adoration by name, so as to warn possible fathers and mothers against it, but the author's guarded references to mathematical problems and exhumed skeletons furnish no means for positive identification. Whatever it was, it embittered the Aster fearfully; it gave her strange habits of frowning, and snorting, and smiting her hands; it made her vocabulary harsh and rude; and, though it developed a fine capacity for hating and sneering, it crushed every impulse of tenderness and affection to the extent of making her sceptical about the reality of such qualities.

The childhood of the Aster was therefore not lovely, and even the ministrations of a rector singularly liberal in his ideas and practices, and of his wife, who would wear clothes deemed not fitting to her station, did little to repair the ghastly wrongs inflicted by the unmentionable science. From the moment of her début in society the Aster began to wreak her revenge, and on those innocent beings who, never even having heard of the science, were quite unprepared for her ferocity. Her progress, we are told, was marked by "suggestions of stifled groans and hidden wounds and blood streams." These horrid evidences of anguish must have proceeded from sympathetic spectators, because in the same breath we learn that her "victims fell to right and left without a groan or murmur." In the presence of such misery the most callous of old-fashioned girls would have softened and repented; not so the Aster. When she fled the arena, it was to sit alone, grim and adamantine, taking a vapor bath in "the steam of victims sacrificed in her honor." Cleopatra swallowing pearls is a comparatively poor figure for luxury. Much force is lost through lack of concentration, and it was probably a realization of this truth that induced the Aster to forego the slaughter of many for the joy of torturing one. Sir Humphrey Strange did not rush blindly to his doom. He was a noted traveller, familiar with exotics, and at once recognized the rarity of the Aster, "feeling as a worm before her." To win and wear this unique blossom becomes a consuming passion, and it is as we follow his reflections about ways and means that we perceive the author is done with preliminary battering, and is about to begin the serious attack on our cherished idol, the young girl.

Now, a cardinal principle of our band of reformers, or iconoclasts, as you please, is that life can be purified only by delving for hidden impurity, by spreading it out for general inspection, and, above all, by insisting that it shall be the subject of a searching analysis conducted in partnership by young men and women contemplating matrimony. Some of the band, doubtless hampered by traditional respect for maiden modesty, have weakly leaned to the notion that it is the mother's duty to interrogate the prospective son-in-law about his knowledge of sin and impart the result to her daughter. Fathers and brothers are considered incompetent for this purpose, presumably because, being men, they may be suspected of disinclination to give another man away. Sir Humphrey Strange is a man of mettle. He pounces on the Aster in pensive mood and desires to speak to her "as man to man," or "as if she were God"—this with intention of asking her to marry him and as a preliminary to confession of his previous amours. The Aster's habitual "cold aloofness" is disturbed; she passes from "a burst of angry horror" to a state of "sneering excitement," but listens just the same, as man, or as God, to what Sir Humphrey has to say. It must have been pretty bad, for he is described as "speaking of dozens of spades," and the author's sympathetic comment is that that "is no joke before a virgin-clean woman." No joke indeed, and apparently destructive of the Aster's virgin cleanness, for she at once agrees to marry him "as an experiment," and mourns that their exalted social station prohibits their living together except as man and wife. Her demoralization is so complete that she presently takes to "smiting her clenched fists angrily" and shouting for the "feelings of bad women, women who have sinned, sinned solidly for love." Her longing for these maddeningly elusive feelings affects her almost as extraordinarily as the cult of science affected her parents.

The narration of her struggles to get hold of them is heartrending. For months she preserved outwardly an appalling calm, but, "her room could tell strange tales when she shut herself in and threw up the sponge till another round." Occasionally she sought the woods, let down her hair, and had a round with the wintry blast. But comfort in the form of thrills and glows and spasms refused her call, and at last, in desperation, she rounded on her husband and volubly scourged him for the sin, disgrace, and shame in which by marrying her he had involved her. Alas for Sir Humphrey! All his candor had not sufficed. He might just as well have spoken to her as a woman and politely ignored spades. This scene, wherein Sir Humphrey and, through him, all men are, vulgarly speaking, pulverized, lays the author and the cause sadly open to the laughter of the profane. If much that precedes is not the raving of insanity, how could the situation ever have come about?

In default of any other possible justification, we are obliged to regard it as the climax of effort for the emancipation of the English novelist from the yoke of the virgin. Fearless now of censure or of diminution of sales, our novelists may proceed to tear away any poor shreds of decency that cling to and clog the skirts of society, restricted only by a careful assumption of a burning sense of their duty to the race. Let them, however, still beware of the sparkling, purposeless indecency of the Gaul. The "gay galoot" who should try that sort of thing would speedily be had up before a society for the prevention of vice, and the very ladies who had led him on would shriek with accusation. No, he (in time the band may include a he) must bear in mind that, as his predecessors wrote largely for young girls, it is his glorious privilege to write chiefly for Yellow Asters, and while conscientiously revealing the sin and shame of life and maintaining a high standard of frankness and plainness of speech, he must ever regard himself as an apostle of science and a torch-bearer for virtue. He must also remember that on him is laid the burden of fulfilling prophecy. He is bound to show that power and inspiration which he al-

ways said he would when once his fetters were broken. Should he fail, may he share that fate which (doubtless from a silly infatuation about the exterminated maiden) we trust may yet overtake his female forerunners—"to fill a vacant hour with prattle and be forgotten."

THE TURNING-POINT OF THE AMERICAN REVOLUTION.

B. F. Stevens's Facsimiles of Manuscripts in European Archives relating to America, 1773-1783. Vol. XIX., Nos. 1703-1761. 1893.

THERE is no lack of dramatic intensity in the concluding despatches of this volume, nor is the element of irony absent. On December 5, 1777, (No. 1754) Beaumarchais, in his communication to Vergennes, tells how, in the hurry to get to Paris with M. Grand on the news of Burgoyne's surrender, they were both upset; Grand's shoulder was broken, while he himself had a great flow of blood from the nose and mouth, for which he was promptly bled at the foot. Although in addition to these adversities "the vertebræ of the neck were almost broken," he continues sorrowfully, "it is not my postillion who is killing me, it is M. de Maurepas." He is sure, however, that "the true friends of the cause will not be deserted," and with Gallic buoyancy proclaims: "I am the voice which cries for them from the depths of my bed, *De profundis clamavi ad te, Domine, Domine, exaudi orationem meam.*" Then follows one of the early mentions of the surrender which threw the support of France unreservedly in our favor.

No. 1756, also dated on December 5, is from James Lowrey to Mons. St. Piere. If any reasonable doubt exists that St. Piere was Dr. Bancroft, the memorandum by Deane on the back of this letter conclusively decides them to have been the same person. Lowrey's identity is still unknown, but he shows a close intelligence of the doings and sayings, too, of the English ministry. The news of the surrender was received by North "at 12 on Tuesday night [December 3], just after he returned from a long and fatiguing Debate in the House of Commons." Lowrey says that upon Sir William Howe is laid by administration the chief blame of the defeat, because of his expedition to Chesapeake Bay when Washington was so strong in the Jerseys. He should have aided Burgoyne's junction with his army by moving towards Albany.

So much for the news in England and in France. Meanwhile, on December 5 (No. 1757), Stormont writes with much eagerness to Vergennes informing him of the successes of Howe, Clinton, and Cornwallis in the middle provinces during September and October, but utters not a word as to Burgoyne. On the next day he writes to Weymouth (No. 1759), looking for an explanation of the paradox that while Franklin is claiming much for the prosperous condition of things in America (still not a word as to Burgoyne), insinuations, inspired by Franklin, are abroad that *now* is a good time for England to make peace. He holds that Franklin is in correspondence with some one in England, and the Lowrey letter is corroboration that Stormont's opinion was shrewd. On the same day Vergennes writes (No. 1760) to Noailles the following delicate words:

"Lord Stormont, always moderate, has hastened to let me share his modest satisfaction; he has written me a very affectionate letter, to which he annexed a copy of the *Gazette* extraordinary of the 2nd instant. I have duly thanked him for this attention, to which I might have replied by sending him Gen. Burgoyne's capitulation, but I prefer to let him learn it from others. The Americans have lost Philadelphia and captured an army. . . . All this seems to bring us nearer to the moment of the crisis which I have always foreseen."

In No. 1761 is a memorandum only of a despatch to Weymouth, dated the 6th, in which Stormont says that he "is sorry to confirm the news of Burgoyne's catastrophe," and encloses "manuscript copy of 'bulletins' issued by Dr. Franklin, announcing that news." Thus the curtain does not drop on the closing scene of this volume leaving so important a personage of the drama as Lord Stormont ignorant of the situation. Mr. Jonathan Loring Austin arrived at Passey with the news on December 4, so that the news was in London a day earlier than in Paris, and seemingly it took two days more to reach Lord Stormont.

But more important, if less thrilling, than the manner of the reception of the surrender, was the mutual attitude towards America of the Courts of Spain and France at this time. The essential portion of volume xix. relates especially to this matter, and reveals, with remarkable if not flattering clearness, some of the deeper motives which lay beneath the friendliness of both these Powers. It is plainly impossible to show, even in outline, the subtle and discriminating purposes on foot to use the colonies for ulterior ambitions. It is not asserted that these documents now reveal for the first time any startling or hitherto unheard-of plot; only this, that their entire frankness and want of the least savor of international ethics are cynically destructive of some of the illusions which still hover about an American idealization of the Revolution. Nos. 1704, 11, 12, 15, 19, 25, 34, 37, 40, and 45 contain the papers which passed at this time between the two courts through the medium of the Count de Vergennes, the Count de Florida Blanca, and the Marquis d'Ossun. It was at first proposed that France and Spain should, in common, advance "help" to the amount of six millions, on the stringent conditions, among others, that no treaty should be considered between England and America without the consent of the other two Powers, and that, in case of such consideration, there should be an immediate withdrawal of money advances. No. 1711 frankly discusses the cherished plan of weakening England by prolonging war, entirely irrespective of any regard for America. It is evident that Vergennes always had little trust in the "people," and especially in the American people, on the ground that they were incapable of disinterestedness—by which he really meant that the colonists perceived clearly that both France and Spain had large interests in maintaining their separation from England, and that this knowledge of the situation encouraged them to make a too free use, by privateering and by abuses of neutrality laws, of the friendly attitude of these Powers.

The Spanish Court did not meet this proposition of "help" with open arms, and held, to quote Ossun (No. 1715), that "it would not accord with the dignity of two great Powers to lend, but it may be to their glory and their interest to give in suitable proportion." A little later (No. 1719), Ossun, after chronicling the fact that "The Princess of Asturias, Sir, has had inflammation of the gums," speaks of the objections which Lord Grantham makes to Florida Blanca concerning the reinforcement by Spanish soldiers of the garrisons in the French Windward Islands. To Grantham's assertion that the British Ministry would be thought mad if it wished to make war on the two crowns, the Count replied laughingly that "there were so many mad men in the world that it was prudent to take precautions against madness!" But this was a rare exhibition of levity on the part of the Count de Florida Blanca, who could take every one, himself included, with the utmost seriousness. His paper handed to the Marquis d'Ossun (No. 1725), to serve as a reply to the request of the American Commissioners for a loan of £2,000,000 sterling from Spain and France, is perhaps the most weighty, as it certainly is the most grandiose, of this volume. According to the French plan, six million livres tournois were to be raised, one-half by each crown—this loan to be kept secret even from Congress, on the ground offered by Vergennes, that "the time had not yet come when we can bind them by their signatures" (No. 1711)—and to be paid in instalments, which were to cease at once if the colonies should begin to treat for an agreement with England. To this the Count offers a most wordy declaration of benefits already conferred by Spain; he insists that its costly naval armament, by obliging England to maintain in port a large number of ships against possible movements of the French and Spanish squadrons, is a great, if indirect, aid to the insurgents. Secrecy and the absence of any definite settlement with the Deputies made, in his opinion, "a game of *embite* in which by prudent guessing one risks losing or winning, fleeing from covenants difficult to fulfil and to arrange with such people." His own plan is, firstly, to remind the Deputies of past blessings; secondly, to supply them, each court according to its ability, and without a fixed sum in view; thirdly, fourthly, and fifthly, to load them with solemn advice; and, sixthly, to treat the British Cabinet with circumspection and to "lull them," because, forsooth, it is a nation which is never "grateful" for what is done out of friendship and moderation! If we consider that the main objection of Spain to lending money to America really was the fear that in time England might make a favorable peace between herself and her colonies, and thus, perhaps, end the wished-for opportunity of harrying her on the part of Spain and France, it will not be difficult to appreciate the poignant grief of the Count over the baseness of so "ungrateful" a people as the English.

An entire absence of such preternaturally solemn nonsense and of all needless obviousness put the papers of Vergennes and of Franklin in bright contrast to those of Florida Blanca or even of Stormont. Vergennes (No. 1734) regrets the Spanish decision, and soon (No. 1737) announces that the French King will pay the Americans, during the next year, 3,000,000 in four equal parts. Spain at this point (No. 1740) was afforded a fine chance to allay a possible feeling of shame on her own part at the generosity of France by a loud outcry against the seizure, by Americans, of a French vessel belonging to Spaniards and carrying English goods from London to Cadiz. An ample apology for this blunder was offered (No. 1745) by the Commissioners in behalf of Congress, but Spain continued to sulk for some little time. Franklin, who appears to have written this apology, suggests, with his usual sanity, that consuls be appointed to America in order to make reclamations in proper form.

Several letters from Beaumarchais (Nos. 1708, 1754, 1758), enclosing his "Nouvelles d'Amérique," are as irrepressible as ever, and make it constantly more difficult to regard the head of the shadowy concern of Hortalez with other than amused tolerance.

The indefatigable Stormont makes a vigorous

protest against fitting out vessels like the *Hippotame* and *L'Heureux* with arms and cannon, and manning them with French soldiers; but he is met with the customary reply that the French ministry can know nothing of private enterprises or the "cupidity of merchants." In Nos. 1735 and 1736 he urges strong objections against the building of French ships in Holland. Vergennes, however, maintains that the King has a right to build ships in Amsterdam if he wishes, and that only when their purpose is known has any one a right to question it. He says also that a contraband trade cannot be prevented; to which Stormont pertinently retorts, "Do smugglers go in fleets?"

Of interest, as showing Stormont's part in the "Hynson business," are Nos. 1717, 23, and 42, which properly supplement what has already been said on this matter in the *Nation* (Feb. 20, 1890, No. 1286). In order to secure the despatches, which were to be sent from the agents to Congress, by means of a French packet boat, he suggests that "a few hundred Guineas properly employed would probably tempt the French Captⁿ to throw his Despatches overboard in such a manner as to let them fall into our hands." This from the virtuously indignant gentleman who twenty-four hours before was taxing Maurepas with duplicity! Of Hynson, who undertook the work, Stormont says (No. 1723) he is "rather to be led than gained." "The best way, perhaps, would be to endeavour to persuade him that the Despatches He carries, if discovered to us, may lead to a Quarrel with France, and a Reconciliation with America, which is his favorite idea."

Samuel Longfellow: Memoir and Letters. Edited by Joseph May, Minister of the First Unitarian Church of Philadelphia. Houghton, Mifflin & Co. 1894.

It was necessary that, in the biography of a man so modest, simple, and retiring as Samuel Longfellow, we should feel no sense of contrast or even serious difference between the subject and the author; and this condition has been met in the book which has been written by the Rev. Joseph May. If Mr. Longfellow had ever imagined that his Life would be written, and had got an inkling who would be chosen to write it, he would probably have sought him out, not with Dr. Johnson's sanguinary purpose, but to crush the flower of his intention in the bud. It is fortunate that his modesty prevented an anticipation which might have been fatal to his Life as written here; for had he known with what reserve and delicacy Mr. May would write of him, he certainly might have given him permission to proceed without the slightest violation of his habitual modesty. A biography in more perfect harmony with Mr. Longfellow's character and spirit, his most zealous friends could not desire.

We often have the evidence that the measure of a man's influence is not in anything he does, but in some quality of his personal life, and Mr. Longfellow's fortunes are confirmatory of the truth of this idea. He certainly was not an active man. Born in 1819, and dying in 1892, he was a settled minister for only fifteen years, all told—three in Fall River, Mass., seven in Brooklyn, N. Y., and five in Germantown, Pa. He compiled a 'Book of Hymns and Tunes,' and, with the assistance of his friend Samuel Johnson, two other hymnals, 'A Book of Hymns' and 'Hymns of the Spirit.' He also compiled a vesper service which was remarkable for the sincerity of its several parts, wrote a few articles for the *Radical*, a brief biography of his friend Johnson, and a fuller one of his brother Henry. Here, certainly, was but a small amount of work for a lifetime that was extended over more than seventy years. But it furnishes no measure of his service to society. Virtue was always going out of him to help his neighbors and his friends. His gentle speech, his quiet humor, his ready sympathy, his broad humanity, secured for him the love of all who knew him, and the remembrance of him was a perpetual inspiration to the several parishes to which he ministered.

Mr. May tells very briefly the story of his childhood and his school and college life. Graduating at Harvard in 1839, he entered the Harvard Divinity School in 1842, and his studies there, broken by a year in Fayal, ended in 1846. The school was never better stocked with men of force and genius than while he was there. Among his mates were O. B. Frothingham, W. R. Alger, Joseph Henry Allen, T. W. Higginson, and Samuel Johnson. E. E. Hale was his college classmate and his lifelong friend. The 'Book of Hymns' was compiled when he and Johnson were in the school together. Newman's "Lead, kindly Light" appeared in it as anonymous, and for the first time in a hymnal, though it was written in 1833. "Nearer, my God, to Thee," also, made here its first appearance in America. Mr. May writes briefly of Mr. Longfellow's freedom in changing hymns, and with imperfect sympathy. A letter of Mr. Longfellow's is given, in which he endeavors to justify himself. An essential part is omitted which urged the common identification of Christ with God as a reason for changing "Christ" to "God" in various hymns. A more serious omission is that of any adequate recognition of Mr. Longfellow's personal contribution to the treasury of sacred song. His hymns have been more widely sung than any other Unitarian writer's, and they have had generous welcome far out of the sectarian bounds. Whittier's fame as a hymnist is largely due to the "Sam Book," as Parker called it, of Longfellow and his friend. Not a hymn of Whittier's, written as such, has had any vogue. His famous hymns have all been made out of his longer poems—the most of them by Longfellow and Johnson. 'Hymns of the Spirit,' published in 1864, was another book, not merely the old one revised with a new name. Longfellow's sincerity was manifested by his leaving out "Christ to the young man said," the beautiful hymn that his brother had written for his Fall River ordination. The word Christ was its offence. It was a word, a title, that Mr. Longfellow never in his maturer years permitted himself to use.

Mr. May's characterization of Dr. Noyes's teaching in the Divinity School as "tedious and uninteresting in the extreme" will not be cordially accepted by many of his pupils. Noyes's anticipation of the latest critical results was certainly remarkable. Graduating in 1846, it was not until 1848 that Mr. Longfellow became a settled minister. The humors of his candidating come out in his letters to Hale and Johnson, the two favored correspondents of his early manhood; and Johnson always kept his place. Full of gayety and humor, his letters never fail to please and charm. Often languid and miserable, either he did not write so much about his health as did George Eliot and some other invalids, or Mr. May has been more judicious than their biographers. It was like him, however, to put his best foot foremost and hide his wounds. In the barest room he could always find some pleasant feature, and he was always seeking others' happiness in unobtrusive ways.

He was the mildest-mannered man that ever preached an anti-slavery sermon, but he was a Garrisonian abolitionist, and he did not hold back his testimony in the days of great events. It marks the sensitiveness of the pro-slavery mind that even his gentle protestation raised a storm of angry disapproval. This happened in Fall River and also in Brooklyn, where a "John Brown sermon" was the stone of stumbling and the rock of offence. The trouble hastened his resignation in both places. He would have preferred disunion to war, but, though a man of peace, he was perhaps more combative and polemical than Mr. May conceives. When his most precious beliefs were thoughtlessly impugned, he could strike as hard as any one in their just defence.

He was fond of travel and went to Europe many times. Mr. May is sparing of his letters from abroad, using good judgment here as elsewhere. A letter about Carlyle and one about Tennyson are particularly good, recording impressions of their looks and talk. Enjoying every form of art, Mr. Longfellow's delight in music was the sweetest solace of his uneventful life. What Beethoven's Fourth Symphony meant for him is told in a delightful chapter which one should have in hand some day when hearing the music. He was very fond of children, and especially of boys. Many of his letters to one of these are given, a benediction on a young life too soon cut off. His friendship with Samuel Johnson was an ideal relation, abounding in the rarest mutual sympathy and instigation. Both men were extremely characteristic products of the Transcendental movement and members of a clearly defined group, which included also Frothingham and Wasson and Higginson and Weiss. They never surrendered to the scientific invaders.

With the biography comes a volume of sermons, essays, and addresses. They show a vigorous thinker, and a man whose lofty ideality did not prevent his close acquaintance with men's common needs. He was not one of the liberals who cannot distinguish things that differ. He had the frankest predilection for clear thinking, and could say what he did not believe as well as what he did. With all his modesty he had a noble self-respect. On his seventieth birthday he could rejoice that he had lived "seventy happy, peaceful, and not useless years." Each of the volumes has a portrait. Both are highly characteristic, one meditative and the other interested and alert. With these volumes there should be another, a collection of his hymns and other poems, and such a volume is being prepared by Miss Alice Longfellow.

The Art of Music. By C. Hubert H. Parry. D. Appleton & Co. Pp. 374.

Dr. Parry is by many competent judges considered the most original of living English composers, and among the writers on music certainly no one surpasses him in knowledge, style, and the gift of original thought. There are many excellent articles by specialists in Grove's 'Dictionary of Music and Musicians,' but none better than Dr. Parry's on Form, Sonata, Symphony, etc. He has now written a book the modest and somewhat indefinite title of which gives no idea of the treasures to be found between its covers. Were we asked to name a single book which students of music should read and reread for its facts and opinions, we should unhesitatingly select 'The Art of Music.' It is not exactly a book for beginners, since the chapters on Scales and Folk-music presuppose considerable technical know-

ledge; but this ought not to prevent amateurs from reading it, since the greater part of it is intelligible to all who can understand an ordinary newspaper criticism of a musical production.

'The Art of Music' is not a formal history of music and musicians, but rather an account of the evolution of music from primitive times to the present day. Instead of making great composers the centre of interest, and grouping facts about them, Dr. Parry traces the lines of musical evolution, introducing composers merely as illustrations, without dwelling on the details of their lives. But what especially distinguishes his book from most "histories" and "stories" of music is, that it is not a compilation from previous works, but a résumé by one who observes for himself and thinks for himself, thus providing new points of view and new lights. His book is entirely free from the besetting sin of most German histories of music of repeating from other books ready-made opinions which are already obsolete. What it does is, on the contrary, to set up new standards of judgment, and it may be safely said that, with very few exceptions, Dr. Parry's opinions of musicians from Palestrina to Wagner will be the opinions held generally in the next century.

The plan of the book is indicated by the headings of the chapters: Preliminaries, Scales, Folk-music, Incipient Harmony, Pure Choral Music, Rise of Secular Music, Combination of Old Methods and New Principles, Climax of Early Instrumental Music, Beginnings of Modern Instrumental Music, Middle Stage of Modern Opera, Middle Stage of Sonata Form, Balance of Expression and Design, Modern Tendencies, Modern Phases of Opera. A special interest attaches to the chapters on national types of the scale and folk-song, in these days when local and national color plays so great a rôle in music. In a later chapter the author draws an extremely interesting parallel between Bach and Handel, which will open some eyes in England, and which he finally sums up in the words that Bach

"appeals to a much smaller public than Handel, and is totally unacceptable to shallow, worldly, or unpoetical temperaments; but he has given much higher pleasure to those whose mental and emotional organization is sufficiently high to be in touch with him, and there are but few of the great composers of later times who have not felt him to be their most inspiring example."

Dr. Parry does not hesitate to tell modern composers that the day for sonatas is past; indeed, he is able to deduce this fact from the practice of most of these composers themselves, whereas critics and historians have been generally blind to it. While just to Mozart's genius, the author does not overrate it, as most historians do—*i. e.*, he avoids the ludicrous method of German historians of saying *nil nisi bonum* about great composers of the past, whereby they make it impossible to trace the lines of progress. But it is in the modern chapters that Dr. Parry best shows his superiority of judgment over the German historians (Langhans excepted, who is less mediæval in his method and judgments than his colleagues). He assigns Schubert, Chopin, and Wagner their proper place, and has many admirable and suggestive things to say about them. Here, for instance, in the remarks on Wagner's vocal style (p. 362), is a gem of lucid criticism:

"The art is not limited to obvious tune on one side, and chaotic recitative on the other, but is capable of endless shades of difference. Wagner makes *Mime* sing melody because he is a sneaking impostor who pretends to have any amount of beautiful feelings and has none; that, no doubt, is a subtlety of satire, but otherwise he generally reserves vocal melody for characteristic moments of special exaltation."

A few statements in this book will surprise the reader, as, for instance, the one on p. 84, that Irish folk-music is "probably the most human, the most varied, most poetical, and most imaginative in the world." But there is only one point on which we decidedly differ from Dr. Parry. He makes no mention whatever of Robert Franz, and names Brahms as the third in the great trio of song-composers, with Schubert and Schumann. In our opinion his trio is almost as absurd as it would be to make an operatic triumvirate of Mozart, Wagner, and Mascagni. We have made a careful and repeated study of Brahms's songs, and are more and more astounded at their shallowness and emptiness. We have also found invariably that the admirers of Brahms were entirely unfamiliar with Franz. It is only on this ground that we can explain Dr. Parry's blindness to him, and we are convinced that a thorough study of the 257 songs of Franz will cause him to give that marvellously original genius a page or two in the next edition of his book.

Social England: A Record of the Progress of the People in Religion, Laws, Learning, Arts, Industry, Commerce, Science, Literature, and Manners, from the Earliest Times to the Present Day. By Various Writers. Edited by H. D. Traill. Vol. I. From the Earliest Times to the Accession of Edward the First. G. P. Putnam's Sons. 1894.

THE appearance of this book is significant in more ways than one. In the first place, it is a sign of the times that an experienced man of letters like Mr. Traill should be ready to undertake the editorial labor, and that good men of business, like Messrs. Cassell and Messrs. Putnam, should be ready to assume the financial risk, involved in the issuing of a portly work of some three or four volumes on "social" history. It is the best sort of indication of the direction in which the interest of the educated public is going. Modern democratic sympathies, the application to history of the conceptions of "evolution" and "organism" and "environment," the pressure of economic difficulties—these and other forces are causing us to look at the story of the past in a new sort of way, to put the emphasis in a different place, to ask new questions. The realization of this it was which, with its attractive style, gave Green's 'History of the English People' its extraordinary success. But even Green made social history subordinate to his narrative of political events; and the coöperative undertaking now conducted by Mr. Traill is perhaps the first considerable work in English which has put social development really in the forefront.

Yet it is a pity that, going so far, Mr. Traill has not gone further. The defect of the work as we now have it is that it creates too great a multiplicity of impressions; it tries to strike us with equal emphasis in too many directions; it ceases to be a story and becomes an encyclopædia. And yet among the many lines of thought there is one which could so easily have been made the main line, and furnished the thread of consecutive interest which now the book lacks. It is pretty clear that just as in the thirties and forties of this century the practical work of constitution-making led to the appearance of constitutional history as a more or less separate branch of study, so now the economic problems of the day are pushing economic history to a position of importance. And one need not accept a materialistic view of history in order to recognize that the economic evolution of society is more fundamental than any other single subject of historical investigation, and that around it and in subordination to it may readily be grouped a very large part of what is best worth attention in law and science and manners. If some such idea as this had governed the construction of the book, we should have been spared the absurdity of having as much space devoted to the details of costume as to the most essential questions of social organization. Mr. Traill had a great opportunity, and he has but half profited by it.

The book is significant in another way: it restores five centuries to English history. Under the influence of the Teutonist school of historians, of which Freeman and Green and Dr. Stubbs were the best-known representatives, the history of the people of England has been made to begin with the English invasion of Britain. The Celtic and Roman periods either have been disregarded altogether, or have been assigned a brief introductory chapter for the purpose mainly of explaining why they are unimportant. But now in 'Social England' we have 120 pages given to "England before the English"; and for this new interest in things before Hengist and Horsa there is an explanation. So long as it was thought that Celtic and Roman life had no abiding influence on the later history of England, its investigation could hardly fail to be regarded as nothing more than the idle sport of archæologists. The explanation, in large measure, of the space here given to pre-English times is that more than one of the writers believe that the degree of continuity between those times and later ages was much greater than has commonly been supposed. It is worth noting that the abandonment of the ultra-Teutonist position would seem to have been the result not of arguments like those of Mr. Coote for the survival of Roman *political* institutions, but of arguments like those of Mr. Seebohm for the continuity of *agrarian* life. Mr. York-Powell—who, as the editor of the 'Corpus Poeticum Boreale,' can hardly be suspected of anti-Teutonic sympathies—now tells us that "the English conqueror found estates cultivated by British *servi* and *liberti* and *coloni*, according to certain rules and customs for the profit of the *dominus* and *patronus* and their own living. He stepped into the Roman patron's, or even the earlier Celtic chief's place, exacted his dues, and farmed more or less after his fashion" (p. 125). And again: "The slaves and bondsmen seem to have lived and worked precisely as they had for their former masters" (p. 122). This is a view of the beginnings of English history which involves the rewriting of many a page of our standard constitutional and legal textbooks. Perhaps, however, it will be better not to set about that work just yet; for Mr. York-Powell, with the *élan* which characterizes him, leaps somewhat too hastily from probability to the language of certitude. There is much more in early English social history than the survival of the Roman agricultural system; and much investigation will still be necessary before we can satisfactorily determine the relations of the various elements to one another. We have called attention to Mr. York-Powell's utterance, not because it is the whole truth, but because it marks a reaction from "the forests of Germany" which can hardly fail to be salutary.

American Types of Animal Life. By St. George Mivart, F.R.S. Boston: Little, Brown & Co. 8vo, pp. 374, illustrated.

THE recent diffusion of science has made the public more exacting, until it now demands instruction from men of eminence in their specialties rather than from compilers. This book is one of a considerable number of good ones that owe their existence to increased interest in the study of nature and a keener appreciation of the best sources of information. Prof. Mivart is a distinguished specialist, and has an excellent reputation as an authority in various lines of natural history. His brilliancy, energy, and originality invest his subjects with exceptional interest, and his rank among the greater scientists leads to a presumption in favor of the accuracy of his work. The higher education that has caused the distaste for knowledge, so often incompetent, at second hand, has also made the general reader more critical, more ready to detect inaccuracy, and less ready to tolerate it. And so, while our author may be sure his book will be well received, he can hardly expect certain evidences of haste, carelessness, or worse, on its pages to pass without severe criticism. An illustration occurs in the statement, "No single kind of ape which exists in America is found anywhere else," p. 3, which is followed, p. 20, by notice of the green monkey of the Cape Verde Islands, introduced in the Antilles, where it has run wild. A similar instance is that of the raccoon, which is "absolutely peculiar to North America," on p. 211, but extends its natural range "all over the United States, both north to Alaska and south to Costa Rica," on p. 212, and, through "a Southern species, is to be found all over South America as far south as the Rio Negro," on p. 213. Page 129 states positively that "a snake's body can be bent only from side to side," yet this does not preclude descriptions and figures of the manner in which the snake strikes its prey, the cobra raises its body and bends its head forward, or the constrictors twine around and crush their victims. Of course the author meant that a snake does not progress by raising the middle of its body from the ground, like the caterpillars vulgarly called measuring or span worms; he should have said so. A final example, attributable either to defective observation or erratic imagination, may be taken from p. 125, the account of the rattle of the snake:

"Its three terminal segments or vertebræ become united together into one solid whole, and also become enlarged in size and specially modified in form, being swollen at the hinder end. This bony structure is covered with a special development of the soft, deeper skin from which all the outer skin and scales of the body are formed, the soft structure being so subdivided by grooves as to form three segments, which themselves become coated with three corresponding dense layers of outer skin, or, as it is technically called, 'epidermis,' thus forming three horny rings. These constitute all the rattle there is in young snakes which have not yet shed their skin. . . . When the moult actually takes place, the old covering of the tail end is not cast off (being held by the swollen end of the bone before noted)," etc.

In fact, however, half-a-dozen or more of the vertebræ unite, instead of three; the bone they form is enlarged forward and tapers backward, instead of being swollen at the hinder end; the tail, before sloughing, has but one dense outer horny layer, instead of three; the young snake has but one horny ring before the first slough, instead of three; a young snake has no rattle till the first slough provides the first loose ring; and when the moult takes place, the old covering of the tail is not held by the swollen end of the bone but by the skin. Prof. Mivart knows more about birds and mammals than about snakes.

In view of the title-page, the number of illustrations that do not belong to American types is at first a cause of some surprise. The text explains that the type introduces its group, a proper understanding of which is not possible without consideration of old-world members. A study of the class of mammals to which this book is written as an introduction would be incomplete without reference to relations among lower vertebrates. Consequently the turkey, the snake, and the bullfrog are added to the list of the mammalian types—monkey, opossum, bat, bison, raccoon, sloth, seal, whale, and the "other beasts."

Wah-Kee-Nah and Her People. By James C. Strong, Bvt. Brig.-Gen. Veteran Reserve Corps, U. S. A. G. P. Putnam's Sons. 1893. 8vo, pp. 275.

THIS volume, so we are told, is called Wakeenah in grateful recognition of the services of a "beautiful, fearless, and true-hearted" Yakima (Oregon Indian) girl who was a servant some forty years ago in the family of the author's brother, and who, while living in this capacity, rescued his child from drowning, and subsequently, at the risk of her own life, saved that of the author. About one-third of the book is devoted to an account of this modern Pocahontas and her people, while all the rest, including some fifty pages given up to a summary of the conquest of Mexico, consists of certain "brief outlines of history," which are dragged into the record, apparently for no other purpose than to furnish a basis for arraigning the white man for the way in which he has ever treated the Indian. In fact, our author's object in recapitulating many of these horrible occurrences seems to have been, in part, "to lessen the blame attached to the Indian for the acts of retaliation, often savage and brutal," to which he has been incited; and, at the same time, to induce those who may read the book "to think upon one of the great questions of the day—how to solve the Indian problem."

This is certainly a praiseworthy motive, and, so far as we are concerned, there cannot be two opinions as to the shameful manner in which these people have been treated, and the necessity of adopting a *modus vivendi* which will insure them against future outrage on the part of the Government as well as from private individuals. On this point there is not room for an argument; and it is an encouraging sign to find that those of us who are familiar with the disgraceful record are not anxious to provoke a discussion by singling out any particular people for condemnation. But, while conceding our own shortcomings, we are not prepared to endorse all the remedies suggested by our author; neither do we accept many of his statements, especially those in which, following in the wake of certain old writers, he describes the manners, customs, etc., of the different tribes with which he deals. Take, for example, as bearing upon the first of these points, what we are told (p. 268) about the class of men sent out as Indian agents. No doubt they were often incompetent, occasionally dishonest, and almost any change would have been an improvement upon the way in which they were formerly chosen. It is even possible, though we doubt it, that the army (p. 271) would to-day furnish better material from which to select these officials than can be found in civil life. So, too, the institution of training-schools, with special reference to instruction in farming, might be a step in the right direction, though the fact that the Indian cultivated corn long before the white man landed on these shores would seem to indicate that the trouble is not so much in teaching him the process as it is in persuading him to undergo the amount of labor necessary to success. However, be this as it may, it is not a point upon which we care to enlarge, for the reason that these suggestions, considered as remedies, do not strike at the root of the disease. To do this with any prospect of success, the system of tribal organizations, with its attendant train of evils, must be swept away, or, as our author (p. 270) aptly says, the Indians, except in the matter of alienating land, must be made "citizens as soon as possible, amenable to and protected by the same laws as the white citizen." Until this is done we may be very sure that the Indian question will not be settled, not even if a school were established on every square mile of the different reservations and all the agents were angels.

In regard to the manners, customs, traditions, etc., of these people a word of caution is rendered necessary by the fact that in these "outlines" fact and fiction are so often mixed as to make it difficult for any one but a specialist to find his way. This, however, is not altogether the fault of the old chroniclers. They saw here a condition of affairs which had no parallel in Europe, and in describing it they had to make use of the only terminology with which they were acquainted. Instead of interpreting their accounts by what we now know of Indian life and habits of thought, it was, at one time, the custom to read them in the light of the civilization that prevailed in Spain, and this led to error. Thus, when we are told (pp. 32, 60, etc.) "that the Indian believed in one God—the author of all good—and in an evil spirit who was ever going about doing evil," we at once call a halt, for we know that his religion was a kind of fetishism, and that he had not reached that stage of progress where the conception of dualism in the spiritual hierarchy was possible. His Manito, or guardian spirit, was sometimes good and sometimes bad, or, measuring it by that of a neighbor and rival, it was either superior or inferior in power, and hence to be cherished or discarded as the case might be. The idea of God and Devil, as we flatter ourselves we understand it, came in with the missionaries, and it is doubtful whether it has been assimilated even by those tribes which are said to be Christianized.

Harmful as is this method of interpretation when applied to our Indians, it is productive of greater error when used with reference to a people "far advanced in civilization," as the Mexicans (p. 250) are said to have been. In this portion of his work our author gives full play to his imagination, and accordingly we read of emperors, temples, palaces, chirography, etc., where a specialist of the Morgan school would speak of a war chief, a medicine lodge, and picture-writing. So, also, an ethnologist like Brinton, instead of telling us that the Mexicans were more advanced in civilization (p. 216) than any of our Indians, would have contented himself with saying that "culture was not monopolized by a few tribes"; and that whenever the surroundings favored such a development "the neighboring tribes, though of different stocks, enjoyed it to nearly an equal degree." Errors (or, if the phrase be preferred, differences of opinion) like these might be multiplied indefinitely. They are the result of the two different methods of interpreting the early chronicles, and to this extent they are excusable. But even if this be

granted, and we overlook mistakes which have an apparent foundation in fact, what shall we say of the statement (p. 263) that "the few Aztecs who remain to-day are mere nomads in the country that was once their own," and this in face of the fact that the aboriginal population of Mexico, according to Bandelier, has increased in the last 360 years, and when we know that President Juarez, who overthrew Maximilian and the empire set up by the French invaders, was an Indian?

In conclusion, we must remind our author that, in recounting the sad incidents that marked the early intercourse between the European and the Indian, it is not sufficient to put ourselves in the Indian's place and look at events solely from his point of view: we must also regard them from the level of the white man, and then judge them by the moral code that prevailed in the sixteenth century and not by that of the nineteenth. Viewed in this way, massacres like those of the Pequots (p. 9) and of the Mexicans by Alvarado can be explained and defended, though, as we have elsewhere said, it would be as reasonable to expect to gather grapes from thorns and figs from thistles as to find that the Spanish conquerors or the English colonists were actuated by sentiments of justice and humanity in all their dealings with the Indians.

A Treatise on Money, and Essays on Monetary Problems. By J. Shield Nicholson. London: Black; New York: Macmillan. 1893.

THIS work consists of a treatise on money, written in the first place for the industrial classes of the Wholesale Coöperative Society and published with several minor essays in 1888, together with half-a-dozen articles that have more recently appeared in various periodicals. Several of the latter, we may say at once, have no particular relation to monetary science, and the remainder are so slight as to give rise to the suspicion that they are inserted as padding. It would have been worthier of Prof. Nicholson's reputation to write this treatise anew, and the subject is certainly of sufficient timeliness and importance to have justified it. This may be said with less hesitation because Prof. Nicholson is really a good writer and clear thinker, who has already done excellent work and will do more; and, it might be added, had it not been for the "burning question" of bimetallism, the 'Treatise on Money' would have had merit enough to justify a second edition.

Bimetallism, however, being at the front, and having received, in this country at least, some rather damaging treatment at the hands of its friends as well as its foes, we should have expected Prof. Nicholson, who is an enthusiastic bimetallist, to look most carefully to the preparation of the bimetallic case. It is therefore a disappointment to find him providing a maximum of reproach and assertion, a modicum of argument, and a minimum of proof. We shall endeavor to lay bare the slight foundation upon which he erects his theories, conceding, by the way, that it is after all upon this foundation alone that any rational theory of bimetallism must rest.

Stripped of its accessories, this basis is the proposition that a depreciating standard of value is economically desirable. Prof. Nicholson thinks there is no reasonable doubt that if the stock of the precious metals had not been increased by the discoveries in the sixteenth century, the progress of trade and industry which took place would have been impossible. The laborers who mine gold create a demand for commodities; this demand raises prices in the country where the gold is mined; these higher prices draw goods from other countries; this makes an increased demand and higher prices there; and so "the whole industry of the civilized world was quickened with new life, and the production and the consumption of all kinds of real wealth were stimulated." But since 1874 there have been diminishing prosperity and diminishing supplies of gold, and the method of concomitant variations enables us to infer that the diminished supply of gold is the cause of the diminished prosperity. Hence the general proposition is reached that increased supplies of money give "a real and generous stimulus to the industrial activity of the world." Conversely, if the supplies of gold diminish and we refuse to use silver as money, we may expect "overproduction, loss of profit, and depression." Prof. Nicholson will not even concede that when prices are declining those in receipt of fixed salaries and wages may fare well, for "employment will be irregular," as declining prices cause decreased profits; although he in the same breath declares that producers experience loss of profits because they are unable to readjust money wages. And finally those in receipt of fixed money incomes do not gain, because the "middle men" rapaciously keep up retail prices while they get the benefit of reduced prices in their wholesale purchases.

It certainly seems as if there was something of the "insane root" in bimetallism to cause sober writers like Prof. Nicholson to go on after this fashion. But, however that may be, it is evident, in the first place, that the opening up of the great wheat fields of the Northwest would have the effects ascribed by Prof. Nicholson to discoveries of silver and gold. His language is as applicable to one case as another. The farmers and laborers of the West created a demand for commodities just as the gold-miners did, and this demand had a similar effect on industry. But, in the second place, the assumption that continually rising prices are economically advantageous is entirely inadmissible. The question lies between borrowers and lenders. What will be the effect upon them of the expectation that a man who borrows a thousand dollars when wheat is ninety-nine cents a bushel can repay it in a year by selling wheat at one dollar a bushel and with a corresponding advance every succeeding year? It is evident that lenders will be cautious and borrowers eager; the result of which would appear in the rate of interest. The borrower would in such case be no better off than before, nor the lender either.

But if this were not the case, and industry was "quickened with new life" by a factitious rise in prices, experience shows that such quickening is followed by paralysis. It is a commonplace of the stock market that most speculators are "bulls," and if we take a survey of the world we find it covered with the wrecks and ruins of the enterprises of too sanguine capital. How much money can Prof. Nicholson prove to have been lost through the benumbing influence of falling prices? For every million that he can imagine to have been lost in this way, we will undertake to demonstrate losses of ten millions through over-confident speculation. Who gets rich in the long run—the man who tries for a high rate of interest, or the one who prefers a low one? Experience answers this question with emphasis. It is not too much to say that if all those contemplating new investments of capital were to be persuaded that they had overestimated the profits to accrue, there would be far less wild speculation and much more sound business.

"The overweening conceit which the greater part of men have of their own abilities is an ancient evil remarked by philosophers and moralists of all ages. Their absurd presumption in their own good fortune has been less taken notice of. It is, however, if possible, still more universal. There is no man living who, when in tolerable health and spirits, has not some share of it. The chance of gain is by every man more or less over-valued, and the chance of loss is by most men under-valued, and by scarce any man, who is in tolerable health and spirits, valued more than it is worth."

These words are as true now as when Adam Smith wrote them, and they are enough in reply to the complaints of the "debtor class," which is composed of those who cannot dispose at the advanced prices which they anticipated of the land or goods in which they have been speculating.

Until it can be shown that bimetallism means something more than what it has hitherto meant, an alternating standard of value, and until some means of obtaining it other than mere bimetallic inflation is devised, cautious people who have capital to invest will prefer the existing standard of value; and when such people have a decided preference, our recent experience proves that any attempt to substitute a depreciating standard does not "quicken industry with new life."

Good Old Dorchester: A Narrative History of the Town, 1630-1890. By W. D. Orcutt. Cambridge, Mass.: The Author.

THIS large and handsome, but yet tasteful and unostentatious, volume tells the story of one of the most ancient and honorable towns in the country. From a moment even earlier than the arrival of Winthrop's company on the shores of Massachusetts Bay, the town of Dorchester maintained herself in dignity and beauty for long over two centuries and a quarter, till her younger sister Boston blotted out her separate municipal existence in 1870. There was not a decade in these two hundred and forty years which did not contribute some striking event, or in which some illustrious character could not be pointed out within the limits of old Dorchester, to signalize the spot which the very earliest pioneers had selected as the home of freedom, of enterprise, and of piety. The current of "remarkables," to use Mather's word, runs in this book naturally after the general course of town histories, but with strong and wise control over the temptation to bring to the surface mere local celebrities, which the mistaken pride of descendants and townsmen seeks to exalt beyond their dues. A goodly number of portraits of the exceptionally eminent men, and views of some of the ancient and historical houses, adorn the book. They are executed in various styles of art, but all in good taste.

Historians of Dorchester are fortunate in being able to draw from more than one contemporary annalist. The journals of the pioneer Roger Clap and the pastor Richard Mather, and the laborious and faithful annals of the town clerk, James Blake, give a chance for intimate acquaintance with colonial and provincial celebrities the like of which exists in very few of our ancient towns. To stimulate readers to investigate Mr. Orcutt's book for themselves, they may be reminded of a very few of the striking incidents and great men of Dorchester, all duly recorded in this volume. In 1633 the first town meeting, the basis of all the free institutions of the New England States and their progeny, was held in

Dorchester—an event shortly to be commemorated by a monument. In 1635 the greater part of the Dorchester Church migrated to the Connecticut River, then a fourteen days' journey, and founded the town of Windsor, Conn. By the persuasions of the saintly Eliot, a large remnant of the Massachusetts Indians was peaceably established within the town limits of Dorchester, and saved from the persecutions and wars that so often wronged their brethren; but the slaughter of one of their number by the agent of King Philip was the spark that fired the wars of 1675-6 all over southern New England. William Stoughton, the witchcraft judge and benefactor of Harvard College, was the most prominent citizen of Dorchester, and died there in 1701. The still more famous Increase Mather was born there in 1639. In 1695 a colony from Dorchester made their way to the banks of the Ashley River and founded the church and town of Dorchester, South Carolina. But, the site not proving all they hoped, they moved to Midway in Georgia; and when the rest of that colony refused to send delegates to the Congress at Philadelphia, Dr. Lyman Hall of Midway, of the old Dorchester stock, represented the colony alone. In 1774 the last half-chest of tea washed ashore from the "Boston tea-party" was detected in Dorchester after an organized search and publicly burned, and the possessor forced to a public apology. In 1776 Washington completed the investment of Boston by the occupation of Dorchester Heights, forcing Howe to evacuate the city. Edward Everett was born in Dorchester on the 11th of April, 1794, and the centennial anniversary of his birth was affectionately celebrated by his native town.

Of later matters, Mr. Orcutt's book describes in an interesting manner the singular opposition against which the railroad to Plymouth had to fight its way through Dorchester; the valuable work done by the late Marshall P. Wilder in promoting horticulture; and the life and genius of the sculptor Ball Hughes. His amusing and characteristic incidents of the long life of "Good Old Dorchester," in church, home, school, and war-time, are quite too numerous even to be hinted at. The spirit of the book is so completely that of affection, as its title indicates, that it does not assume the character of a critical history. Any one examining it from that point of view would not be satisfied with some of the insertions and some of the omissions; and, considering the many distinctions of the ancient town, as indicated above, one may say that there is still room for a real History of Dorchester, even after Mr. Orcutt's labor of love.

Bibliografia delle Tradizioni popolari d'Italia. Compilata da Giuseppe Pitrè. Con tre indici speciali. Torino-Palermo: Carlo Clausen. 1894. Gr. 8vo, two columns, pp. xx, 603.

Dr. Giuseppe Pitrè has appropriately crowned his indefatigable labors in the field of Italian folk-lore by this splendid volume, which puts the student in possession of the vast material collected and ransacked by the compiler during the thirty and more years of his incessant studies. In the interesting preface, the aim of the present work to be helpful to collectors and students is set forth, and the compiler, if he has erred at all, has erred in the direction of copiousness. For this, Pitrè has earned the gratitude of scholars who know the lack of Italian general bibliographies, and the peculiar difficulties that beset the collector in a country which has the admirable, and, at the same time, exasperating custom of publishing the most valuable things in, say, twenty-five copies for wedding presents, which, like other wedding gifts, get into commerce only on the death of the recipients.

The scope of this bibliography may first be shown by what it excludes. It begins with the middle ages, and so omits classical folk-lore, and it further omits the class of popular literature generally known as chap-books (*storie e libretti popolari*), though modern reprints of such as have been the subject of study and have a definite folk-lore (*demopsicologico*) character are included. On the other hand, the editor has admitted the folk-lore of Corsica, Trieste, and Venetian Dalmatia, as well as that of the Slavic or Slavonic, German, Greek, and Albanian colonies in Friuli, Calabria, Terra d'Otranto, Sicily, etc. A more difficult question concerns the inclusion of poetry of a popular nature (*poesia popolareggiante e popolaresca*) and novels and facetiæ of the Italian writers of past ages. Here the compiler has been guided by his own judgment and that of the numerous scholars whom he has consulted. He has included what seemed more popular than literary, and into the second category above mentioned he has admitted Straparola, Basile, Sarnelli, Arlotto, Mainardi, Domenichi, Poggio, Doni, Costo, Gozzi, Lippi, etc., while excluding Boccaccio, Sacchetti, and others of that class.

It will be seen that Dr. Pitrè has understood his task in the broadest sense, and he has further enlarged it by registering all articles in journals of every description, and all works of travel, etc., containing contributions to manners, customs, etc. In this way the 'Bibliografia' is a complete index to the invaluable *Archivio per lo studio delle tradizioni popolari* (Palermo), the oldest folk-lore journal in existence, which has been under the management of Dr. Pitrè since its inception by him in 1882. The 'Bibliografia' is far, however, from being a dry list of titles. The editor has, wherever it seemed helpful, summarized the contents of the work under notice, or given such references as may save the student from purchasing a worthless book or duplicating one he already possesses. It is impossible to be too grateful to Dr. Pitrè for this part of his labor, or for the indexes to be mentioned presently. The work comprises 6,680 titles (it must be remembered that this figure denotes various editions, articles in periodicals, translations, etc.), arranged alphabetically in six classes: tales, stories, legends, and facetiæ; songs and melodies; children's games and songs; riddles, formulæ, cries of vendors, etc., argot; proverbs; usages, customs, beliefs and prejudices. While there is something to be said in favor of one alphabetical arrangement, undoubtedly in a work of this kind a classification by subjects is of great help to the scholar, and any objection to the system is removed by the excellent index of authors, pseudonyms, and titles of anonymous works. There are, besides, two other indexes, one of places, in which the vast material is distributed over its wide geographical range, and one of subjects. The value of this last-named index cannot be overestimated. Although the editor does not claim that it is exhaustive, it is still full enough to save greatly the time of the student in his researches as to any particular topic. The book itself in its typographical arrangement is faultless and reflects the greatest credit upon the publisher, who has also been the friend and enlightened patron of the editor. It may be well to state for the benefit of libraries and amateurs that the edition consists of only 550 numbered copies, and the price is twenty-five lire or francs.

When we consider that Dr. Pitrè (whose works alone furnish 220 titles) is a practising physician at Palermo, with no private fortune or aid from the State, and with the leisure which he can find only in the intervals of an arduous profession, we are lost in wonder at the enormous amount of labor he has accomplished. No one has ever before so fully collected the folk-lore of his country in every direction, or placed all workers in this field under such profound obligations. He has sacrificed all other rewards. May he at least have that of the grateful appreciation of scholars in his lifetime, and may it not be said of him, "Cineri gloria sera venit."

Life on the Lagoons. By Horatio F. Brown. Macmillan.

Seldom have we come upon so satisfactory and charming a book as this. Who has not written about Venice—not poems merely, but descriptive rhapsodies? Byron, Hobhouse, Stendhal, Gautier—the list is but begun. Mr. Howells made his early reputation by his sketches of Venetian life. Mr. James, M. Paul Bourget have more recently written Venice up, as we may properly say. But they, and most of the others, differ from Mr. Brown in this important respect: they write as travellers who see the outside of the wonderful city, and have emotions and enthuse over them; he writes as one who, from long intimacy, has come to know the life of the people to-day, just as, by profound and sympathetic study, he has come to know the history of Venice. Mr. Brown is as free from illusions regarding the Byronic or stage-villain Venetians of the past as he is from the Ruskinian contempt for modern Venetians. He brings forward many quaint legends and many well-told accounts of contemporary customs; he is alive to the unique position of Venice in art and in history. Such qualifications very few of the scores who have written about Venice possessed.

It is impossible to indicate even the pith of his many sketches. In one will be found a clear summary of the rise and fall of the Venetian state; in another, he traces the development of the gondola; in a third, he describes the gondoliers' guilds—almost the last survival of the old social organism. For pure description, read the account of floods in the city, or the "Vision of La Sensa," or "San Nicolò del Lido." The chapters on home life, popular beliefs, and popular poetry contain more information of the most intimate kind than any other English book we know of. So, too, the brief essay on "A Gondolier's Bank" reveals a very curious and surprising aptitude, on the part of the Venetian boatmen, for finance. We are inclined to think that they would be astonished to learn that a majority of the American Congress believed it possible to "coin a vacuum." Curious in another way is the account of the *osele*, or medals which the Doge used to strike and present to several thousand noblemen, each of whom had an hereditary right to receive five wild ducks from the Doge at Christmas-time, but who, when water fowl grew scarce, accepted *osele* instead. The final paper is a rhapsody which, were it not so genuine in sentiment and so tasteful in execution, would be as intolerable as some of the "prose pastels" which we have lately seen.

For any one who is acquainted with Mr. Brown's 'History of Venice,' this volume holds a surprise in its graceful style; in his history he was more formal. To the real love-

er of Venice, the person who not merely has been dazzled by her exterior but has felt her deeper charm, we can recommend this book, as being full of that spirit which comes only of long acquaintance and knowledge and sympathy. The volume has many illustrations which serve to recall well-known views or to reveal scenes in every-day life.

BOOKS OF THE WEEK.

Abbott, C. C. Travels in a Tree-top. Philadelphia: J. B. Lippincott Co.
A Catalogue of Books relating to the University, Town and County of Cambridge from 1521 to 1893. Macmillan. $3.

Yeats, W. B. The Celtic Twilight: Men and Women, Dhouls and Faeries. Macmillan. $1.25.

"A glorious story . . . which cannot be too warmly recommended to all who love a tale that stirs the blood. Perhaps not the least among its many good qualities is the fact that its chivalry is of the nineteenth, not of the sixteenth century. . . . The Englishman who saves the king . . . is as interesting a knight as was Bayard. . . . The story holds the reader's attention from the first to last."—*The Critic.*

THE PRISONER OF

ZENDA.

By ANTHONY HOPE. Oblong 16mo, buckram, 75 cents.

HENRY HOLT & CO., N. Y.

Tours.

Tyrolean Tours.

INNSBRUCK, TYROL, AUSTRIA.

1,900 feet above the sea, with dry, bracing climate.

Centre for Coaching Trips
and Excursions of all kinds.

HOTEL TIROL.

Open all the year. CARL LANDSEE, Proprietor. Large, airy, sunny rooms; modern conveniences; superior cuisine. Reduced rates in winter. Eminent medical care if desired. Unusual educational advantages on moderate terms. EXCURSIONS A SPECIALTY. Best references. Illustrated pamphlets sent on application.

THE SUMMER'S TRAVEL ABROAD.

Applications received at

The Misses Weldon's French and English

SCHOOL, 331 SOUTH 17TH STREET, PHILADELPHIA, from a few young ladies wishing to join the school's exclusive class travelling about EUROPE, June to October, 1894.

EUROPEAN PARTY.

London, Paris, Switzerland, and Italy, with a week in Holland and a Coaching Trip in the Isle of Wight. For circular address
Miss L. M. DAME, 111 Green St., Lynn, Mass.

VACATION TOUR IN EUROPE.

Party carefully selected and strictly limited, under my own escort.
EDWARD FRANKLYN COLE, A.M.,
P. O. Box 1409, New York.

MISS MORGAN, WHO HAS CHAPERONED vacation parties to Europe, would like this summer to take a few young ladies for a year of study and travel. Address Miss MORGAN, Prin. Young Ladies' School, Portsmouth, N. H.

EUROPE.—Small, Select Party of Ladies. Three months. Sixth party. For circular, address Miss BARBOUR, 81 Columbia Heights, Brooklyn, N. Y.

LONDON, ENGLAND.

A gentleman wishes to let, furnished, his good house (billiard-room, large old garden, four tennis-courts, etc.), fifteen minutes rail, West End or city, on inexpensive terms, for four to twelve months. Servants left if desired. Communicate with P., care the *Nation.*

HATCHARDS.

This is the favorite BOOKSTORE, and for 100 years the resort of the smartest people in London. It is visited and patronized by all who love books. London is the great market for books, and all the best as well as the cheapest editions can be had by writing to us. Special collections formed, and fuller information supplied than from any other house. Books both old and new, and relating to any subject, can readily be supplied at very moderate prices.

Agents for Clubs, Libraries, and all private Collectors.

187 PICCADILLY, LONDON, W.

SEASONABLE BOOKS.

JUST ISSUED:

With the Wild Flowers.

By E. M. HARDINGE. 16mo, cloth, illustrated. $1.00.

This delightful little book carries the reader through the whole season with the wild flowers, as they make their appearance. It is written with imagination and the quality of thoroughly entertaining, while imparting flower facts with strict accuracy.

The Amateur Aquarist.

By MARK SAMUEL. 16mo, cloth, illustrated, $1.00.

An American book indispensable to every aquarium owner. It contains Complete Instructions for making a New Self-sustaining Aquarium, requiring Change of Water but Once a Year, and Tells How, When, and Where to find suitable Water Plants and Fishes. It contains over Fifty new Illustrations from life, by which to identify the specimens.

Sent, postpaid, on receipt of the price by

The Baker & Taylor Co., Publishers,

5 and 7 East Sixteenth St., New York.

COTTAGE AT MT. DESERT,

For rent 1894. Twelve-room cottage, near the shore. Excellent location; sanitary plumbing; grand ocean and mountain views; new and convenient.
Apply to M. TIBBETTS,
Seal Harbor, Mt. Desert, Me.

CHOCORUA, N. H.

TO LET, furnished for the summer, a new 9-roomed cottage near and overlooking Lake Chocorua. Address
M. G. S., 107 Irving St., Cambridge, Mass.

A Tonic

For Brain-Workers, the Weak and Debilitated.

Horsford's Acid Phosphate

is without exception the Best Remedy for relieving Mental and Nervous Exhaustion; and where the system has become debilitated by disease, it acts as a general tonic and vitalizer, affording sustenance to both brain and body.

Dr. E. Cornell Esten, Philadelphia, Pa., says: "I have met with the greatest and most satisfactory results in dyspepsia and general derangement of the cerebral and nervous systems, causing debility and exhaustion."

Descriptive Pamphlet free.

The choicest tobacco made, and pre-eminently a gentleman's smoke.

Marburg Bros., The American Tobacco Co, Successor, Baltimore, Md.

The Nation.

NEW YORK, THURSDAY, MAY 24, 1894.

The Week.

THE declaration of Congressman Harter against the Gorman-Brice tariff bill will find an echo among Democrats in all parts of the country. As the real character of the bill, as doctored by Gorman and Brice and other protection allies, has been disclosed in one iniquity after another, the disgust of all friends of tariff reform has been deepening, until to-day they are agreed in saying with Mr. Harter that, while there may be a distinction between the present bill and the McKinley act, there is practically no real difference, and that, rather than have this bill become a law, it would be better "to let the McKinley bill, with its enormous taxes and its startling Treasury deficiency, work out its own damnation." The fate of the Democratic party, if it be not hopelessly sealed already, lies in the hands of the Democrats of the House. If they will stand with Mr. Harter for their own bill and unalterably against the Brice-Gorman-McKinley bill, they can force the conference committee to accept it, and can force the Senate also to adopt it. In that way alone can the party save even a shred of its character, and thus have a hope for success in the future.

It is good news, confirmed by the *Wool and Cotton Reporter*, that the Senate finance committee has already been frightened out of its high-protectionist cotton schedule, and has gone back to the House ad-valorem rates This leaves the *Reporter's* leading article in rather ridiculous plight. It was written to show what was the "secret of the success of the Fall River manufacturers" in getting the finance committee to accept their specific schedule. It was, it seems, because they went to Washington and "fought hard" and "labored earnestly with Senator Gorman" and "each member of the committee." Their example was held up by the *Reporter* as a guide to other manufacturers in getting what they wanted, with much wise remark on the proper way to get "arguments" before the committee. But its Washington despatch turned this sweet morsel to ashes in its mouth, and it falls violently upon the committee in this fashion: "And so the shifting, bickering, dickering course of tariff legislation continues." When the dickering gets you your rates, it is "argument" and an "excellent bill" on "correct principles"; but when the dickering goes against you, it is "disgusting and disturbing." We call it good news that the protectionist cotton schedule has been abandoned, because it shows that the finance committee has winced under the public exposure of its trickery in that matter, and also because it shows what the House can do if it stands up stiffly for its own moderate bill as against the Senate surrender.

The report of the debate on Senator Lodge's amendment to declare commercial war on Great Britain in order to compel her to adopt bimetallism has reached us in the *Congressional Record*, Considering that it was led by a Harvard graduate, the successor of Webster and Sumner and Everett, it is enough to make any patriotic American blush. His chief supporters were Stewart of Nevada and Peffer of Kansas. Senator McPherson made a rational speech against the amendment, and asked Lodge whether he meant it to be taken seriously; showing that he does not know Lodge. The whole proceedings read like a discussion in an Oklahoma debating society. Lodge's first and leading argument in favor of his motion was the quarter from which opposition to it came, beginning with that wicked paper, the *Evening Post*, which of course he "never reads," but to which a friend had "called his attention." Then came "the Canadian papers" and the London *Times*. Surely, whatever these oppose must be right. Lodge might have gone further on this line. The whole civilized world is laughing at him. Is not this enough for any ordinary blatherskite or demagogue? The only test of right or expediency possessed by the school of politicians to which Lodge belongs seems to be the disapprobation of decent people. When they find that nearly all good men hate them, and all intelligent men mock them, they slap their knees and cry "Ha, ha!" Their great men, like McKinley in the late canvass, are men who have somehow incurred the detestation of mankind. Lodge was asked whether he really meant to begin a commercial war with England by provoking her to retaliation. He admitted that this would not be unwelcome to him. Retaliatory duties would give free trade "its final blow." He wanted to "strike at English trade," Australian wool, Canadian lumber, and Cape diamonds, and he could not forget that it "was London merchants who begged for the repeal of the Stamp Act." He let out, however, at the close of his remarks, what his "little game" was. What he sought was simply to "put the Democrats in a hole." Listen to this from the "scholar in politics":

> "Politically, I trust that the Democratic party will vote this amendment down. They have paraded in large sections of this country as the only friends of silver. I should enjoy seeing them discuss it with their constituents after defeating this amendment. Politically, I should be delighted to see them kill an amendment which looks to a discrimination against England in the interest of silver."

The sentence of Coxey and two of his associates to imprisonment of twenty days, and the imposition of a fine of five dollars in addition upon Coxey and his "marshal" for "trespassing upon the grass" in the capitol grounds, constitute a fitting outcome for the "great industrial army" movement which was heralded as certain to bring 100,000 men together at Washington. There was an interesting colloquy between the judge and the counsel for Coxey just preceding the sentence. The counsel assured the court that the conviction was asked by those "who are all-powerful in the administration of this government." "Who are they?" asked the judge. "The parties who are dominant, who are all-powerful," replied the counsel. "Who are these myths, these ghosts?" pursued the judge. Then came the awful truth from the reluctant counsel: "Those who are in favor of the gold standard." "If that is so," said the undaunted judge, "they have not reached this court." "On the one side," continued the counsel, "you have the money power, on the other the poor and struggling masses—by which will your honor be influenced?" "By neither," replied the judge; and then he sentenced the representatives of the "struggling masses" to twenty days' imprisonment for violation of the laws, and a low, vulgar fine of $5 for tramping on the grass, as if the great men were no better than ordinary tramps. This marks the end of the most ludicrous movement ever seriously considered by a great people. After a few more struggles with the constabulary and police forces of the far West, the few remaining contingents of the "army" will be scattered or put in jail, and no more will be heard of them.

One of the new "ethical teachers" has been brought up with a turn. The president of Drake University in Des Moines, Ia., Mr. Aylesworth, lost his head over the Coxey business last month. When one of the "industrial armies" under "Gen." Kelly reached the western boundary of the State, he left his institution and visited the camp, professedly to study the "economics" of the movement in a scientific spirit. But he began by authorizing the announcement that he had come in from Omaha, then infected with Coxeyism, because he was "ashamed to hail from Iowa," and he ended his visit by inviting the "General" to address the students of the university when he should reach Des Moines. The army in due course of time reached Des Moines, but Kelly did

not address the students. The reason was that the trustees of the institution had held a meeting and adopted a declaration that the university is not an exponent of any new social scheme, that it believes in the old and homely virtues of industry, economy, and integrity; that its mission is not to engage in crusades for testing theories to correct the ills of society; that the teaching or endorsement of any political dogmas or partisan doctrines is absolutely forbidden, and that any violation of these principles would furnish sufficient cause for the summary dismissal of the offender from the faculty. If the higher institutions of learning are to retain their authority, it will be by such restraint of the flighty Aylesworths at the hands of "level-headed" trustees.

The sanity of the professors who write the editorial pages of the *Yale Review* is in grateful contrast with the much "ethics" which hath made so many college professors mad. In the May number there is a particularly effective refutation of the statement, so commonly accepted, that the present industrial depression is the worst the United States has ever passed through. Testing the matter by the statistics of mercantile failures, in proportion to the total business of the country, and by labor troubles, the conclusion is reached that the panic of 1893 was considerably more disastrous than that of 1884, but somewhat less so than that of 1873-'74, and vastly less so than that of 1857. In regard to the many railroad receiverships which have so powerfully impressed the imaginations of some writers, the article very truthfully remarks that "the crisis has simply served to prevent them [many roads] from keeping up false appearances any longer." Equally just is what is said of labor disturbances: "As yet the strikes of 1894 have not begun to equal those of 1885-'86 in importance, and are far from being as dangerous as those of 1877."

The Populists in the South seem disposed to use the negro vote against the white Democrats. It is many years since colored voters played any part in the politics of Georgia, but they are apparently to have considerable influence this year. At the recent Populist State Convention there was a number of negro delegates, and noticeable deference was shown them, one being made a member of the State executive committee. The regular Democrats are indignant at the third-party men for their inclination to make the negro again a factor in politics, but it is not going to be so easy as it once was to maintain the race line. The repeal of the federal election laws has removed the chief argument which so long held the whites together, and there are signs in all parts of the South that independents will no longer be deterred from seeking the help of the blacks if they see a chance of success in such an alliance.

The expulsion of Powderly from the Knights of Labor calls attention to the downfall of both the man and the organization. Eight years ago both were at the height of their power. The Knights of Labor were precipitating strikes all over the country in the spring of 1886, and the master-workman was treated by the politicians as the head of a new power in the government of the country. During the month of April, Powderly was invited to appear before a House committee, and a member suggested that it might be "well to consider what, in your judgment, can be constitutionally done [in the interest of Labor], and what might be done and ought to be done by amendments to the Constitution." The master-workman thanked the Congressman for the suggestion, and he also promised to comply with the request of another member of the committee that, in considering this question, he would "take into view the complex nature of this government, and the divided responsibility between federal and State legislation, so as to make your suggestions such as the national legislature can duly act upon." Now that the organization has practically collapsed and Powderly himself is expelled by those who cling to the wreck, it is hard to believe that only a few years ago the leader of the Knights of Labor was regarded as one of the "great powers."

The silver plank adopted last week by the Missouri Democratic Convention is represented as a great victory for Bland and his ideas, but an examination of the plank itself does not bear this out. It marks, rather, a complete retreat on Bland's part from the positions which he has stubbornly held for sixteen years. He gives up the ratio of 16 to 1, denies that he is in favor of silver monometallism, and says that silver must be coined only at a ratio which will keep it in circulation concurrently with gold. This is most gentle roaring, and will frighten nobody. It is safe to say that Bland and all his generation will pass away before any such ratio as he now says he is after will be found. In the meantime, and pending the discovery of that undiscoverable thing, he may declaim and demand as much as he pleases. Where his plank is not meaningless mouthing, it is full of concessions and surrenders on his part, which he had to make in order to get it passed at all, just as he was forced to allow the convention to applaud the acts of President Cleveland, the veto of Bland's pet seigniorage bill not excepted. In fact, the attitude of the Missouri Democracy on the currency question is not a whit more threatening, and is really less ludicrous, than that of the Indiana Republicans as shown in their recent convention.

The proposition to amend the Constitution so that United States Senators may be elected by popular vote, has been brought forward again in this Congress, but there does not seem much prospect of its passage, to say nothing of the remoter chances of its ratification by the necessary number of States. There is, however, one way already open for bringing the choice much nearer to the people, by having each party in its State convention name the man whom it will elect in case it secures control of the Legislature. The famous precedent of 1858 in Illinois, when Lincoln and Douglas were thus put forward by the Republicans and Democrats, was imitated by the Democrats in the campaign of 1890, when ex-Gov. Palmer was thus made their candidate for Senator, and Democratic members of the Legislature were instructed to vote for him. The Republicans of Wisconsin also pursued the same course when Senator Spooner's term was approaching its close. But the politicians are by no means agreed as to the wisdom of the policy. The Cook County (Chicago) Republican convention, which always exerts a strong influence upon the State convention, met a few days ago and adopted a resolution declaring its conviction that the nomination of a candidate for Senator would be unwise and inexpedient, and instructing the delegates to oppose such action by every honorable means. The same question came before the Idaho Republican State committee a fortnight ago, and it was found that the members were almost evenly divided as to the advisability of thus designating the choice of the party for United States Senator.

The question of trying the Norwegian liquor system in Massachusetts came before the lower branch of the Legislature on Wednesday week, and the result showed that the "campaign of education" which has been prosecuted during the last month has produced a result. Although the liquor committee had, a few weeks before, made an adverse report, the House, by the overwhelming vote of 132 to 39, adopted a substitute bill permitting cities which have voted for license two successive years to adopt the system if a majority favors its trial. The chief opposition came from the extreme Prohibitionists, who hold that "the commonwealth should not engage in a business which has produced so much woe and misery." But more moderate members, who always vote against license in their towns, favored the system, in the

belief that it would eliminate many of the worst features of liquor-selling as now conducted. The most effective argument seems to have been the undisputed fact that the entire liquor interest of the State is opposed to the measure. The bill has still to pass the Senate.

The system consists in taking the sale of liquor from private individuals and intrusting it to corporations organized under State authority. Its distinguishing feature is that the present motive of the individual dealer to sell the largest possible quantity of liquor is removed, since the company can draw only a small income and the surplus profits must go to the community. Everybody knows that the average saloon-keeper is so anxious to make money that he will break the law by selling after hours, to minors and drunkards, and in other ways; and that he is supported in this policy by his backer, who is often a brewer anxious to swell his output. In the Scandinavian countries the corporation has no incentive to sell large quantities, and its employee not only has nothing to gain but everything to lose by pursuing this policy, since he is paid a regular salary and forfeits his place if he breaks the regulations. There seems to be no doubt that the system has worked well in Sweden and Norway. The consumption of spirits per capita has been reduced more than one-half in each of these countries, while during the same period there has been an increase almost everywhere else in the world. It has been found possible there to keep the companies in good hands and to enforce strict rules. The Massachusetts advocates of the system believe that these results can be duplicated in the United States. A number of well-known citizens, including some earnest prohibitionists, announce their readiness to take stock in such companies if authorized in their towns, and to give careful attention to the supervision of the business.

Mayor Gilroy's appointment of Charles H. Murray as police commissioner is a surprise and a puzzle to all shades of politicians who are not in the secret, but there is not a particle of doubt in any politician's mind that there is a "bargain" or "deal" of some kind behind it. Nobody is so innocent nowadays as to accept the mayor's volunteered explanation that he made the appointment because he believes that the "Republican party, as the minority party of the city, is entitled to representation in the selection of election officers." Nobody, too, accepts without a wink the somewhat ostentatious display of "surprise" by Mr. Murray when the news of the appointment was announced to him. There are no surprises of this kind in Tammany government; no valuable office is given to a Republican politician except after a strictly business understanding as to the uses he will make of it. That the new commissioner is one of the type of Republican politicians whom Tammany has always found useful, his record leaves no doubt. He was for years one of "Jake" Patterson's most active Boys, and he is now endorsed handsomely by such high Boy authorities as "Clarry" Meade, the "wicked Gibbs's" man on the police-justice bench, who says of him, with genuine Boy cordiality: "Charley Murray is a good fellow and will make a first-class commissioner." That means that he will be a commissioner of the "Johnny" McClave type, who votes uniformly with the Tammany commissioners, not because he sympathizes with them politically, but because he approves of their conduct.

We commented recently on the plan of the German bimetallist, Dr. Arendt, to fix the price of silver every year by a popular vote of England, France, Germany, and the United States, and now we learn that the levity of our remarks has given pain to the earnest doctor. He was purely unselfish and benevolent in his intentions, and was, in fact, thinking more of the monetary troubles of France and this country than of those of his own, and he thinks it hard that a philanthropist should be mocked by the subjects, or victims, of his philanthropy. But we are not sinners above all that refuse to let the bimetallists make the world happy, for we have noticed that serious people in France have declined to take Dr. Arendt seriously, and even in his own land he is told by a leading German paper that he is bringing forth the east wind.

Another German professor has come to the help of the bimetallists and the agrarians against the mighty, and devised another plan to put an end to their woes. Prof. Sering is the man, and the plan is the simple one of not paying your debts. He does not state it in that bald way, to be sure, as no man would imagine who knows the awful German intellect and its ability to becloud a simple proposition with great swelling words of vanity. The way the thing is come at is by a long process of reasoning to show that the farmers are the most vital element in the concept of the State, and that therefore any exceptional measures taken in their behalf could be defended as in accordance with the "Staatsraison." After that it is easy to show that what the farmers most need is a scaling down of their mortgages, which Prof. Sering thinks the State should at once set about, just as it took away from the proprietors of feudal estates from a fifth to a third of their possessions, equally on the principle of the *Staatsraison*. We need not now stop to point out how rapidly that principle would spread to others than farmers, if once admitted and applied in their case, and how everybody in debt or distress of any kind would speedily be showing that he was an essential part of the State and a most fit subject for the forgiving of debts. Such learned absurdities, however, will do good as showing that bimetallism, under all its disguises, is simply an elaborate scheme to chouse creditors out of their just dues. A brutally frank English commentator on the London Bimetallic League's meeting summed the whole thing up by asking Mr. Balfour and his kind: "What does all your palavering amount to but a confession that you are insolvent and want to make as good terms as possible?"

The English archbishops and bishops have, apparently, from the worldly point of view, done a very foolish thing in coming out with a manifesto against the disestablishment of the Welsh Church, and have even directed the use of a special prayer against the bill. What is most unfortunate about it is that every one of their arguments—so far as we have received them by the cable—were used against the disestablishment of the Irish Church—probably the most monstrous expression of intolerance the world ever saw. Even that very absurd one, that the poor would lose their rights to seats in the churches, was actually offered to the Irish Catholics. The fact is that the Welsh Church is the church of a small, rich minority, and is supported in the main out of the earnings of the majority, and is detested by them. In our day there is no getting over this fact. Any established church of which it can be said is doomed. The disestablishment of the Irish Church settled the matter as far as Great Britain is concerned. What is still worse for the bishops is that the Irish Church, far from disappearing or sinking into impotence, as was predicted by them, not only has, since its disestablishment, grown in numbers and in religious fervor, but has increased its wealth. Mr. George Russell, a devoted churchman, warmly advocated Welsh disestablishment in the House of Commons in the interest of religion, and supported himself by the Irish example. The bishops doubtless feel that in defending the Irish Church they are defending an outpost of the English Church, and fear that their turn will come next. But they could hardly use better means, in these days, of bringing this about than making themselves conspicuous in defence of causes which the non-religious world think hopelessly bad. In this world the manifesto will not make a single convert. The good churchmen the bishops have with them already. It is the dissenters, and agnostics, and secularists whom they have to fear.

"SCUTTLING" OUT OF SAMOA.

IT is very difficult to say anything intelligent about abandoning Samoa, without knowing more than the world generally knows about our reasons for going there. It would probably never have entered into the head of any one in this country to go near the islands if some German traders had not established themselves there early in the seventies, and begun to meddle in native politics, and appropriate native property, and call in German men-of-war when they got into quarrels with the people they were robbing. Their proceedings were so high-handed that they soon came into collision with the American consul, and his complaints had to be noticed. The natives are split up into factions, and are apparently incapable of carrying on a regular government. If this be so, the proper persons to take possession of it or "protect" it are the Australians. It is in their "system." It is nearer to New Zealand than any other civilized state, and is in the direct line of its communication with the rest of the world. But instead of proposing this we entered into a tripartite treaty in 1889 with Germany and England for the establishment of an independent government under foreign advice and assistance. It has not worked well. The islands are still rent by disputes and faction fights, and life and property are reported to be insecure. One of the worst questions arises out of the land titles. The land of the islands has for many years been going steadily to the Germans and other foreign traders, and the natives feel they have been cheated out of it. In fact, if we substitute traders for missionaries, the case of Samoa is very like that of Hawaii. The traders have got the land and the kings are undoubtedly unchaste.

The instructions which Mr. Blaine gave April 11, 1889, to the American representatives at the conference which led to the tripartite treaty, expressed "an anxious desire to secure the Samoans a healthy, prosperous, and civilized life." "We had no desire to dominate," he said, "and every wish to develop a stable and just government." At the same time he made a vigorous protest against any interference with the harbor of Pago-Pago, which we had secured for naval purposes by treaty with the lawful authorities of Samoa, and intimated that the opening of the Nicaragua Canal would make this increasingly important. It is only necessary to say, apropos of this, that Mr. Gresham reports that American commerce with the islands can hardly be said to exist. About six American ships a year visit the place, and the American trade, which amounted to $60,000 in 1889, has not increased. There are no ships, and only a schooner-load of coal, in the harbor of Pago-Pago. In fact, what Mr. Blaine called American interests in the place are no more important than American interests in New Zealand or New Caledonia; and Samoa is between four and five thousand miles from the Nicaragua Canal.

What took us there, except a desire to seem as big and important as Germany, it is difficult to see. The Germans went there when Bismarck was full of his colonization schemes, and when the world seemed too small for the German race. We are sure that the Germans are now pretty tired of the whole business, and would be glad to be out of it. Australia, which is the growing Power in the South Pacific, is pressing Great Britain hard not to renew the treaty, and New Zealand is insisting on her claim to the islands, which lie almost at her door. Senator Morgan says he has no objection to our backing out of the agreement "under conditions," one of which is that we should retain the harbor of Pago-Pago, and that the rights of American citizens should be protected. Of course there can be no objection to our keeping the harbor. In peace it would do nobody any harm. In war, if the enemy had a larger navy than ours, he would take it from us at once. Our ships in time of war, in fact, would hardly venture to go near it. Why we should "keep up our interest in the harbor" because of the Nicaragua Canal, we are unable to see. The canal would benefit all the islands of the Pacific and our Pacific coast, but the special value to the canal of small islands 4,000 miles away we must leave to others to point out. There is no doubt that the Australians will eventually get Samoa and keep it, and we might as well urge now that it be turned over to them. In fact, there could hardly be found a better illustration of the follies of modern diplomacy than the whole Samoan pother.

"PLAYING THE MISSIONARY FOR ALL HE IS WORTH."

THE Hawaiian annexationists and their apologists have made so many displays of cynicism, in both politics and morals, that one can hardly be surprised at any fresh exhibition of the kind on their part. A recent confession of their fraudulent methods is so brazen, however, that it surpasses anything which has gone before. The Hawaiian *Gazette* of April 24 has an article on what it calls "The Higher Standpoint," in which it quotes at length from a letter of a gentleman resident in the United States, "who has peculiar facilities for discerning public and private sentiment on important questions." This discerning gentleman writes to the annexationists that their cause made slow headway in this country as long as it was suspected that the revolution was the work of American adventurers, but that "we finally became convinced that there was a deep moral purpose in it, and that this was due largely to the 'missionary' element." Then he concludes:

> "If I were to give you homely advice as a practical politician, I should say, 'Play the missionary for all he is worth.' He may be no better than he ought to be; but so long as our sympathies are enlisted through his share in your affairs, you should use him. Do not undeceive us until you get what you want."

Now, it is astonishing enough that the *Gazette* should print such a letter at all, but it is still more astonishing that it should accept the advice and propose to act on it. It says to "our good friends of the American League" that they must not be "impatient if there is too much missionary in the Government at present." They must remember that "our cause is placed before the American public" at a time when there is much "suspicion on the subject of annexing mongrel communities." With incredible effrontery it adds, "When annexation is secured, then the missionary can be 'played out' and good men 'played in.'"

It is easy to infer from this that the annexationists are not dwelling together as brethren. In fact, the "American League," to which the *Gazette* refers so deprecatingly, is an organization formed for the purpose of ousting the missionaries and taking away the spoils of office which they are now enjoying. This League, moreover, is saying very ugly things about the "too much missionary in the Government." It says that they have been continuing themselves in power for more than fourteen months without a shadow of popular warrant therefor, and that they have now arranged a mockery of a constitutional convention which they can control absolutely, and the results of which they can submit to the popular vote or not, as they see fit. Still more angrily is it saying that they are voting all the while to increase their own salaries and are putting their friends and relatives in office, in utter disregard of the hundreds of American patriots who stand ready to take the places of these greedy missionaries.

Nor can it be denied that the missionary Government is giving some color to these ill-natured charges. It spent a good part of April in passing "an act making special appropriations for salaries and pay-rolls." To guard against unpleasant contingencies, the act was made valid for two years, so that the salaries and pay-rolls will go snugly along till March, 1896, without any further legislative action—which is what we believe the missionaries call the meeting together of nineteen men to vote money out of the public funds for themselves and their dependents. The occasion seemed a fitting one, too, to increase salaries all around, to the common advantage of all concerned in voting them. Indeed, it would appear at this distance that, if the annexationists were playing the missionary for all he is worth for effect on public sentiment in this coun-

try, the missionary himself is playing his chance at the public treasury for all it is worth.

The inspection of the appropriation act, and especially the reading of the debates of the Executive and Advisory Councils upon it, will make this tolerably clear. While the process of raising salaries was going on, one bothersome member raised the point of the propriety of an officer's voting to increase his own salary. He even had the impertinence to read rule 22, which says that "no member shall be permitted to vote on any question where his private right, distinct from public interest, is immediately concerned." But the attorney-general, whose salary had already been raised by the aid of his own vote, promptly ruled that this was plainly a question of public interest, and that therefore every member had a right to vote himself an increase of $1,000 a year. The result is, that the men who now have their hands in the treasury of the 90,000 Hawaiians are paying themselves higher salaries than are received by the corresponding officers of a government representing more than 60,000,000 Americans. The Hawaiian chief justice receives $1,500 a year more than Chief Justice Fuller. Each of the cabinet officers draws $1,000 a year more than the members of our cabinet. The entire act carries an appropriation of $1,648,018, or about one-half the total revenue of the country. Who shall say that even Tammany Hall can teach these missionaries anything about the art of government?

These official records of the provisional Government and the frank confessions of the *Gazette* show what a gigantic bunco game the annexationists have been playing. They have filled the air with cries about a "missionary civilization" being endangered, and about the fruits of sixty years of American philanthropy being imperilled, and all the while the "pals" have been consoling each other by saying: "We know it is tough, boys, but the missionary bait is the only one we can use to catch American gudgeons. Just wait till we get annexation, and you'll see how soon 'good men' will seize all the fat offices. Until then, understand, we are all missionaries."

THE SOFT-COAL STRIKE.

THE fact that there is a general strike among the miners of soft coal throughout the region east of the Mississippi River is well known. The supply of bituminous coal is, in consequence of this strike, becoming so small as to threaten serious results in the near future. But while the general situation is within the knowledge of all, the actual merits of the case and the motives which have influenced the actions of both operators and miners are not so easily ascertained. In the first place, it is to be borne in mind that the Allegheny Mountains divide the soft-coal fields into two regions, which have very little business influence upon each other. The output of Pennsylvania and Maryland, with the greater part of the production of Virginia and West Virginia, seeks markets at tide-water or in the East. With the exception of one field, that of northern Pennsylvania, where, it is said, wages have been reduced in order to secure a larger volume of sales, the miners east of the Alleghenies have no grievance, and do not profess to have any. A miner in southern Pennsylvania or Maryland will earn on an average $700 a year, and could perhaps earn more if he were willing to work steadily throughout the year. This sum, or anything like it, must be considered good wages when we recollect that mining does not call for any especial skill, except to avoid danger. Nevertheless, that danger should be allowed for in estimating proper wages. The miners in the eastern region having no grievance, the strike there is purely sympathetic. By sympathetic is meant that these men were willing to quit work in order to help the cause of their brethren in Ohio.

The Federation of Miners, which has been holding a conference with the employers at Cleveland, was formed as an attempt to consolidate the interests of all the miners in the principal soft-coal fields of the United States. The trouble in the trade which brought on the strike began west of the Alleghenies. In Illinois, Indiana, Ohio, and in the region around Pittsburgh, there has long existed a sort of rough adjustment of mining wages by which the peculiar conditions in each State and the quality of the coal were allowed for in the rate paid per ton. This series of wage differentials, as we may call it, has long been a matter requiring delicate treatment. The adjustment was intended to put the operators of the different fields on a par with each other in the common market of Lake Erie cities and Chicago. Since no standard of output and of volume of sales was possible, these differentials, which include also differences in railway freights, have always proved themselves to be matters of discord and difficult of adjustment. The business depression added greatly to the difficulties of the situation. The capacity for production west of Pittsburgh was larger than the demand for soft coal. Prices of coal were reduced in this way from time to time as competition grew fiercer, until as a last resort the employers in some of the fields reduced the miners' wages. The situation in the Pittsburgh field may be taken as an example. There was an agreement of long standing by which the operators in this field were to pay nine cents per ton more for mining than was paid by their brethren across the river in Ohio. The pressure of competition, and the reduction in wages in the Pittsburgh field, destroyed this differential, thus giving to the Pittsburgh operators an advantage to which the operators of the other States thought they were not entitled. It is said, with how much justice cannot be determined, that the mining companies of Ohio are in secret sympathy with the efforts of the Federation of Miners to restore wages to the old schedule, and thus to put again in force the old differential between the two fields. This will serve as an instance of the complications to which the strike has given rise.

The strike of the miners west of the Alleghenies is thus intended to force the payment of the old rate of wages, which had been reduced because of the fierce competition with which the operating companies fought for the comparatively few orders that were offering. The leaders of the federation recognize that the miners of one State cannot get the old wages if the miners of another State consent to receive less than before, or work to supply the trade demands of the striking section. It was by this argument that these leaders induced the miners of Pennsylvania and Maryland, who had no grievance of their own, to support the Ohio contention by a sympathetic strike, though these two regions interfere but little with each other. Every panic, with its succeeding period of depression, brings about strikes as one of its consequences. Employers of labor strive to effect an adjustment between the lower level of prices and wages. This is usually resisted by the employees, with a consequent disturbance of business until a new adjustment is found. Whether the operators will win the present fight, or the old wages be restored, or whether a compromise is possible, can be decided only by the event. Whatever the immediate outcome, the trade adjustments between the various competing fields, which years of experience have demonstrated to be necessary, must be observed, or future trouble will be inevitable.

GROWING RICH IN THE PUBLIC SERVICE.

WHATEVER be the result of the inquiry which Mr. Goff is carrying on, he is on the right line of investigation. It is the first time in thirty years that any attempt has been made to examine the condition of the police force of this city in the right way. Committees have before now come near doing it, but some mysterious influence always called them off before they reached the true point of attack. The department, from the commissioners down, has for twenty-five years lain under the suspicion of gross corruption. This suspicion has been strengthened by the way the worldly condition of all

the officers has improved during their service, on very moderate salaries. It is a condition of every service in the world, commercial, military, civil, or political, that there shall be nothing mysterious about the manner in which an officer grows rich; that his friends and his superiors shall at least know enough about his affairs to know that honest sources of wealth are, or have been, open to him. Every man who cares for his reputation looks to this for himself. He does not, while holding a position of trust in any one's service, add house to house, and farm to farm, and splendor to splendor without making known to his employer where the money comes from if his salary plainly does not supply it. No bank would allow any officer to indulge in luxuries that his stipend would not warrant without looking into his affairs. The same rule prevails in all armies, and does or ought to prevail in all civil services. No public man ought to get rich in a manner that sets people to wondering over his ways and means. People in fiduciary positions, like judges, have not only to be, but to seem, pure. Public morality cannot be maintained if everybody doubts the integrity of public servants.

It is now fully twenty years since the practice of putting political adventurers, with no pecuniary or social standing, in the Police Commission began. The place is one, owing to its enormous power over the criminal and semi-criminal classes, in which the incumbent needs all the fortification that high character and general public esteem can give him. As a rule, the men who have filled it during the period we have mentioned have had no standing in particular, and have been too obscure to have any public esteem, or to be much ashamed or troubled if suspected of anything discreditable. They have, as a rule, been men to whom money is everything, and reputation a comparatively small matter. Their fortunes, therefore, have always needed close watching, but have never received it. They have come again and again under more or less of a cloud, without bringing on them any inquiry, until Dr. Parkhurst took the matter up and by his charges made inquiry imperative. It ought now to be pushed home. We trust that Mr. Goff and every one concerned will remember that a suspected or accused official has no "private affairs." His affairs become public in every sense of the word as soon as any reputable person says he is a bribe-taker or corruptionist of any description. In such a situation as the police commissioners are now placed in, an honorable man scorns secrecy. He craves an inquiry. He lays everything bare to the world. If death be preferable to dishonor, so, *à fortiori*, is investigation. Alexander Hamilton set a memorable example by accusing himself of a sort of private immorality which the public in his day were least likely to forgive, lest any stain should rest on his character as a public officer.

How necessary official investigation is for the maintenance of public morality, is well illustrated by the way in which Croker has escaped from public life with a large fortune. It is no longer possible to investigate him. Although Mayor Grant swore in 1888 that in 1886 Croker "was very poor indeed," in 1893 he was in possession of a large racing stud, and a stock farm, and a very expensive house in Fifth Avenue. He was during this period in an official, though not a public, position of great influence and authority, and was known to hundreds as the director and controller of all administration in this city, and of all legislation at Albany, and was known to many tens as the receiver of money in return for protection from legislative attacks, or, in other words, from "blackmail." He was, too, engaged in no money-making business or occupation. Horse-racing and horse-raising do not come under these heads, and during the interval between 1887 and 1893 extraordinary depression prevailed in all kinds of business, including real estate. Nevertheless, in the absence of official inquiry, he was able, in his retirement, to procure an apology or defence from a religious paper, the *Outlook*. What is most curious about it is that a precisely similar apology for Tweed, with an ascription of his wealth and that of his associates to "outside operations," appeared in the *Evangelist* in New York within a very short period of the explosion which finally landed him in jail and broke up the ring. One does not need to ascribe such tributes to anything but the genuine kindliness and charitableness of religious editors, combined with the gentle credulity which usually goes with such qualities; but they show the value of official inquiry when the "rise in real estate" is extraordinarily rapid, and does not appear in the sales made at the exchange.

FASHIONABLE POLITICAL ECONOMY.

POLITICAL economy is the study of human nature under certain circumscribed conditions. The true economist is a man who watches and reports the play of the human mind on the phenomena of trade, commerce, and industry. He tells us by observation and sometimes by experiment what men will do, if let alone, when brought face to face with certain facts of human society. He is thus able, as all scientific men ought to be, to predict and to verify his predictions. He is able to tell what will happen if something else happens; what will result, for instance, if this play of the human mind on the phenomena of trade, commerce, and industry is interfered with. His concern, too, is wholly with the human mind of to-day, and not the human mind of 1,000 or 500 years ago; the "historical school" to the contrary notwithstanding. How mines were worked in the middle ages is not his affair; how they are worked to-day is what he has to study. This was the work the old Manchester school did, and the result was that it acquired great influence, and had much effect on legislation and opinion.

But as philanthropy spread, the study of the way the human mind plays on industrial phenomena became unpopular. Men arose who said this was a poor occupation; that it had not banished poverty or debt; that the true work of the economist was the study of the way the human mind *ought* to play on industrial phenomena, and generally to make men happy, by legislation. And they fell to denouncing Smith and Ricardo and the Manchester school. These were the "ethical economists," who now have possession of the field, and are filling the world with plans of human regeneration by a freer outlay of human earnings. In the colleges they abound, but the trouble is that the intelligent world generally ridicules their pretension to be called "scientific." The London *Times* says of these professors :

> "Put in plain English, this means that several professors of political economy at the present day hold the pious opinion that an agreement between the leading commercial nations would suffice to fix a ratio between gold and silver. This is not a scientific opinion at all in any proper sense. It is a deduction from facts which are at the disposal of everybody, made by men mostly turned out of one school who have destroyed their own pretensions to authority by turning topsy-turvy the economic 'science' of their immediate predecessors. They have shown us that in this 'science' fashion rules as absolutely as in the science of dressing ladies' hair, and we accordingly set very little store by their opinion, or even by their consensus."

The reason of this contempt is obvious. In leaving the world of fact for the world of opinion, and substituting "ethical concepts" for observation, they put themselves on a level with all the dreamers and speculators of the earth. In the ethical world, one man's ideas are just as good as another's—those of Henry, the dynamiter, who was nothing if not ethical, as those of William Morris, the Christian socialist. All of them are prophets simply, and you can neither refute a prophet nor test him. It may be that, by blowing up all the rich people with bombs, society would be purified, and it may be that, by giving all the capital of the world to the governments, poverty would disappear. Who knows? God is great, and the world is wide.

There has been much speculation as to the causes of this change. Some say it is due to the large number of young professors who have studied

philosophy in the German universities, and thus permeated themselves with a theory of society which made the mere phenomena of trade seem a low, debasing study. Others, like the writer in the London *Times*, say it is due to changes of fashion, such as occur in ladies' hairdressing, and there is something in this, for everybody knows that the philosophy of the day does change as a garment. One day we are all devoted Kantists; the next we are Hegelians, and the next Schopenhauerites and Spencerites. In the field of metaphysics men have from the beginning run to and fro from positivism to transcendentalism, and transcendentalism to positivism, incessantly, and the world has therefore always congratulated itself that it is not ruled by philosophers. Just now, under the excitement of recent economic changes, we are very sentimental, and are weeping over the poor just as the noblemen and gentlemen did before the French Revolution, and it is not wonderful that the economists found economy too dry and cold, and threw themselves into ethics.

In fact, they are using the strictly economic problems now mainly as a means of sharpening their wits. Very few, if any, of the things over which the various "schools" are now disputing have the smallest human interest. The whole value to mankind of the study of political economy lies in its influence on popular opinion. It is not a thing which a scientist can carry into his laboratory and work over in supreme indifference to the rest of the world. Its subject-matter is human affairs, or, as we have said, the play of the human mind on the phenomena of trade and industry. Its object is to get individuals to understand this play and adapt to it their lives and their legislation. If it have not this in view, it is as profitless as the speculations of the schoolmen touching the number of angels that could get into the eye of a needle.

Some attention is called to this point in the notices of the work of some of our American economists in the last number of that wonderfully sane periodical, the *Journal des Économistes*. One author, the editor remarks, disports himself "on the heights of economico-metaphysical speculation." "Reading his work," he says, "is a good intellectual exercise, but has the author contributed to the progress of the science?" Another finds fault with the classical method of estimating the cost of production. The manufacturer says he has spent so much in raw material, so much in wages, so much in wear and tear, therefore his profit must be so much. This is a narrow view. He should have gone back to the cost of the wool in Australia, and followed it through all its changes of place and fashion till it became a frock coat; to which we fear the manufacturer would say, "Shucks!" Another still tries to get at the law of distribution by analyzing and combining the "pain of production" with the "utility of the product" and the "pleasure of consumption"; on which the French economist sensibly remarks "that real life [which is the life the economist has to study] takes no account of these speculations, that political economy can rest only in experience."

This is a state of things greatly to be regretted. Never in any age of the world has there been greater need that economists should speak with a voice of proved and provable authority. Nine-tenths of them are to-day singing "songs of freedom" with socialists and labor agitators, and filling the bellies of the poor with the east wind.

IRISH SURNAMES.

In the newly issued Dublin blue-book, 'Special Report on Surnames in Ireland,' by Robert E. Matheson, which is an appendix to the twenty-ninth annual report on marriages, births, and deaths in Ireland, will be found some very curious and interesting facts in regard to Irish names as now existing in the island. As would be expected, "the great bulk of the most common names are undoubtedly of Celtic origin," but those of English origin are also numerous, and it is a well-recognized fact that the surname is not an infallible clue to the race of the user. Many Irish names have been translated into English. Some Englishmen in past ages took Irish names, and innumerable Irishmen (by which we mean the native Celtic stock) were forced to take English names. The well-known statute of 5 Edw. IV., cap. 3, A. D. 1465, prescribed "that every Irishman that dwells betwixt or among Englishmen in the County of Dublin, Myeth, Vriell and Kildare, shall take to him an English surname of one town, as Sutton, Chester, Trym, Skryne, Corke, Kinsale; or colour, as White, Black, Browne; or arts or science, as Smith or Carpenter; or office, as Cooke, Butler, . . ."

The tables in this Report show the one hundred most prevalent names to be mainly Celtic, with a few remarkable exceptions. The population in 1890 was estimated at 4,717,959 persons, and the estimate of persons bearing any particular name is ascertained by multiplying the births in 1890 of that name by the average birth-rate, which is one for every 44 8-10 persons. The result is that the first three names in order of frequency are Murphy, Kelly, and Sullivan, but the fourth (Walsh) means a Welshman, and the fifth is the ubiquitous Smith. The 26th is Wilson, the 31st Campbell, the 32d Clarke, the 33d Johnston, the 34th Hughes, the 37th Brown, the 42d Thompson, the 50th White. Lower down in the list we find Burns (68), Robinson (73), Cunningham (74), Griffin (75), Ward (78), Reid (81), Graham (82), Higgins (83), King (86), Bell (89), and Scott (90). The last name on this list (Dwyer) represents 8,100 persons, as against 62,600 for the Murphy clan.

One very evident fact is the decadence of the forms in "O" and "Mac," since the relative position is No. 6 for O'Brien, 10 for O'Neill, 13 for McCarthy, 21 for McLaughlin, and 39 for Maguire. Moreover, O'Brien is little over one-half as numerous as Murphy, and O'Neill a little less than one-half. In separate lists we find the names of 135 families with names beginning with "Mac" and about 600 names with "O" prefixed. Of these the most outlandish would appear to be now borne by few persons, since most of them are lacking in the lists of names having five births recorded in 1890, and which are supposed to represent families of 250 persons. Of course some occur in the birth record without the "O" and the "Mac." Only five "Fitz" names are recorded, viz.: Fitzgerald, 330 births, equal to 14,784 population; Fitzpatrick, 249 births, equal to 11,155 population; Fitzsimons, 80 births, equal to 3,584 population; Fitzgibbon, 34 births, equal to 1,523 population; Fitzmaurice, 21 births, equal to 940 population.

As to the predominance of names, it seems that the one hundred principal names embrace about two million of the inhabitants, and an examination of the birth-lists shows that the population is mainly Celtic. The census of 1891 declares 4,581,431 persons born in Ireland, 74,523 in England and Wales, 27,323 in Scotland, and 21,330 abroad, or a total of 4,704,607. Ireland has been a great hive, for centuries throwing off swarms, but receiving comparatively few accessions of other stock. Macaulay states that at the beginning of the seventeenth century the English colony was confined to the seaboard; but, after the terrific inroads under Cromwell, the result was that under James II. the Celtic race was probably somewhat under a million in number, and among them resided about two hundred thousand colonists of Saxon blood. The examination of names to-day indicates that this proportion has been substantially preserved. Ulster is, of course, the stronghold of the invader, and here such names as Smith, Johnston, Stewart, Wilson, Thompson, Campbell, Moore, Bell, Patterson, Bradley, and Brown are numerous, though even here Reilly and Gallagher lead the list.

In this report the author gives little space to the origin and form of names. In 1890 he prepared an official report entitled 'Varieties and Synonymes of Surnames and Christian Names in Ireland,' compiled from the records of births, deaths, and marriages. Nevertheless he collected only the variations of names, and although these are important for local work, they leave us in ignorance of the meaning which underlies the name. Of course every one knows that "Mac" means "son of," and "O" means "descendant," probably "grandson"; "Kil" or "Gil" (*Giolla*), means "servant of," and is usually prefixed to a saint's name, as in Kilbride (servant of St. Bridget), Gilpatrick (servant of St. Patrick), Gilfoyle (servant of St. Paul); though Gilchrist is "servant of Christ," and Gildea is "servant of God." Maol (according to Mr. Matheson) signifies a tonsured person who became the spiritual servant of a saint. Thus Maol-Dubhan, "servant of St. Dubhan," forms Maoldun, anglicised into Muldoon. Other names cited by him are: Carrick, *carraice*, a rock; Clough, *cloch*, a stone; Columb, *colum*, a dove; Cunneen, *coinin*, a rabbit; Darragh, *dair*, an oak; Mullaly, *eala*, a swan; Quilty, *coillte*, woods; Sheedy, *sioda*, silk; McGowan, *gobha*, a smith; Breheny, *breathamh*, a judge; Cleary, *cleireach*, a clerk; Ward, *bhard*, a bard; Colgun, *colg*, a sword; McCraith, *craith*, to weave; Davin, *daimh*, a poet; McIntyre, *Mac-an-t-Saoir*, the son of the workman; Roe, *ruadh*, red; Duff, *dubh*, black; Lauder, *laidir*, strong; Daly, *dall*, blind; McGirr, *gor*, short; Casey, *cathaiseach*, valiant; Dempsey, *diomusach*, arrogant; Brody, *brodach*, proud; Corcoran, *corcurach*, purple or red; Kinnavy, *cnamh*, a bone; McCosh, *cos*, a foot; McClave, *lamh*, the hand.

These few examples, though interesting specimens of names from rank or occupation, from natural objects, from personal qualities, etc., still leave unexplained the great body of surnames.

It remains to consider some composite names, by which we mean such surnames as do not indicate the probable racial derivation of the individual. It is beyond question that the foreign invaders, from the earliest historic times, have abandoned their names for Celtic forms. Thus for De Burgo, or Burke, was used MacWilliam; for De Angulos, or Nangle, MacCostello; De Exeter, MacJordan; Barrett, MacWatten; Staunton, M'Aveeley; De Bermingham, MacFeorais; Fitzsimon, MacRuddery; Poer, MacShere; Butler, MacPierce; Fitzgerald, MacThomas; De Courcy, MacPatrick; Barry, MacAdam. Again, common English names, derived from colors, objects, animals, and the like, were freely translated into Irish. Thus, Bird became Heany; Black, Duff; Gray, Colreavy; White, Banane or Bawn; Little, Begg; Long, Fodha; Fox, Shanahan; Holly, Quinlan; Oaks, Darragh; Rock, Carrick; Waters, Toorish; Monday, McAloon; Boar, McCullagh; Oats, Quirk; Silk, Sheedy; Weir, Corra: and Smith, Gow and McGowan. Of course, the reverse often happened, and the Celt transformed his name into the corresponding English word. We have already cited the statute of A. D. 1465 which compelled the Irishmen within the Pale to take English surnames. All of these causes produce numerous names which are absolutely no indication of race, and in fact the mania of certain Americans of Irish descent to magnify their race now leads them to claim many purely English surnames as Irish, merely on account of the prevalence of the name in Ireland. It is equally mistaken for them to claim many of the Scotch forms in Mac, though more pardonable, since the languages are allied.

The genealogist will find very little satisfaction in such a record of names as this Report gives. The clan system is fatal to all pedigree-making, either among the countless Murphys or O'Briens of Ireland, or the equally numerous MacDonalds or Stewarts or Campbells of Scotland. The line of the chief of the clan is carefully recorded, and that of such of his prominent relatives as have founded territorial families. But, beyond that, the multiplicity of kinsmen bearing the common name destroys all possibility of identification after a very few generations, even where records remain. In Ireland most of the leading clans are still represented; not always, however, by wealthy descendants. Sir Bernard Burke, in his 'Vicissitude of Families,' nearly thirty years ago pointed out the flourishing representatives of M'Murrough, King of Leicester, of the O'Neills, Princes of Clanboy, of the O'Briens, Kings of Thomond, the O'Connors of Connaught, the MacCarthys, and many of the lesser families. Another authority quotes as still existing certain special titles, viz.: Prince of Coolavin, a MacDermott; Knight of Glin, a Fitzgerald; Baron of Killoc, a Russell, The O'Conor Don, etc. On the other hand, there are a few undisputed instances of the representatives of famous families existing in the grade of the poorest peasantry. A generation or two ago, such claims carried a certain reverence from the people; but so thorough has been the work of disaffection caused by emigration, agrarian troubles, and Fenianism, that even in Ireland the ancient affection and respect for "the old blood" has virtually ceased.

Mr. Matheson's two essays should be reprinted in America if the supposed regard of the Irish Celt for his race has any existence. It is noticeable, however, that the Celts born in the United States are not students of the Irish language. While immigrants of other nationalities cling to their native tongue, and insist that their children shall learn it concurrently with the indispensable English, the Irishman seems content to forget the speech of his fathers. The most eloquent Land-Leaguer or Fenian, while raving over the wrongs inflicted upon Erin, would be utterly silenced by the shortest sentence propounded to him upon an American platform in Ireland's venerable language. It is not unreasonable to surmise that the instinct of the race leads our American Celts to perceive that they are doomed to absorption here. The signs all point to this desirable conclusion. The children born here speedily develop strong local attachments, and each generation of course inherits and increases the love of country.

PROTECTIONISM AND SOCIALISM IN ITALY.

ITALY, May, 1894.

A NEW review, entitled *La Riforma Sociale*, and edited by Francesco S. Nitti and Luigi Roux, promises to become one of the best organs for impartial and radical discussion. But these comparatively young writers put forth their theories as new, whereas, were they well read in the writings of the makers of Italy, they would find that, thirty and forty years ago, Cavour, Mazzini, and Cattaneo all agreed on what were and what were not the functions of the State in social matters. In a short, pithy article entitled "The Agrarian Party and its Social Significance," Signor Nitti, after affirming that protectionism is less an economic theory than the consequence of class selfishness, hits the nail on the head when he adds:

"Those agrarians who demand that the State shall secure for their products a remunerative limit—the French *prix de revient*, a fixed price—by the aid of protective and prohibitive tariffs, outrage the principles on which modern society is founded; they claim privileges and monopolies which are the antithesis of liberty and solidarity. Their demand is explainable only by the doctrines of socialism pure and simple. When the workingmen and peasantry demand that the law insure them work and a minimum wage, they are merely claiming for their class what the agrarian party demand for themselves. They are more consistent, and start from higher principles; they speak in the name of the great majority of mankind, whereas the agrarians act in the interests of a very small fraction of a party. The 260 deputies who champion the interests of the agrarian party in the House and clamor for the remunerative limit, cannot honestly oppose the demand of the workingmen for a minimum wage; and, once this is conceded, what are to be the limits of State interference in the economic sphere?"

True, but this is not the first time that it has been proclaimed in Italy. Cavour, who was a wealthy capitalist and a first-class agriculturist, was an out-and-out free-trader on principle. During the tempestuous period of 1848-9 he studied attentively the social as well as the political conditions of European countries, and in the two volumes of his writings, admirably edited by Prof. Domenico Zanichelli, we find (vol. i., p. 360-89) an exhaustive article on the social reforms attempted by the French Revolutionists. In his view, all "these strange systems proposed involve the renunciation of the principles of individual liberty, invest the government of society with unlimited powers, and reduce individuals to automatons." Passing to the proposed organization of labor, he writes:

"With the proclamation that the State ought to provide work for every workingman, the election of a commission to study not only the means for ameliorating the economical conditions of the poorer classes, but also the principles which underlie the relations between employer and employed, between capital and labor, by arbitrary regulations as to the time and wages of labor—by these acts, and still more by imprudent speeches and writings, the Government has manifested its intention to reconstruct on new foundations, as yet hidden, all existing relations of capital and labor in the production of wealth. In a word, the Provisional Government seeks a fresh solution of the great, the tremendous problem of the organization of labor."

After showing what a bad organizer any Government is even of a private industrial undertaking with honest officials and chosen workmen, Cavour asks, What would a national manufactory result in where the worst workmen will offer themselves because they swell the ranks of the unemployed? All his arguments tend to prove that State organization of labor must prove an inevitable failure. As the articles appeared in the *Risorgimento* of March, 1848, and as later failures confirmed the truth of his opinions, they have a certain value for impartial critics.

But socialists will say: Cavour was a capitalist, a conservative, a monarchist; naturally he would be opposed to all attempts to equalize the conditions of rich and poor, of labor and capital. To this we answer that Mazzini, who was neither a capitalist nor a conservative, but a humanitarian and republican, in his 'Systems of Democracy in Europe' came to the same conclusions, and admonished his countrymen to beware of the isms of the sectarians, since only by individual liberty, to be gained for Italy by the ousting of despots and their satellites, and then through the principle of association, could they hope to ameliorate their condition. With regard to individual property, Cavour and Mazzini use the same expressions, and maintain that if that stimulus were removed, men would neither work nor save, invent nor study; that progress would be sapped at its foundations. Where they both agree, again, is on the absurdity, the injustice, the evils of protection; and in this both carry their doctrines to the logical results. "If the State," said Cavour, "has neither the right nor the duty nor the power to regulate the relations between labor and capital, between the employer and the employed, neither can it be rightfully empowered to protect one industry or one class of production by artificial means."

In the second volume of his writings we find (pp. 353-363) a long article on English legislation on the corn trade. Assuming the principle of free trade as accepted, he refutes all the specious arguments of the opportunists and the sophists, and, writing in 1843, concludes:

"When an economic system is proved to be contrary to reason, to justice, to equity; when its ablest defenders are compelled to invoke mere motives of convenience and of opportunity, the system is doomed; shaken at its foundations, the slightest jar will make it totter, the first unusual strain will bring it down from turret to foundation-stone. Hence we may predict in a near future the total abolition of the corn laws, and, as a consequence, the overthrow of all the protective barriers which have for so long a period surrounded the industrial and agricultural operations of Great Britain."

Later we have a long article on the "influence of England's commercial policy on the Continent, and especially in Italy" (vol. iii., pp. 469-532), written for the *Antologia Italiana* in 1847, in which he foresaw that Italy

must gravitate infallibly towards free trade. Curiously, at that time, Cavour, his father and brother, were accused of bringing grain up to famine prices and reducing the people of Turin to starvation. Cavour sent the accusations to the director of the *Antologia*, asking whether "he would care for more articles on the freedom of commerce from the pen of a man who was the object of such accusations." What the editor replied we do not know, but no second article appeared; so the methods of applying free trade in Italy had to wait for their official champion until Cavour openly supported his doctrines in Parliament as Deputy and as Minister. As a Deputy he never allowed an opportunity to pass without deriding the manufacturers and agriculturists who required "protectionist pillows" on which to repose; and in every case where he could not get a duty abolished, he did his utmost to get it reduced. As a Minister, he openly proclaimed his free-trade principles, especially during 1851, when he was Minister of Agriculture and Commerce. His absolute and minute knowledge of all agricultural operations gave him a great advantage over his opponents.

"I quite admit, gentlemen," he said, "that to proprietor-farmers a high rate of duties is seductive, but this is not the case with consumers. If you tax the wine in the low countries, we have more ague and fever; if you tax the bread, the people feed on inferior cereals and we have pellagra and other diseases." Again, he laid great stress on the fact that every protected industry had gone down because the manufacturers, sleeping on their protectionist pillows, no longer brought that keen intelligence, that unceasing activity, which they had exercised to obtain supremacy. Thus he showed how the protection of the various silk industries had lowered the perfection of each, giving the victory to Lyons. Perhaps his most impressive speech is that of April 14, 1851, in answer to the protectionists, headed by Count di Revel, backed up, as he proved, by some of the ultra democrats.

"The ministry," he said, "profess frankly and entirely the principle of free trade, believing that a government in normal times ought never to protect by special duties this or that industry: that it is not its duty, hence it has not the right, to favor one industry more than another; that it has no authority whatsoever for imposing a tax on the generality of consumers for the benefit of special industries. The custom-house exists for the purpose of finance—that is, for the public weal. Frontier duties form a necessary branch of income, but it is neither just nor opportune to impose a tax on the generality of citizens in favor of a special class."

The discussion lasted several days. His opponents, touched in their pockets, brought forward every argument—the ruin of industry, the famine of the workingmen, since no capitalist would risk his money in unprotected industry. Cavour demolished all their arguments by proving that high duties were the cause of smuggling, that many trades were utterly ruined by smugglers, that the high duties were a triple tax on the public, "who pay the smuggler, the Government, and the industrial chief of the protected industry." But his final triumph came through the words spoken on the third day of the discussion—words which Italy would have done well to remember throughout all these intervening years:

"Let us leave the political question entirely aside in order to consider the economic aspect of the case. Humanity tends to the amelioration of the lower classes. Two methods are proposed, and all the systems ideated by the wisest and most audacious intellects are reduced to these two. The first is, Have faith in the principles of liberty, in the principle of free competition, in the free development of the moral and intellectual man, and believe that the extension of these principles will secure greater well-being for all, and especially for the less fortunate classes. This is the doctrine of the political economists; these are the principles professed by the statesmen who are at the head of public affairs in England. Another school professes entirely opposite principles. Its members believe that humanity cannot be helped, that the condition of the working masses cannot be ameliorated, without ever more and more limiting individual actions, without enlarging boundlessly the central action of a moral body, represented by a government which is yet to be created, that shall assume the general concentration of individual forces. This, gentlemen, is the socialistic school. It is useless to deceive ourselves: although this school has arrived at baneful, nay, atrocious deductions, it cannot be denied that its principles contain much that is seductive to generous and elevated minds. Well, the sole means of combating the doctrines of this school, which threatens to invade Europe, is to oppose other principles to theirs. In the economic as in the political and religious field, ideas can be combated only by ideas, principles by principles. Physical repression avails little. For a moment cannons, bayonets may repress theories, may maintain material order, but sooner or later these theories, these ideas, get translated into facts and obtain the victory in the politico-economic order.

"Now, gentlemen, I maintain that the most potent ally of the socialistic school (of course I allude to intellectual alliances) is the protectionist doctrines. They start from absolutely the same principle, and, reduced to their simplest terms, they affirm the right, and hence the duty, of Government to intervene in the distribution and employment of capital, the mission and the power of Government to substitute its own will, supposed to be more enlightened, for the free will of the individual. If this doctrine be admitted as an incontestable truth, I do not see what answer we can make to the working classes who offer the following argument to the Government: You deem it your right and duty to intervene in the distribution of capital, in the regulation of capital. Why, then, do you not intervene for the regulation of the other element of production, viz., wages? Why do you not organize labor? And verily I believe that if you admit the system of protection, you must as a logical consequence admit, if not all, at least a large number of socialistic doctrines. Hence I beg the opponents of the treaties [of navigation and commerce with England and Belgium] who sit on the right, and who are proud, as I am, of the name conservative, to ponder well these considerations, and, once arrived at the conclusion that protectionism is the corner-stone on which socialism builds up its batteries for the destruction of the old social edifice, I trust that they will refuse their vote of support, their authority."

Did space admit, I could quote even more eloquent passages from Cattaneo, who was in correspondence with Cobden from the commencement of his campaign in favor of free trade. Mazzini was none the less opposed to the protectionists and the socialists as they now present their doctrines. But, instead of exalting the principle of free competition carried to its utmost limits, his one ardent desire was to see the Italian workmen become capitalists through coöperation.

But Cavour, Cattaneo, Mazzini are looked on as retrogrades by the modern school, and, as for protection, the demands of the agriculturists are as impudent as they are infamous. With the populations starving and taxed (as far as the very poorest are concerned) beyond all possibility of payment, with poor Sicily still under martial law because the peasants have demanded and do demand that the Government shall revise the outrageous contracts forced on them by the proprietors, here are the farmers and owners of land demanding an additional tax on corn, which already pays five lire per quintal. They pretend that, as the French protected corn until it reached the price of twenty-five lire per quintal, the Italian Government ought to protect them in the same way. Note that they farm so wretchedly that a hectare yields on an average only ten quintals, whereas, I can quote foreign proprietors who make it yield twenty and even thirty quintals. Not content with this demand, in which they are supported by 260 Deputies, to those who say, "But don't you see that you will be none the better off, because the poor people will go back to the inferior cereals?" they make answer, "Oh no! we shall take care of that, because we propose to tax all these—to raise the price of oats to seventy lire per ton, that of maize and beans to twenty-two lire fifty centimes." Yet it is a well known fact that, by so doing, many will be reduced to live on offal. In many provinces the populations never touch wheaten bread save in the hospitals, and there is a proverb in the Basilicata to indicate that so and so is cared for with the utmost tenderness. "Why, he is fed on wheaten bread." The landed proprietors know that this, even without meat, is the cure for pellagra, and yet they insist on their barbarous demands.

Would that I could say with hopefulness that the Government will refuse to accede to the demand. Already the tax on salt is applied, all reduction in the military and naval budgets refused, and "order reigns" in the land. But what will happen when the state of siege is over, it is difficult to foresee. Assuredly, if the starving peasants should present themselves to the Government after the passage of the new corn laws and put the dilemma as put by Cavour, "Now that you have benefited the proprietors and farmers by putting into their pockets money taken by force from the pockets of the very poorest and most numerous class, will you kindly lessen our working hours and compel our employers to fix a minimum wage?" the members of the said Government would find themselves in a cleft stick. The case is so apparent that really I cannot see that much fault can be found with your Coxeyite army, save that they have mistaken the time of day. They should have manifested their desire to the Harrison Administration at the moment of the passage of the McKinley act.

J. W. M.

LONDON'S SUMMER EXHIBITIONS.

LONDON, May 4, 1894.

AT the beginning of its career, the New Gallery, inheriting the old Grosvenor traditions, represented a definite school, or movement, in England. Though its managers found place for other painters, it was essentially the headquarters of the Primitives, or followers of the Pre-Raphaelites. But gradually, probably for want of sufficient support from the Primitives themselves, it fell away from its first principles, until this year, in its spring exhibition, it has degenerated into a mere annex of the Royal Academy. It contains little that might not as appropriately be found in Burlington House, and, of this little, nothing is of special note if we except the "Love among the Ruins," by Sir Edward Burne-Jones, a replica in oils of the well-known large water-color which, by such a curious and unaccountable blunder, was virtually destroyed a few months ago. The story must still be remembered by the artist's admirers. As far as one can tell without immediate comparison, the new painting retains the characteristics of the original—the fine blue, recalling Rossetti, in the gown of the female figure; the good decorative intention in the arrangement of the ruins, entangled with

wild roses and brambles; the wan weariness in the lovers' faces; and something of the old weakness and affectation in the technique. It is, in a word, a painting full of some of the finest and some of the worst qualities of the painter, but, with all its drawbacks, immensely more successful than the two new canvases, without a history, which he also exhibits: one, a portrait in which he seems to vie with Henner in the attempted harmony of blacks and whites, but makes the mistake of giving to the living model the corpse-like pallor which the Frenchman has retained for his dead Christ; the other, "Vespertina Quies," a single figure in the manner of earlier Sibyls and Symbols. But for these exceptions, the collection certainly does not call for separate or more detailed criticism.

The chief impression given by the New Gallery, the first to open its doors, was one of mediocrity in the year's work. This has now been confirmed by the display of commonplace at the Royal Academy. But here there are premonitions, as it were, of a coming change or awakening, slight enough, and yet not to be overlooked. As one critic said to me, it is as if the Academy were turning in its sleep. Work that once would have been rejected immediately because of its disregard of academical conventions, has crept in; the canvases of younger men, once disdained or skied, now adorn the line. If the show is not so "modern," or daring, or experimental as to challenge comparison with the Champ-de-Mars (or, I might say, the Champs-Élysées), at least there is a far-away reminiscence of problems that are or have been the concern of exhibitors at the Palais des Beaux-Arts. Impressionism has made some headway; even *pointillisme* is beginning to assert itself. But perhaps the greatest surprise the Academy has to offer is the prominence accorded to Mr. Sargent's decorations for the Boston Public Library, hanging them not merely well, but in much the same position they will occupy eventually in the building for which they are designed.

In every way, Mr. Sargent's is the most important work of the year; important not only as an interesting new departure of an artist who has so distinguished himself in another branch of art, but because of its own vigor and impressiveness. The compositions shown are for a lunette and a section of barrel-vault ceiling (in the entrance hall of the special-library floor), which is to be entirely decorated by Mr. Sargent. The religions of the world give the subject, or motive, he has chosen for the whole design, or series of designs. The one portion now completed represents the oppressed children of Israel in the hand of the heathen — Psalms cvi, 21 *et seq.*, being the text he prints as explanation in the catalogue. The Israelites, naked and martyred, are crouched in the centre of the lunette; on one side is an Assyrian, the figure borrowed from ancient sculptures, and the conventional Assyrian lion; on the other, an Egyptian and the Egyptian ibis; above, emerging from what is apparently an arrangement of wings, is the arm of the Almighty, who regarded the affliction of his people "when he heard their cry." On the ceiling are the idols after whom they strayed; to the right, Astarte, veiled and terrible in her beauty; to the left, a horrible colossal monster, meant, I imagine, for Moloch; between are the signs of the zodiac and strange allegorical figures. It is sufficient to look at the composition to realize the amount of research and study necessary to enable the artist to undertake it. It suggests a patience and a deliberation with which, judging from his usual brilliant and rapid methods, one would scarce have credited Mr. Sargent.

And not only this: he has also adapted his technique to his motive. His treatment is as archaic as his subject; only in the children of Israel is there something of realistic rendering —a realism which, truth to tell, seems to strike a discordant note in the prevailing conventionalism. A barbaric splendor is produced by the gold of the armor and weapons and ornaments, all modelled in high relief and set on the canvas as nimbus and decorations are in old Italian altar-pieces; by the stones and jewels glistening in the robes of Astarte; by the brilliancy of the red wings. No doubt this was the effect Mr. Sargent sought. Otherwise, it would not be easy to account for what seems a want of harmony in the color scheme. The wings are so many unattached spots of red. The filmy blue gauze—a marvel of cleverness in the painting—that envelops Astarte is in almost too violent contrast with the more sombre adornments of Moloch. But, as I say, this probably is intentional; color harmonies not being characteristic of archaic art. Besides, until one sees all the designs together in their proper place—there is a frieze of prophets, I believe, to go under the lunette—it is too soon to speak of the decorative success of the general scheme. The comparatively small fraction exhibited amazes by the knowledge revealed, by the vigor of drawing, and the virility and strength and fearlessness of the composition.

To turn from work done for a definite purpose to the ordinary exhibition *machine* is to make the latter seem more casual and unobserved and "faked" than ever. Indeed, it is the inability of ninety-nine painters out of a hundred to see things for themselves, or to see them intelligently and artistically, that is so deplorable and tedious. Art is not the mere haphazard arrangement which most of the pictures at the Academy are. It is because of its decorative quality, because a beautiful composition has been seen and felt before being intrusted to canvas, that Mr. Edwin A. Abbey's "Fiammetta's Song" stands out in marked relief. On a more ambitious scale than any of the few paintings by him which I can remember, I am not sure that to the size of the canvas he has not, in a measure, sacrificed his effect, and that its charm would not have been strengthened by judicious reduction. But, as it is, there is a stateliness, a dignity in the design that delights. The theme is simple: women in graceful old Florentine costume are grouped about a semicircular terrace, which is backed by tall cypresses and overlooks a broad, beautiful Italian landscape. The decorative intention is as fine and almost as well realized as in Mr. Abbey's late illustrations to the comedies of Shakspere, and shows him to be only less successful as a painter than as an illustrator.

The same quality, with a still more painter-like feeling, is found in Mr. William Stott's "Awakening of the Spirit of the Rose," which is not unlike the Nymph he painted many years since—quite his best-known picture—though a gain in correctness of drawing is more than outbalanced by a loss in poetry of treatment. Another canvas by this artist, "The Faerie Wood," also asserts itself, in the midst of many mediocrities, by its decorative convention and restraint. And it is because Mr. Tuke's "August Blue" is something more than a study of naked boys bathing—though the subject is by no means easy or simple—that it compels attention, where the more ambitious "Sir Percival" from Mr. Hacker's studio and the flaunting nakedness of Prof. Herkomer's model invite the courtesy of neglect.

And so it is with the portraits and landscapes. The bald and brutal presentments of uninteresting, or interesting, people by Academicians, who monopolize too much of the line, are passed over for a quiet, sombre, well-thought-out, and well-balanced portrait of Prof. Blackie, by Sir George Reid, the president of the Scottish Academy, for the work of so young a man as Mr. Charles W. Furse, who, in painting Lord Roberts of Candahar, has borrowed a hint from Velasquez or Sir Joshua, and set his hero against a fine conventionalized landscape; and who, again, in painting a scholar, has, while suggesting character, also made a fine harmony of the gray of the coat and of the books in the bookcase, of the green of the necktie and of the pattern of the chair. Even Mr. Orchardson and Mr. Watts, though the latter has at the New Gallery a portrait of Mr. George Meredith notable for its subject, are less to the fore. The serious work of men like Mr. H. W. B. Davis and Mr. Alfred East and Mr. David Murray; the earnest endeavor to solve a difficult problem—a brilliant sunset after the rain—of a man like Mr. Alfred Parsons, are far eclipsed by a quiet, unpretending landscape, "Returning from Pasture," by Mr. T. Austen Brown, a painter not very widely known. The reason of his success is that he has attempted not only to grapple with a technical difficulty, not only to record a bare transcript of nature, but to make a picture of the simple material chosen—a few cows, a girl driving them, a row of trees, a bit of blue sky, and a glimpse of a near village. Here is new proof, were it wanted, that subject in art is nothing; treatment, everything. It probably will be noted that among the few exhibitors worth special mention members of the Academy do not figure largely. But of them the only other conspicuous fact to be recorded is that Sir John E. Millais is absent altogether. The president's rigid, classic conventions are more formal and academic even than usual. Mr. Alma-Tadema has but an indifferent portrait and a small arrangement of marble. Mr. Fildes has deserted sentiment for royalty, and painted a characterless portrait of the Princess of Wales. And thus I might go through the list of painters.

With the sculptors, however, it is another matter. Here, Mr. Frampton, with his bas-reliefs, and Mr. Onslow Ford, with his portrait busts, give distinction to the galleries. And, above all, there is Mr. Alfred Gilbert, who is represented by a sketch model of the tomb of the late Duke of Clarence. It is an exquisite piece of work. An alabaster sarcophagus is enclosed by an elaborate metal railing, decorated with angels and arabesques; above, a kneeling angel with silver wings holds a golden crown over the extended figure of the dead prince. The model is as lovely and refined and rich as many an old reliquary or casket. But a doubt rises in the mind as to whether the design will be as effective on the large scale ultimately intended. As time goes on, one becomes more and more convinced that Mr. Gilbert is less the sculptor than the goldsmith—the modern Cellini. However, without seeing the tomb itself, it would be impossible to pronounce upon its merits. N. N.

MARSHAL OUDINOT.—II.

PARIS, May 8, 1894.

MME. OUDINOT was called all her life "the lady who made the campaign of Russia." We left her retreating with her severely wounded

husband, attended by a small escort of cuirassiers, which diminished at each station. On the ascent of the hill of Wilna, she says:

"I saw motionless soldiers all along the road; it had been impossible for them to go further; overtaken by the cold, they had fallen, and, when they had fallen, they could not rise again. Pools of blood were seen on the snow. Nothing has ever effaced from my memory the terrible impression which I received from this ascent through a field of dead. Our horses, rough shod for the ice, mounted vigorously this steep hill, and we soon left the painful spectacle behind us. The marshal maintained a profound silence; he felt instinctively all that I suffered from what was under my eyes, but he himself suffered too much to ask questions. We were now going like the wind over the plateau which we had crossed with so much difficulty a few weeks before; but the snow had made the roads very even."

After a most difficult journey, the marshal entered Berlin on January 1. The King, who was at Potsdam, made kind inquiries after the marshal's health, through Prince Radziwill, his brother-in-law. Victor Oudinot joined his father in Berlin. He had been travelling from Wilna with a friend, and reported that they had saved each other's noses by throwing snow in the face, after the Russian fashion, when their noses were beginning to grow unnaturally pale and to freeze. The marshal stayed a little time in Leipzig and in Mayence, and finally returned to Bar, where he slowly recovered. He left for Paris in March, in order to offer his services to the Emperor for a new campaign, which was imminent. The young and heroic duchess was presented to the Emperor, to Marie Louise, to the mother of Napoleon, to the Empress Josephine, and to Queen Hortense. The presentation to Napoleon was characteristic.

"I followed the Duchess of Bassano, who soon found herself alone with Napoleon and me. He took a step toward us, and, making a gesture of the head rather than a bow, he said; 'Good-morning, Madame the Duchess of Bassano.' Then, turning towards me, with the same toss of the head, without changing his expression or the inflection of his voice, he said: 'Good-morning, Madame the Duchess of Reggio.' I bowed, for I had now recovered my spirits. After a moment's silence the Emperor asked for news of the marshal, and then said: 'You are a long-married woman, madame.' A fine smile followed these words and lighted his face. I answered that I had, in fact, already been married sixteen months, but that circumstances had prevented my presentation. 'I know,' said the Emperor seriously, with a shade of interest, 'you made a long journey, and,' he added with well-marked interest, 'you were very cold.' I bowed; he stopped; then asked, 'You are from Champaign?' After my answer, he asked again for news of my husband, and, turning towards my companion, spoke, I think, of her children; then bowed us out together."

This was the only interview Mme. de Reggio ever had with the Emperor. It was thought that she had been received with favor. She says that she saw for ever that "dark blue eye which it was as impossible to fix as it is to fix the sun." The marshal received the command of the Twelfth Corps of the Grand Armée, and the young duchess returned to Bar. Oudinot played his part at Lützen, at Bautzen, at Gross-Beeren; he covered the rear-guard during the retreat, and, stricken with typhus, had to return to his country-place of Jeand'heurs. Soon afterwards France was invaded and the marshal retired to Paris with his wife; he received the command of a portion of the Guard, and left with it for Vitry. There his father and many of his relations and friends lived still. Oudinot was wounded again during the campaign of France, but only slightly, and had not to leave his command. The end of the Empire was approaching. The Duchess of Reggio gives a graphic account of the departure of Marie Louise for the Loire. She was at Versailles, and, on the eve of the occupation of Paris by the Allies, she heard a great noise—

"an incessant and confused noise, which lasted all night, and announced the passage of a great number of men, horses, and carriages. The light of day shone upon the most astonishing spectacle which could well be seen. It kept us motionless at our windows. What was passing before us, my children, . . . was the Empire, the Empire, which fled with all its pomp and splendor; the ministers, in their carriages drawn by six horses, taking with them, with their portfolios, wives, children, jewels, liveries, the whole Council of State, with its archives, the crown jewels, the administrations. And these remains of power and of magnificence were mixed up on the road with poor families who had put on a cart all that they could take from their houses, for fear of plunder! At daybreak the roar of cannon had been heard."

King Joseph, who had been left in Paris for its eventual defence, signed a proclamation ending with these words, "Parisians, I remain with you," and left almost immediately afterwards. At Rambouillet, Mme. Oudinot saw Queen Hortense, who was in flight and had just heard that the Neuilly bridge had been blown up. She was thus separated from her mother, the Empress Josephine, who remained alone at Malmaison. Marshal Oudinot did not wait long to recognize the Bourbons; he felt free after the abdication at Fontainebleau, and he was sent by the Provisional Government to meet the Comte d'Artois. "The marshal," says the duchess, "returned captivated by the charm of a prince whom he served sincerely, not only in action, but by his experience in French affairs." The Comte d'Artois at once appointed him minister of state and gave him a place in the cabinet. The Duchess of Reggio, who belonged to a Legitimist family, has nothing to say about this sudden conversion of her husband, and finds it very natural. In revolutionary times, the most extraordinary things seem almost natural. In a visit which Mme. de Reggio, who had returned to Paris, thought necessary to make to the Empress Josephine, at Malmaison, whom did she meet but Mme. de Staël!

"The personal enemy of the Emperor probably thought it in good taste to put in an appearance at Malmaison. . . . When the Empress and Mme. de Staël appeared, we found that the former seemed very agitated. Mme. de Staël crossed the drawing-room rapidly, bowed, and left. I must tell you that, besides Mme. de Ste.-Aulaire and myself, a third person had been introduced, who was no less than Mme. Walewska, the Polish lady to whom the Emperor was so tenderly attached during the campaign of 1806. These two women, one who had hated Napoleon, the other who perhaps had loved him too much, drawn by the same impulse towards the repudiated wife—was it not a curious contrast and meeting? But the strangeness and the force of events explained everything. Josephine, however, did not leave us time to meditate; after having answered the farewell bow of Mme. de Staël, she came towards the mantelpiece, where we were all three waiting in silence, and, without any preamble, said: 'I am come from a very painful meeting. Would you believe that, among other questions which Mme. de Staël thought fit to put to me, she asked if I still loved the Emperor? She wished to analyze my state of mind in the presence of this great misfortune. I, who never ceased to love the Emperor while he was happy, would I change now?'"

The Empress Josephine was already ill. She died a week afterwards.

The Emperor Alexander paid a visit to Mme. de Reggio. The marshal had assembled all his staff and his relations for this visit.

"General Pajol had his arm in a sling; Victor Oudinot walked with crutches; M. de Xaintrailles was bent double from the effect of a lance wound; M. Jacqueminot was limping, as well as General Pacthod. This was a striking group and produced its effect. With an exquisite good grace, which never left him, the Emperor offered me his hand to lead me from the head of the stairs to the drawing-room, and all the gentlemen followed us. They formed a circle and the marshal introduced them in succession. To each were addressed some questions. 'Gentlemen,' said the Emperor at the end, 'this war has indeed maltreated you; but if on our side we acquired some ability, to whom did we owe it? Yes, the terrible lessons which you gave us at last taught us something.'"

The Duchess of Reggio was very happy in seeing France at peace and the Bourbons on the throne, but her contentment did not last long. When Napoleon left Elba and came back to France, the marshal was at Metz; Marshal Soult, then minister of war, had given him a command in the east, which placed under his orders the garrisons of Metz and Nancy. The marshal gave a great ball and the duchess was dressing when her husband entered her room, and announced to her that a courier had just arrived from the minister of war: Napoleon was marching on Paris. "You will dance, my dear," said the marshal, "you will seem very quiet, you will know nothing and allow nobody about you to know anything." During the dance, which was very animated, the marshal held a council with the generals and colonels of the garrison. He resolved to march on Toul and Langres, in order to oppose the progress of the Emperor. Before starting, he received a message from Marshal Ney, who asked him to coöperate with him against Napoleon. The day after he wrote this letter, Ney changed his mind, and united his troops with those of the Emperor. Already emissaries of Napoleon had been sent to all the garrisons of the east. At Toul, Oudinot resolved to hold a review, to speak to the soldiers, and to end his speech with "Vive le Roi!" The night before, he summoned to his hôtel all the regimental officers from sub-lieutenant to colonel.

"They formed a circle, with the marshal in the middle. He allowed them to seat themselves in silence, and then said to them: 'Gentlemen, in the present circumstances, I make an appeal to your loyalty; we wear the white cockade; to-morrow I shall pass you in review before my departure. How will you and your soldiers answer my cry, "Vive le Roi!"?'

"A dead silence followed these words. Nothing more dramatic ever happened in my presence. Concealed behind a curtain, I was a forced witness of this scene. Two chandeliers gave light enough to prevent anything being lost; but their pale reflections on the sombre and warlike faces produced an indescribable effect. This silence, expressive as it was, could not be accepted by the marshal as an answer. I saw the storm gathering; each minute seemed a century. . . . At last, these words were uttered by the marshal: 'Well, gentlemen?' Then a young officer of inferior rank came forward and said: 'Yes, Monsieur le Maréchal, we must answer you, and nobody here will deny what I am going to say. To your cry of "Vive le Roi!" the troops and we ourselves shall answer, "Vive l'Empereur!"' 'I thank you sir,' said the marshal. He bowed, and they all left the room without saying another word."

The marshal returned to Metz and proclaimed a state of siege. When he heard of the arrival of Napoleon in Paris and the flight of Louis XVIII., he sent in his resignation to the minister of war, Marshal Davout, his old friend. Napoleon felt displeased with Oudinot, and ordered him to retire to his country-place in Lorraine. A few days afterwards he called him to Paris and was very friendly to him, but Oudinot received no command.

Here ends what I may call the heroic part of the memoirs of the Duchess of Reggio. It is difficult to imagine a greater contrast than that between the first and the second part of the volume. The duchess herself seems changed; she is no longer the young woman who shares the retreat from Russia, who admires the hero in her husband. After the second restoration, Oudinot is in high favor, and she becomes herself a lady-in-waiting to the Duchesse de Berry. What she writes about this new period is too much in the style of the court circular. After the Revolution of 1830, she remained in voluntary retirement for many years. Oudinot was less obstinate, and accepted the new régime; he became the Governor of the Invalides, and in that capacity received the remains of his Emperor, brought from Saint-Helena by the Prince de Joinville.

The Duke of Reggio died on September 13, 1847, at the age of eighty-one, at the Invalides, and the Duchess at Bar-le-Duc in the month of May, 1868.

Correspondence.

THE DRED SCOTT CASE.

To the Editor of The Nation:

Sir: May I ask the privilege of making two comments upon your review of Mr. Brinton Coxe's invaluable book? First, in your remarks on Judge Bancroft Davis's omission of the Dred Scott case from his "Table of cases in which statutes have been held to be repugnant to the Constitution," you say: "Why it was omitted seems inexplicable. The omission remained unobserved by all eyes until those of Mr. Coxe discerned it." I think there must have been many who observed it, but who concluded, as I did, that Judge Davis omitted it deliberately, on the ground that, after the Court had declared that it had not jurisdiction over the case of Dred Scott, whatever it said further was *obiter dictum*. At least this seems a plausible explanation.

Secondly, it seems due to President Scott to draw renewed attention to his discovery of the New Jersey case of Holmes and Ketcham vs. Walton. This case, decided in 1779, is anterior to Trevett vs. Weeden and the other cases of the Revolutionary period mentioned by Mr. Coxe. It was made known in 1886 (Papers of the American Historical Association, ii., 45), but seems to have escaped Mr. Coxe's extremely careful search.—I am, sir,

Respectfully yours,
J. Franklin Jameson.

Brown University, May 15, 1894.

[The late Mr. Justice Miller continued the work of condensing the reports of the Supreme Court which Mr. Justice Curtis had brought down to 17 Howard. In the second volume of his 'Decisions of the Supreme Court' is the case of Dred Scott, and the following is his concluding syllabus of the decision:

"(9.) Therefore, the act of Congress of 1821, prohibiting slavery in the territory ceded by France, north of thirty-six degrees thirty minutes north latitude, is unconstitutional and void."

With Chief Justice Taney declaring, in what purports to be the opinion of the Court, "Upon these considerations, it is the opinion of the Court that the act of Congress which prohibited the citizen from holding and owning property of this kind in the territory of the United States north of the line therein mentioned, *is not warranted by the Constitution and is therefore void*," and with so eminent a jurist and constitutional scholar as Judge Miller giving as his analysis of the decision the conclusion that it adjudged the statute to be "unconstitutional and void," we must reiterate that the deliberate omission of the case from the table of cases seems inexplicable. The only rational explanation is that the omission was one of those extraordinary oversights which sometimes befall the most careful and industrious of men; and such a man Mr. Bancroft Davis unquestionably is. If it were a less famous case, one might say that Mr. Davis had been misled by the reporters. The head-notes of Howard cover three pages and refer to the statute but once, and then in a vague way, speaking of "an exercise of authority over private property which is not warranted by the Constitution." The first volume of Miller purports to include 19 Howard, but omits the case of Dred Scott; the second volume purports to give only 20 and 21 Howard, but contains the case of Dred Scott, which is in 19 Howard. Mr. Davis, however, is himself too good a constitutional scholar to be misled by such inaccuracies.

As to Holmes vs. Walton, it was not Mr. Coxe who overlooked the case, but our correspondent who has overlooked what Mr. Coxe says about it. He devotes half a page to it (p. 222), and concedes that the date of the decision was with him largely a matter of conjecture, though he inclined to the conclusion that it was in the latter part of 1786 or the earlier part of 1787. Whether it was before or after Trevett vs. Weeden was not the subject of his investigation. All that he cared to determine was that the case was one of those "alluded to by Gerry on June 6, 1787." It is proper, however, to add that Mr. Coxe, apparently, was ignorant of President Scott's researches, and that he, apparently, relied on Mr. Meigs's list of cases published in 1885.—Ed. Nation.]

CONGRESS AND SPELLING-REFORM.

To the Editor of The Nation:

Sir: The Congress of the United States is quite generally recognized as a perpetual source of danger in many other directions, but one might have supposed that the English language, at least, was safe from any worse fate at its hands than to be used for the concealment of thought (or its absence) and for the killing of time. It is certainly to be hoped that the common sense of the country will warn it away from any attempt at the reformation of English spelling.

You have pointed out some of the absurdities of such a course, but the subject was not exhausted. If it be the duty of Congress to economize by amputating a silent *e*, how could it logically stop short of lopping off the useless monosyllable at the end of the famous Congressional "Where are we *at?*" and this would at once drag the whole subject into the realm of party politics. Some future Senator might introduce into his time-killing speech on some amendment to a proposed duty on dandelion roots the whole of Logan's four-days' speech on the Fitz-John Porter case. This would naturally lead some language-reform Democrat to move for a revision of Logan's syntax, in order to keep down the appropriation for public printing, and the result would be worse than the fight over the expunging of anti-Jackson resolutions.

But, seriously, cannot the spelling-reform enthusiasts see the practical difficulties in the way of a wholesale conventional change in English spelling, whether such a change be in itself desirable or not? Do they not know that the vast majority, for a whole generation at least, would go right on in the old fashion, entirely regardless of the precepts and practices of the reformers, or even of the Government Printing-Office? Do they not realize that the poor children whose difficulties with the present system have reached such an acute stage (in the minds of the reformers) would be plunged into confusion worse confounded by the continual appearance of different spellings for hundreds of words in common use? Could anything result from such a condition except a period of anarchy, with no recognized standard, every man spelling as might seem "right in his own eyes"? Has the fact been considered that by the time when the new method should (if ever) drive its opponents from the field, it would be strictly phonetic no longer? Or is it supposed that such a phonetic strait-jacket can be devised as to paralyze the vital organs of phonetic evolution by its grasp, and entail upon our descendants for all time the privilege of using the petrified linguistic corpse of the nineteenth century?

If those who are making war on silent letters through the Chandler resolution will but devote their energies to replacing the present Senate by a body of men who can comprehend the significance of the letters which are not silent in such words as *duty* and *patriotism*, the children of the land will get along well enough with their old spelling-books.

W. H. Johnson.

AN APPARENTLY UNNOTICED SENSE OF *HARD*.

To the Editor of The Nation:

Sir: Now that the study of the English literature of earlier days is so industriously prosecuted, the discussion, in a miscellaneous journal like the *Nation*, of an obsolete word, or use of a word, can hardly be considered as misplaced. Without further preamble, then, commentation being postponed for a few minutes, I produce some quotations illustrative of a signification of the adjective *hard* which has long passed away:

"And yit wee weren cast doun and beten down, many tymes, to the *hard* erthe be wyndes, and thondres, and tempestes." Sir John Maundeville, *Voiage and Travaile* (about 1400), p. 284 (ed. 1839).

"Eyther smote other, soo that hors & man wente to the erthe; and so they lay long astonyed, & their hors knees brast to the *hard* bone." Sir Thomas Malory, *Kyng Arthur* (1470-85), vol. i., p. 20 (ed. 1817).

"And the Bishop of Norwich and his councell let brenne thes shippis, with all the pelage, in the same haven, all in to *hard* asshes." Anon., *Cronicles of Englōde*, etc. (1483), sig. D 6*v*.

"They persed the flemynges cotes of mayle into ye *harde* bones." Lord Berners, Trans. of

Froissart (1523), vol. i., p. 738 (ed. 1812), vol. i., p. 738.

"In good fayth, syr, quod he, I am, in thys mater, euen at the *harde* wall, and se not how to go ferther." Sir Thomas More, *A Dyalogue* (1529), fol. lv., *v.*

"To fret out the rotten flesh, even to the *hard* quick, that it smart again." William Tyndale (about 1530), *Expositions and Notes* (1849), p. 68.

"His weapon entred through bothe wode and stone, and into the erth, to the *hard* head." Lord Berners, Trans. of *Arthur of Lytle Brytayne* (about 1530), p. 142 (ed. 1814).

"But than Arthur put his sword Clarence into his body up to the *harde* crosse." *Id., ibid.*, p. 173.

"He was cloven to the *hard* tethe, and so he fell downe dead." *Id., ibid.*, p. 322.

"Cicero mocked hir to the *harde* teeth." Rev. N. Udall, Trans. of *Apophthegmes of Erasmus* (1542), fol. 319*v*.

"All the horsses [were] trapped in sondrie couloured ueluettes to the *heard* pauement." Richard Grafton, *Chronicle* (1543), fol. 146.

"Vp to the pappe his string did he pull, his shaft to the *harde* yron." Roger Ascham, *Toxophilus* (1545), p. 134 (ed. 1868).

"Vp is he to the *harde* eares in loue." Rev. N. Udall, *Roister Doister* (before 1553), Act I., Scene I.

"The sorie foxe, being al alone, was eaten vp almoste to the *harde* bone." Sir Thomas Wilson, *The Arte of Rhetorike* (1553), fol. 101 *v.* (ed. 1567).

"And therewithall he thruste the rapier into him, to the *hard* hiltes." William Painter, *The Palace of Pleasure* (1566–67), vol. i., p. 291 (ed. 1813).

"He commanded to strike of all the Rhodians heads, and to raise the city to the *hard* foundations." "The temples wil fall down to the *hard* foundations." Sir Thomas North, Trans. of *Guevara's Diall of Princes* (1568), fol. 359, 412. These passages are not in the edition of 1557, the first.

"Our auncestours . . . pursued vertue at the *harde* heeles, and shunned vyce as a rocke, for feare of shipwracke." Rev. Stephen Gosson, *The Schoole of Abuse* (1579), p. 26 (ed. 1868).

"I . . . wore my wits to the *hard* stumpes." "A Tree . . . though it be often felled to the *hard* roote," etc. "When my Lady came, and saw me . . . wasted to the *harde* bones," etc. John Lyly, *Euphues and his England* (1580), in *Euphues*, etc. (ed. 1868), pp. 272, 291, 297.

"The earth was cast round about him up to the *hard* chin." Anon. (1587), in *Raphael Holinshed's Chronicles* (ed. 1807–8), vol. vi., p. 331.

"But I leave it [pease-pottage] to rusticks, who have stomacks like Ostriges, that can digest *hard* yron." Thomas Cogan, *The Haven of Health* (1589), p, 33 (ed. 1636).

"Following the Argonautes at the *heard* heeles." G. W[oodcocke], Trans. of *Hist. of Ivstine* (1606), fol. 109 *v.*

"Up to the *hard* eares." R. C., *A World of Wonders* (1607), p. 149. The French original, by Henri Estienne, has simply "jusque aux oreilles."

"As for broken heads to the *hard* scalpe, were no dainty." Anon., *The Historie of Frier Rush* (1620), p. 14 (ed. 1828). By a common outworn idiom, *they* is here omitted before "were." *Scalpe* here has the old sense of "skull."

It must have been before the evolution of nightshirts that a man was first said—as even till past the middle of the last century he was sometimes said—"to be in naked bed" and "to go into his naked bed," instead of "to be in bed naked" and "to go to his bed naked." These extinct phrases are to be accounted instances of the absurdity which rhetoricians have dignified by the name of hypallage.

As to "they followed him at the hard heels," however, the like of which expression is twice seen above, we have, in it, I apprehend, nothing of a similar description. I mean that "they followed him at the hard heels" was not intended as a transposition, involving an adjective substituted for an adverb, of "they followed him hard at the heels," that is, as we should now put it, "they followed hard at his heels."

With regard to the other quotations which have been brought forward, it is patent that, for the most part, their *hard*, if thrown back, adverbialized, so as immediately to precede *to*, *into*, *at*, should, in reason, have, unprecedentedly, the sense of "quite," or that of "as far as," much rather than that of "close," "near." In all my quotations, too, there is, pretty clearly, one and the same peculiarity about their *hard*. How is it to be explained?

Ever since English arose, the *ground* or *earth* has, of course, had, equally with *cold*, *hard*, as a common epithet. But why may we not surmise that it was, of old, often called *hard* when there was no appropriate occasion for its being thus distinguished? "The *hard* ground" would, under such circumstances, convey no other idea than that of "the *ground*," or, with the stress worded, "the *very* ground"; and *hard*, being frequently taken, in one connexion, as an equivalent of "very," may easily have come to be taken, in other connexions, as likewise its equivalent. On this view, *hard*, as applied to *ashes*, *quick*, *ears*, *chin*, and *heels*, presents no difficulty. Helpful, doubtless, towards originating "*hard* asshes," "*hard* quick," and the rest, were, after "*hard* ground," such combinations as "*hard* bone," "*harde* wall," "*hard* foundations," in which the epithet not seldom seems to have been merely emphatic.

"Who, *almost*, was there?" As in this question, *almost* was long a synonym of *indeed*, *verily*. And now it has been made out, I think, that *hard* was formerly a synonym of *very*.

Two unusual locutions, in which *hard* has respect to severity or rigour, are, in conclusion, here exemplified:

"The Souldiers of Augustus . . . desired leave to be excused from the service, not because they would be so, indeed, but because they meant *to hold Augustus* (as the saying is) *to hard meat*, and make him grant what they demanded, for feare they should leave him." Sir Richard Baker, Trans. of *Malvezzi's Discovrses upon Cornelius Tacitus* (1642), p. 459.

"But what I answer I would be understood to direct to the Atheist and the Infidel, permitting them that already believe the substance, to vary their phansies with what circumstances they please. But, for these others, *I must hold them to hard meat*, and cut my skirts as short as I can, that they sit not upon them." Rev. Dr. Henry More, *The Grand Mystery of Godliness* (1660), p. 223.

"I asked Jack *at the hard;* and at first he could tell me nothing about it." Sir G. W. Dasent, *Half a Life* (1874), vol. i., p. 275.

F. H.

MARLESFORD, ENGLAND, March 9, 1894.

Notes.

JAMES POTT & Co. publish immediately Dr. Henry Drummond's 'Lowell Lectures on the Ascent of Man'—"a study in embryos, in rudiments, in installations." The two summary closing lectures on the Ascent of Mankind are not reproduced.

'A Suburban Pastoral, and Other Tales,' by Prof. Henry A. Beers of Yale, is on the eve of publication by Henry Holt & Co.

'General Washington,' by Gen. Bradley T. Johnson, in the Great Commanders series; and the following novels, 'Cleopatra,' by Dr. George Ebers, 'A Daughter of To-day,' by Mrs. Everard Cotes, and 'Mary Fenwick's Daughter,' by Beatrice Whitby, are in the press of D. Appleton & Co.

Ginn & Co. will issue, this month, 'The Inflections and Syntax of Malory's Morte d'Arthur,' by Charles Sears Baldwin.

Hachette & Cie., Paris (New York: Dyrsen & Pfeiffer), have begun to publish in instalments Maspero's 'Histoire Ancienne des Peuples de l'Orient,' a work bearing the same title as that of 1875 by the same author, but otherwise wholly new in text and illustrations. The work will form three volumes, or 150 *livraisons*.

Mayer & Müller, Berlin, have undertaken to publish in chronological order the complete mathematical works of Karl Weierstrass, in eight volumes, beginning with his 'Development of Elliptic Functions' in 1841. The second part (five volumes) will embrace the majority of the lectures delivered by Weierstrass at the University of Berlin.

We come to a fresh season of reprints, and at the very top we must name the delightful two-volume edition of the Letters of Edward FitzGerald (Macmillan). Mr. Wright has added some forty to the selection already published in connection with FitzGerald's Writings, and not one of them would we miss; indeed, taken by themselves they illustrate FitzGerald's character at almost every point—his friendships, human interest, critical taste, literary occupation, and inimitable epistolary style. Here we have the dawn of his Omar quatrains, more depreciation of Tennyson's "Princess," more of his Cromwell researches on behalf of Carlyle, another letter from Carlyle himself, more verbal discussion (damning "individual") in a letter to Fitzedward Hall, and a rare boyish reminiscence of country folk shooting at an effigy of Bonaparte by way of celebrating Waterloo. Then we see him longing to revive 'Clarissa Harlowe' with the aid of scissors, and suggesting that Sir Thomas Browne's style would befit a translation of 'Don Quixote.' These are but samples. The bulk of a book, FitzGerald says, destroys his pleasure in the use of it; and this has been borne in mind for the present handy edition. Prof. Wright makes the captivating announcement that he is engaged in editing a voluminous correspondence of FitzGerald with Mrs. Kemble.

There is something about FitzGerald's letters that reminds one of Pepys, and anyhow we mention next the fourth volume of Mr. Wheatley's substantially final edition of the Diary (London: Geo. Bell & Sons; New York: Macmillan). It ends even with the third volume of the MS., and with the first half-year, 1665. The illustrations are Kneller's portrait of the diarist, with likenesses also of the Duke of York, Edward Cocker, and Sir William Petty.

Further volumes in the dainty rubricated Shakspere of J. M. Dent & Co. (New York: Macmillan) are "Two Gentlemen of Verona" and "The Merry Wives of Windsor"; the latter being ornamented with the Chandos portrait, the former with a view of the bust in Stratford Church.

'Woodstock' and 'The Talisman' carry on the Black (Dryburgh) edition of the Waverley Novels (New York: Macmillan), the series now making twenty-one volumes.

Charles Scribner's Sons add 'My Farm at Edgewood' and 'Wet Days at Edgewood' to the uniform series of Donald G. Mitchell's works, in neat and unpretentious garb.

The late Dr. Alpheus Todd's 'Parliamentary Government in the British Colonies' has been edited afresh by his son, who supplies a very interesting, if brief, sketch of his father's career, besides bringing the work down to date in respect to the important legislation of the decade since the author's death, in Canada and other colonies. This pious (and useful) labor is in continuation of Mr. A. H. Todd's new edition of his father's 'Parliamentary Govern-

ment in England,' a few years ago. Both are standard works of reference. Longmans, Green & Co. are the publishers.

The Catholics, who felt themselves very near the spirit of Columbus in the celebrations which one is now rather glad to leave behind, have made a parting gift to the Columbian bibliophiles in a pretty book, 'The Columbus Memorial Volume,' in which the Catholic Club of New York and the United States Catholic Historical Society have united in admiration of the man whom some would like to adore as a saint.

'The Natural History of the Christian Religion' (Macmillan) is the taking title of the not very taking book which the Rev. William Mackintosh has written "to trace the origin of Christianity to the common religious instinct." The author has a good endowment of Scotch pertinacity in arguing out every phase of every theory to the bitter end, and this often gives an appearance of diffuseness to his pages, while his express reliance upon the "employment of conjecture" necessarily lends an air of unreality to many parts of his discussion. Strikingly in contrast is the method of Weizsäcker in his 'Apostolic Age of the Christian Church,' the first volume of which leads off in the new series of Williams & Norgate's "Theological Translation Library" (Putnams). Here we have a master of historical investigation, with his eye all the while on the fact, marshalling the different parts of the record into a sequence which has often been dislocated in the traditional form, and which, when restored, clears up many a puzzling tract in the narrative.

The life and works of Mrs. Elizabeth Rowe (1674–1737), the author of the Biblical epic 'Joseph' and of 'Letters from the Dead to the Living,' are discussed by Dr. Theodor Vetter in an excellent brochure ('Die göttliche Rowe') just published at Zürich. Though now one of the "very dead" authors, Mrs. Rowe was a not insignificant figure in her own day. Her relations to the English literature of her century are interesting; but much more remarkable is the impression which her poetry made on her German contemporaries, especially Klopstock, who decorated her with the title "die göttliche." Dr. Vetter's tract sets forth the facts briefly but sufficiently, and is agreeably written.

After twenty-six years of honorable activity the Spenser Society has issued its farewell volume. The first publication of the society was 'The Proverbs and Epigrams' of John Heywood, the last is the same author's 'The Spider and the Flie.' Between these two volumes stand in stately series the works of Taylor the Water-Poet, of Wither, and of Drayton, the 'Tenne Tragedies of Seneca,' the 'Shepheards Calender' of 1579 in facsimile, and many other indispensable reprints. The demise of the society is to students of English the loss of an old and very helpful friend. The excellence of the present volume makes regret the more poignant. The edition of 1556 is carefully reprinted, and the amusing woodcuts, of which there are very many, are faithfully reproduced. Finally, Prof. A. W. Ward, the last president of the Society, has prefixed an introduction which is both a good discussion of the work and a graceful valedictory. *Vivat sequens!*

M. Yriarte has given us, in the 'Livre de Souvenirs de Maso di Bartolommeo dit Masaccio' (Paris: J. Rothschild), a very curious and interesting document. Maso, who must not be confounded with the great Masaccio, was a comparatively obscure Florentine sculptor of the fifteenth century, and not otherwise of great importance than that he had the happy thought to keep, for eight years together, a brief diary and account-book, and that this manuscript has been preserved for us—part of it in the library of Prato and part in the Magliabecchiana at Florence. It forms a unique record of the life of an artist at that period, before artists became the great men that the sixteenth century made of some of them, and when they were humble craftsmen and ready to accept anything in their line of work, from the decoration of a cathedral front to the casting of cannon or church-bells. Maso even records the casting of copper balls for a bed, yet he was a sculptor of enough repute to be named with Michelozzi and Luca della Robbia in the contract for the bronze gates of the sacristy of Santa Maria del Fiore, and an architect eminent enough to be designer-in-chief of the façade of S. Domenico di Urbino, where Luca della Robbia was subcontractor only for the reliefs in majolica and in stone. M. Yriarte gives the manuscript in full in its original crabbed Italian, as well as his own commentary and a translation of the more important passages. There are forty-odd illustrations, but only a comparatively small proportion of their number is strictly relevant to the subject.

To do something new seems to have been the principal aim of the publishers of 'The Yellow Book; An Illustrated Quarterly' (London: Elkin Mathews & John Lane; Boston: Copeland & Day), vol. i. of which, for April, 1894, lies before us. It is bound in boards of a hideous yellow color, with a design, only more hideous than frivolous, in violent black. The pictures (for they are not illustrations and have no connection with the text, but are introduced for their own sake) are of the latest school of English impressionism, and are very slight or very affected or very vulgar. The page is a broad 12mo, and the lines of letterpress, in old-faced type, run straight across it, with old-style catchwords. The matter is, much of it, very modern and very impressionistic, the Whistlerian affectations of Mr. Max Beerbohm's "Defence of Cosmetics" being particularly intolerable. The names of Henry James, George Saintsbury, and Edmund Gosse among the writers, and that of Sir Frederick Leighton among the artists, give, however, a somewhat higher tone to the table of contents, and Mr. Arthur Waugh's essay on "Reticence in Literature" is a healthy protest against many of the vices of "modernity."

Probably no book ever came into this world amid such a clamor of vociferous advertising as has heralded and accompanied the advent of M. Zola's 'Lourdes.' Interviews with its illustrious author began to appear months ago, and clever newspaper paragraphs have since been whetting the interest then excited. On the publication of the first instalment of the romance, Paris broke out in a carnival of *réclame*. Many colored "posters," advertising vans, sandwich men swarmed throughout the city. No such a launching, says M. Gaston Deschamps, has been seen since the days of Boulanger's election or of the glory of Buffalo Bill. Whether the novel will justify all this noise remains to be seen. The opening chapters seem a little clumsy and dull.

Six numbers of a folio "Bibliothèque de Dessin," issued from the Librairie de l'Art, 8 Boulevard des Capucines, Paris, are filled with facsimile drawings by masters old and modern, eight sheets to a number, without letterpress, at two francs the number. Figures predominate—portraits, studies, or imaginative characters—and the total represents the autographic work of Dürer, Rembrandt, Van Dyck, Rubens, Potter, Jordaens, Visscher, Signorelli, Donatello, Da Vinci, Del Sarto, Sanzio, Watteau, Boucher, Rousseau, Millet, Fragonard, Jacquemart, Delaunay, Constable, Herkomer, Legros, and two Americans, Boughton and Knight—to mention only a part. These are very cheap examples of great draughtmanship, and must recommend themselves both for purposes of instruction and for decorative uses. The same establishment sends us four more parts (5-8) of the smaller "Bibliothèque d'Éducation Artistique," continuing the series of choice "Japanese decorative documents" drawn from the Gillot collection. The subjects are flowers and plants, quadrupeds and fish, and strikingly exemplify the keenness of Japanese observation and firmness of stroke in delineating animal life in motion. Humor vies here with the decorative instinct in a way unknown to Western art.

Dr. Harrison Allen's 'Monograph of the Bats of North America,' Bulletin 43 of the National Museum, is a work of great merit. The quality and thoroughness of its descriptions and comparisons, whether external or anatomical, should commend it to all zoölogists having to do with characterization or determination of species. Dr. Allen has devoted his energy to discovery of real additions to knowledge, rather than temporary arrangements; he has gathered a mass of information that cannot be set aside by future students and that is creditable alike to the author and the country. The work is done mainly from the specimens, comparatively little of it from the literature; its extent is shown in the fact that the record, from twenty-one species, with seven varieties, belonging to twelve genera, of two families, required 198 pages of closely printed text and 38 plates of illustrations.

A very dull imagination can infer from its title the labor and the merit of the volume just issued by a committee of the Society of the Alumni of the University of Pennsylvania, viz., 'Biographical Catalogue of the Matriculates of the College, together with lists of the members of the College Faculty, and the trustees, officers, and recipients of honorary degrees, 1749–1893.' A laudable compression has reduced this mass of details to less than 600 large octavo pages. Nothing is in order but to congratulate the University on the industry and devotion of its catalogue committee. Their work will be welcomed everywhere as one more bond in the union of educated men, and one more guide to posterity in tracing the fortunes and descent of a class whose conspicuity is not always commensurate with their influence.

The Geographical Society of Bern has published a report of its proceedings for the years 1891–1892, together with some score of papers presented to the society during this period. Among these we have noted a narrative of travels in Colombia, an interesting sketch of a visit to the King of Dahomey, and a notice by the president, Dr. Gobat, of some of the contributions to North American ethnology published by the Smithsonian Institution. Mr. A. S. Gatschet contributes, in English, some mythic stories of the Yuchi Indians, related to him by the pupil of a mission school at Wialaka, Creek Nation. In the first a council of the various animals, called by the Creator, decides that earth shall be taken from the bottom of the waters to provide solid matter for their home. After the loon and the beaver have failed, the crawfish succeeds in bringing up some mud in its claws which is

given to the Creator, who "rolled it out to a flat mass, spread it on the surface of the waters and it became land."

The geographical unity of the British empire is suggestively treated by Mr. George R. Parkin in the *Scottish Geographical Magazine* for May. The growth of the empire he holds to have been strictly organic—an expansion due to "the rush of a national life, powerful beyond all precedent, along the geographical lines of least resistance." Some striking illustrations of the close industrial dependence of different parts of the empire are given through figures showing the amount of the great staples of wool, meat, cheese, tea, as well as cotton, produced on British territory or in countries under British protection. An interesting series of maps, historical, political, and commercial, give a graphic picture of the growth of the empire during the last two centuries, the principal ocean steamship and telegraph lines, and the naval and coaling stations. "A Quiet Corner of the Alps," by V. Dingelstedt, is a genial description of the Vièze Valley, one of the most conservative regions in Roman Catholic Switzerland. Mr. Stuart-Glennie supplies a brief narrative of his recent explorations in Greece.

Stone & Kimball, Chicago and Cambridge, have founded a semi-monthly called the *Chap-Book*, of handy small duodecimo shape and tasteful get-up, which is to serve as an original literary medium as well as a means of advertisement for the house. The proportion of Canadian poets in the promised list of contributors is noticeable.

Mr. Francis Olcott Allen, 314 Walnut Street, Philadelphia, desires to learn the colors of the devices furnished by Franklin for the flags of the "Associators" of 1747 in Philadelphia, particularly device No. 1, "a lion erect, a naked scimitar in one paw, the other holding the escutcheon of Pennsylvania: motto, *Patria*."

An imperial photograph of the Rev. Edward E. Hale is the latest addition to Mr. F. Gutekunst's Philadelphia portrait gallery of celebrities. It is a faithful reflection of the features of the author of 'A Man without a Country,' considerably nearer his prime, we judge, than the septuagenarian now is.

—In an interesting and important opinion of the Court of Claims, on April 16, in the case of United States vs. Weil, Judge Nott not only holds, as our readers know, that the President may constitutionally sign a bill during a recess of Congress, but argues that what we call the veto power is no part of the legislative function, and therefore that an adjournment of the Legislature does not in reason affect the question of the power of the executive. Moreover, he traces the clause in the Federal Constitution which gives to the President his power of revising legislation to the Constitution of New York of 1777. That instrument established a Council of Revision having this power, and consisting of the Governor, Chancellor, and the judges of the highest State court, or any two of them with the Governor. The common doctrine, that our ordinary executive veto is founded on the old veto of the English King, is denied. "It is manifest, then, that the [Federal] Convention turned from the Constitution of England to the Constitution of New York. When they did so, the man did not live who regarded the Council of Revision as the successor of the Crown, or its approval or disapproval of bills as an exercise of the royal prerogative or a legislative power." Perhaps it is not unreasonable, however, to consider that all which goes to making up the total process of enacting a law, including the revising process, is a part of the legislative function. It does not at all follow that all parts of it must be done while the two legislative houses are in session.

—As regards the history of the matter, Judge Nott has not mentioned that the Massachusetts Convention of 1779-'80 had been all over this ground long before the Federal Convention, and had furnished since 1780 a model which was closely followed; nor does he allude to the prominent part which Mr. Gerry of Massachusetts took in determining the shape of this part of the Federal instrument. This fact is mentioned by Mason in his learned and valuable book, 'Veto Power,' p. 19, note. All this, indeed, may be thought to leave Judge Nott's interesting point of history untouched, since Massachusetts evidently profited by the New York instrument, and the Federal Convention undoubtedly had it in view. But after all, clear as it is that our American "veto" is no veto at all, do not the debates show that, historically, it developed out of the English executive veto? And was not the New York revision, what Madison calls the Federal revision, "a qualified veto"? The circumstances of the case of U. S. vs. Weil suggest an interesting question as to the power of the President, upon a mere recess, to skip the recess and piece together the days preceding it, after the bill reaches him, and the days following it, after the adjournment, in making up the ten days allowed him for consideration before signing. In 1791 (Opinion of the Justices, 3 Mass., 567), the justices of the Supreme Court of Massachusetts, where five days are allowed, laid it down, in an advisory opinion, that such a recess did not necessarily kill an unsigned bill, but that, if left unsigned for more than five days of *the legislative session*, excluding the recess, it became a law. "When a prorogation takes place," they added, "the session is ended, and a bill or resolve, after the session is ended, cannot acquire the force of law."

—Prof. David P. Todd, in charge of the U. S. scientific expedition to West Africa four years ago, having given the necessary permission, Mr. Heli Chatelain, philologist of the expedition, has published his 'Folk-Tales of Angola' as the first volume of "Memoirs of the American Folk-Lore Society" (Houghton, Mifflin & Co.), a handsome book of upwards of 300 pages, comprising fifty tales, with Ki-Mbundu text, literal English translation, introduction, notes, music, and two maps of Angola. We must leave to others the task of estimating the linguistic value of Mr. Chatelain's work, which, however, seems to us considerable, and mention briefly its importance for the student of folk-lore. The native African inhabitants of the Portuguese province of Angola belong to the Bantu stock, but they have been in contact with Europeans for four hundred years. A glance at the Ki-Mbundu text shows Portuguese words in abundance, and a cursory examination of the tales reveals the existence of Portuguese, and possibly Italian, stories (see especially Nos. i., ii., iii., v., and xxvi.). It was, however, to the animal tales that we turned with the greatest anticipation, hoping to find many parallels to those in 'Uncle Remus,' Jones's 'Negro Myths from the Georgia Coast,' and Miss Owen's 'Voodoo Tales.' We were disappointed, and the points of contact with our own negro tales are few. The "Tar Baby" is found in No. xxii.; a trait of No. xvii. is found among the Bahaman negroes; No. xxiii. suggests one of Æsop's fables (the sick lion and the fox, Lafontaine vi., 14), and No. xxxiii. another (the cat changed into a woman, Lafontaine ii., 18). No. xviii. is an interesting variant of the Eastern apologue treated by Benfey, 'Pantschatantra,' i., 113, and found all over Europe (see Köhler's notes to Gonzenbach's 'Sicilianische Märchen,' No. 69). Mr. Chatelain's work is, however, extremely interesting and valuable as showing the diffusion of European tales among savages by colonists, missionaries, and traders. Examples of this had previously been afforded by Mr. Jones's book mentioned above, and Miss Owen's work contained curious illustrations of the mutual relations between negroes and Indians. The American Folk-Lore Society is to be congratulated on having made such a scholarly beginning with its "Memoirs," and we shall look forward with interest to the second volume, which is to contain 'Folk-Tales of Louisiana,' by Alcée Fortier.

—Prof. Cook's 'First Book in Old English,' with grammar, reader, notes, and vocabulary (Boston: Ginn & Co.), will be welcomed as a valuable addition to the multiplying means of instruction in Old English. The grammar is a well-condensed compendium on the basis of Prof. Cook's translation of Sievers, and sufficient for the beginner. We are inclined to take issue with Prof. Cook as to his abandonment of the classification of nouns by stems for the sake of supposed ease in learning, and he himself anticipates criticism. This is the mistake made in Sweet's 'Anglo-Saxon Reader,' which classifies by plurals, and this classification very soon breaks down. It is much better for the student to put forth a little more effort in the beginning, and learn once for all the arrangement by stems, which then becomes a secure possession, available for any Teutonic language, instead of having to learn his noun-classification over again at a later period in his course. The prose selections are from Aelfric, King Alfred (*i. e.*, the translation of Beda that goes under his name, and a little from Boëthius), Wulfstan, and 'Apollonius of Tyre.' The poetical selections include a few lines from 'Beowulf,' all too few, and some from 'Judith' and from 'Andreas'; the Greek 'Life' on which a part of 'Andreas' is founded is given in an Appendix, with a translation. The Appendix includes also specimens of the dialects, Northumbrian, Mercian, and Kentish. The notes at the foot of the pages contain copious grammatical references, and these are also found in the glossary, which, though brief in its meanings, is doubtless adequate for its purpose. German cognates are here frequently given.

—Prof. MacLean's 'Old and Middle English Reader,' on the basis of Zupitza's 'Alt- und Mittel-englisches Uebungsbuch,' with introduction, notes, and glossary (Macmillan), has been long in preparation, the text having been printed from Zupitza's third edition in 1886. The delay has, however, much improved the book, for Prof. MacLean has prefixed valuable descriptive notices of the selections, with bibliographical references and brief notes, and a short sketch of Old and Middle English versification by Oscar L. Triggs. The greatest improvement has been made in the glossary, which, in contrast with the bare meanings given in Zupitza, has been provided with etymological illustrations from cognate languages and with references to Skeat's 'Principles of English Etymology.' It may be questioned whether the ordinary student, at the stage for which this Reader is intended, has

sufficient phonetic and etymological training to profit by these illustrations; nevertheless, they are there for the use of the teacher. There are fifteen selections in Old English, from Cædmon's Hymn to the later Saxon Chronicle (1154), and nineteen in Middle English, from the 'Poema Morale' to Lydgate's 'Guy of Warwick'—all short, and arranged chronologically rather than graded in difficulty; but the Old English student would hardly begin with the Northumbrian dialect. We miss a compendium of grammar, for want of which a constant use of Sievers for Old English and some other work for Middle English is necessary. Prof. MacLean well says: "The time has come to make Old English available for those of English speech as the natural point of departure for the study of Comparative Philology." It is hoped that teachers of English will agree with him, and his book will serve as a useful help to that end. A few misprints in the Introduction may be readily corrected.

—The two most recently discovered orations of Hyperides have been edited, with an introduction and translation, by Mr. F. G. Kenyon, assistant curator of MSS. in the British Museum (London: George Bell & Sons; New York: Macmillan). The object of the experienced editor has been to furnish, in a convenient and inexpensive form, these latest treasures from Egypt, which are at present accessible only in foreign periodicals, or accompanied by a costly facsimile. The fragment against Philippides derived from a papyrus belonging to the British Museum is so incomplete as to possess an interest chiefly for the scholar and the antiquarian. But the speech against Athenogenes is much better preserved, and is for many reasons the most interesting that has survived to us of the works of Hyperides. It shows the tact, address, and the forensic skill of the famous defender of Phryne in a case very similar to hers in point of delicacy and difficulty. It reveals also the methods of the Athenian sharper and "confidence-woman"; while the frank picture of society and manners sketched by the orator forms the counterpart and supplement of some comedy of Menander. Mr. Kenyon's introduction furnishes the student with the needful outline of facts, and his free and spirited rendering supplies certain gaps in the manuscript and argument. The text is printed line for line with the original papyrus, indicating the lacunæ conjecturally filled or to be filled. A facsimile page is given from the papyrus in the Louvre, discovered in 1888. This dates from the second century A. C., and is the oldest MS. we possess of a classic, unless it may be Mr. Flinders Petrie's manuscript fragment of the 'Phædo' and the 'Antiope.'

—A correspondent writes from abroad:

"An article in the May number of the *Nineteenth Century* on the 'Old Art Criticism and the New,' by Mary Whitehall Costelloe, comes just in time to make us fully appreciate the evil of leaving such an important post as the directorship of the National Gallery in the gift of mere politicians. Taking up the so-called 'Raphaels' of the Louvre, and the so-called 'Botticellis' of the National Gallery, Mrs. Costelloe demonstrates clearly and forcibly what a lamentable effect the one lot had on the French classical school, and the other on the English Pre-Raphaelites, and suggests that both would have been saved from the exaggerations they fell into had they not modelled themselves on rubbish palmed off as Raphael and Botticelli. The conclusion Mrs. Costelloe draws is that it is all-important that the director of a gallery should be a scientific connoisseur, as such a director is most likely to be free from the school prejudices of a professional painter, and most likely to buy for the public's money works of art of real benefit to the public. Mrs. Costelloe's thesis is well borne out by the singular fact that the three best-kept and best-catalogued galleries in the world, those of Munich, Dresden, and Berlin, are directed by connoisseurs, and that Dr. Bode, with comparatively small expenditure, is enriching the Berlin Gallery so fast that it will soon outstrip the National Gallery, in spite of the extravagance of its painter-directors. By appointing another water-color painter of questionable merit to the directorship of the English National Collection, Lord Rosebery has done all he could to defeat the purpose of its existence—the presentation of great art in a rational, illuminating way to the general public."

BRITISH DIPLOMACY IN THE FAR EAST.

The Life of Sir Harry Parkes, K.C.B., G.C.M.G., sometime Her Majesty's Minister to China and Japan. Two vols. Parts I., III., in China, 1842–1865, 1883–1885, by Stanley Lane-Poole; Part II., in Japan, 1865–1883, by F. V. Dickins. Macmillan & Co. 1894.

RATHER short, bustling and alert in movement, fair-haired, with tight lips, the lower one shutting over the upper, piercing blue eyes, a firm jaw, strong nose, lines of sternness above the mouth—such was the man who for one decade in China and two in Japan represented British foreign policy, and accomplished a career typically English. The estimates of two associates describe him well and sufficiently. Said Lord Elgin:

"Parkes is one of the most remarkable men I have ever met; for energy, courage, and ability combined, I do not know where I could find his match; and this, joined to a facility of speaking Chinese, . . . makes him at present *the* man of the situation."

Said Sir Chaloner Alabaster:

"He believed that the first duty of an Englishman was to make England great; that to do so you should act as an Englishman, be perfectly fair and just, never to do anything mean or ungentlemanly, but have your own way in everything, and fight to the death, and if possible beyond it, to get it."

Sent out to China (1841) at the age of thirteen to become an interpreter, he was soon made Consulate Interpreter at Amoy; thence, by successive achievements of energy and skill, he was enabled to rise to Acting Consul at Canton (1853), Consul at Amoy (1854), Secretary to the Siamese Mission (1855), Commissioner for Canton (1858), Consul at Shanghai (1859), K. C. B. in 1862, Minister to Japan (1865), and, finally, Minister to China (1883). His death in 1885 may be said to mark the end of an epoch of Oriental history as well as of a method of diplomacy peculiar to that epoch. No doubt, as Lord Wolseley said, "he would have made a great general." In the circumstances of his lacking high birth and favoring influence, of his opportunity to cope with new and difficult problems in a foreign community, and of his ultimate rise to distinction through sheer force of personality, his career reminds one immediately of the great John Lawrence. Only one circumstance, but one of infinite significance, separates him for ever from the honor of being classed with the Indian hero: his character lacked that spirit of true generosity and sympathy which made Lawrence one of Nature's noblemen. "Act as an Englishman" and "have your own way in everything"—this motto indicates at once the scope and the limits of his ideal and of his achievements. "He appears to have succeeded . . . in every diplomatic enterprise he undertook during the entire period of his service in Japan" without firing a shot or using a threat of force; this is the highest praise that one of his biographers can give him or (apparently) cares to give him.

What of history's judgment on the events in which he took part? We need not here look for help to his loyal and uncritical biographers. With a devoted and admirable faith in the rightness of Englishmen everywhere, and especially in China and Japan, they have both unwittingly succeeded in making it impossible for the uninformed reader to learn the true conditions of things, the exact issues involved, the considerations which bear on the ultimate judgment of the historian; yet all the while they have unawares revealed their simple and trusting partisanship. Both write here with the same pen and are the same author. Once in a while a latent suspicion arises for the biographer that there is possibly another point of view, but this is speedily and satisfactorily argued down; as where he claims that Sir Harry never used or threatened force, and then, in fine ingenuousness, hastens to add: "Doubtless the Japanese Ministers were sometimes warned in unmistakable language of what might be the effects of adopting or persevering in a particular policy, but a warning is not a threat, though circumstances sometimes give it that color"—and a very black color, too, if the facts were told; or, where he refers briefly to that odious insult, the illegal maintenance by Parkes of an armed battalion of British troops on Japanese soil for eleven years, and then, calmly admitting that "they might probably have been quite safely withdrawn at an earlier period," proceeds to argue that it was just as well as it was, because they "saved the Japanese Government trouble and expense" in some unspecified way. Let us now run over some of the leading events in order.

(1.) In the bombardment of Canton in 1856, the second war with China, and the Tien-tsin Treaty of 1860, Harry Parkes was the living energy; what he did not do personally was at least represented in his spirit. What were the ethics of these doings? England was determined to get a trade with China; China did not want to trade with England; England therefore resorted to brute force; she made use of questionable, even flimsy pretexts—opium in 1842, the seizure of criminals on a junk in 1856—brought slaughter and devastation to Chinese cities, and as a price made China pay millions for English war expenses and open thirteen ports to trade. The total result was "a gain of at least £2,000,000 a year in English imports" by the first war, and "a further increase of £3,500,000" by the second war. Now the biographer says that the isolation which China desired "could not be permitted, and it would be bad for the world at large if it were." But the pages of his book show that the real reason why it "could not be permitted" was that it would be bad for England if, on some pretext and by some means, England could not get a fuller share of the profits of Chinese trade. The fact that, through the influence of Cobden and Bright, there was a vote of censure and a dissolution of Parliament on this question in 1857 shows that at least a section of the British public believed in the immorality of the pretext taken and the means employed; and the fair historian should take account of this, and not dismiss it contemptuously as an instance of legislators "meddling in foreign affairs of which they know nothing."

(2.) The burning of the Imperial Summer Palace at Peking in 1860 was done, it must be remembered, after the British force had complete command of the city and the whole object

of the war was accomplished; and was intended, as is admitted, solely as a "punishment," and "to make the Emperor and the Government feel it in the most sensitive quarter." What has the biographer to offer? "From the dilettante's point of view it was like an act of vandalism; from that of sound policy in China it was statesmanlike." If this be so, give us more of "dilettanteism" and less of British "statesmanship" abroad.

(3.) In Japan we come first to the murder of Richardson and the British retaliatory expedition to Kagoshima, which bombarded and destroyed an innocent city of 100,000 people in revenge for the well-provoked killing of a single insolent brute, and then demanded and obtained $3,000,000 from a poor nation in payment (grossly excessive) of the expenses of the raid. This was just before the time of Parkes; but he approved of it, and so does his biographer, of course. He wholly misstates the facts of the Richardson affray, and the raid, as we might have expected, he calls "absolutely necessary." Fortunately the facts are on record.

(4.) The Japanese expedition to Formosa, in 1874 (ostensibly intended, like that of Decatur to Algiers, to inflict punishment on bands of pirates there), which Sir Harry Parkes condemns roundly in his correspondence, is one of the most complicated topics of diplomatic history in Japan, particularly in connection with the question it raised of the right of an American (General Legendre) to enlist in the Japanese service. But the reader would not from these pages suspect that there was any complication. It is stated, too, that "the real object was rather to affirm the sovereign rights of Japan over the Loochoo Islands, as against the somewhat shadowy supremacy of China" (p. 186), and that "it ended in what amounted to a recognition by China of the Loochoo Islands as a portion of the Japanese Empire, to which, indeed, by race and geography they belong" (p. 196). In other words, the Japanese planned and accomplished a task of great national import. But between whiles (p. 190) we are told that "there can be no doubt that the expedition to Formosa was a mere piratical raid"; and the honest reader is left to guess which conclusion he is to take.

(5.) As to the quarantine regulations of Yokohama, the facts are that the Japanese Government, in August, 1878, were putting in force quarantine regulations designed to keep out cholera, then threatening from China; that Mr. Bingham, the American Minister, had sanctioned these for American ships; that Sir Harry, because, as he says, his consent had not been "formally requested" (though he was actually consulted), refused and instigated other ministers to refuse consent; that in consequence of this refusal an infected vessel sailed in and landed its diseased passengers, and that 80,000 Japanese in that year and the next died of a plague which, in all human probability, would not have come if Sir Harry had done as the American Minister did. If facts count for anything, the deaths of those Japanese are on the head of Sir Harry Parkes. His biographer is careful not to state the circumstances, but says that "the controversy can only be glanced at here," and refers his readers to a newspaper file of November, 1879, for the facts! This same expedient of referring to a buried newspaper file is also resorted to by the biographer for disposing of detailed charges of misconduct which one would like to have seen openly and squarely dealt with in such a work as this. Considering that they were put forward in print by such eminent friends of Japan as Sir E. J. Reed and Mr. E. H. House, it is rather singular that the biographer contents himself with insinuating that Sir Edward was, in making them, guilty of a breach of hospitality towards Sir Harry, and by adding that "it must suffice to refer to Sir Harry Parkes's letter of simple denial printed in the *Times* of June 4, 1881."

While we cannot fail to stamp the work of this most eminent of modern Eastern diplomatists with the disapproval which it merits, we must not forget that the criticism should not be a purely personal one. Sir Harry Parkes was merely the representative of a certain mode of dealing with the Orient. As an individual he only did, and did well and magnificently, what was demanded and approved by the traditions of a nation and the instincts of a race. In the first place, the traditions of British diplomacy have persistently sanctioned the policy of bullying an "inferior" nation which has something that the Briton wants. The deeds and the language of such envoys as Hammond, Merry, and "Copenhagen" Jackson, and of such foreign secretaries as Wellesley and Canning, are specimens of the political Bible from which Sir Harry Parkes took his inspiration. In the second place, the instincts of a race come in the way of a good understanding between Englishmen (and in a less degree other Germanic peoples) and Orientals. The key to the situation is the existence of two different points of view, and the almost inevitable clashing of the conduct of those who represent them. The genius of the East is one thing, of the West another thing. Neither can hope wholly to understand the other. What can be done is at least that each should try to understand that the other *has* a different point of view, and to make allowances so far as may be. What is foolish and wrong and cruel is that the stronger should deny that the other has any point of view worth considering, and should go at it with force and arms and bully it out of its claims, and then abuse it as uncivilized for wanting to have its own way of looking at things. This is what the Parkes school has always done, and this, let us be thankful, is what American diplomacy, in Japan, has generally declined to do. It is unfortunate, but it is inevitable, that such a conflict of forces should exist where there is such a difference of national genius. But it is also unfortunate, though by no means inevitable, that biographers cannot be found who can appreciate the two sides of the question. That there is another side we have tried to indicate. When we remember what the Chinese have suffered from American mobs and American politicians, and what bitter recollections they have of the tender mercies of British gunboats, we can begin to understand something of why they decline to open their country fully to the influences of Western "civilization." That is the explanation of a good deal of Chinese statesmanship to-day.

RAYMOND'S THEORY OF ART.

Art in Theory: An Introduction to the Study of Comparative Æsthetics. By George Lansing Raymond, L.H.D., Professor of Æsthetics in the College of New Jersey at Princeton. G. P. Putnam's Sons. 1894.

THIS book is an elaborate effort to find a common basis for all the fine arts—a fundamental principle which distinguishes art as such from other forms of human effort, and from which a system of criticism can be educed that may be applied to each art in turn. It is, though not first in order of publication, the introduction to a series of volumes in which this system is to be so applied. There can be no doubt of the desirability of such a canon of criticism if it can be found, nor of the industry and ingenuity which Prof. Raymond has brought to the task of finding it. His reading on everything even remotely connected with his subject has evidently been immense, and quotations from every one under the heavens are "as plenty as blackberries" in his pages. Indeed, they overload them and help to make his volume the hard reading it unmistakably is. His reasoning is "inductive": *i. e.*, having a theory to expound, he begins as far from it as possible, and tries to show, by elaborate approaches, how one may arrive at it, thus continually tantalizing the reader, who wants to know what he is driving at. His style is heavy and almost floundering, and his profuse use of italics is irritating alike to mind and eye. Take as an example a sentence which is also worth noting as the key to his theory:

"As the result, which we term *art*, is a combination of what comes, in the first place, from nature or *natural instinct*, and in the second place, from a *human* being exercising the distinctive traits of the human *mind*, we may say that, in this case at least, art is *nature made human*, or *nature remade by the human mind*."

A little further on in the same paragraph there are nine italicized words in three lines. The reader revolts, and feels like assuring the author that he is not so dull but that he can catch the point without such a dig in the ribs.

Leaving here the question of form, let us consider the substance of the book—the theory of art it inculcates. It will be impossible to follow it through all the windings of its development, but we will try to give a fair notion of what it is, to touch it in its course here and there and show the queer conclusions to which it brings the author, and to point out what seems to us its inadequacy.

According to Prof. Raymond, then, all art is representation, is "nature made human." This is practically Zola's definition, "Art is nature seen through a temperament." All the arts are fine in the degree in which they represent nature and at the same time express the human mind. Nature furnishes the form while the mind furnishes the significance. Here comes in the astonishing third chapter on "Form and Significance as Antagonistic," in which classicism and romanticism are considered as the two tendencies in art which spring from this antagonism, "the germ" of classicism being "the conception, which inevitably tends to imitation, that art should chiefly emphasize the form; whereas the germ" of romanticism "is the conception that the ideas expressed in the form should be chiefly emphasized." Here we are apparently landed in the preposterous conclusion that classicism and realism are one and the same, and our perplexity is not helped when we are immediately informed that they are not, though with no reason given, and when we suddenly find that classicism is based, not on form as found in nature, but on form as found in previous works of art.

In fact, classicism and romanticism are not founded at all on the antagonism of form and significance. "Sound, not sense" was certainly never a motto of classic literature. Classicism and romanticism are tempers of mind which equally affect the form and the substance of art; classicism being reasonable, logical, and constructive, while romanticism is emotional and sensuous. In classicism the intellect dominates the feelings, while in romanticism the feelings dominate the intellect.

The next few chapters are, naturally enough, devoted to showing that this antagonism between form and significance is not real, and that this is true because art does not imitate but represents in another material and manner the facts of nature, and that the representation of either nature or mind requires the representation of the other. In all this the author succeeds fairly well as long as he deals with the strictly imitative arts of painting and sculpture, but his efforts to make music and architecture fit into his theory are not happy. When one finds him saying, "Columns, arches, and roofs do not by any means copy or imitate, but they do *represent*, the trunks and branches and watershedding leaves of the forest," one feels that something is wrong, and one is almost prepared for the horrors of the paragraph in which, after asking why the conception of a Gothic cathedral may not have been suggested by the trunks and branches of an avenue of trees, he goes on as follows:

"Whatever answer may be given to this question, . . . none can fail to recall that we frequently find in architecture actual reproductions of the figures of men, animals, leaves, and flowers, chiselled, carved, or worked in some way into the ornamentation, and who can say that the world has seen the highest developments in these directions? Why might it not be possible to carry these methods further, and to produce an interior the columns, groinings, and ceilings of which should resemble, as closely as could the forms of a landscape picture, the trunks and leaves of, say, a palm grove, while the walls and partitions should resemble natural rocks overgrown by natural vines? Is it not conceivable, too, in this age, when artificial tile and brick and stone can be produced in all possible colors, and when iron can be moulded into beams and platings of all possible shapes, that, with judicious selections of natural models and artistic foreshortenings, exteriors might be produced in the wholes or parts of which, both in walls and roofs, the resemblances to natural appearances—vine-clad or flower-covered groves, mounds, cliffs—should be almost as unmistakable as in certain painting and sculpture?"

From such an "architecture of the future," good Lord, deliver us!

Chapter vii. is on the "Art-impulse," and identifies it, as others have done, with the impulse to *play* which comes of excess of life-force. The author considers imitation the only invariable characteristic of play, which naturally conducts him to his theory of "representative art." The trouble with this is that it fails to show in what lies the difference between imitation and art—between playing soldiers and the drama. Evidently something more than he has hit upon so far is necessary to account for art, and at page 83 beauty is suddenly introduced as the characteristic of natural objects that prompts man to artistic representation of them. Chapters xi. to xv. are therefore taken up with a long analysis of beauty, with much of which we disagree, especially the mixing up moral beauty with physical, but the general conclusion of which might, we think, have put our author on the right track. This general conclusion, with which we are quite in accord, is that beauty is nothing else than order, harmony, or proportion; beauty of sound, beauty of form, beauty of color, being the resultant of mathematical proportions in lines, sound waves or color waves. We will not follow Prof. Raymond through the rest of the volume, in which he ceases to make use of this definition of beauty (which is half apologetically introduced as a side issue) and goes back to his theory of art as "nature made human," tracing out its application in various ways to the arts and their order in place and time, but will merely remark that he seems to prove that architecture should be the latest of the arts to develop, whereas it is notoriously one of the earliest. Instead, we shall state as briefly as possible what we conceive to be the true bond of unity between the arts—the true fundamental principle of art in all its forms.

We take art to be the application to *anything*, in the spirit of play and for pleasure only, of the principle of proportion. The arts deal with great variety of matter and by no means all of them with representation. Music deals with pure sound and is only incidentally imitative. Poetry deals with the expression in words of thought and emotion. Architecture deals with construction. Painting deals with delineation and also with pure color, in which it approaches music. Acting is the most purely imitative, perhaps, of all the arts. But, whatever be the difference of subject-matter, the one thing common to all art is the application of the principle of order. Rhyme and rhythm added to the expression of thought make poetry; sound submitted to the laws of harmony and melody becomes music; and so with the other arts. How does the dance differ from playful leaping but in its subjection to measure? There is nothing artistic in planting, but when three trees were first planted in a row for pleasure, not for utility, landscape gardening began. And if it were necessary to make a graded hierarchy of the arts, we should say that that art was the highest which permitted of the most permanent, subtle, and complicated harmonies and proportions; architecture being a lower art than painting and music, because its proportions are more rudimentary and simple, while acting is lower because its harmonies are not permanent. But it is also necessary for art, if it be great art, to deal greatly with its subject-matter. Hence, besides the perfection of harmony or order which is necessary to all art, each has its own perfection peculiar to itself, so that poetry, dealing with expression, must be greatly expressive, architecture, dealing with construction, must be greatly constructive, and painting, dealing with delineation, must be greatly imitative. That which is truly ideal in all art is the element of order, the form. The other element varies in the various arts, and bears one name or another, and it is the same law we have so often dwelt on, that painting shall be realistic as well as idealistic, which necessitates that poetry shall contain thought as well as rhythm, and that architecture shall base its fair proportions upon sound construction. We cannot here work out this theory further and modify it to suit the thousand variations and interlockings of the many manifestations of art, each of which at times borrows something from the others, and so far changes its nature; but we believe it to be the true theory of the nature of art, and commend its development to the student of æsthetics.

Greek Vase Paintings: A Selection of Examples. With preface, introduction, and descriptions by J. E. Harrison and D. S. MacColl. London: T. Fisher Unwin; New York: The Century Co. 1894.

An important service has been rendered to all lovers of ancient Greek fictile art by making accessible to them, at the very moderate price of ten dollars, this choice selection of examples of Greek vase paintings. Hitherto the study of this branch of ancient art has been possible only for those who could visit the great archæological museums of the Old World, or who, at considerable cost and trouble, have been able to procure the expensive volumes in which these objects have been reproduced. The editors have been permitted to make a selection of plates from volumes of this character, and these have been reproduced by modern process-work. The value of the present volume, of course, depends upon the skill and judgment with which such selection has been made. All the important collections in Europe, some twenty in number, have been drawn upon, and even the one in Baltimore has furnished two illustrations. But naturally the British Museum has supplied a larger proportion of the forty-three plates, fourteen in number, including two from photographs; while the Louvre, Vienna, Munich, and Berlin have contributed in about equal shares. The indebtedness of the editors to the German Archæological Society, the *Wiener Vorlegeblätter*, and Hartwig's 'Meisterschalen,' is frankly acknowledged; while Gerhard's 'Auserlesene Vasenbilder' and his 'Trinkschalen' have been also drawn upon. The vases figured have been chosen simply for their excellence and beauty, and not from their mythological or archæological value. While only a few of the designs are adduced as masterpieces, yet in its entirety this collection is ample to inspire an appreciative comprehension of the history and progress of the art of vase-painting.

That good taste and sound learning have been combined is guaranteed by the names of the joint editors. Mrs. Harrison's 'Myths of the Odyssey' and her 'Mythology and Monuments of Ancient Athens' are familiar to Greek scholars. Mr. MacColl, in his preface, is strenuous to "redress an injustice of fame done to Euphronius, Hieron, and other masters of one of the most finely balanced arts of design and poetry ever struck out in decoration." He goes on, dwelling upon the subtle refinements of style that have so impressed him, and concludes that "to find the image of a people . . . who could marry grace and dignity with their mirth, we must burrow in Greek graves. . . . Tomb has delivered them to Museum, and it is time that the book-worm should not be the only heir of his brother." Mrs. Harrison's "Introductory Historic Note" is modestly called by her only "a sketch drawn up strictly with reference to the plates, and not in any sense a history of Greek Ceramography. . . . It is an attempt to put together what is known as to the methods and even mannerisms of the several artists." But classical archæologists, we are inclined to think, will speak of it in quite different terms. To us it seems to sum up in a brief, comprehensive way, all the latest knowledge in this controverted branch of the history of ancient art. It tells sufficiently how painted vases were made, and how they have been named according to their various shapes and uses. Upon the vexed question of the date of the transition from the earlier black-figured to the red-figured technique, Mrs. Harrison shows how Ludwig Ross's discovery, in 1835, of a fragment of a red-figured plate in the layer of débris from the Persian sack of the Acropolis, 480 B. C., has been abundantly confirmed by the exhaustive excavations made there since 1887. "We no longer trouble about the influence of Polygnotus on the work that preceded him, and we no longer try to detect in vase-paintings motives from the sculptures of the unbuilt Parthenon, or subjects from the plays as yet unacted of Æschylus and Sophocles." The whole work, in both styles, has now been brought within the limits of the century from 570 to 470, or even less, and by means of art-

ists' signatures and dedicatory inscriptions even closer limits can be drawn.

The Black-Figured Masters who worked principally upon amphoræ are first described, and then the transition to "Epiktetos and his set," with whom the *kylix* was the favorite shape for the display of their skill, is set forth in ample detail. It used to be thought that "the black-figured style laid down its life at Marathon. The new chronology forbids all this, and we have come to see that the artist can take delight in twisting the limbs of an athlete and composing a revel without the impulse of a Persian war." Euphronius, and the other great masters of the red-figured style, Duris, Peithinus, Hieron, and Brygos, are lovingly dwelt upon, and the specimens given of their skill are fully described. We are told how many examples of each master are known, and their individuality is so discriminated that the criteria by which unsigned works are allotted to their authors are made readily comprehensible.

We wish that space permitted our giving an outline of the chapter upon "Athenian White Funeral Lekythoi" and of that on "The Interpretation of Vases." These show Mrs. Harrison's strength at its best, as might be expected from her previous writings. Her accuracy is equal to her learning; and we have noticed only one slip, where (p. 19, line 3 from bottom) she speaks of "the walls of the Museum at Athens." As the Museum is a hill, it is evident that she meant to write *Theseum*. Her account (p. 17) of plate xi., "The contest of Hercules with the triple-bodied Geryones," is inconsistent with the description given of the plate, and is manifestly wrong in the number stated of the figures both of the warriors and of the herd. Although the volume in hand is a marvel of cheapness and excellence combined, we regret that sufficient pains has not been taken to revise the text and to compare it with the numbering of the plates. Certainly it is strange that no List of Plates is furnished. We have noted the following errors, and trust that the needed corrections may be made in a work that is destined to become a standard: P. 20, line 20, for pp. 18, 19, read 27, 28; line 32, for plate xvi. read xv.; line 34, for plate iii. read iv.; line 45, for plate xvii. read xvi. P. 21, line 4, for plate xviii. read xvii.; line 6 from bottom, for plate xii. read xiii. P. 22, lines 4 and 7, for plate xix. read xviii.; line 14, for plate xx. read xix.; line 31, for plate xxi. read xx. P. 24, line 7 from bottom, for p. 22 read 30. P. 26, line 3, for p. 23 read 31. P. 32, line 2 from bottom, for p. 32 read 22.

Town Life in the Fifteenth Century. By Mrs. J. R. Green. New York and London: Macmillan & Co. 1894.

Now that so much interest is being taken in social history, there is sure to be a ready welcome for a book which describes the internal life of English towns at the period of their greatest power; especially when that book appears in two comely volumes with the impress of a great publisher, and the reader need only open it to come upon analogies or contrasts to present-day conditions stated in language pointed and highly colored. The name which the authoress bears; the dedication of her work to the memory of the author of the 'History of the English People'; the statement in the preface that it was undertaken in fulfilment of a promise made to him when his work was over—these circumstances all help to make the welcome warmer, for, to most of those who care for English history, John Richard Green is a cherished name. Starting, perhaps, with some irritation against the "stylist" whose success for the time threw his masters into the shade, they have come to feel something like a personal affection for that transparent soul who struggled so hard against such odds, and did so much to make the "island story" dear to all English-speaking people. They rejoice to see that name once more coupled, by one who bears it, with worthy achievements.

And, indeed, this book of Mrs. Green's deserves a good deal more than a *succès d'estime*. In the first place, it is the result of arduous labors which have probably occupied several years; though possibly her readers will hardly realize how much the way had been smoothed by earlier scholars, especially Schanz and Gross. And then, secondly, several of the chapters, especially those on the "Battle for Freedom" and "The Battle for Supremacy," deal, and, on the whole, deal effectively, with topics hitherto strangely disregarded by English writers, though their importance for Continental towns has long been recognized by foreign scholars. The contrasted fortunes of towns upon the royal demesne and of towns upon baronial or church estates in their efforts to secure municipal self-government, and the difficulties with which municipalities had to struggle which were confronted with rival jurisdictions within their walls, are here for the first time emphatically set forth. To the serious student of municipal history, in particular, the book will serve as a stimulant—if only to controversy; and even that would be an agreeable exchange for the isolation which has usually been the fate of workers in this field. It will serve also as an indication of the material at his disposal.

Still, it must be avowed that, in spite of its high purpose and popular language, we have seldom come across a more wearisome book. This is in part the fault of its style, which is a curiously faithful echo of the style of John Richard Green. Even in the hands of its creator, that style, with its perpetual effort after picturesqueness and emphasis, was apt to become a little trying to the nerves. The 'Short History' was saved by the very breadth of the space to be covered and the compression which fortunately formed part of its plan. Rapid movement was necessary, and this carried us safely over the epithets, not to mention that in a thousand years of history there were occasions to which a large proportion of the glittering adjectives and resonant verbs could be fitly applied. But the case is different when the same style is applied in eight hundred pages to such a subject as the fifteenth-century borough. A brief, broadly generalized statement of the movement of town life during the hundred years could be made interesting to a reflecting mind; an episode here and there might even be found to have dramatic quality; but we may be tolerably certain that a true statement of the minutiæ of the municipal history of any century—the fifteenth as well as the nineteenth—must be pretty dull, if for no other reason than that human affairs are intricate, and that intricacy is seldom obviously interesting. And the writer who attempts to make every page sparkling is pretty sure to pay the penalty. So has it been with Mrs. Green. Again and again we come upon the most startling inconsistencies; and in almost every case the explanation is that the temptation to say a "strong" thing—to use "utterly" and "altogether" and "completely," to talk of "a struggle for life" and "the drain of taxation," to exult over "buoyant and exuberant strength" or to lament over "dreary groups seething with inarticulate discontent"—has been too much for sober judgment.

Yet the book is not sufficiently inconsistent to be impartial; and this brings us to an even graver defect. The impression which as a whole it produces is that of panegyric alternating with special pleading. The keynote is struck in the preface, where we are reminded that Mr. Green's own "brilliant sketch of the early life of English towns" was "inspired by ardent sympathy and emotion." Mrs. Green evidently aspires to continue his work. But until we are pretty certain of the fundamental facts and relations, "ardent sympathy and emotion" are precisely the qualities most in the way. The reason why the student of physical science only too often despises history is just this—that it has been written with "emotion." Even Mrs. Green would agree that the accounts hitherto given of *other* mediæval institutions—for instance, of the Church—are largely vitiated by "sympathy." When she herself comes to treat of the labor question and the crafts and the guild merchant, in her second volume, she confesses that there is much that is still obscure. Would it not be well to keep our feelings well in hand until we have more light? As it is, the reader who goes to these volumes must be prepared to find the boroughs always in the right, whether in their difficulties with the royal government, the church, or the crafts. To all these powers the meanest motives are freely attributed. And yet, when we reflect that royal administration, church, and crafts all indubitably contributed valuable elements to progress, and that the lot of those countries, like Germany, where the towns gained more of their own way, was not altogether satisfactory, we cannot help feeling that such partisanship is no safe guide.

Secularism: its Progress and its Morals. By John M. Bonham, author of 'Industrial Liberty.' G. P. Putnam's Sons. 1894.

THE philosophy of secularism has never been set forth more gravely and effectively than in Mr. Bonham's book. His main contention is that the scientific and industrial environment tends to the substitution of scientific conceptions for metaphysical and theological notions, to a belief in natural law as opposed to the belief in supernatural agency. He lays much stress on the impersonal character of the influence of the environment. It does not arouse the antagonism excited by anti-theological assaults like those of Bradlaugh and Ingersoll, neither of whom is named, though they, and such as they, are clearly in the writer's mind. In the development of this idea and elsewhere throughout the book there is much interesting and suggestive matter; but for one so resolutely anti-metaphysical in his purpose Mr. Bonham has a singularly metaphysical mind. He deals in abstractions and deductions much more freely than in the concrete and inductive method of science. His two chapters on "Intuition" are notable in this respect.

Much better, partly because so much more definite, are the two chapters which follow, "Advanced Theology" and "Qualified Science." He is much more concerned with the inconsistencies of those thinkers who profess to welcome the discoveries of science and to square their theology with them, than he is with the ultra-conservatives. He has many things upon this head that are worthy of the most serious consideration on the part of those to whom they are addressed. The chapter on "Qualified Science" is for the benefit of Mr.

Herbert Spencer in the main. It finds him, if not "very religious" as St. Paul is now translated, "too superstitious" as he was translated formerly. Mr. Bonham's is one more of many admirable criticisms on Spencer's reconciliation of science and religion on a basis of common ignorance. That Spencer, setting out to build a system of philosophy that should be a synthesis of the sciences, should have quarried his foundations from the rotten-stone of Mansel's metaphysical 'Limits of Religious Thought' is the comic tragedy of contemporary speculation. But that his present critic, if less metaphysical, is less religious than Mr. Spencer in his implications is by no means clear. He says: "All thinking men agree that there is a power beyond us which mundane experiences in themselves do not enable us to define." He solicits for this power no reverence, but, as the power that is at the back of all those laws of nature which are so impressive to his imagination, reverence for it would seem to be inevitable. He has his own teleology, for he is ready enough to tell us that "Nature meant" this and that; and such teleology only needs to spell its subject with three letters instead of six to be something very like theology.

He must not be astonished if a good many of his readers do not think that he has made an end of all religion. There are a great many people whose rejection of supernatural religion is quite as definite and intelligent as his own, who believe in the reality of religion nevertheless. To fancy that these can all be routed by an attack on some individual position of Canon Farrar or the 'Scotch Sermons' of 1880 is a flagrant instance of reckoning without one's host. In the course of the discussion, the term "supersensual" is often used to express the sphere of the unknown and unknowable. Yet Mr. Bonham must be aware that the scientific use of the imagination has added to the sphere of science a supersensual region of indefinite extent. Besides, there is a supersensual world of thought and feeling which may properly excite something of that reverence which is Mr. Bonham's "last enemy to be destroyed."

The two chapters on ethics contain some of the clearest thinking and the strongest criticism in the book, showing, as they do, how contradictory are the ethics of the Christian world and the ethical teachings of the New Testament. In no respect does Mr. Bonham write better than concerning the ethics of the intellect—the duty of believing only what we must, and leaving others free to do the same. So eloquent is he against all arbitrary authority, all fencing off of some things as sacred and inviolable, that Lucretia Mott's favorite sentence, "Truth for authority, not authority for truth," might well have been the motto of his book. The sincerity of the believer and the consolation inherent in his belief as sanctions of its truth are well discussed, and with results extremely damaging to time-honored fallacies. As a whole, the book is one to send back the apologists for traditional opinions on their reserves. They cannot meet it with their ordinary thin array. If the manner of the book were equal to its matter, it would be much more impressive. That even then it would make the author's world without religion attractive to the noblest minds, or persuade them that the most characteristic aspect of human nature has been the most unreal, we have some serious doubts.

Autobiography and Letters of George Henry Pertz, Editor of the Monumenta Germanica. Edited by his wife. London. Privately printed. 8vo, pp. 226.

American students at the University of Berlin between 1842 and 1872 remember Pertz as the dignified and learned superintendent of the Royal Library. To a much wider circle he is known as the patient and admiring biographer of Prussia's great statesman, in the Napoleonic period, Baron vom Stein, and also as the biographer of Gneisenau. But his highest claim to remembrance is the service that he rendered to German history by editing and publishing the long series of historical memoirs, 'Scriptores, Leges, Diplomata,' which is known in all great libraries under the title of 'Monumenta Germaniæ Historica.' Dr. Pertz belonged to the class of scholars who early make choice of a career, under favorable circumstances, and adhere thereto with unflinching fidelity and industry, indifferent to the applause of the multitude, and satisfied by the consciousness of rendering lasting benefit to future generations. So long as men study the mediæval history of Germany, it will be necessary to consult that row of folio volumes which he initiated, and edited for many years, and which is still increasing under the control of younger men. Heeren gave him the impulse, saying to his student in Göttingen (who thought of writing a life of Louis the Pious), "Do not occupy yourself with modern books, but go to the contemporary sources of history, and a light will dawn upon you." Stein gave him opportunity by inviting him in 1819 to undertake the historians of the Carlovingian period, and proposing that he should go and examine the manuscripts to be found in South Germany and Vienna, at the expense of the newly founded "Society of those who are interested and learned in German history." Recognition of his ability soon came in other quarters, and the rest of his life was tranquil and secure, crowned with honors to its close in 1876, in his eighty-second year.

The volume before us gives the portrait of a modest, learned, and able scholar, who, like many other librarians and editors, cared more to rescue from oblivion historical papers than to construct upon them readable summaries, either biographical or historical. It was a curious incident of his boyhood that when Hanover, his native town, was held in subjection by the French army (in 1813), the French prefect, being a man who appreciated learning, offered to the schoolboys, as a prize, freedom from conscription. This prize fell to Pertz, whose subsequent life was devoted, indirectly, to intensifying the love of German unity, and whose son Hermann, nearly sixty years later, led a company of two hundred pioneers from Hanover to Strasbourg at the beginning of the war of 1870-71.

In Berlin, where he resided after 1842, Pertz was in the centre of all that made the Prussian capital the home of learning. Humboldt, Ritter, the Grimms, Ranke, Lepsius, Ehrenberg, Rose, Trendelenburg, Boeckh are among the names that then gave lustre to intellectual society. There are many glimpses of that life, and a few also of that of the court circles. Here, for example, is a visit to Frederick Wilhelm IV., at Sans-souci, in 1842: "The King sent for me. He was cheerful at dinner, made inquiries on several literary subjects—the history of the Guelphs, and the archives of Hanover. The Queen spoke with me feelingly about Niebuhr's letters, his character, and his children. Then I had a long talk with Humboldt. We discussed the latest scientific and political events." Here is a meeting of the Academy, where Raumer and Ranke "entertained the King and two Princes with a refutation of the charge that Frederick II. was the most immoral of sovereigns." "Raumer spoke with less indecision than in his history. Ranke [famous for his rapid utterance] was not understood by many, but seemed to endeavor to be distinct, and Steffens pulled his coat-tail whenever he hurried too much." Here are some incidents of the uprising in 1848: "At this moment, the King is riding through the streets and he is proclaimed Emperor of Germany. May God protect him" "The King protested earnestly, and refused to accept the title." "We must now strain every nerve to stand together firmly united in opposition to the threatened subversion of everything. The question is whether we, as a free and great people, shall stand united, or, despising history, shall for a second time fall dismembered." Here is mention of Bismarck in 1862. Pertz writes:

"I spent Wednesday evening with Prof. Sybel at L. Ranke's. The conversation turned, of course, mostly upon our politics; no one could tell what turn things might take. Since the King has appointed Bismarck President of his Cabinet and Minister of Foreign Affairs, Count Bernstorff and Van der Heydt have resigned. Bismarck was formerly a decided ultra-aristocrat, but is said to have improved since and turned more to the liberal side, after the experience which he had in Frankfort. Time alone will show what the country will have in him. He is thought to be very bold and determined, which is a quality of doubtful value."

In England as well as in Prussia, Dr. Pertz was at home, having married Miss Horner in 1854. This marriage and his antiquarian researches brought him often into intimate relations with many of the leading personages in literary and scientific circles. In Bavaria he also made repeated visits during the latter part of his life.

This volume, being almost wholly autobiographic, does not give any critical estimate of the work of Dr. Pertz—that must be sought elsewhere; but it does convey the impression of a sincere character, devoted through a long life to a high ideal, with constantly increasing tokens of admiration and respect not only from his own countrymen, but from historical scholars in France, Italy, and England. Of his domestic life, one who knew him well has said:

"He was a man of strong affections, of a keen, even enthusiastic nature, although he had obtained so complete a mastery over himself that, except upon occasions, few would suspect the warmth which lay beneath his calm exterior; a patriotic sentiment, the call of friendship, or a touch of tenderness towards his own family alone betraying the impetuosity of his feelings."

The Journal of Martha Pintard Bayard, London, 1794 to 1797. Edited by S. Bayard Dod. Dodd, Mead & Co. 1894.

If history is the essence of biographies, surely the domestic and social history of past days must be written from such simple, truthful, and hence vivid records of daily life as are given in this century-old journal of Mrs. Bayard. She was the young, gently bred wife of Samuel Bayard, who was appointed by Washington to prosecute in the British Admiralty Courts the claims of American citizens under the Jay treaty. She had from her childhood "been taught to regard the British as enemies," and never grew accustomed to living among them, but longed constantly for her far-away home. She recorded in very good concise English and a very naïve literary style many interesting details of her stay in Eng-

land, of court life, and of "persons of honour and quality," such as we have read in the printed letters of other American women of those same years—the letters of Mrs. Elliot and of Lady Cathcart and Lady Carnegie. Mrs. Bayard told also the trivial events of every-day life—the food, service, methods of travel, diversions of the past century, and what she calls the "tip of the modes." Finally, she gave some intelligent and spirited descriptions of foreign scenes, such as of Bath and Ranelagh. Old James Howell says that "letters shew the inside of a man"; such diaries as this show still more truly the inner life of a woman—in this case of an acute, religious, lovable, highly patriotic, eighteenth-century American woman.

An agreeable and useful addition to this book would have been notes of identification and explanation of the many interesting persons referred to. The book is illustrated with portraits of the diary-writer and her husband.

BOOKS OF THE WEEK.

Aitken, G. A. Richard Steele. [Mermaid Series.] London: T. Fisher Unwin; New York: Scribners. $1.25.
Baily, W. E. Dramatic Poems. Philadelphia: The Author.

Questions of the Day.

The Silver Situation in the United States.

By Prof. F. W. TAUSSIG, LL.B., Ph.D., Professor of Political Economy in Harvard University, author of "The Tariff History of the United States." (No. 74 in "The Questions of the Day" Series.) 8vo, 75 cents.

"Professor Taussig is already well known by his admirable 'History of the United States Tariff,' and at a time when currency problems are attracting attention in Europe, Asia, and America, the appearance of a treatise from his pen on the history of silver in the United States during the last decade is peculiarly opportune."—*London Times.*

Joint-Metallism.

A plan by which gold and silver together, at ratios always based on their relative market values, may be made the metallic basis of a sound, honest, self-regulating, and permanent currency, without frequent recoinings, and without danger of one metal driving out the other. By ANSON PHELPS STOKES. (Questions of the Day Series, No. 79.) 8vo, cloth 75c.

"The plan is certainly novel and ingenious."—DAVID A. WELLS.

"Much impressed by the argument."—H. C. POTTER.

"I think the statement of the question most admirable and convincing."—DAVID H. GREER.

"I find the views on this important subject very convincing."—W. T. HARRIS, *United States Commissioner of Education.*

The Natural Law of Money.

Wherein the successive steps in the growth of money are traced from the days of barter to the introduction of the modern clearing-house, and monetary principles are examined in their relation to past and present legislation. By WILLIAM BROUGH. 12mo, $1.00.

"The author's style is clear and concise, and he gives a great deal of valuable information well adapted to the understanding of the general reader in a comparatively brief compass."—*Boston Saturday Gazette.*

"The book is clearly written, frank in its statements, scientific in its methods, and decidedly readable."—*American Banker.*

Canadian Independence.

Annexation and British Imperial Federation. By JAMES DOUGLAS. "Questions of the Day" Series, No. 78. 12mo, cloth, 75c.

Primary Elections.

A Study of Methods for Improving the Basis of Party Organization. By DANIEL S. REMSEN. (No. 77 in the "Questions of the Day" Series.) 8vo, 75 cts.

"One of the most valuable and helpful of the many discussions of political, social, and economic topics that have been published in this series. His description is succinct and clear. He has no hobbies, and discusses the questions involved with the utmost calmness and in judicial temper."—*Public Opinion, Washington.*

"Common Sense" Applied to Woman Suffrage.

A statement of the reasons which justify the demand to extend the suffrage to women, with consideration of the arguments against such enfranchisement, and with special reference to the issues to be presented at the New York Constitutional Convention of 1894. By MARY PUTNAM JACOBI, M.D. (Questions of the Day Series, No. 80.) (In preparation.) 8vo, cloth, 75c.

Full list of economic and political publications sent on application.

Issued by

THE CENTURY CO.

Roger Williams.

The Pioneer of Religious Liberty. By OSCAR S. STRAUS, author of "The Origin of the Republican Form of Government in the United States." Several biographies of Roger Williams have been written, most of which are now out of print. Since the publication of these earlier works much valuable additional information concerning the pioneer of religious liberty in America has come to light. Mr. Straus, the author of the present volume, has given careful study to the subject of Roger Williams and his work, and has endeavored in this biography to bring out the truth without fear or favor, and to present an impartial record of the character and work of this remarkable man, who was in the fullest sense the pioneer of religious liberty. Price, $1.25.

A NEW BOOK BY

Rudyard Kipling.

'The Jungle Book'

A perfect treasury of delight for young folks—and old folks too. No one but the author of "Plain Tales from the Hills," "Soldiers Three," etc., could have written the fascinating stories that are contained in this volume—stories of the Indian jungle, of Kala Nag, the elephant; of Shere Kahn, the tiger, and old Baloo, the sleepy brown bear who teaches the wolf cubs the Law of the Jungle; of Bagheera, the black panther, and of Kaa, the python, whose blow is like the blow of a steam hammer. The book will become a classic. Of the stories (nearly all of which are illustrated) the New York *Christian Advocate* says: "They are unique in literature and perfectly delightful in spirit." In cloth binding, 300 pages, price $1.50.

**** These books may be had at all bookstores, or will be sent, postpaid, to any address, by the publishers on receipt of price.*

THE CENTURY CO.,

FOR JUNE.

The Final Effort of Theology. By ANDREW D. WHITE.
An account of the hostile reception given to Darwin's epoch-making book by misguided theologians.

Nicaragua and the Mosquito Coast. (Illustrated.) By Dr. R. N. KEELY, Jr.
Describes the country about Bluefields, which Nicaragua is threatening to absorb, its government, inhabitants, and fruit plantations.

Pleasures of the Telescope. (Illustrated.) By GARRETT P. SERVISS.
Advice and directions for amateurs in astronomy.

Dairy Schools and Dairy Products. (Illustrated.) By Professor F. W. WOLL.
Dairy schools are a new thing in this country and the pioneer institution, founded only four years ago, is here fully described.

The Nation.

NEW YORK, THURSDAY, MAY 31, 1894.

The Week.

On Tuesday the House, in committee of the whole, voted to strike out the appropriation for the civil-service commission, by 109 to 71. Much hand-clapping and cheering followed the announcement of the vote. On Thursday, when a yea-and-nay vote was called for in the House, the appropriation was put back into the bill by a vote of 153 to 80, but there is no record of any cheering. One would think that the spoilsmen would get sick of this annual farce. Everybody knows that they hate the civil-service law, and there is no need of such impotent making of faces and shaking of fists to prove that. Everybody knows, too, that they do not dare go on record as nullifiers of the law by withholding the money necessary to execute it, and there is no need of their demonstrating that over and over again. The exhibition has ceased to be even comic.

What possible comfort Senator Vest can find in confessing to the cowardly surrender which he and the other members of the finance committee made to the protectionist highwaymen who "held up" the Wilson bill, it is hard to imagine. He does it again and again in open Senate, as if it somehow afforded him great relief. Last Saturday he stated explicitly that "the members of the committee who were framing the tariff" were "informed" that the bill they had reported "could not be adopted," and he spoke excitedly of the changes which had been "forced upon the committee." Probably he means, by such remarks, to stir up resentment in the party at the handful of men who have McKinleyized its tariff in the Senate. That result he will very likely accomplish, but at the same time he will inevitably brand himself and his fellow-members of the finance committee with hopeless incompetence and weakness. He does not seem to perceive how humiliating a thing it is that four or five men should have been able to bring to naught the work of the committee and the professions and aims of the party. The worst of it is that the threats which brought the frightened committee to its knees were all the while empty, and could have been successfully met by an unyielding front. The surrender was really needless; but even if it were not, it would have been better to stand firm and pass no bill at all than to agree upon a measure for which no one but its direct beneficiaries has a word to say, and for which not even they have a shred of respect left.

A gigantic effort to do something for silver was made in the Senate last Friday, but was strangely ignored in the press reports. The section of the tariff relating to "metal thread of gold, silver, or other metals" came along, and was going through without objection, when Mr. Quay moved that the duty on gold thread be left as it was, 25 per cent. ad valorem, but that the rate on silver thread be fixed at 100 per cent. He said that his amendment was "in the interest of silver." A hint of that kind was enough for the champion friend of silver from Massachusetts, Senator Lodge, and though he was unable to vote, being paired with Senator Hill—*par nobile fratrum*, as they used to say at Harvard—he expressed his entire approval of the scheme. It was such a transparent bit of humbuggery that not even Peffer would vote for it, and five Republicans voted openly against it, the total vote being 10 for to 37 against. But the chance to make a record was not yet lost, for the next paragraph concerned "silver leaf," and here again Quay moved to make the duty 100 per cent. Lodge was able to vote this time, as Senator Hill had come in; and he and Hoar and all the other Republicans voting, except Hawley and Teller, came up valiantly "in the interest of silver." Quay himself seems to have regarded the matter as a huge joke, and ran off into the cloak-room without voting, leaving it to the solemn New England Senators to make fools of themselves. But what a tremendous boom for the Republican nomination on a silver platform Lodge is getting ready! Commercial war with England, to force her to the silver standard, 100 per cent. duty on silver thread and silver leaf—on such a record alone he could make the Presidential race without writing another reform article for the magazines.

One of the neat little tricks played by the woollen-manufacturers in the McKinley bill is now coming home to plague them. In that "scientific" tariff they wrote in for themselves a specific duty equal to four times the duty per pound on wool and in addition 50 per cent. ad valorem. The specific duty was "compensatory"—that is, as it took four pounds of raw wool to make one pound of cloth, the four-fold duty only made up for the tariff on the raw material, and the real protection was found only in the 50 per cent. ad valorem. Now comes the Senate bill leaving out the compensatory specific duty, of course, as there is to be no tax on wool to compensate for, and giving a rate of 40 per cent. ad valorem on the finished product. But the woollen-manufacturers cry out as one man that this means ruin to them. "What," ask the astonished committee, "can't you stand one-fifth off your former protection, admitted to be high?" Then the manufacturers draw the Senators off into a corner and say: "The fact is, we lied when we said it took four pounds of wool to make one pound of cloth; it really takes considerably less than three, and the biggest part of our protection lay in the specific duty." So at least says the *Wool and Cotton Reporter*, and adds:

> "The proper thing to do now for manufacturers is to confess to a little deception regarding the make-up of the specific duty, admit the truth, and ask for recognition of actual facts. The protection was needed, and the only sin committed was in the way it was obtained."

The House committee on the subject has reported favorably a resolution to amend the Federal Constitution by taking the choice of United States Senators from the Legislatures and giving it to the people. The committee hold that the necessity for such a change has increased since a similar resolution passed the lower branch of the last Congress without a dissenting vote, and that the action of the Senate during the present Congress has intensified popular feeling in favor of the proposition. The House will doubtless again endorse the scheme, and the Senate again bury it in committee. The extent of the popular demand is exaggerated by its advocates, although the proposition has met with increasing favor of late years. To amend the Constitution, however, is so difficult a process that nothing short of an overwhelming public sentiment will surmount the obstacles, and such a sentiment does not yet exist. It is one of those questions about which most people would like some evidence before they make up their minds that a change would be a good thing, and fortunately its advocates can furnish such evidence without changing the Constitution. Election by popular vote means only the election of one or another of two candidates nominated by party conventions, and conventions can nominate candidates for Senators without an amendment to the Constitution. The only difference is, that a party would then name its man to be voted for at the polls as in the case of a Governor, whereas now it can name the man and instruct its members of the Legislature to support him, which they can be trusted to do. This produces the same result, except in the rare cases where gerrymanders give the Governor to one party and the Legislature to the other. If the people really want Senators chosen by popu-

lar vote, we shall see party conventions generally nominating candidates in this way.

We are glad the platform of the Pennsylvania Republicans "recommends an expansion of the circulating medium of the country until the same shall amount to $40 per capita of our population." It is now only $34 per capita. Six dollars more per capita would, we think, lift us promptly out of our present slough of despond. But it ought to be distributed at the treasury, sub-treasury, and post-offices "directly to the people." The reason why the present $34 per capita does us so little good is, that the banks and gold-bugs have got hold of it all and refuse to give it up except for goods, or, what is the same thing as goods, collateral. Consequently it is useless to the great body of the people; for how few of us have got any collateral! With six dollars more apiece put into every man's and woman's pocket by the United States marshal or other federal official, we think we see a bright future for America. Having got them, however, we must hold on to them. If we part with them, the gold-bugs are sure to get hold of them, and we should be no better off than ever. They should be hidden somewhere about the house, and not allowed, as is too often the case, to dribble into banks and trust companies.

The chief interest of outsiders in the Alabama Democratic State Convention last week centred in its attitude toward the Cleveland administration; but its position toward vital issues in the affairs of the commonwealth also merits attention. Alabama is one of the Southern States which have not yet abolished the evil system of hiring out convicts to contractors, but the convention pledged the party to efforts at reforming its abuses. The growing hold of the public-school system upon the people is shown by the fact that a resolution was adopted promising to increase the appropriations for its support whenever the financial condition of the State will permit. An election law based upon the Australian system was passed by the last Legislature, which will have its first trial in the choice of State officers next August. The Convention declared that this law "was intended to obtain at the ballot-box a full and free expression of the popular will," and, in case a trial should show that it failed to accomplish this end, pledged the party to make such changes and alterations as should be shown to be necessary. The feeling in favor of election reform is growing throughout the South. Popular sentiment in Louisiana calls for the passage of a law introducing the Australian system in that State by the Legislature now in session, and the progressive newspapers of Florida are agitating for similar action by the Legislature which is to be chosen in that State this year.

It seems a great pity that, when the Ohio Republicans began electing McKinley Governor with a view of keeping him on the track for the Presidential race, they could not also have named a man to look after the duties of the executive office. These are enough to engage the undivided attention of any man, but McKinley, of course, has little time left for them after attending to the exacting requirements of a Presidential boom. The consequence is that the reputation of the State is suffering severely. During the last few months there have been repeated cases of the lynching of black men by white, but nothing has been done towards punishing the offenders and thus arresting the tendency towards lawlessness. The penal, reformatory, and charitable institutions of the State are in a bad way, and there are shocking scandals about some of them. It appears that the Dayton asylum for the insane is not allowed a large enough appropriation to purchase sufficient food for the inmates. Two of the higher officials of the penitentiary recently engaged in a brutal fist-fight in the presence of hundreds of convicts who were assembled to take part in religious worship, and the deputy warden has just filed forty charges against his chief, covering a number of offences, any one of which is just cause for removal. Meanwhile, McKinley's eyes are so firmly fixed upon 1896 that misgovernment, official scandals, and lynchings in 1894 never attract his notice.

So many of the proposed amendments to the State Constitution that are offered to the convention at Albany are merely tentative in character, or "introduced by request," that serious consideration of them is not called for. One, however, proposes so serious a backward step that its character should not be overlooked. It provides that no bill shall become a law after the adjournment of the Legislature; that is, that the Governor must act on all measures before the hour of adjournment is reached, just as the President is called to do on the business of Congress. We presume that this change is proposed because of the vexation felt by members of the Legislature over the veto of bills after the adjournment, when there is no chance to repass them. But the adoption of this amendment would only produce at Albany the scenes witnessed at Washington during the closing hours of a Congress, when the President, betaking himself to the capitol, adds his signature to many of the most important measures of the session, including big appropriation bills, without any opportunity for the practical consideration of them. Before the adoption of the amendments of 1874, a Governor of this State could sign or veto a bill at any time within the year of its passage. Gov. Dix disposed of some of the most important bills in his hands in the December after their passage. An amendment adopted in 1874 limited the time within which he could approve of a bill after the final adjournment of the Legislature to thirty days. There seems to be no good reason for changing this. If it be deemed advisable that the Legislature should have an opportunity to pass on all vetoed measures, it could take a recess for ten days after its business was completed, and meet again simply to receive communications from the Governor. If Judge Nott's recent decision is upheld, even the President will have ten days in which to pass upon bills after Congress adjourns.

It is evident from the declaration of Mayor Gilroy that Tammany will do all it can to prevent approval of the new rapid-transit bill, signed by Gov. Flower, at the polls in November, and this fact should be kept in mind by its advocates. We do not believe there is any reason to fear an adverse verdict at the polls, but it would be a serious mistake to underestimate Tammany's ability and ingenuity as an opponent. The mayor's excited opinion of the bill as the "most pernicious law that has been placed on the statute books," and his belief that "it will be held to be unconstitutional by the courts," are valuable simply as revelations of Tammany hostility. His utterances mean that Tammany sees in the plan a death-blow to all hope of a colossal job, which the building of the road as a public work at the city expense would make of it; and consequently Tammany will fight to defeat it with every resource at its command. There could be no higher evidence adduced of the meritorious quality of a plan for public improvement than the declaration of a Tammany mayor and prospective Tammany boss that "it fails properly to guard the public interests," and will call for the unnecessary expenditure of many millions of dollars. The honest portion of the public will offset this prejudiced view with the favorable opinions of the Chamber of Commerce and such authorities on public affairs as ex-Mayor Hewitt.

The subject of the fourth biography in the illustrated series of lives of Tammany worthies which the *World* is publishing, is John J. Scannell, the man whom Mayor Gilroy made a fire commissioner. Full particulars of his career as the keeper of notorious resorts, leader of a gang of thugs, and murderer, are set forth, with pictures of the scene of his crime and of "Murderers' Row" in the Tombs, showing the

cells in which he and Croker were incarcerated at the same time under similar accusations. The sketch is as remarkable in its way as were those of Croker and "Barney" Martin and "Paddy" Divver which preceded it. We presume that Scannell will receive it in silence, as Croker, Martin, and Divver received theirs. He knows as well as they did that with Tammany followers revelations of this kind do no harm. A life of criminal activity as a preparation for public office is a recognized part of the Tammany creed. What respectable people think about their careers does not trouble Croker, or Martin, or Divver, or Scannell, for such people would not vote for them under any conditions. All they ask of this portion of the community is that it adhere to its passion for "straight tickets," thus keeping itself divided into two harmless factions and making it possible for graduates of Murderers' Row to continue to administer the government of the city. So long as the honest portion of the community continues in this policy, biographies and pictures have no terrors to the Tammany leaders.

The *Tribune* asked last week:

> "But who is accountable for the conditions of social discontent prevailing throughout the United States, which rendered possible the recruitment of the tramp brigades?"

This is apropos of the strong desire of all the tramps in the United States to get to Washington. It is this desire which is making all the disturbances all over the Union. It is what has led to all the train-stealing, and marching, and levying of contributions on the hapless farmers along the road. The "Coxey movement" is, in fact, a movement on Washington. To reach Washington is the one aim of all the "armies." If we can discover, therefore, who it is that has been teaching the people of the United States during the past thirty years that all prosperity must come from Washington; that without the help of Washington there cannot be steady employment and fair wages for the laborer, or reasonable profits for the capitalist; that when you are poor and unfortunate in business, you should write to your Congressman or appear before the committee and "demand a hearing" — if we can find out who did this, we shall find out who is accountable for those expressions of "social discontent" known as "Coxeyism" and "Populism." Both these rely on Washington to get them out of their troubles. Who is it? The *Tribune* knows well, and if the Great Father who presides over that paper would let his young men answer reasonable questions, we should have much fun.

Despite the attempts to tax it out of existence, the oleomargarine industry continues to grow. There are now issued 283 wholesale and 6,396 retail dealers' licenses under the internal-revenue department, and the tax of 2 cents a pound yields the Government more than $400,000 a year. It has thus been shown that this new product really "met a long-felt want," in the shape of a cheaper substitute for butter. Even the dairy farmers are beginning to recognize the uselessness of fighting against it. Senator Manderson of Nebraska has introduced a bill to permit manufacturers to pack their product in one-pound packages instead of ten pounds, and use tin cases as well as wooden and paper. The cases must still be labelled, but the proposed changes would enable dealers to sell to small families as well as large consumers, and to export their goods in tins. The Senator says that he has been advised to advocate these changes not only by manufacturers of oleomargarine, but also by farmers and dairymen, who have found that their fright a few years ago was unnecessary, and that good butter does not suffer in price from the increasing use of the substitute. The raid of legislative authority upon oleomargarine has been a gross abuse of power, and it turns out to be as fruitless as it was unjustifiable.

Surely we have a very bloodthirsty navy. Most Christian and humane men either are glad, or pay homage to religion and humanity by pretending to be glad, that they have not been called on, even in their country's interest, to kill people and destroy property. But Capt. Picking, the commander of the *Charleston*, said last week, at a dinner given to him in Baltimore on Monday evening, that "he was sorry he did not have the opportunity [down at Rio Janeiro] to use the force placed at his command." This means that he did not have the opportunity—that is, that nobody gave him cause—to deal out death and destruction on the people around him, either ashore or afloat. Had he done so, it would doubtless have furnished entertainment for thousands of people at home, although our books are full of horror over the Romans for having gladiatorial shows. There is not the smallest likelihood in our time of our having a naval war anywhere except for the purpose of furnishing amusement to people on shore and "copy" for the newspapers, and yet we suppose large bodies of people who go to church would hail it with keen delight.

The dinner given to Admiral Erben and Capt. Mahan of the *Chicago* in London on Thursday, although undoubtedly meant in the main as a return for the hospitality with which British officers were received here last year, was in a considerable degree an acknowledgment of the immense impression made on the English mind by Capt. Mahan's book on the 'Sea Power.' No American book of recent date has had so wide a circulation among the class which does not read or care for literature in general, and especially light literature. It has found its way into all the naval and military and sporting circles, and has had a powerful influence in support of the demand for an increase in the navy. In fact, no such tribute to the British navy and to navies in general, as instruments of national power, has ever been paid. It will always stand in the front rank of historical as well as strategical discussion. But its influence on the mind of the author has been just as marked as on the mind of the British public. In writing the wonderful story of the British fight for maritime supremacy, he has persuaded himself that his own country ought to follow the same career, and provide herself with a string of dependencies all over the globe to fight for and defend—another proof of the old adage that there is "nothing new under the sun." Could the fathers of the republic have foreseen in 1789 what the views of a great many of us as to the conditions of national greatness would be to-day, how sad it would have made them.

The German press is apparently up in arms against the plan of handing Samoa over to the New Zealanders; and from the commercial point of view the Germans are right. They have got most of the trade and most of the land of the island, and are abundantly able by themselves to control the natives. They would probably like nothing better than the withdrawal of the British and Americans, and the surrender of the islands to German management; but what are the "ethics" of the matter it is difficult to see. In dealing with all these barbarous states, some ethical theory is absolutely necessary for a civilized Power. In our treatment of Hawaii we appeared, not as the owners of the land, but as the champions of chastity and pure religion. Now, the Germans make no pretence of caring a kreutzer about the personal morals of the Samoan chiefs, and would as soon have the people worship stocks and stones as anything else. They are openly "on the make." But can Great Britain and America surrender an island to people who publicly profess indifference to the morality of the inhabitants? If the Germans get full control, in fact, the only home of virtue and orthodoxy on the island will be our "coaling station," known as Pago-Pago, which has now so little coal in it that there will be plenty of room for Samoans disgusted with the licentiousness of their compatriots.

CHAIRMAN SPRINGER ON BANKING.

MR. SPRINGER, chairman of the committee on banking and currency in the House, made a speech on Saturday setting forth first his ideas of what ought not to exist in the way of bank-notes in this country. There ought not to be any State bank-notes. This he proves by a long history of the heterogeneous issues of State banks and their frequent failures before the war. His picture is not overdrawn, except that his allusions to the good bank-notes are so slight as to leave the impression that they were very few in number, whereas they were far more numerous than the bad ones in the two decades immediately preceding the war. But as to heterogeneousness, which is an evil by itself, even when the notes are good, Mr. Springer is entirely right. Nor is there any reason to suppose that this evil would now be less if the 10 per cent. tax on State-bank issues were repealed, although banking would be better. It would be better because public opinion on the subject of banking is far clearer and more pronounced now than it was before the war. This is an improvement, due mainly to the national banking system. This system has cultivated a taste for clean banking. It has taught the present generation to be intolerant of the slovenly methods and practices which prevailed in large sections of the country before the war—prevailed simply because the public in those sections demanded nothing better. But variety is not the spice of life in bank-note issues. There is no more reason why we should have two thousand different forms of bank-note engraving (in adtion to five thousand counterfeits) than there is for having two thousand different forms of the gold eagle or the silver half-dollar. Yet nobody can guarantee us against such heterogeneousness if the 10 per cent. tax is repealed.

When Mr. Springer comes to the constructive part of his discourse, we are not able to agree with him and we can scarcely understand him. At first he seems to be aiming at a new system of bank-note issues, but he tells us that it is a new system of Government notes for which the banks are to be merely agencies of distribution. He quotes Mr. Webster as saying that it is the constitutional duty of this Government to see that a proper currency, suitable to the circumstances of the times and to the wants of trade and business, be maintained and preserved. This opinion of "the great expounder of the Constitution" is eulogized, and then Mr. Springer proceeds:

> "Conceding, therefore, that a national currency may be issued under the authority of the Government of the United States, let us consider how we can best distribute that currency to the people."

The germ of Webster's idea was that the duty was incumbent on Congress of providing the methods for the issuing of a national currency. The method that he had in view was a United States bank. The idea, as translated by Mr. Springer, is that the Government ought to issue the currency itself, and he is only concerned as to a choice of methods. Three such occur to him. One is for the Treasury to "lend money to the people." Another is to print greenbacks and pay them out for Government expenses in lieu of taxation. Both of these are condemned. The third is to employ banks, but the banks are to act only as Government agents; for, according to Mr. Springer, "a bank of discount and deposit has no necessary relation to the currency any more than it has to the coins of the country; you might as well claim, because the banks receive deposits and loan money, that they shall have the right to coin money and to issue coins with their own stamp upon them. There is no necessary relation between them." Of course not. Who said there was? There is no necessary relation between shirts and collars, but it is very convenient to have them together. This question is not one of necessity, but of convenience to the public. Experience has shown that it is a public convenience for banks of discount and deposit to issue and redeem circulating notes of a fiduciary character, because they alone can discount commercial paper and thus adapt the volume of notes to the wants of business.

Mr. Springer's plan of bank agency in the issuing of Government notes is the present national banking system with two variations. These are: (1) that 20 per cent. of the deposited security for bank issues must be in coin, (2) that the other 80 per cent. may be in bonds of the United States, or of any State, county, parish, city, or town which have not been quoted in the market below 95 during the two years preceding their acceptance as such security. The notes are to be issued in three series, A, B, and C. Series A is to consist of notes corresponding to the amount of coin deposited, *i. e.*, 20 per cent. of the whole, and is to pay a tax of two-tenths of one per cent. per annum. Series B, which shall be equal to 60 per cent. of all the currency issued to the bank, shall pay a tax of one per cent. per annum. Series C, the remainder, shall pay a tax of four per cent. per annum.

These provisions are designed to secure elasticity to the currency, on the theory that the banks will adjust their issues according to the tax they have to pay on their notes. First they will issue the 20 per cent. because the tax is very small. Then they will issue the 60 per cent., or whatever part is needed, when business is brisk. Then they will issue the remaining 20 per cent. in times of financial stringency, and when the demand for money is very strong, and will retire it as soon as possible on account of the heavy tax. This is Mr. Springer's idea of elasticity in the currency.

The want of elasticity in the present system is really due to the requirement that the bank shall lock up in public securities the capital with which it ought to be discounting commercial paper. To cure this evil, Mr. Springer proposes "a hair of the dog that bit you." That is, he proposes that 20 per cent. of the deposited security shall be in coin, which draws no interest, and that on 20 per cent. more (if currency is issued) there shall be a tax of 4 per cent. per annum. This would leave only 60 per cent. of the circulation in as elastic a state as it is now, the remaining 40 per cent. being stiffer than ever. Such a system, if it could by any possibility pass Congress, would never go into operation, because the banks would never take out the notes on the terms proposed. Bankers are not in business for their health any more than other people. There is no profit to speak of in the present system; that is the reason why it is moribund. There would be less profit under the proposed system; therefore it would be born dead.

"I have carefully examined," says Mr. Springer, "the banking systems of the whole civilized world, and those systems which have come and gone in the past. Nowhere has a currency ever been issued heretofore so well and so perfectly secured as would be the notes under the bill which I have proposed." We are reminded of the saying of another Illinois statesman, that he had mastered the science of finance in two weeks' time, which led him to support the inflation bill that was vetoed by President Grant. Such hasty acquirement of the science of banking would be apt to lead its votary unduly to magnify security for note issues, as a man may be prevented from seeing a mountain by holding a ten-cent piece too near his eye.

THE SENATE "FREE LUNCH" TARIFF.

SENATOR GORMAN is better at concocting dishonest schemes than he is at defending them. His true rôle is silent indifference to popular and party clamor. To allow himself to be forced to take the floor in his own defence, as he did on Thursday, is both to assume responsibility and to lay himself open to damaging retort; and those things the politicians of the subterranean school always do well to avoid. His speech in explanation of the party betrayal, of which he is the chief author, only leaves the Senate tariff bill worse off than ever, and, in fact, justifies the description of it attributed to the cynical Senator Brice as a bill made up not on the principles of free trade, but on those of a "free lunch."

None of the contentions put forward by Mr. Gorman in behalf of the high-protectionist bill which he now fathers will bear examination. His charge that

the Wilson bill was hastily considered, and therefore necessarily imperfect, is based upon a comparison of dates which is entirely misleading. The present Congress had a great advantage in time over the McKinley Congress. It was called in extra session on the 7th of August, and got all the work of organization off its hands at that time. The chairman of the committee on ways and means was appointed then, and had nothing to do but work on the forthcoming tariff all through the long Senate wrangle over silver, so that, when the regular session began in December, the preliminary labors on the tariff were in a more forward state than was ever before the case with such a bill. That the bill should have passed by February 1 was, therefore, not at all proof of haste and carelessness.

But, adds Mr. Gorman, "it is sufficient to say" that there never has been a moment when either the Wilson bill or the first draft of the Senate bill could get a majority. Why not? Simply because he and three or four other schemers stood out for their "free lunch." Nothing else is meant by his talk about the "consideration" due to certain States (meaning the Senators thereof and the manufacturers who own the Senators), and the "purely business matters" connected with tariff schedules. All this is only the polite and parliamentary way of saying that Messrs. Gorman and Brice and Murphy and Smith and Faulkner and Caffery took the finance committee by the throat and frightened it into an abandonment of all pretence of rational or honest tariff reform.

The Maryland Senator did well to fight shy of details. It is easy to lump the percentages in a whole schedule and figure out reductions, but the iniquities are to be searched for in the separate sections, and every fresh examination of the Senate amendments reveals new examples of gross favoritism, with all the ear-marks of the lobby and corrupt methods upon them, out-McKinleying McKinley in the cotton schedules and the glass-ware duties and in the metal classifications—in which last Senator Quay was allowed to get the "consideration" for Pennsylvania. A specimen outrage is to be found in the duties proposed on pocket-knives. The Wilson bill put a rate of 45 per cent. ad valorem on all classes. In the Senate amendments specific rates are restored equivalent to protective duties of from 33 to 83 per cent., which are ingeniously devised, *à la* McKinley, so as to put the heaviest taxes on the kinds most commonly in use. We are informed that the lobbyist who got these bounties in the bill is known, as is also the "influence" which sent him to Washington, and that the whole story of the "cutlery deal" in the Senate may soon be made public. Again, take the taxes on files. McKinley put some of his most artistic work in the specific duties of his files paragraph. They gave protection of from 100 to 200 per cent. The Wilson bill lumped all the classifications into a single head, and put on a duty of 35 per cent. ad valorem. This was allowed to stand in the finance committee's first report, but, after the "free-lunch" era set in, the paragraph was bedevilled with specific duties again, in a way only less shocking than McKinley's. Files that can be bought in the American market to-day at 20 to 27 cents per dozen are to be taxed 30 cents a dozen; those selling at 69 to 98 cents have a rate of $1 laid on them. The result is, as a large dealer has figured it out, that an English agent could not place an order in this country without practically giving away his files and paying the duty into the bargain! It is clear, from the prices quoted, that no protection at all is necessary, and the only conceivable object in putting on such outrageous rates is to prepare the way for a Trust to rob the consumer. We do not like such robbery any better under the label of tariff reform than we did under the name of McKinleyism.

It is a great mystery how the sincere tariff-reformers, who undoubtedly constitute a majority of the Democratic Senators, could have brought themselves to consent to such enormities. If they did it, as some assert, in order to hurry the bill through the Senate and then have it made decent again in conference, we think they were ill-advised. Some of the Gorman excrescences will undoubtedly be cut off in conference; but in the juggle the protectionists will be sure to sneak off with some booty which they never could have got in a fair and open fight in the Senate or in a Democratic caucus. It would have been better if such a fight had been made. As it is, the House will have to rescue as much of its bill as it can out of the talons of the Gorman-Brice "combine." They are not weak, and they will not yield easily; but if the House remembers that they have the cowardice of men without principles, and that their consciences can be reached only by the whip of open party condemnation and mention by name, it can shame and frighten them into something that tariff-reformers can look at without loathing.

HERETICAL FACTS.

THIS year's Presbyterian trial for heresy has been rather a dismal affair. Having only to traverse again the path made so plain in the Briggs case, and with a foregone conclusion confronting and dispiriting both prosecutor and accused, there has been little heart in the business. The actors in the case have moved about like men in a dumb show, and the public has found nothing enlivening in the spectacle. Nevertheless, Prof. Smith, in his *moriturus* address, managed admirably to sum up the main significance of his trial when he said, alluding to the slight personal issues involved, "But to have a great church go in the face of well-ascertained facts is not a small thing."

In this, there can be no doubt, he put his finger on the main difference between the heresy of which the late Prof. Robertson Smith and Prof. Briggs were found guilty, and of which Prof. Smith knew that he would be found guilty, and all the other forms of heresy known to the history of the church. These had to do with matters of pious opinion, or metaphysical distinction, or ecclesiastical right and order; the new heresy turns on a question of fact. The combatants who took part in the Docetic controversy, or the Monothelite heresy, or the Arian dispute, were like ghosts fighting apparitions, and could not be brought to the test of flesh-and-blood facts. So with most of the famous doctrinal controversies of the later centuries: they have pitted theory against theory and wire-drawn distinction against wire-drawn distinction, with no exit except in the brute decisions of the "ecclesiastical mob," as Dean Stanley used to call the clergymen who rushed up to Convocation from all over England to condemn books they had not read. But the great heresy which the Presbyterians of Scotland and America have invented is that of accepting a body of well-ascertained fact.

That is to say, the specialists of chief renown the world over who have given most study to the matter, are now agreed that the traditional conception of the history and institutions and literature of Israel is utterly misleading and wrong-headed. For this agreement a consensus of learned and pious names can be adduced which, in the case of any other question of historical fact, would be regarded by all as overwhelming and conclusive. It is so regarded by all except the Presbyterians of Scotland and the United States—indeed, it is doubtless an injustice longer to except the Scottish Church, as it has shown marked liberalism of late years and refused to depose other professors under substantially the same charges as those brought against Prof. Robertson Smith. Thus we have the situation that what the universities of Europe unanimously declare to be a fact, what a professor or a clergyman can hold and teach with impunity in Great Britain, or in the Episcopal or Congregational, probably in the Methodist or Baptist, and certainly in the Unitarian and Universalist churches in this country—that the Presbyterian Church asserts to be heresy, and if it is a fact, so much the worse for it.

A case which can be so stated does not require arguing; but some of the bearings of it are worth mention. It shows afresh the immense power of what Browning calls "the instinctive the-

orizing" "whence the fact looks to the eye as the eye likes the look." A college professor used to say to his classes: "Talk about the irresistible power of mathematical demonstration: why, if personal interest or prejudice were involved, you would find plenty of people to deny that the sum of all the angles upon a perpendicular was equal to two right angles." Who can doubt this that has witnessed the ability of thousands of bimetallists to assert passionately that 62=129? It is only a special application of this principle of human nature that is now at the root of the Presbyterian trouble. In religious matters there have always been more opportunities for its display than elsewhere; and that is the only reason one is more struck with them there than elsewhere. M. Oppert was lately telling of a lecture he gave in Glasgow many years ago on the relation of the Biblical record to the Assyrian monuments. He began by saying that he had found many confirmations of the Scriptural history in the cuneiform inscriptions, whereat the audience cheered vociferously. Then he added that in some cases the monuments contradicted the Bible. Such a chill and silence fell upon the auditory at this that the deft Frenchman saw that something must be done, and so hastened to remark, "That shows how mistaken the monuments sometimes are"; which called out renewed applause and set all straight again.

Another thing which this new heresy of fact illustrates is the futility of that favorite device of certain theologians which consists in marking off the human mind and human studies into separate compartments which have nothing to do with each other. This has been a rather clever use on their part of the modern specialization of learning. "Very well," they have said, "we agree to take the word of a specialist in medicine or engineering or finance, but you must also take our word as specialists in theology." And so they have been quite willing to go along on this theory of the fragmentary nature of truth, and have professed to be eager to work tolerantly by the side of the scientist, provided a high fence divided them and neither would look over to see how the other was getting along. But the practical working of this kind of gardening has not been happy. The theologian *has* looked over the scientist's fence and said, "See here, you must not let that tree of evolution grow so high, for it's killing some of my best crops"; and the scientist, in his turn, has been compelled to protest against the way the theologian has let his vine of the creative week run all over the scientist's lot, so that the latter could not work his soil at all without cutting it up by the roots. And finally, this scientific reconstruction of sacred history and literature has knocked the dividing fence entirely down, and is forcing the theologians to decide whether theology is to accept the fact, and all facts, and so strive to be worthy of its old name, "The Queen of all the Sciences," or to shrink into narrower and narrower compass and helplessness.

THE EXCAVATIONS AT ARGOS.

ATHENS, May 4, 1894.

AMONG the noteworthy changes in the aspect of Greece which have been wrought in the last few years there is one group or class which appeals especially to the student of classical life, namely, those which have resulted from the unusual activity in excavating ancient sites in various parts of the country. This activity, the results of which will always remain a brilliant memorial of the present administration of the Department of Antiquities, is due, both directly and indirectly, to the energetic and liberal spirit in which that department is now conducted—directly, because the Greeks themselves, both the Government and their Archæological Society, are doing much more than they used to, and indirectly because the foreign schools here are allowed almost unlimited privileges for excavating. Thanks to the liberality of the Government in such matters, each school has now its site, or group of sites, where it has the exclusive right to dig, and where it can work without interference from the authorities, the only precaution taken being that of keeping an official superintendent on the spot to watch the excavations. Permission to export any of the objects found is still rigidly withheld, but if the "finds" continue to accumulate in the museums as they have been doing in recent years, there is reason to hope that this reservation will be somewhat relaxed.

The schools have been quick to avail themselves of the opportunities thus offered, and this combined activity of Greeks and foreigners has revealed the secrets of many a site which, a generation ago, was little more than a name and a cluster of associations. Each one of these might well form the subject of a letter, but I should like to give some account of that which has the most interest for Americans, and of which we have more reason to be proud than perhaps is realized at home. I mean the exploration of the site of the great sanctuary of Hera in Argolis, which, as the readers of the *Nation* know, has been conducted for three years by members of our School at Athens under the direction of Dr. Waldstein. I had the good fortune to spend three days there, just before the close of this season's work, and am sure that any member of the Archæological Institute of America would have felt as well pleased as I did at the manner in which the Institute's appropriation has been expended, not only as regards the value of the discoveries, but in the careful and intelligent handling of the soil, with a view to noting every bit of evidence it afforded on questions which might arise. If the younger members of the School lack the preliminary archæological training which always places our students at a disadvantage in comparison with those who come here from other countries, they have, on the other hand, the advantage of being Yankees, and therefore easily adaptable under proper instruction. It does not take them long to learn what is expected of them in superintending excavations, and consequently this part of the work, which all that has been attempted as yet, will stand comparison with any that has been done.

The site of the Heraion is literally one of the most commanding that could be thought of for a temple. No one who has crossed the plain of Argos can ever forget the beauty of that country. More level than Attica, its appearance is also more restful. There is hardly a mound to break its surface until one reaches the foothills of the mountains which surround it, except where the sea makes its crescent on the south. Almost hidden in the northwest corner stands the citadel of Mykenæ, commanding the whole district without being itself conspicuous. To the east of this runs a wall of low mountains, which forms the northern boundary of the plain. One of these, Eubœa, stands out a little more prominently than the others. The long, sweeping curve of its slope is broken near the base by a small crest or ridge, into which it rises just before it joins the plain, and this crest was chosen as the site for the temple of Hera.

The original temple was placed not upon the summit of this crest, but upon the upper part of the southern slope, where a platform or terrace was constructed for it, and here it must have formed a conspicuous object from every quarter of the plain. The huge rectangular blocks of which the retaining wall of this platform was built were for years the only landmark of the site until, in 1852, Rangabé excavated sufficiently to locate the position of the late temple, of which I shall speak presently. The platform itself was buried to a considerable depth under accumulated soil until the present exavations laid it bare and determined its limits. It is paved with polygonal blocks, and measures about 148 feet in length by 115 feet in breadth. Its situation, in reference to the other buildings of the sanctuary, is shown on the plan which accompanies the twelfth annual report of the School, issued this spring. Unfortunately, very slight remains of the temple were found, a circumstance easily accounted for by the probability that, above the baseline, it was constructed of clay and wood, like the temple of Hera at Olympia. Even the columns have disappeared, and the only unquestionable remnant on the site is a portion of one low wall, on the top of which the circles traced in the stone to indicate the size and position of several of the columns are still clearly visible. This bit of wall is much more primitive than those of the Olympian Heraion, and bespeaks a decidedly earlier date for this temple, which may therefore be the oldest Greek temple that we know. Possibly there may be other data concerning it among the débris of the excavations in other parts of the hill, but this is a matter for an expert architect to determine. The pavement of the platform is in remarkably good preservation. Above it, and separated by a thin layer of earth, was a concrete flooring, several patches of which are left. Some of these are blackened by fire, presumably the conflagration of which Thucydides speaks, by which the temple was destroyed in 423 B. C.

Of the later and more famous temple the remains are much more satisfactory. The Greek prejudice against erecting a new temple upon the site of an old one is well illustrated here. Instead of utilizing the old platform, which was perfectly able to hold it, a second terrace was constructed below it, also on the southern slope and overlooking the plain. I say a second terrace, yet it would be more correct to speak of this as the third, there being a smaller one between the two, upon which numerous remains of early houses have been found.

These are described by Dr. Waldstein in the report to which I have alluded. As he suggests, they probably had some connection with the service of the older temple, and were possibly the dwellings of the priestesses. The excavation of the later terrace is a remarkably clean piece of work, and reflects great credit on those who had to do with it. Every answer which the place still had to give as to the character and details of the new temple and its immediate surroundings, the student finds here, readily at hand. On this terrace there is nothing more to be uncovered, and evidently no fragment that could have been of the slightest importance has been thrown away. If it is lost, the manner in which the site has been unearthed is sufficient evidence that it was lost before the excavations were begun. What actually remains *in situ* is the walls of the foundations, several courses high, including those of the peripteros and the interior, and that of the steps or incline by which the temple was entered. These foundation walls are not preserved up to the level of the floor; and from the manner in which they were left it is evident that they—and probably other portions of the temple—were not destroyed by nature or by violence, but carried away, block by block. There is reason to believe, therefore, that the careful examination, by an architect, of the towns in the plain might result in the discovery of important members built into mediæval or later structures. On and near the terrace are sufficient fragments to give the general indications of the proportions and style of the temple, though here again it is surprising that there are not more. I believe that only three fragments of capitals have been unearthed, and scarcely any of the columns themselves. On the other hand, a number of blocks of the upper members have been found, and these show that both the triglyphs and the background of the pediments were of black marble.

The retaining wall which separated the terrace of the later temple from that above it, formed the back of a long stoa or portico, in front of which votive statues and stelai were erected. The bases and grooves showing where these stood are numerous, but, beyond a few inscriptions, nothing of the works themselves remains.

Below the new temple is a fourth terrace, which seems to have been occupied for the greater part, if not the whole, of its length by another portico, only a portion of which has yet been uncovered. The greater part of the working force has been concentrated upon this site during the present season, partly because it seems to have been one of the principal buildings of the sanctuary, and might be expected to contain inscriptions or other monuments of importance, and partly because Dr. Waldstein hoped that in the enormous mass of earth under which its remains are buried he might find sculptures or other valuable objects, thrown over from the terrace of the temple. Some fragments of metopes have already been found here, and quantities of terracotta fragments. But not more than half of the portico had been uncovered when the work had to be brought to a close, and we cannot say what may yet be waiting to be brought to light.

I have spoken of only the most important buildings which have thus far been unearthed, but there are others, partially disclosed this year, which promise to be no less interesting, some of them being undoubtedly within the sacred enclosure, and therefore directly connected with the sanctuary. As the plans of these are more or less complicated, a description would be confusing without the aid of diagrams, and for these we must wait until new drawings of the site have been prepared. From this slight account, however, it will be seen that the architectural discoveries are not the least important that have been made here. They are in fact much more extensive than I had expected to find them, and well deserve to be carefully worked up.

Of the sculptures the now famous Hera head still remains the most beautiful and the most interesting. Of this and the other fragments, which are now familiar in America through casts and photographs, I need not speak. This year, besides the fragments found on the lowest terrace, several have been brought to light elsewhere, among them the head of a youth, which bears a close resemblance to the female head found by Rangabé on this site. This year, as before, the fragments of decorated pottery discovered are almost countless. Combined they form one of the most remarkable finds of this nature ever made in Greece. By far the larger part are of the early styles, Mykenæan, Dipylon, and, most of all, the so-called "proto-Corinthian," upon the history of which they bid fair to throw new light. The labor of classifying these will be long and trying, but it will give our School one of the best opportunities that could have been desired for publishing new and valuable material.

Speaking of pottery, I cannot pass over a most interesting discovery which took place while I was at the excavation—that of a "beehive" tomb of the Mykenæ type, which apparently had never been opened since the last body was placed in it. The excitement of watching an event like this cannot be described, and it is felt by the workmen no less than by those who are superintending them. First of all, the discovery that there is a tomb, a discovery possible only to the expert digger (in this case a workman) whose practised eye detects in the slight depression of the soil the fact which another would pass over without suspecting. Then the beginning of work with the pick and spade. Slowly the truth comes to light; the tomb was roughly hewn in the soft rock, and, the top having fallen in, the vault or chamber is filled to the surface with a solid mass of earth. Gradually its concave walls show themselves, and then the two or three men who can work inside the hole proceed, as carefully as their impatience will allow, to clear the interior down to the level where they may expect to find something. After a time—and a long time it seemed—the first indication comes; the fragment of a human bone is struck. Now the pick and spade stop, the men get down on their knees and scratch the earth with their knives, working as delicately as Italians. Presently one of them utters an exclamation—the first vase has been found. It is a decorated specimen intact, and shows that there is hope for more. In this way the work continued for two days, at the end of which the tomb and its *dromos*, or entrance-passage, had been cleared out. The tomb measured about ten feet in diameter and the same in height. It contained no less than fifty-two specimens of prehistoric pottery, most of them fine examples of the Mykenæ and Ialysos types, with the decorations upon them quite fresh and brilliant. Of these, forty-eight were vases, three were idols, and one was a little chair or throne for an idol, about six inches tall, and gayly painted. There was no metal of any kind.

This tomb was about a half-mile to the northwest of the temple, near the path to Mykenæ. Another was found the day following, much nearer the Heraion. It was empty, but its existence proved that the first was not an isolated grave, and probably there are many others in the neighborhood, as the workmen believe. If so, there may be still another chapter to be written on the history and worship of the old temple near which they were made. What was their relation to it?

I hope that this and the other discoveries I have described may cause those who are interested in these matters to share the regret I felt when I heard that it was not the intention of the managing committee of the School to continue these excavations after this year. It was, as I know, the expectation that the work could be completed with the present season. This, in spite of prophecies, has been impossible, as an examination of the place shows. It is a safe maxim for all work of this kind that you cannot tell what is in a hole until you have dug it; and, in the present case, the more that has been dug the more there has been to dig. Aside from the question of these newly-discovered tombs, which bid fair to be of exceptional importance, the site of the Heraion itself cannot be considered properly excavated until the line of the peribolos wall has been determined and every building or monument within it laid bare. Its entrance is still to be discovered and the approaches by which the different terraces were reached. Two hundred and fifty men have been employed this year, and an average of five members of the School have superintended the work and taken charge of the things found. This is as large a force as can be advantageously employed, yet it is my impression that more than one season will still be necessary before the work can properly be considered as finished. It would be unfortunate if the results of these excavations were to remain unpublished, yet it would seem a waste alike of energy and money if what we are to regard as a final publication were prepared with a large part of the site still buried. Therefore, in the interest of our School, and for the sake of those who have carried on the work admirably thus far, it is earnestly to be hoped that the committee will find it possible to allow the excavations to continue until they are really completed, and then to publish the results in the manner they deserve.

EDWARD ROBINSON.

ÎLE DE FRANCE AND PICARDY.—III.

LONDON, April, 1894.

COUCY-LA-VILLE, down in the plain, by the side of the fishy little Lette, was a small Roman farming village as early as the end of the third century; but Coucy le-Château was not founded on the heights, which were then no doubt heavily wooded, till six hundred years later, when an archbishop of Reims, seeing his bishopric invaded by the Normans, built a tower and gave it to a vassal to guard. The place and the man were well chosen. A promontory rises abruptly two hundred feet, dominating the plain, and giving a view of every one that passes through the valley for leagues around, from the hill of Laon to the forest of Compiègne. And the man was the first known to history of a strong, fierce stock, Eudes de Coucy. Three hundred years more passed, and the house of Coucy, always at war with some one and as often as not with the sovereign, prospered till its head was Seigneur d'Assis, de Marle, de la Fère, de Folembray, de Montmirail, d'Oisy, de Crèvecœur, de la Ferté-Aucoul et de la Ferté-Gaucher, Vicomte de Meaux, Châtelain de Cambrai, father-in-law of a King of Scotland and brother-in-law of the

Emperor Otho IV. Feudalism, which had long been supreme in France and had gone near to leave the King little more than the power of a great noble, had just entered on the struggle with royalty in which it was to succumb, when Enguerrand III. de Coucy, descendant of a race of robber-barons, himself at once a robber and practically another king, cherishing hopes (in spite of his proud motto: "Roy ne suys, ne prince, ne duc, ne comte aussy; je suys le sire de Coucy") of seizing the royal name and power—in which, indeed, he would have succeeded had not Queen Blanche bought off his ally, the Count of Champagne—built this castle to replace one that Louis VI. had burnt. Perhaps he intended it as an answer to the menace offered to the whole nobility by the great donjon of the Louvre, which Philip Augustus had completed a decade before.

The Sire's tower has lasted longer than the King's, but not the power of his race, for the castle of the vassal was dismantled by the minister of a king, while the donjon of the king was torn down not by a noble but by a greater king. Yet Enguerrand's keep was twice as high and twice as broad and its walls twice as thick as the donjon of Philip Augustus. The greatest towers known, says Viollet-le-Duc, are but spindles in comparison with it. A hundred and three feet in diameter, a hundred and sixty-two feet high, with walls twenty-seven feet through, it was built to resist the worst attacks that its founder could conceive of. And such was the energy of the man that this immense mass, with its four subordinate towers, each as great as an ordinary donjon, and its lofty surrounding walls and its elaborate underground constructions, was only five years in building, from 1225 to 1230.

The keep was far from being the whole of the fortress. Before the besieger could get to that inner stronghold he must, if he selected the postern to attack, cross the first drawbridge and break through the gate of the outer wall, fight his way along the narrow path that led to the postern of the inner wall, the *chemise*, exposed all the time to missiles hurled at him from the loopholes and embrasures of a flanking tower and of the *chemise* itself, break down a double postern gate barred by heavy beams let into holes in the wall, cut through a portcullis, and, after all, find himself only in the moat between the wall and the tower. What chance would he have of battering down or picking his way through its solid walls while the garrison was pouring down boiling pitch upon him and dropping great stones from battlements 160 feet above him? Nor could he hope to reduce the fortress by famine. A spring within the donjon gave a plentiful water supply. The cellars stored the provisions of a garrison of a thousand men for a year, a time long enough to tire out most mediæval besiegers. Besides this, it is said that there was a passage under ground, six miles long, by which supplies and fresh men could be secretly brought in, or a sally be made with fatal effect upon the enemy's rear.

The donjon itself is so built as to bring everything under the eye or within reach of the voice of the master. The narrow winding stairway made in the thickness of the wall stops with each story; whoever went higher must be seen by the guards as he crossed the hall to the opposite side where the stairs begin again. There is no other passage for man. Provisions and munitions could be raised by a lift running up the centre of the tower through holes pierced in the middle of each vault. The counterweight descended in a dry well at the side, as deep as the tower is high. These lift holes let not only goods pass, but also the commands of the master, which must often have resounded rudely through the vaulted chambers. The lift was, in fact, a huge speaking-trumpet befitting the stature of the man, one of whose ancestors is said to have been nine feet tall. Enguerrand kept with him fifty knights, which implies a garrison of five hundred men. They must have been picked like the grenadiers of Frederic the Great's father. The castle is built for giants; the steps are all high, and the battlements and seats were not meant for men of ordinary stature. Secure in his strength and his control over his followers, Enguerrand did not resort to those tricks which are common in Norman military architecture, where it is evident that the barons feared the treachery of their own men as much as the force of the besiegers, and provided means for defending themselves alike against a victorious enemy and a revolted garrison.

Coucy is less known to Parisians than Pierrefonds. It is less accessible; it has not the advantage of being near an imperial pleasure-seat, where the city man can stay at an elegant hotel, walk in a park as fine as Versailles, and drive out to the château through a beautiful forest apt for picnics in summer; it has not been restored by the most famous French architect; it is not fresh, comfortable, complete; it is only a ruin. For that very reason we enjoyed it the more. Pierrefonds is scenic, like a fine representation at the opera—interesting, but not real life; it does not move one nor carry him back to the past as do the solid tower and the crumbling walls of Coucy; it is a marvellous imitation of the antique, but Coucy is the antique itself.

For the first three hundred years of its existence Coucy was a danger to all the surrounding country and to the King in Paris. Mazarin wisely ordered it to be blown up, but his powder barrels that destroyed the smaller towers, could only crack, not throw down, the massive walls of the keep. Although the Cardinal had ordered the whole to be razed to the ground so that men should cultivate their fields on its site, his engineer abandoned the attempt, contenting himself with the destruction of the vaulted floors, and with burning what little there was to burn, so that the donjon is now an empty shell. But the inhabitants of the town for three centuries did their part to complete the destruction by using the ruins as a stone quarry whenever they wanted to build a house.

The château was made for a stronghold simply. But, as feudal manners softened, the arts were called in to render existence more endurable. After a time the castle had its wall paintings and its carvings, of which something is still to be seen, and no doubt its tapestries. There was a Salle des Preux and moreover a Salle des Preuses, whose statues in demi-relief adorned the great chimney-piece. But in its first estate it must have been a sad dwelling, to our ideas. One speculates on the mental condition of the inhabitants of these jails. What did the lord and lady think of? The men probably of nothing profound. Their womankind, in the abundant leisure of a life devoid of distraction, if they could not satisfy themselves with domestic cares, must have died of ennui or given themselves up to mysticism, according to their natures.

The first sight of the still perfect fortification of the town itself, as one sees it from the western railway station (the "halte"), skirting the edge of the steep hill and ending on the left with the château, easily carries the imagination back to the feudal times when the Sire would be sallying out to harry the lands of the Bishop of Laon or the Bishop of Noyon, or to intercept a convoy of merchants, or to meet the army of his suzerain. The thought by contrast heightens the pleasant effect of the fields now peacefully stretching up the slope and tilled almost to the foot of the wall. In its town Coucy has a great advantage over its rival. The village of Pierrefonds is an almost modern watering-place; Coucy-le-Château is a mediæval town with less admixture of the new than any we saw, less even than Laon. It is well, if one has time, after exploring its irregular streets, where everything is strange, admiring the half-effaced carvings on the portal of the church, and finally going minutely through the ruins of the castle with the guide, who, unlike most of his detestable race, does not hurry the lingering traveller—it is well to go out of the town between the two great towers of the Porte de Laon and scramble down the hill to the hamlet of Coucy-la-Ville, where is an odd little church with a curiously decorated tower, built a century later than the château, during the English occupation. The English, by the way, met with no opposition from the Coucy of the time, who was faithful to the anti-royal policy of his family. C. R.

Correspondence.

THE PARTHENON FRIEZE.

To the Editor of The Nation:

Sir: Mr. Waldstein's letter on the Parthenon frieze, published in your issue of May 3, calls for an answer from me, and deserves a sharp one. I will nevertheless confine myself to the criticism of your correspondent's assertions as far as they are directed against my own.

Mr. Waldstein has initiated a startling method. He begins by proclaiming, *urbi et orbi*, some wonderful discovery; when other people interfere to express a doubt, he bids them be silent; then he discovers himself that his discovery is worth nothing, and wants to be credited for the second achievement as highly as for the first one. There is such a deal of unscientific naïveté in this process that serious archæologists might abstain from troubling themselves and others about it. Indeed, I have, for some time past, left Mr. Waldstein and his contradictions to their fate; but as he seems now to require a new warning, he will get it: *ecco servito*.

In his 'Essays on the Art of Pheidias,' published in 1885, Mr. Waldstein stated that the terracotta plaques reproducing parts of the Parthenon frieze were probably the original clay models made by Pheidias. "If the models of Pheidias were valued and kept by the Geeeks, it is most likely that upon the dissolution of Greek independence . . . such portable remains would have been taken to Rome" (p. 238). In a diffuse note annexed to the same chapter of his almost unreadable work, Mr. Waldstein acknowledged (or discovered, if he prefers) that the terracottas *might* be forgeries, but he concluded (p. 265): "The view which to my own mind presents the fewest serious difficulties, is that the plaques are genuine antiques." In his article "Pheïdias," in Baumeister's *Denkmäler*, Mr. Waldstein published the Paris plaque, with the note (p. 1315): "Die Platte wird von Andern als verdächtig angesehen." These words prove clearly that Mr. Waldstein disagreed on that point with the *Andern*, and thought the plaque to be genuine.

I reviewed Mr. Waldstein's 'Essays' in the *Revue Critique* (1886, i., p. 401). Your correspondent says, in his letter, that I made "a thoroughly unjustifiable attack upon another chapter of his [my] book." My attack was, on the contrary, perfectly justified. Mr. Waldstein had found that a head in the Louvre, purchased in 1882, belonged to a metope of the Parthenon, and he wrote a paper on the subject in the *Journal of Hellenic Studies* for 1882. Meanwhile, in the *Bulletin de la Société des Antiquaires* a notice had appeared to the effect that the head in question had been recognized by the authorities in the Louvre as belonging to the Parthenon sculptures before Mr. Waldstein could have seen it (cf. *Revue des Revues*, viii., p. 203.) Reprinting his paper in 1885, Mr. Waldstein ought to have known that chapter of the "literature" of his subject. I reproached him, very gently, with having ignored it; that is what Mr. Waldstein calls a "thoroughly unjustifiable attack." In the same article, I am said by Mr. Waldstein to have "stated in decided terms that the terracotta plaques were not genuine." "This statement," continues Mr. Waldstein, "rested entirely upon his own authority." That is perfectly true; I did not want anybody else's authority to write as I did (p. 404):

"Les esquisses de Phidias sont un pur roman. M. Waldstein a eu le tort très grave de publier les deux essais tels qu'il les avait écrits dans l'enthousiasme de sa découverte, quitte à reléguer des objections écrasantes dans une longue note en petits caractères que bien des gens pourront négliger de lire. . . . De toutes les catégories d'objets antiques, aucune n'est plus aisée à contrefaire que les terres-cuites. . . . J'ai examiné avec le plus grand soin la plaque du Louvre, qui peut vraiment donner le change aux plus experts; mais quand le moule est fourni par la réduction mathématique d'un chef-d'œuvre, quand la terre est la même que celle des anciennes terres-cuites italiennes, comment veut-on que le travail du faussaire laisse des vestiges apparents?"

Now, Mr. Waldstein writes just the same thing, but credits his "own experience of ancient terracottas," which I have hitherto heard nothing of, with the revelation of that important piece of truth!

I have been repeatedly obliged, when dealing with Mr. Waldstein's works, to reproach him with writing phrases which have no meaning whatever. Mr. Cecil Torr, in the *Classical Review* (1889, p. 420), has gone a step further, and declared squarely that Mr. Waldstein's catalogue of the Fitzwilliam contained much "nonsense." I must say just the same of the following phrase in his letter: "If these plaques are forged reproductions of the Parthenon frieze itself, the recognition of their Pheidiac character, even in their mutilated condition, strongly proves the correctness of this method of observation." *Sunt verba et voces.* Nobody ever heard of a "method" consisting in detecting that a reduced copy of the Venus of Melos resembles the Venus of Melos. I boldly assert that no archæologist or even philologist will ever get an appearance of common sense out of that sentence.

But to return to the plaques. In 1889, the discovery of the head of Iris, belonging to the Parthenon frieze, brought a new argument to bear against their genuineness. I expected that Mr. Waldstein would confess that I was right, and that the controversy would pass *ad acta*. Instead of that, he triumphed once more in the excellence of his "method," and added emphatically: "It is by such discoveries that this question will finally be decided, and not by mere assertions on the part of those who have not carefully studied all the points, and have in no way contributed by unwarrantable expression of opinion to the settling of the problem." Whereupon I replied (*Revue Archéologique*, 1889, ii., p. 95): "Voilà une pierre dans mon jardin, où je la ramasse avec beaucoup d'indifférence. . . . Obligé d'avouer que j'avais raison, M. Waldstein essaie de faire croire qu'il s'est éclairé lui-même, et que mes objections ne lui ont rien appris du tout." I remember having erased from my proof-sheets a rather too frank qualification of Mr. Waldstein's dealing on that occasion.

At the beginning of the present year, Furtwaengler, in his 'Meisterwerke,' pronounced Mr. Waldstein's plaques to be genuine, referring them to a set of copies made in the time of Augustus, which is at least not as absurd as Mr. Waldstein's own hypothesis was. But, in the meantime, Mr. Waldstein has collected other arguments against their genuineness, and he now enters a protest against Furtwaengler's "violent assurance" in vindicating it! Furtwaengler, indeed, is very fond of bold assertions, and they often enough have brought him into trouble; but he is a great archæologist, the greatest of our age after Brunn, a man who is capable of holding a personal opinion, not a vacillating dilettante in archæology. His method does not consist in asserting on one page and denying on the next, as Mr. Waldstein has done not only in the case of the plaques, but in the farcical controversy about the Eretrian tomb. I think Furtwaengler is wrong in believing the plaques to be genuine, and I maintain against him, as I did against the author of the 'Essays,' that they are Italian forgeries made in this century. On the other hand, I can perfectly conceive that a man of such a high scientific standing should have got irritated by the pedantic flimsiness of a so-called "method," and I easily pardon him for having spoken of Mr. Waldstein, in his immortal 'Meisterwerke,' more harshly than French politeness ever allowed me to do (see 'Meisterwerke,' p. 229).

SALOMON REINACH.

MUSÉE DE ST.-GERMAIN, May 19, 1894.

SAMBO AND SANCHO.

TO THE EDITOR OF THE NATION:

SIR: Some weeks since you called attention to a supposed misprint in one of Mr. Lowell's Letters (vol. ii., p. 301). Writing in November, 1885, he said, as printed, "Aren't the enchanters as active as ever? Haven't they resuscitated Sambo in a shape as *descomunal* as ever after we had dismounted him once and for all?" A few lines before, Mr. Lowell had referred to Don Quixote, and you suggested that "Sambo" was a misprint for "Sancho." The suggestion had an aspect of plausibility. But Mr. Lowell wrote "Sambo"; the word in his autograph letter is so distinct as to admit of no question.

I suspect that he was thinking of the "bloody shirt" incantations of some Northern politicians, and of the resuscitation of Sambo in the *descomunal* shape of a voter led by Mahone.

I am, very truly yours, C. E. NORTON.

CAMBRIDGE, May 28, 1894.

SIR H. PARKES'S BIOGRAPHERS.

TO THE EDITOR OF THE NATION:

SIR: The very just as well as very thorough review of the Life of Sir Harry Parkes in your last issue may be supplemented, if you will permit, by a reference to one of the biographers' anti-Americanism. This is at times rabid, amusing, and provocative of absurd inaccuracy. For example, in the table of contents is a line, "American butchers as professors, p. 306." On that page the biographer says:

"It might be supposed that this [Mr. John A. Bingham's] prejudice against British subjects and the British minister arose out of some scathing comments upon American teachers in the employment of the Japanese Government."
